FLORISTS' REVIEW

G. L. GRANT, Editor and Manager (late Editor and Manager of the American Florist), 530-535 Caxton Building, Chicago.

Vol. 1. CHICAGO AND NEW YORK, DECEMBER 2, 1897. No. 1.

Announcement

For twelve years I was Editor and Manager of the American Florist. Under my management that paper became a very popular publication with the trade, in spite of certain disadvantages with which I had to contend.

Conditions became more unfavorable with the passing years. My only recourse was to start a new paper on a clean foundation. Here it is.

AN UNPARALLELED SUBSCRIPTION OFFER.

Every one to whom this issue of the FLORISTS' REVIEW is addressed, and who fills out, signs and returns the accompanying subscription blank, accompanied by $1.00, within 30 days from date, will receive not only the FLORISTS' REVIEW for one year but also a certificate entitling him to the earnings on one-tenth of a share of stock in the company formed to publish the paper. The shares will be of a par value of $10.00 each.

Why do I make such an unparalleled offer? It is very simple.

You will have an interest in the success of the paper.

You will see that you can buy everything that you want to just as good advantage from advertisers in the FLORISTS' REVIEW as elsewhere and at the same time benefit yourself by increasing the earning power of your certificate.

This mutual arrangement cannot fail to bring to the paper a heavy advertising patronage, and as a result the stock represented by your certificate will earn good dividends.

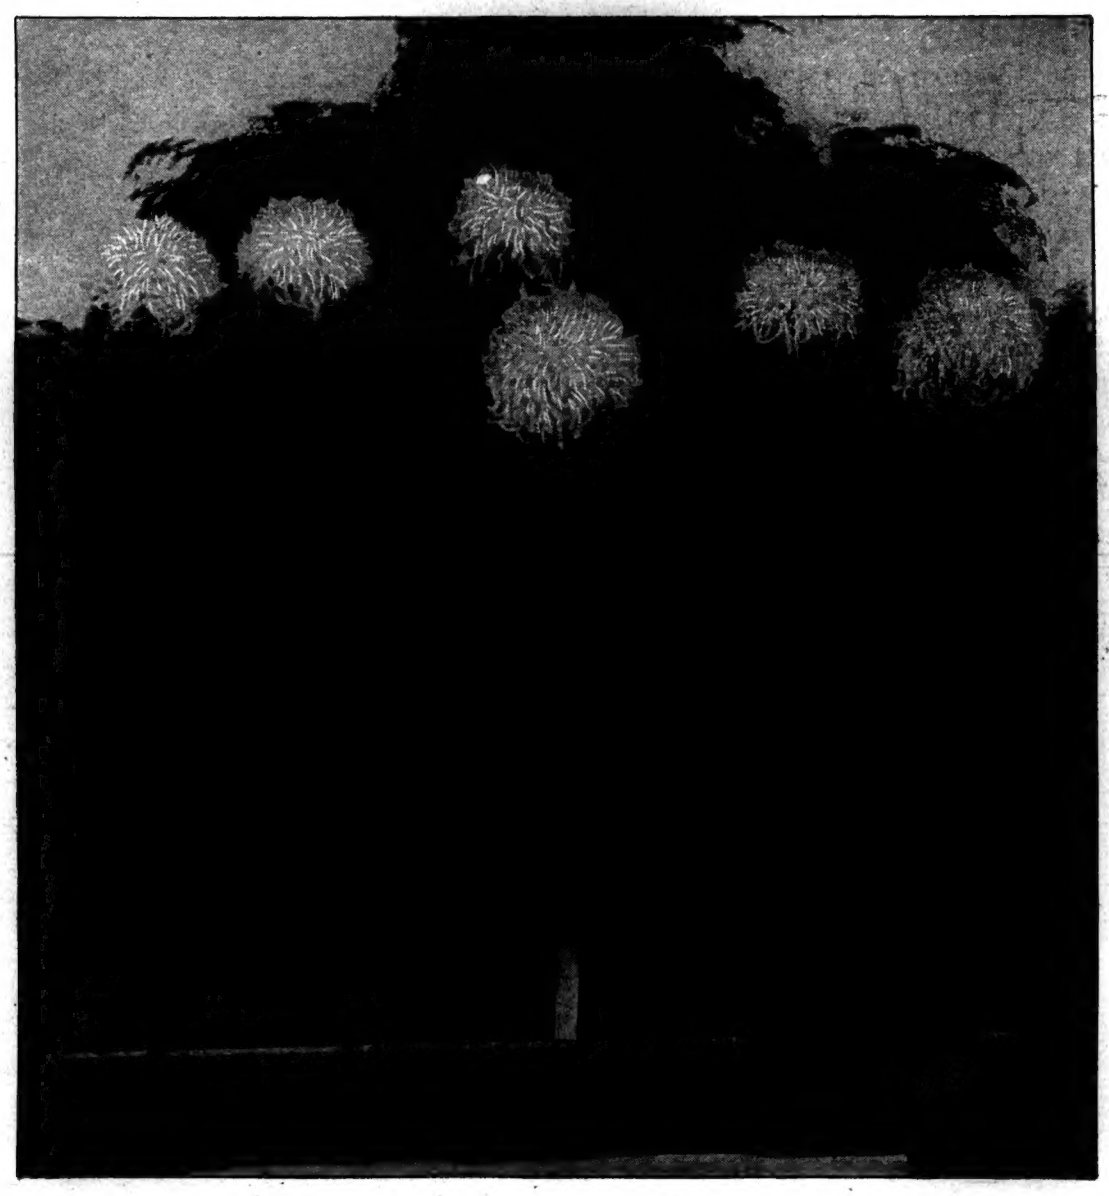
And the more you buy of advertisers in the FLORISTS' REVIEW (always mentioning the paper) the larger your dividends will be.

I shall control fully and absolutely every department of the paper, and no axes will be ground in its columns, either directly or indirectly. Its pages will be always open to honest criticism, no matter whose toes may be pinched.

You will get a better paper than has yet been published in this field, and a share of its earnings. Please let me hear from you by early mail.

Yours for Co-operation and Mutual Benefit,

G. L. Grant



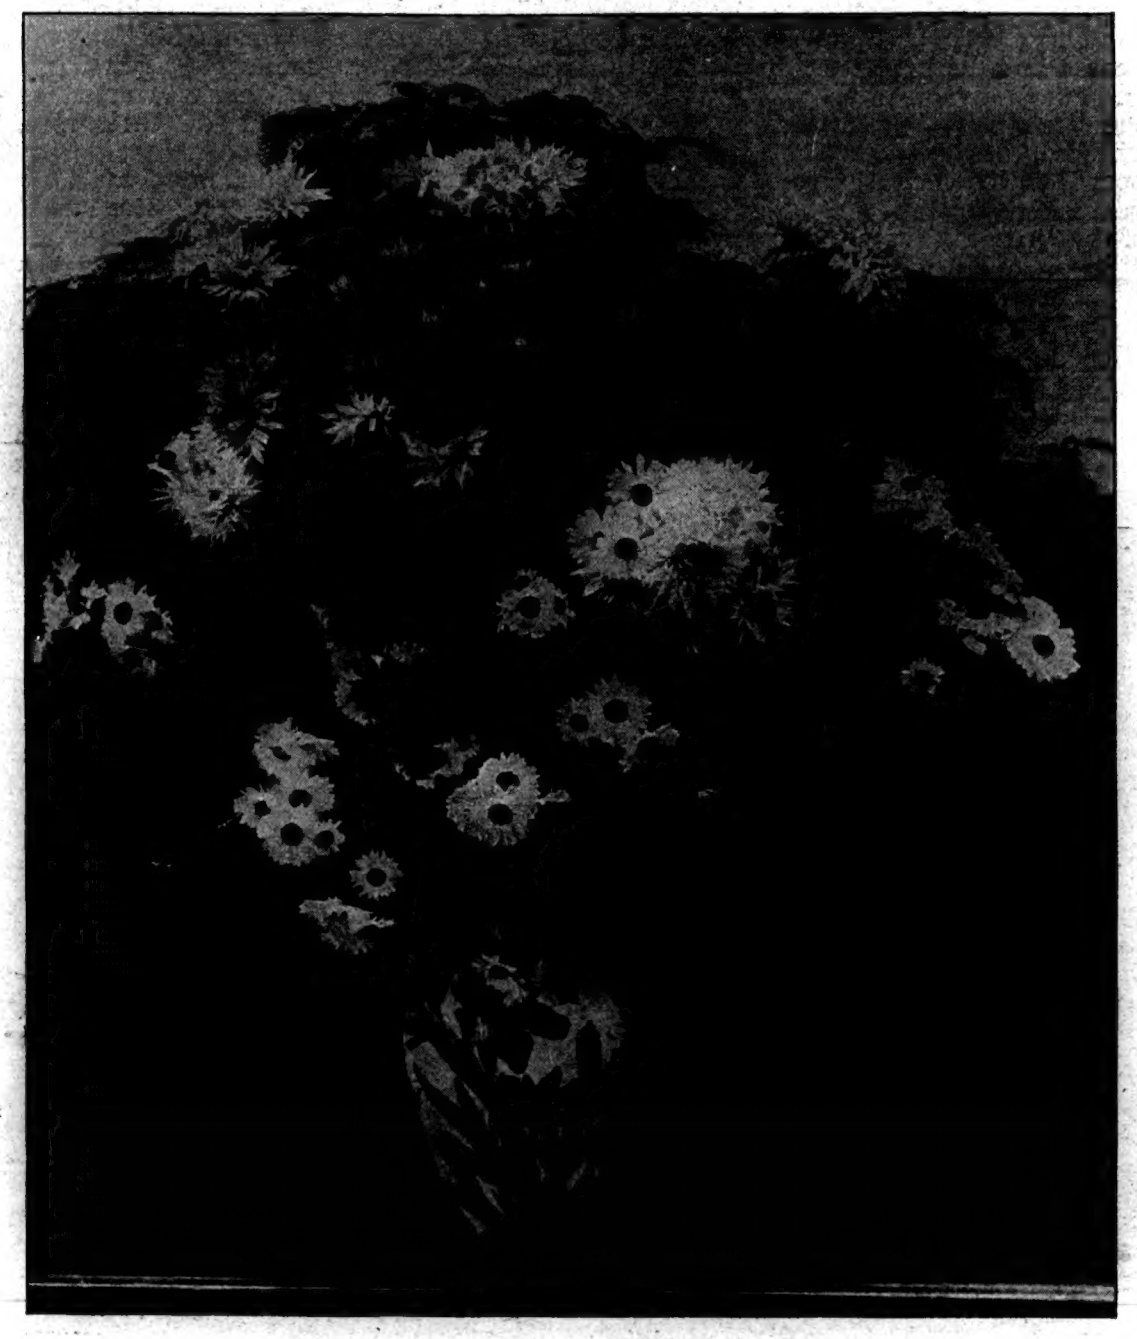
Chicago, Dec. 2, 1897.

CHRYSANTHEMUMS

CHRYSANTHEMUM NOTES.

Do chrysanthemums pay? Many a man is just now figuring up his returns and on his face is a look of anxious thought. Competent judges declare that never before in the history of the New York market did good flowers wholesale at so low a figure; 10 to 12 cents was a good average price; deduct from this commission and expressage then ask again: Do chryanthemums pay? Ask me something else. Of course the retail florist with his local trade has a better chance of getting a higher figure. He knows what his average consumption is and grows to meet his demand and nearly always one or two weddings just about that time will clean off his surplus. Chrysanthemums will pay him all right and he knows it. But the wholesale grower will tell you the business is yellow, yellow as a nondescript cur and not a tinge of the Klondike article about it, and on every hand one hears the same remark: "Next year we shall considerably reduce our number of plants."

Every little while we hear that the people are getting tired of the big flowers and that more money could be made by not disbudding, but growing long sprays of flowers. This season has shown that it was not the big flower but the big price that the public kicked at. Graceful sprays with a dozen flowers on a stem may appeal to the æsthetic soul but they never touched his pocketbook for they did not pay the expressage. The glut of medium to small flowers that have filled the market all through the season ruled prices and made any reasonable return utterly impossible. Some one has said this is an age of mediocrity. Is it going to apply to the florists' trade also?



Growing Chrysanthemums in Boxes.

The lesson we should take to heart from the experiences of this year is, first and foremost economy in production. The illustration will give the reader an idea of a cheap and easy method of raising good flowers with a minimum of labor. The box is 4 feet long, 10 inches wide and 5 inches deep, made of common hemlock boards, taking for each box 18 feet of lumber 5x1. This can be bought sawn into the proper lengths and with cost of nailing together will only average about 20 cents. If the boxes are stored away in a dry place after they are done with and given any reasonable amount of care, they are good for three or four seasons without any patching up to speak of. The advantages of such a box are that it is easy to handle, does not require any more attention as to watering than a bench would, can be moved at any time to any place desired and will accommodate five plants of any variety and six of close growing kinds like Philadelphia or Helen Bloodgood. Each plant can be stopped so as to grow two good flowers and if size is not a desideratum three could be taken just as well as not.

Stock Plants.

The florist is hampered for room as a rule. Everything is clamoring for space and in consequence too often his stock plants are thrown under the benches to grow if they will. If they don't, "well, young plants are cheap in the spring," and the business rushes on. The best way is to strike the strongest suckers you can find right away. Just a few of each kind and as soon as they are in fit condition plant out in a bench in a cool house. Stopped once or twice they will give an abundance of healthy cuttings in the new year that will be much more vigorous and which will root more quickly than any that can be got from old stools at that time.

Why, oh why is it brother florists, that the average "mum" cutting one buys or sees in January and February is such a miserable, insignificant looking little object? Get good healthy cuttings above everything, even though you don't get quite so many. If the "mum" were not the hardy, naturally vigorous plant it is, the record of failures in successful culture would be enormous. As it is, rust, blight and other diseases are increasing,

Vase of Naturally Grown Chrysanthemums.

and largely due, I am convinced, to the unnatural treatment the plants receive during the winter. Some growers place their old stools out in cold frames, cover them up and leave them for the winter, and this practice is perhaps more to be commended than leaving them under the benches to have the life drawn out of them, but unless the winter is mild only the stronger kinds start away good in the spring and lots of varieties may need to be renewed.

Next week I will give a list of varieties that we have found most useful on account of shipping, keeping, and other qualities.

New Jersey. CHARLES TOTTY.

VASE OF CHRYSANTHEMUMS.

Our illustration represents a vase of chrysanthemums "grown naturally," and include the varieties, Daisy, semi-double white; Silver Cloud, blush white; Defender, dark crimson; the old fashioned Elaine, white; W. H. Lincoln, yellow. These should find a ready market, but alas! beauty and æsthetics are not always a marketable product, though what could be handsomer for decorative purposes! We know a grower who shipped fifty handsome sprays like these to a wholesaler, but his returns were only 50 cents, and he says he will attempt no more the education of an exacting public who want only what is "fine and large" and colors that are equal to one-hundred candle power.

The wholesaler, however, is no friend of the chrysanthemum, and dreads the day of its first appearance, and his heart is made glad by its exit. But you may break up the vase and do what you will, the large chrysanthemum will stay with us still. H. A. B.

THE STATUS OF THE CHRYSANTHEMUM!

The wonderful strides made in the improvement of the flower in the past five years or so, both in the high culture given it and also in the perfection of new varieties, causes the question to be asked anxiously each recurring autumn: "Have we reached the limit in size, color, form and general perfection?" The answer, we think, is still in the negative, for much remains to be accomplished before we have reached the ne-plus-ultra in the three principal colors.

Our method of staging chrysanthemums with long stems and foliage, shuts out from the exhibition table a large percentage of all foreign varieties introduced, as well as ninety-nine per cent of American seedlings which are fine in many particulars but lacking these two essentials. A very few years ago, we were not so hard to please but now, *texture, a hard stem, width of bloom*, combined with *depth* and *fullness, foliage* up to the flower, not to speak of *color*, all of these are requisites in all new applicants for favor.

The qualifications for the successful entry of varieties in classes for exhibition demand the same characteristics that have placed the most popular standard commercial varieties where they are today, and in addition the exhibition sorts must of necessity have *size* also.

The tests applied to a new variety are very severe, and it must pass them with a good percentage before it can enter the social circle of its tried and older friends of the true aristocracy of the chrysanthemum family. All this tends to the improvement of the family and the new variety which has run the gauntlet of the committees may, ten chances to one, be depended upon as a real acquisition.

The Exhibitions.

An inquiry into the success of the fall shows of 1897 would be very interesting to the trade at large, and even more instructive than entertaining. A review of the various large exhibitions shows an almost unanimous report of a higher quality than ever of cut blooms, an average quality of specimen plants, fine exhibits of roses, carnations, violets, orchids, palms, ferns, table decorations and designs; and yet with the notable exception of Chicago, the general report is a smaller attendance and "*not* a success b*nancially*," followed almost invariably *fly* the statement that the show had been well advertised, the decorations and music were fine, and nearly all the shows enjoyed fair weather on a majority of the days.

Where lies the trouble? Are the people growing tired of flower shows? Is the admission fee too high? Do they want more variety, and if so, how in the name of Flora can it be given them? Must it be under the patronage of the "Ladies of the 400," or is it works of art that the public crave as a surrounding for the flowers? We confess that we can't answer what the public wants.

We observe that *high* admission fees, as at the Astoria, do not bring out crowds of the exclusives, nor does the twenty-five cent fee attract great crowds elsewhere. We do not think that lack of variety can be alleged against many of the exhibitions for they are no longer chrysanthemum shows, but are true flower shows instead.

We do not claim that our shows have reached perfection, by any means, for every year we see room for improvement; our vases are not always in keeping with the treasures that they hold either in color or in form; very much can be done in the way of providing effective backgrounds; and we sin oftenest in setting our vases on tables so high that the visitor must look up to the underside of fine blooms, when he longs to look down

upon them and be satisfied. But it would seem that these must be minor points. Neither can it be urged that "once seen, always the same;" we have never heard of the "public" tiring of the cherry trees and the apple boughs, though they exhibit the same bloom, in the same setting, every May; they rave over the scarlet and gold of the maples each succeeding October; has the "admission fee," anything to do with the "success" of nature's exhibitions?

Over in England the National Chrysanthemum Society has just given its 51st exhibition; judging by the printed reports it has eclipsed all former efforts and we suppose that it has been a "success" as nothing has been said to the contrary; neither is anything said in any of the various reports as to the attendance, the admission fee, the advertising, the decorations, or any of the other features so absolutely necessary to an American chrysanthemum show; and year after year the British public has turned out and enjoyed with perennial enthusiasm the "12's" and "24's" and "48's" of Chinese, or Japanese arranged flat on boards without sign of stem or foliage; year after year they fight anew the battle of the "true-incurved" and its spurious half-brother; although they were shown last year a beautiful example of the American style of arranging long stems in vases, with which, we judge, they were mightily pleased, by no means do we find them throwing their boards to the woodpile in 1897.

It would seem that English flower-lovers are not chasing novelty and variety in *their* shows. We wish that Mr. C. Harman Payne, or one of the large exhibitors, could give us a little insight into the *modus operandi* of the "success" of the English shows; we would also like to hear from the spokesman of the "Big 4" of Chicago: Chadwick, Egan, Rudd, and Anthony, who certainly are to be heartily congratulated on their recent achievement.

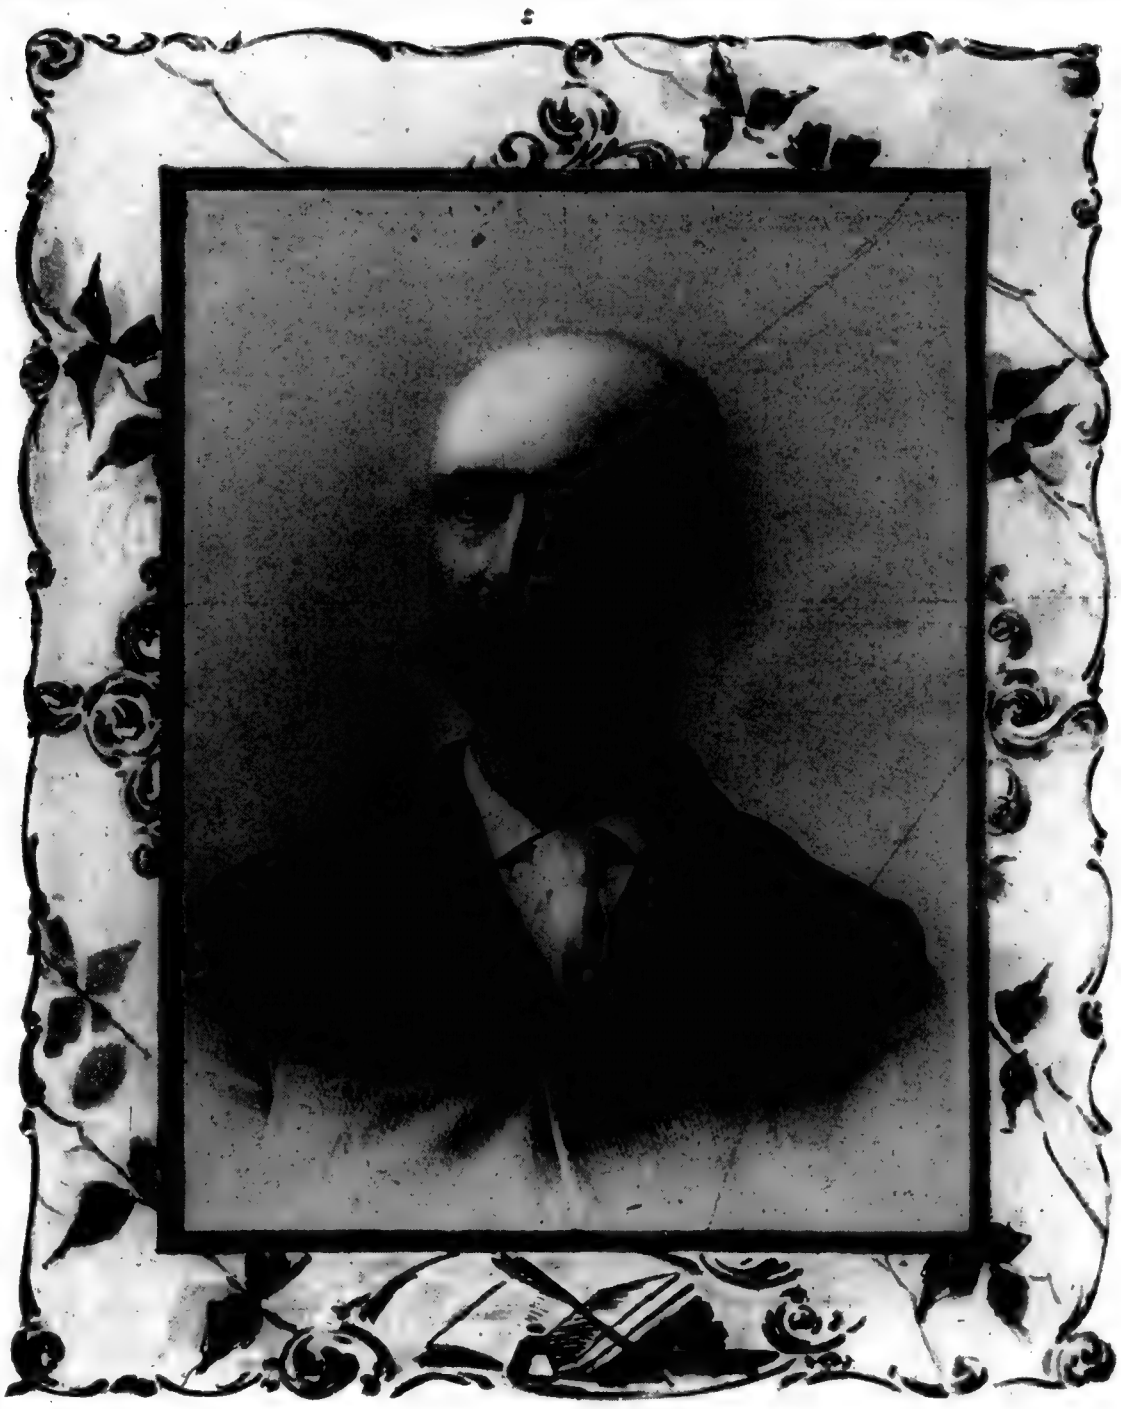
One thing is certain, the florists must not tire of their efforts to make the fall shows a success. We must all make the matter a study and we shall finally solve the problem. We cannot allow it to go unsolved without loss to the trade and a distinct loss to the public as well. Many people who are not yet true lovers of flowers for the flower's sake, are still buyers of flowers for fashion's sake, and will continue to decorate their rooms and dress their tables just as long as they are the style, and there is nothing like the flower show to bring the best and newest to the notice of the people, so that our problem resolves itself into the simple question of how shall we get the people generally to attend our floral festivals?

E. G. Hill.

Arrangement of Plants.

The two "stars" of the past chrysanthemum season were the new white, Frank Hardy, and the new yellow, Pennsylvania. Both scored very high with the committees of the Chrysanthemum Society of America and will undoubtedly take a high place in the list of the really useful commercial varieties.

NOVEL PLANT ARRANGEMENT.



Our illustration represents a very exquisite creation by the well-known Fifth avenue florist, Mr. George Stumpp, New York, and is gotten up specially for the Thanksgiving and Christmas trade.

It comprises a handsome basket (of any design, lined with tin), somewhat deeper than the ordinary flower basket, filled with plants (in or out of pot), standing on a bamboo or gilt pedestal entwined either with smilax or asparagus.

The cost of producing such a basket depends entirely on the material used, and it can be filled either with cheap or expensive plants, though the more variety the better, so long as colors are harmonious.

The plants used, as seen in the example, are: Center-piece, Pandanus Veitchii (6-inch pot), Areca lutescens (5-inch pot), Cocos Weddelliana (4-inch pot), while the balance are well selected and pretty green and foliage plants, and include 3-inch ferns, Maranta bicolor, Tradescantia Reginæ, Ophiopogon jaburum, Peperomia argroneura, and the dainty variegated grass Poa Chinensis variegata; the trailing plant seen is Veronica radicans variegata, and here and there among the plants and on the handle of the basket are placed small branches of the red "bird-berry," a variety of cratægus indigenous to New York State, the whole surmounted by a bow of white ribbon; at Christmas a crimson one adds richness and warmth to the whole. As mentioned before, if a pedestal is used smilax or asparagus has a delicate effect.

No two baskets need be made alike, and "variety is the spice," as in all of this work. The following plants may be used to good purpose: "Colored" dra-

William Scott.

cænas, all palms and ferns, including Adiantum Farleyense, Cyperus alternifolius (green and variegated), crotons, and many other pretty plants, also different varieties of berried sprays. H. A. B.

WILLIAM SCOTT.

We present herewith an excellent portrait of Mr. William Scott, of Buffalo, N. Y., who is undoubtedly the most popular writer on matters connected with the trade, and who, we are pleased to be able to say, will in future confine his correspondence to the FLORISTS' REVIEW. Mr. Scott's versatility has been a constant source of amazement to the writer of these lines, who early noted his ability and encouraged him to write more and more freely for the trade press. No question referred to him seems to have been too complicated for him to answer, and many times matters outside of a strictly trade character have been treated as ably as they would have been by a specialist and in a far more practical and entertaining manner.

Mr. Scott carries on a general florists' business in Buffalo. He has a down town store and has an acre of land in almost the geographical center of the city and 30,000 feet of glass. Also 12 acres of land in the village of Corfu, near Buffalo, with 18,000 feet of glass. The latter establishment is devoted almost entirely to the production of cut flowers. His business covers all the various divisions of the trade and this accounts for his familiarity with such a wide range of subjects. This being supplemented by a wonderfully retentive memory aud a peculiarly happy, clear and graceful style of composition, has made him the most valued contributor to the trade press. But his popularity does not rest solely upon his writings. He believes in visiting his fellow craftsmen and has traveled extensively. He is good fellowship personified and to meet him is to feel he is your friend, if you are worthy of such friendship. We question if anyone in the trade is now more generally known or more universally esteemed than William Scott, and his able administration of the office of President of the Society of American Florists is fresh in the memories of all.

Mr. Scott was born July 31, 1844, at Leigh Park, Hampshire, England, the country home of Sir George Thomas Staunton, one of the finest gardens in Europe, where his father was head-gardener for 27 years. He attended a private school in the neighboring town of Havant till he was 13 years of age at which time the schoolmaster became insane, but Mr. Scott says this was not his fault. He began work in the garden shortly after this and the first job of gardening he can remember doing for wages was weeding chrysanthemums that had been cut down after flowering and were standing in pots under the shelter of a hedge. At 15 years of age he had the care of a conservatory that had to be so scrupulously clean and neat that the petal of a camellia must not be seen on the snow white paths or the trim kept border. Among the plants in this old-fashioned house (which he says he has since often dreamed he was neglecting) was a Phormium tenax some six feet across, oranges of various species or varieties that yielded bushels of fruit, an Acacia pubescens that went to the roof, and a grand specimen of Araucaria excelsa ten feet high and perfect in form, and still, such is the mildness of the climate of the south coast of England, more than one winter passed without the fires being lighted to heat this house.

In this beautiful garden were not only the rarest exotic plants, including for those days a grand collection of orchids, almost all the economic plants, and exotic fruits, grown to perfection, but the highest type of landscape art was exemplified. The beauty of the place attracted many visitors and. Mr. Scott was privileged to see many of the illustrious men and women of Europe who came there to enjoy that beauty. The old baronet cared nothing for fox hunting, shooting or any other sport that enters into the life of a rural landlord in England. He liked to have as his guests the brightest lights of England, to talk botany to Sir Joseph Hooker, and to be known as the greatest authority in Western Europe on China and the Chinese language. He had spent many years of his earlier life as an attache of the British embassy in the land of the "almond eyes."

When the subject of this sketch was 17 years of age his father removed to Chichester, where he rented the Northgate Nurseries. Mr. Scott worked in the nursery, greenhouses and seed store of his father till the spring of 1868, except for two years during which he was employed in the seed store of Mr. W. H. Rogers, of Southampton, famous as a most estimable man and as a good grower of rhododendrons. In the spring of 1868 a spirit of adventure came over the young man, his brother, and his friend Mr. E. I. Mepsted Australia was the objective point, but was too far away. Then Port Natal was mentioned, but still too far away to please the loving parents. Canada was settled upon as a compromise, but the good father said: "Boys, the United States is the place for you, and I have many friends there." James Fleming, then in partner-

ship with Peter Henderson, was one of the old Leigh Park men. Mr. Buist, of Philadelphia, and Mr. Brackenridge, of Baltimore, were old associates of the elder Scott in Edinburgh. Mr. David Ferguson, of Philadelphia, was another Leigh Park man, and there were others in the United States.

The watering pot was thrown down one Saturday night in March, with the expectation that it was never to be handled again and the trio were off for the backwoods of Canada to trap and hunt and get in close communion with the redmen of the primeval forest. A look at the forest, about three miles up Yonge street, Toronto, was enough for the party, and through the kindness of Mr. George Leslie, the well-known nurseryman, the party was quickly back at the old trade. The following winter Mr. Scott was in the employ of Mr. James Pape, who grew plants for the Toronto market. The summer of 1869 they tried market gardening and the seed business in Stratford, Ont. There were too many in the firm, as was evidenced during the dull months when the gross receipts of the day amounted to not over $1.25. So they paid their London seed bills, and all other bills, and through his old friend Mr. George Vair, Mr. Scott engaged with Mr. George Bailey, of Buffalo, who was then one of Buffalo's most prosperous manufacturers and was building a fine place. Mr. Scott was "imported" to work for him in 1870. He crossed the Niagara River under conditions that would now be a direct violation of the contract labor law. But in this case low price was not the motive for importing "a foreigner," for he received good wages. The first two years, and especially the second year, he *saved* $50 a month and kept a wife and prospective family.

In 1876, through the declining business of his employer he was almost compelled to rent the houses, quite a little commercial growing having been done the preceding two years. In August, 1876, an agreement was made by which, for the use of 3,700 feet of glass for eleven months, Mr. Scott bound himself to pay $1,000. This included the use of the stock, but that consisted mainly of bedding plants from which he could get cuttings for another year. The only thing to return any money that winter was a few thousand good carnation plants. As he had invested his previous hard earnings in a small farm which he found out too late passed considerable periods under four feet of water, he started without $10 working capital. It was hard scratching when the second installment of the rent ($250) came due in February, but when the last payment of $500 was made June 1, he had cash in abundance. The place not being sold he rented it again for another year at $600, at the end of which time he secured the property on Balcom street, where he now lives, and built two houses, each 20x100. He rented the Bailey place for the third year and at the end of that time gave it up. Since then several young men have tried to run the old place at a rental of $300 a year, but always at a loss.

Mr. Scott speaks modestly of his present establishment as but a moderate sized place compared to those of many younger in the business, and while this may be true to a certain extent his place ranks with the large ones and nowhere are plants and flowers better grown. Quality is sought rather than quantity, and the former is found to pay better than the latter, though Mr. Scott comes pretty near getting both.

A beautiful note in Mr. Scott's character is his sincere affection for his excellent wife. In referring to his early struggles in business he freely accords her the credit for his success, and says that without the help of his most true and loving helpmate he never could have accomplished what he has.

Mr. Scott has always believed in employing plenty of help of good quality and paying good wages. He hates to see an intelligent young florist put down on a level with an hostler. No tattered and torn urchins are ever seen on his place. He cares not as to the nationality or religious faith of his workmen, but insists on intelligence, integrity and industry. In speaking of himself Mr. Scott has said: "I do not wish to be judged by what I am worth, but by what I have earned and done."

What Mr. Scott has done for his fellow craftsmen through his contributions to the trade press is well known to the readers of this, and all will be pleased to know that his pen is to contribute regularly and freely to these columns, but we have a still more pleasant announcement to make. Mr. Scott is now at work on a book which will prove an inestimable boon to the trade. It is to be entitled the "Florists' Manual" and will cover the whole field of commercial floriculture, the subjects arranged in alphabetical order, encyclopædia style, so that the cultural details regarding any plant may be quickly looked up as desired. It will cover construction, heating, labor saving devices, peculiarities of varieties, and everything connected with the trade about which a florist may occasionally wish to refresh his memory, the retailer as well as the grower. This book will be published by the publishers of the Florists' Review at a moderate price and a very large circulation of the book is assured. This will undoubtedly be Mr. Scott's crowning work and he is devoting the greatest care to the preparation of the various articles, which will be as full and complete as possible though still terse and condensed. The art of telling a great deal in a few words is possessed by Mr. Scott to a remarkable degree and he is peculiarly fitted to write exactly the sort of matter for which there is a need. We know the appearance of the volume will be looked for with the greatest interest.

ORCHIDS

CATTLEYAS AND THEIR CULTURE.

There is not in the cornucopia of the floral goddess a flower that has more admirers at the present time than the cattleya. What flower could draw forth more genuine admiration than the beautiful specimen herewith reproduced (page 8) with its ninety exquisite blooms all fully expanded at one time? Such gems, I presume to assert, can never be looked upon with scorn—except by the utterly perverted, nor can they be offered to the spoiled child of fortune without an implied compliment. Every year has advanced their popularity and enhanced their beauty in the shape of some stranger of garden or natural origin that has forced itself upon us by the marvelous beauty of its markings or size of flower. Considering how easily and inexpensively a large number of them can be successfully handled it is surprising to me that they have not received more general attention from the growers, for there is no doubt that the cattleya is the flower of the future where chasteness, fragrance and richness of effect are desired.

The different methods of mounting specimens shown here in the illustration are all very simple and inexpensive and if carefully carried out are sure to give satisfactory results, thereby commending themselves to the growers in general. Figs. 1, 2, 3, 4 and 6 in the illustration are methods preferable to pot culture, because you can water, feed heavier, and dry out quicker than is the case with pots, and you can understand the condition of your plants at a glance; inexperienced labor is not so liable to err and one man can handle by this system three times the number of plants that he could were they in pots. Lager and Hurrell of Summit, N. J., are the pioneers in the long board system (Fig. 4), a system that is highly commendable.

Fig. 1 shows plants mounted upon a fern stem, the plants fixed thereon by means of long wire staples clenched on the other side. I prefer these stems to anything else for growing cattleyas upon because you can deluge them with water

Cattleyas Mounted in Various Ways.

with no fear of injury as they dry out very quickly.

Fig. 2 shows the ordinary orchid basket which is to my mind the next best method of growing. I use the fern stems here also. I put as much as I can into the basket, then fix the specimen upon the top with wire staples; in all cases a small wad of peat is used between the staple and the plant to insure against the acidity of the staple.

Figs. 3, 4 and 6 you will perceive are boards. We adhere to no particular kind of wood as we find that the cattleya will take to anything if it is clean. In mounting the plants here we use short staples and wire nails. We place a thin cushion of fibrous peat upon the board and spread the plants well out, nailing them firmly down with the staples.

Fig. 5 is the most familiar way of growing cattleyas and is very desirable in a great many cases. They are easy to handle and serviceable for house or decorative purposes, in fact they are indispensable in a private garden.

I again recommend the fern stems instead of the orthodox compo of pot shreds, peat and chopped sphagnum. Pot in the ordinary way with pieces of fern stems, top-dress with sphagnum as the season advances. In regard to stimulants, it is an understood fact that the climate of this country is very exhaustive both to animal and plant life, therefore to maintain the longevity of your plants you must feed well. By considerable experience I have come to the conclusion that you may use any mild stimulant directly to the root of the cattleya with beneficial results. Some experienced growers use various salts, such as nitrate of soda, potash, sulphate of ammonia, etc., but in the hands of the inexperienced they are dangerous except for atmospheric treatment. Cattleyas handled right, on the cool and airy system, under very thin shade, coupled with the above remarks, ought to produce flowers of great substance, color and size.

Cattleyas when growing require a genial moist atmosphere, with a temperature as near 60° as you can keep it. When resting you will preserve the vitality of the plants by maintaining a drier atmosphere, with just sufficient water at the root to keep the psuedo-bulbs from shriveling, a temperature from 45° to 50° with plenty of air and light when permissible, and if your plants have been grown under thin shade, as advised, you may now expose your labiatas to the full benefit of the winter sun, which will insure a strong lead in March, with positive flower.

Varieties most desirable for commercial work are: Labiata, Trianæ, Mossiæ, and Gigas, which will give a succession of flowers from October to June.

J. ROBERTSON,

Madison, N. J.

(To be continued.)

NOTES ON PARK PLANTING.

Tree, shrubs and grass largely form the scenery of nature, and their harmonious arrangement constitutes the charm of a pleasing landscape; the study then of where to plant, how to plant and what to plant, is an important one with reference to the planting of public parks.

Generally speaking a park should have a broad belt of trees and shrubbery on its borders, an exception to this rule being when a desirable view can, by the omission, be obtained beyond the limits of the park, and this should not be done to the detriment of any view or effects within the park, unless the view obtained is of surpassing beauty or interest and is not likely to be shut out by buildings or other disturbing features introduced into the foreground by the growth of population. The object of the bordering belt of woods is to shut out urban life, and to provide masses of foliage as a rest for the eye across the interior vistas. The importance, then, of planting as soon as practicable this screen and background is apparent; its absence makes difficult the creation of good landscapic effects within the park.

It may be laid down as an axiom in park development, that to prepare for planting should be the first aim of the landscape gardener, that no work of any kind should be done in preference to that which can be done in the furtherance of this object; roads, walks and buildings are only secondary in importance in the initial steps of park construction, and should only have such attention as may be necessary to further the preparation of the ground for planting.

The outlines of the bordering timber belt should conform to the natural expression of the topography of the ground, or be varied to form recesses and projections along the foliage line, every point or bay being studied with reference to

Specimen Cattleya Labiata.

harmony with other conditions existing.

The planting of the interior should not be attempted until a comprehensive study of the ground has been made from all points; cast iron rules can not be framed here for guidance; perhaps the configuration of the ground will permit of the development of a more or less large open space surrounded by rising ground, than which nothing is more simple in its dignity and expression. Assist nature in the direction indicated by clearing away from the open any scattering trees or shrubbery, unless the trees are perchance of noble proportions and not too frequent to destroy the effect of distance; plant then the rising ground to form a background—a setting for the picture—reaching out to within the borders of the meadow at places, forming bays and bends for the play of lights and shadows, and apparently lengthened vistas, or misty distances.

Old existing woods which have grown without intelligent care can be improved in outline, naked boles can be hidden, and the foliage line brought to the ground by the judicious planting of their borders, for which purpose nothing can excel cornels, viburnums, amelanchiers, the Judas tree and sumacs.

To correct a bad line or to blend the natural wood into the general scheme it may be necessary to plant timber trees, adding them to the old forest; the effect of this is bad while the trees are small, and is to be avoided if the intended effect can be attained by cutting out a part of the forest.

The water side can be treated effectively by planting heavily bold points or bluffy shores, allowing the meadow to approach the water at low bays or indentations in the shore line, the general effect, however, should be that of enclosure.

Roads and walks should never intrude into or cross large open spaces designed for foreground or vista effects, and they are happily planted when, as they skirt meadow or plantation, openings are occasionally left on either hand for glimpses into the recesses of the woods or over the broad open ground; walks and shade should go hand in hand, and only be divorced under extreme exigency.

The preparation of ground for planting is a matter of the first importance. If it lacks in depth of good loam the omission should be generously supplied; without good soil vigorous tree growth cannot be obtained, and large expenditures for procuring it is money well invested and in the line of strict economy in park administration.

Unsatisfactory also are results if holes are simply dug into the hard packed ground, or if the surface is merely skimmed by the plow, and the trees thrust in, and left to fight as best they may with a growth of grass or weeds; give to young tree plantations the same culture a good farmer would give were the trees hills of corn; plow and subsoil at least twice during the previous fall months, and reduce the ground to a fine mellow condition.

When planting for groves or masses, plant thickly; the intended permanent trees may be planted from thirty to fifty feet apart, according to expected development, and the space between filled with other trees ten to twelve feet apart to serve as protection, from which selections can be made from time to time (as growth proceeds and overcrowding threatens) for planting elsewhere. Close planting is conducive to rapid growth from the protection each affords the other; the plantation also serves as a nursery, the profit of which will amply pay for constant never tiring culture, the only note of

warning required being to thin quickly before damage is done. Close planting may be advocated even for small groupings, the protection and tilth being of great benefit to the intended permanent trees, beside the effect of mass is the sooner attained.

Much time and money has been wasted, and much disappointment incurred, by planting trees and shrubs in ground without adequate preparation, and with little subsequent care; how often in a hard baked soil holes are dug scarcely large enough to hold the roots, the trees are jammed in and left to their fate; their bark, tender from the shade of close nursery rows, exposed to the hot suns of summer and the freezing and thawing of winter, soon succumbs, and the trees at best linger out a short existence of stunted growth.

Good soil, deep plowing and constant cultivation are the essential conditions required for success in young tree plantations. Cultivation should be continued for at least two years after planting, or until the branches shade the ground, when grass may be sown or an undergrowth of suitable kind may be planted.

CARNATIONS

CARNATION NOTES.

Carnations! Roses! But not to crowd too hard on the well merited fame of the Queen of flowers, I will say: Roses! Carnations! If the one claims royalty, the other is divine. Queen and Priestess; two powers that reign supreme. The Queen of Autumn may overshadow the two in her time but not wholly, her reign is short, she comes with a dash and vanishes as she appears. She needs a long rest, or better, say a ten months' retirement before she is able again to resume her power; and well may we grant it to her, for her short reign is rather an incentive to appreciate roses and carnations so much better again, than to cause a depression of the value of these two staple articles.

It is interesting to observe the turn the fall exhibitions take in their make-up, and this has been especially noticeable in the ones just closed. Of course the chrysanthemum is queen, but she has every year more to content herself with other celebrities, to divide the honors of the exhibitions with other flowers, and of these the two most prominent are again roses and carnations.

But to be specific, the time of our fall exhibitions is most disadvantageous to the carnation as a show flower. Although in the market every day in the year, the plants only housed a short time ago are not up to their standard to produce flowers of the same quality as a few weeks later. But still the carnation is there and demands her share of the honors.

This brings my mind to the often tried experiment of indoor summer culture. Well content that it is useless for me to try it again, I hear reports of success from other localities where the summer heat is not so intense, and where they enjoy cooler nights than in our section of the country. Where indoor culture through summer is feasible the grower can certainly produce better flowers for the fall exhibitions than otherwise; and if only for the sake of making a better showing such localities should feel encouraged in their efforts. Early successful planting of strong plants from the field is another advantage, and I believe such plantings will also insure better crops for midwinter than an all summer indoor culture.

We, like many others, were very unfortunate in this respect. The continued long drouth left our plants rather small and the extreme hot weather at the same time in the latter part of August and beginning of September, prevented an early transplanting. A disadvantage often proves to be a benefit in another way. The long drouth and hot, dry weather proved to be an excellent purifier of parasitic diseases, for in all my experience I never enjoyed more healthy plants than at present. Spot is totally absent, bacteriosis nearly so; I can only notice once in a while a few yellow spots, and these appeared since we have had more cloudy weather. Some new varieties that we received infested with rust showed very little when lifted, and we find it quite an easy job to keep the disease in check by picking the leaves wherever it shows its tell tale signs, and I feel still more convinced that this is the only remedy for a gradual eradication of this most tenacious but otherwise less harmful disease than others.

I have this season made an experiment in the preparation of my bench soil. I observed the same mode and care in preparing it, but made it only fairly rich. I used only about one-third of the fertilizers that I used before. My reason for doing so is this: I noticed that plants freshly transplanted in very rich soil moved on very slowly; it showed a plain case of overfeeding. The plants in their weakened condition are unable to assimilate or digest the abundance of food crowded on to them and besides take it up indiscriminately. The result is sick plants that very slowly overcome the check of transplanting, and when yet under the influence of hot weather a break down is certain.

The results of this experiment are very gratifying indeed. The first plants housed I could not take as a criterion, for they sweltered in the shaded house in a day temperature of over 100° and never below 80° at night, but they came through the ordeal exceedingly well. The most satisfactory results were shown later when the weather turned cooler, for then the plants fresh from the field moved on as though they never had been transplanted. In a week's time the white roots appeared on the surface clamoring for food and this was supplied them in the form of a mulch of well rotted manure partly mixed with soil, and now we are feeding with liquid manure regularly once a week. As soon as the balance between leaves and roots, disturbed by the lifting, is evened up again, the plant can stand liberal feeding, and the sooner this condition is brought about, the more time is gained; the plant is ready for work and with judicious feeding more can be accomplished than with crowding the fertilizers in the soil in the first place. Water is given whenever it is required, and when we overdo this, bad results will follow; why not give the food in the same way?

At this time at our place the last cleaning of weeds and decayed leaves is finished, the plants are mulched, the supports are in place, and we only have to follow up such routine work as ventilating, watering, feeding, disbudding, fumigating, and the cutting of the flowers. Of these I will write in my next.

FRED DORNER.

CANNAS AT RIVERTON, N. J.

The early part of the season was unfavorable to the development of this beautiful class of plants, heavy cold rains being the rule and it was comparatively late in the season before they made any progress; however after midsummer and along until October the show was superb, the different varieties being planted in long 400-foot rows across the field, presenting a bewildering maze of color.

The old favorites, Madame Crozy, Alphonse Bouvier, Florence Vaughan and Queen Charlotte, still hold their own against all new comers, in their respective types, but new varieties of merit are always welcome, keeping up the charm of novelty, making a pleasant contrast to the older varieties and affording a certain pleasurable excitement in watching their development. Amongst the latter are several which are well worthy of a place in every collection, having been tested for two seasons with the most gratifying results.

A great acquisition is Mlle. Berat, a variety with bright carmine pink flowers, a very profuse bloomer, throwing its rich compact spikes at just the proper distance above the foliage, standing the hot sun with perfect impunity and filling a long felt want in this color, being the nearest approach to a good pink, making a desirable fifth to the standard varieties mentioned above.

Leon Pepin Lehalleur has a fine rounded flower of a carmine red color, good substance and is a very free bloomer.

Hortense Barbereau is a gem, flowers fine cherry red with trusses of immense size, rich heavy foliage, and very desirable for massing.

Baronne de Poilly is an excellent variety with flowers of a rich orange salmon which open out very full, and are beautifully rounded.

Vice-Pres. Luizet has flowers of a rich cherry red with carmine reflex, conspicuous by its peculiar color and wealth of bloom.

Some of the older varieties which showed up finely were Furst Bismarck, a bright fiery red; Franz Buchner, deep orange suffused with scarlet with broad gold band.

Paul Meylan, a vigorous grower with beautiful orange red flowers, which though smaller than Madame Crozy is very desirable on account of its unique color. Beaute Poitevine is still the ideal crimson bedder, perfect in every way.

Adjoining the field proper a strip was set apart for the purpose of testing new varieties as well as for comparison with the older sorts, all of which were planted in rows of six plants each, side by side. Over two hundred varieties were thus planted, the most notable new sorts being Furst Hohenlohe, which promises to be the ideal yellow bedder, short compact growth, immense bloomer, with pure yellow flowers with the exception of the lower petal, which is slightly marked with red, fine compact truss.

Goliath, a velvety dark crimson, deeper in color than Bouvier, with large flowers and spike.

Sam Trelease is the gem of the collection, a variety raised by Mr. James Gurney, Superintendent of Tower Grove Park, St. Louis. It has the habit of Madame Crozy, with a large rounded flower of a rich glowing scarlet or the nearest approach to that desirable color.

Secretaire Chabanne, orange with deeper shadings, good bloomer and large flower.

Depute Ravarin, deep garnet, and Madame Favrichon, bright vermilion.

A large collection of the new Italian cannas were also tested, the most prominent being America, with its beautiful striped flowers and handsome dark foliage.

Allemania, with huge scarlet and yellow flowers, often measuring over six inches in diameter.

H. Wendland, a beautiful scarlet with golden border. Africa, La France and Pluto are all beautiful, with magnificent dark foliage.

In the dark foliaged Crozy varieties the best are Egandale, currant red; Admiral Avellan, orange red; and F. Neuvesel, beautiful carmine; the latter is an old variety but one of the best and most effective. J. D.

MISCELLANEOUS SEASONABLE HINTS.

Chrysanthemums are largely gone, and flowering plants for Christmas will demand our thoughts for the next few weeks. For several weeks past the weather has been just the reverse of what is desired to make sturdy growths and brilliant flowers—dark, gloomy, and wet, and not cold enough to need strong firing. For almost all plants when the weather conditions are such, a good heat on the pipes and a little air is always the correct thing to do. To let a house be damp and close because it is not very cold outside is the poorest economy.

Azaleas.

Azaleas for Christmas should be showing color now. Deutsche Perle, the beautiful double white, is the easiest of all to get in by the holidays, but Vervæneana, the irregular growing fine pink, and Simon Mardner, red, come in all right. A good syringing on the under side of the foliage will help them along and certainly help to keep down thrip and red spider.

The Calla.

The calla (Richardia) is now considered by many as quite unprofitable, but if you do grow it, don't forget that it should always have a night temperature of not less than 60°, liberal pot room, and a light house.

Harrisii Lilies.

The Bermuda or Harrisii lilies are now in flower with us, and there should be no difficulty in keeping up a good succession of them from now on. I have noticed for several years past there has always been a good demand for them at the holidays, not so many ask for pot plants as the cut stems for decorating. With the later crop of these, particularly the Easter plants, I adopted the plan pursued by an eminent Philadelphia grower, viz., to pot the seven to nine bulbs first into 4-inch pots. When they have made a growth of three or four inches you can tell whether they are going to be healthy plants. Many of mine are now just in that condition and in a week or so will be shifted into 6 and 7-inch pots. You can also pick out three plants of the same size pot into a 9-inch, and be reasonably sure they will all three flower at the same time. There are certainly a few of your customers who will give you three dollars for a fine pot of lilies. This plan of handling the lilies twice may seem more labor than putting the dry bulb at once into its flowering pot, but it has many advantages to commend it. It must be a saving of soil, and what is of far more value, space. I have never been afflicted with more than ten per cent. of diseased Bermudas, but have learnt that it is of no earthly use to allow them to encumber the bench after they once show signs of disease. I don't think it is infectious from plant to plant, but the disease develops with the growth of the plants, and any lingering hope that you will perhaps get perfect flowers from a diseased plant is futile. Consign them to the dump pile without delay, and return with a smile to put something else in their place or to grow to perfection what is left.

Poinsettias.

The poinsettia has for a long time been a popular and assuredly profitable plant with us. Don't leave them without a stake and a tie until they have curvature of the spine. They want and deserve a support. You know, of course, they are a truly tropical plant and want a hot house, but perfect light, or they will grow spindling and to an unsightly length. They are now showing their brilliant scarlet bracts, some three or four inches long, and if they show signs of exhaustion by their bottom foliage turning yellow, don't make the big mistake of shifting them at this late day; that will only add to their distress. Water them twice a week with liquid manure, and if it comes from the cow-stable there is none better for these strong feeding plants. About a hop, step, and a jump from where I am writing there is a batch of about 200 poinsettias that ten weeks ago gave promise of being an extra fine lot; if they had been then shifted into 6-inch pots they would have been, but that operation was deferred to about a month ago with the consequence that now they are a wreck. I don't look at them; we never speak as we pass by. Right across the bench is a big batch struck two months later and shifted two months ago from a 3½ to 5-inch pot; they are fine in every respect with the deep green leaves that so finely set off the bracts. While speaking of leaves in this advanced age of floral taste and arrangement, what flower is there that is valued or appreciated without perfect foliage? I know of none; even the humble violet must have its embellishment of healthy leaves.

Cyclamens.

Cyclamens will soon be in their prime. They are often badly troubled with green fly. A mild fumigating does not hurt them, but a good preventive of the aphis is to raise each plant on an inverted pot, giving each plant a good circulation of air, and on the bench spread two or three inches of tobacco stems. If fly is once killed the stems scattered among the plants will keep them down for a long time. About 50° at night is cool enough to flower cyclamens well.

Fuchsias.

There are not many cuttings to put in just now, as most of the bedding plants can be increased so rapidly later on. But fuchsias, if you grow them largely, should be propagated as early as you can. When "struck" two months later the cuttings are so anxious to flower that they do not made good-sized plants.

Begonias.

If you grow that once highly-prized but now so common plant, the Begonia Rex, and its many varieties, you should now have them in the sand, as it will take them all their time to make useful sized plants by end of May, the time when they are useful for baskets and veranda boxes. Begonia metallica and other begonias nearly allied should be propagated without delay.

Cytisus Racemosus.

Cytisus racemosus, that once favorite plant, should also be started to get a good plant for Easter of '98.

Bulbs.

I have invested this fall in a few thousand French Von Sion. I was unacquainted with them, but was talked into them, and from the early start they are making in the beds outside it seems that

Cross of Eucharis Amazonica.

they will bear up their reputation and flower with good stem at Xmas. which the "talk" assured me they would do.

If Romans and Paper White pay at all, it is certainly at Christmas and round that time. I have often remarked how much superior both of these flowers are when forced slowly, particularly the latter.

For some years I have not seen much profit in trying to force tulips for the holidays. It is difficult to do unless you have just the place and conditions, and does not pay unless you are in the specialty to a large extent. If there is one tulip more than another that would pay to produce at Christmas and for two weeks after, it is "La Reine"; true enough a white tulip when allowed to come along slowly, but with certain treatment assumes the most lovely pink shades. It requires great heat till the flowers are pretty well developed, then can be removed to an ordinary bench where the temperature is that of a rose house, its flowers will then put on that exquisite stripe of pink. My experience is that at no time do tulips like their roots roasted. A box built over the pipes where violent heat will not strike the bottom of the flats, but where the temperature surrounding the growing tulips will be steadily at 85° will force up the growth. Keep the top of the box covered with boards or a cloth, like ducking, till the flower is well developed; allow three weeks to force them. Don't attempt to force a double tulip of any kind, or a Dutch hyacinth, for many weeks yet.

Pansies.

I will remind you that if you want pansies that will sell before your neighbors, it pays to cover them with glass, and if that is not convenient, a layer of hemlock boughs is a far better covering than litter from the stable.

Cannas.

I don't know where you have stored your canna roots, but I do know that it must be somewhere where no drip from a bench falls on them during the winter or you will lose a large proportion. A dry cellar is too dry. Under a rose or carnation bench is an admirable place, but have provision to keep the drip from them.

WM. SCOTT.

CROSS OF EUCHARIS AMAZONICA.

The accompanying engraving is from a photograph of a cross arranged by Mr. Samuel Murray, of the Probst Bros. Floral Company, Kansas City, Mo. Mr. Murray is very fond of the eucharis, and grows large quantities of the flowers. He finds them a very profitable addition to his stock of flowers and has kindly favored us on request with the following notes on his method of cultivating the eucharis:

"We grow them in our asparagus house on narrow benches over hot water pipes. Our present crop, which is about gone, was eighty-three spikes, and would have been more but from the fact that about a month ago during a heavy rain water leaked into the bed from the gutters, started part of them up, giving us fifty spikes. But for the past five years we have had no trouble to have a full crop in during our show, giving us good material for floral work. They are planted in good turfy loam and mulched with well decayed cow and sheep manure. After flowering we give them plenty of water by syringing, so as to keep them free of mealy bug until growth is made. Then we keep them at rest by withholding water.

"We get two crops a year from our bench. We used to grow them in pots, but find the bench system less troublesome and very satisfactory."

HARDY FLOWERS FOR FORCING.

Although flowers enter so largely into the every-day life of the public in all our large cities and towns, it is surprising what a limited range of choice is offered to those who daily purchase them. What wonder then if stagnation frequently occurs when surely the most ardent flower lover must at times experience a sense of nausea, or, if not as bad as this, a strong desire to change off from the never-ending monotony of certain staples in daily supply the year round. Roses and carnations we have always with us, and violets for three-fourths of the year. No wonder indeed the chrysanthemum usurps the throne of the Queen of Flowers and is esteemed so highly during its bright, brief season.

None will deny there is room for more variety among market flowers, but all hesitate to break away from the old, sharply drawn lines of trade. Some have found out to their loss what missionary work in the flower trade involves, although it sounds very nice to talk about educating the public taste to this, that, and the other. Still the path of progress knows no termination, and only down this path will come relief from the present-day congestion with staple market commodities. This does not arise from the paucity of available material but from our own exclusive choice therefrom.

Take, for example, the vast family of hardy flowers now under cultivation, averaging considerably over a thousand species, with varieties innumerable besides. Are they ignored because they are hardy? Numbers are certainly amenable to forcing treatment and would prove a welcome change to present day

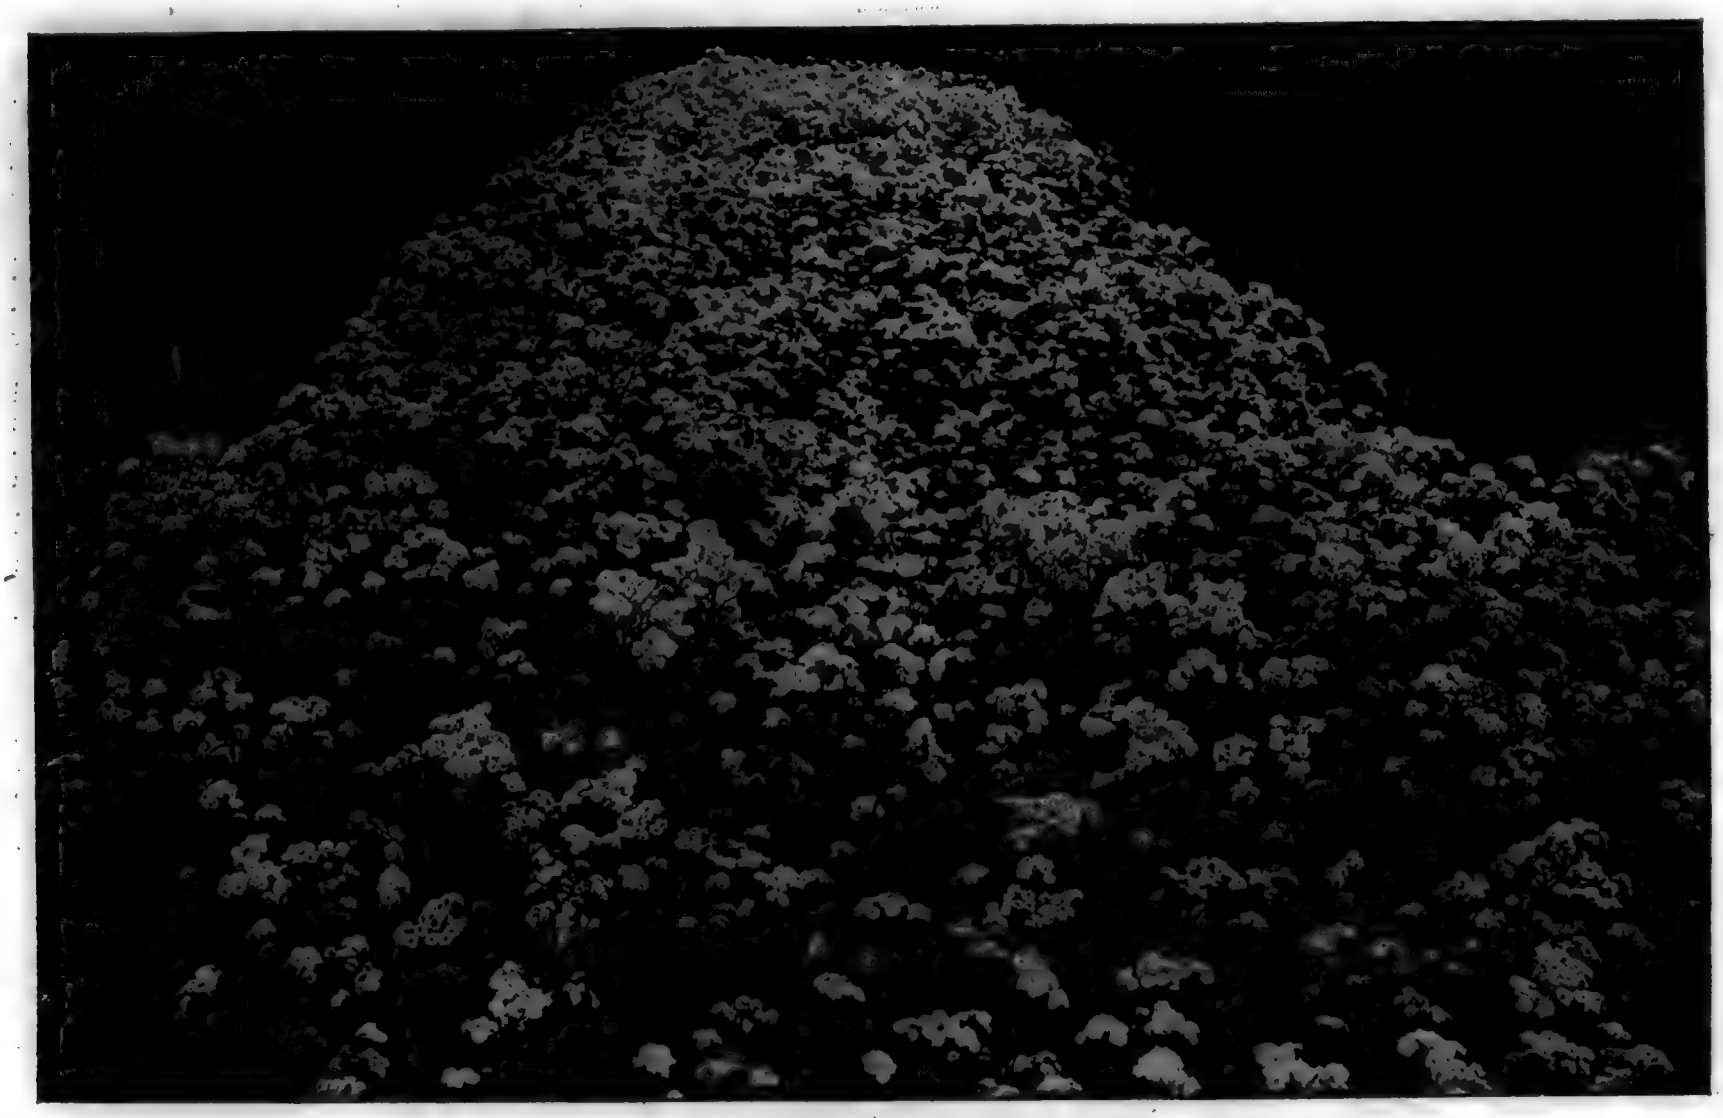
stereotyped custom. I was delighted to see on the market and in some of the best flower stores in New York in the early months of this year, long handsome spikes of the good old-fashioned snapdragon (Antirrhinum majus) in pure white and yellow forms, and I believe they sold readily. In a similar way we might have an advance season of many flowers that bloom later in the open air.

Lily of the Valley is always procurable, but why should we not sometimes see its stately and fragrant relative, the Solomon's Seal (Polygonatum multiflorum)? Nothing could be easier to force, whilst the graceful beauty of its arching leafy stems, studded with blooms of exquisite sweetness, would certainly attract to it much admiration. The pæony in its outdoor season is irresistible with its gorgeous munificence of brilliant colors. It, too, responds to gentle forcing conditions, and the hybrid roses forced for spring would have a strong rival if one only took such a tree pæony as Reine Elizabeth in quantity and flowered it under glass two months ahead of its natural season.

Among many families of flowers that come in May and June normally, especially to be recommended for the purpose here advocated, are trollius, pyrethrums, megaseas, aquilegias, hemerocallis, anemone, and irises galore; these are all adapted to cutting, whilst the possibilities with pot plants, assuming there is a demand and a market for them, are infinitely greater. To be successful with these plants one must secure good strong stock, potting it up or planting into boxes, or even on the bench of the greenhouse itself, and, beginning in the early days of the year, gradually inure it to forcing conditions. With a home plot where the plants could have good culture one might grow and always have good forcing stocks of the several subjects.

A. Herrington.

Madison, N. J.



Vase of Achillea The Pearl.

ACHILLEA PTARMICA PLENA—THE PEARL.

Some years ago I recommended this plant to a brother florist who was inquiring for a good all-around hardy white flower which could be used in bouquets or bunches as well as in the making up of floral designs during the summer months. He planted a bed of them the following spring, and was quite satisfied with the result of the first year, though the plants did not flower as early in the season as those he had seen with us, but they gave him a succession of bloom until very late in the fall, and when they came out early again the spring after he was so well pleased that he expressed his thanks in a letter for suggesting this plant. About six weeks after this pleasing communication, another one arrived, quite different in character. The bed had ceased blooming, the plants would not keep on growing and flowering after the first crop had been cut, as they did the year before, and he wanted to know what he could do for them. I soon found out that the bed had been planted rather closely and was now one solid mass of runners and roots, no space was left for the healthy development of the young stems, and the soil had received but very little nourishment since the bed was planted. I recommended a liberal top-dressing of fine rich compost and regular thorough watering for about two weeks as the best remedy for the present time, also advising the annual planting of a new patch either in spring or fall and the retaining of the older bed only until the first crop of flowers had been cut therefrom the second season. The younger plants will always give us a constant succession of bloom until very late in autumn (I have gathered some very good sprays as late as November 10), still we have to rely on the older bed for flowers early in the season.

The best results are obtained with this useful plant when planted in long single rows two and a half or three feet apart. Here the individual flowers are much larger and the sprays attain greater dimensions than when their roots are confined within the limits of a smaller bed; each new runner has a chance to develop to full size and will form a many-branched stem with a multitude of perfect shaped flowers. The soil should be made very rich near the surface; the roots have no inclination to go down very deep; about a foot or fifteen inches apart in the row three or four little runners are laid in, which soon form roots and spread out quickly. As the stems grow and elongate they may show an inclination to fall over; stakes driven in at intervals of eight or ten feet and twine stretched from one to another on both sides of the row, will effectually keep the plants in an upright position; the rain cannot splash the flowers into the dirt when they are thus supported.

Really well grown achilleas are seldom seen anywhere; it is a cheap flower, and not many of our florists care to spend much time and labor on them; they are generally satisfied to have a patch on hand to cut from in case of emergency when they run short of white stuff. It

Bed of Achillea The Pearl.

surely would pay them well to grow them as indicated above; then instead of using this pretty little flower only occasionally, they would come to the conclusion that it deserves to be employed regularly on all occasions calling for light and airy work. Ordinarily we see it used up in the groundwork of funeral designs, where little sprays are wound with wire so as to form a little tight bunch about the size of a carnation. All individuality is lost entirely; we cannot distinguish the exquisite shape of each separate flower—a bunch of white is all that presents itself. The loose sprays of finer and rarer flowers, asparagus green or the adiantum fronds over them partially hide the groundwork, and it may be all right in some instances to assign a secondary place to this achillea, but I would strongly advise the use of this charming little flower, occasionally at least, in more prominent positions. A bunch of them on an ivy wreath or on one corner of a pillow is decidedly pleasing; try it and you will be convinced. Being an excellent keeper, it is admirably well adapted for loose bouquets or for vases when cut with long stems. We may use it to advantage either alone by itself or in combination with other suitable flowers.

As to the culture or treatment of achilleas, very little need be said. Any ordinary good garden soil will answer if well enriched, but they do best in a somewhat moist ground. They are as hardy as anything we have and never need protection of any description. The old established plants will begin to flower in June; the corymbs on these are generally smaller and more compact than those produced on the younger plants, especially when planted rather closely in a bed; it is for this reason that I advocate culture in the field, where we always can count on the largest corymbs, which are never so close and compact even on an older row. The loose and spready heads are certainly preferable for cut flower purposes or for arranging in vases, while the more compact heads of last year's bed are perhaps better used in the groundwork of designs.

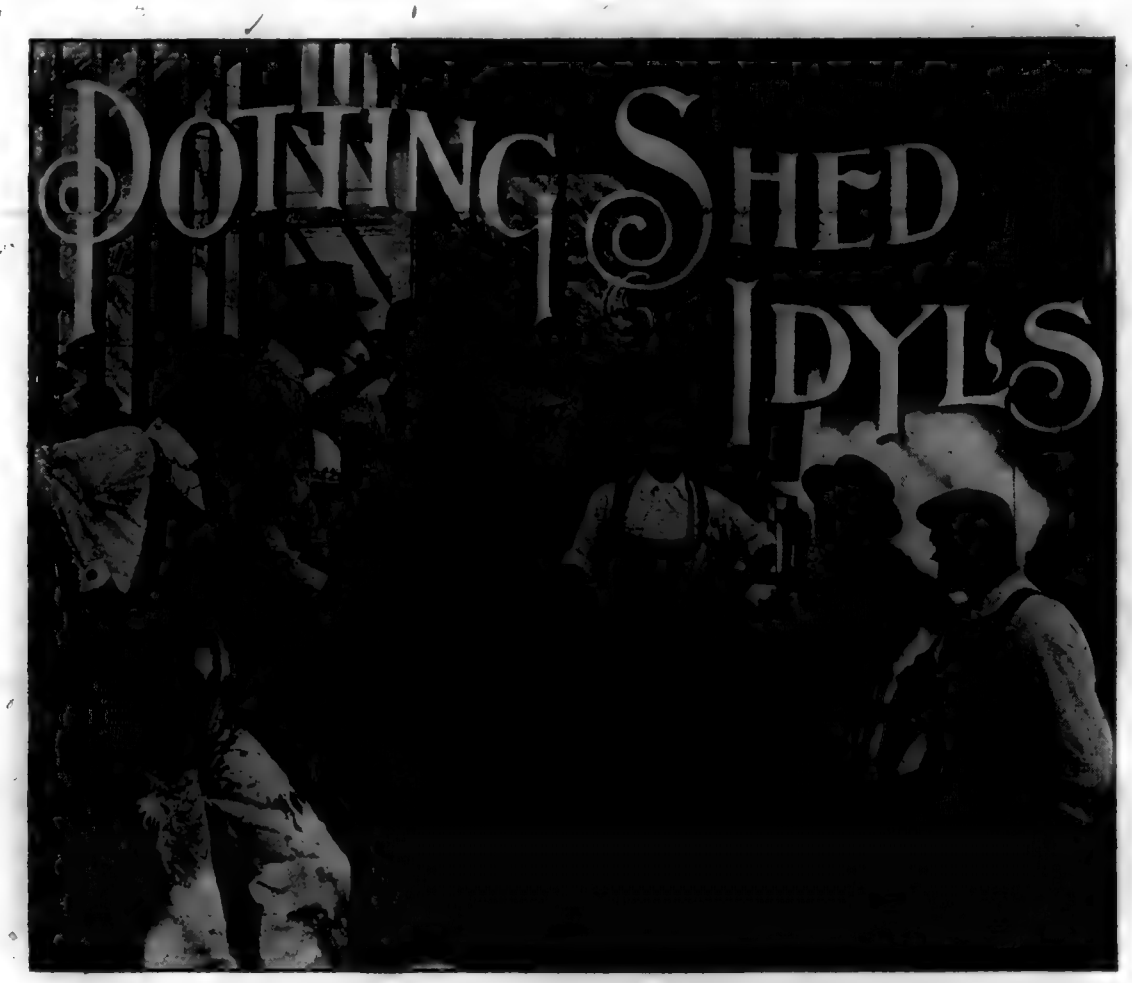
During the month of August we usually experience a prolonged dry spell, and the plants, young or old, may then stop growing, but one or two liberal applications of water will invariably start the young growth again, and a continuous supply of flowers can be expected with certainty until late fall. I know of but very few plants which are equally valuable in the home trade of the average florist; it supplies him almost continuously with serviceable material during the entire summer and autumn, and at a very small outlay a generous supply can be grown. Out of a dozen plants or clumps as they are sold by florists and dealers, we can make several hundred, because it is not good policy to plant them undivided; they do better when only three or four tips are planted together, though from the undivided clumps we would perhaps be able to gather flowers some weeks earlier, but later in the season the production would be inferior,

K.

A NEW FUMIGATING IDEA.

Through long years of experimenting with various methods to fumigate plant houses with tobacco, where a variety of different plants were growing, we generally had difficulty to dislodge aphis from verbena, lettuce, etc., without fumigating so heavy that some other plants suffered serious damage.

Of late years we have hit upon the idea of using the fine waste from cigar manufactories. This is kept in a dry place to keep it free from any dampness, or it will not burn. We use little skeleton tin trays 1½ inches deep, 15 inches long and about 4 inches wide, with a screen bottom, such as is used for door screens. They are nearly filled level with the tobacco, and placed in the paths or under the benches, with a 4-inch pot under the one end, a few live coals are dropped in the lower end and the work is done.



A house 100 feet long by 18 feet wide will bear four to six of the trays. The smoke will continue five hours, but at no time so heavy that a person even not habituated to using tobacco could go through the house without inconvenience; but it keeps up too long for the aphis, and one or at most two applications and they are no

more. Plants suffer no injury by this method, and we think for cut flowers, that they do not have so much tobacco odor from this light smoke, as when houses are filled with heavy smoke by the usual method.

Another advantage we find, a house may be free from aphis, save a certain batch of plants is affected. By setting a tray or two underneath such, the aphis can be dislodged without filling the whole house alike with smoke; or any part of the house can be fumigated heavier than other parts if necessary. A set of six trays will do for as many houses by fumigating in succession.

Lancaster, Pa.

JAGGS DISCOURSES.

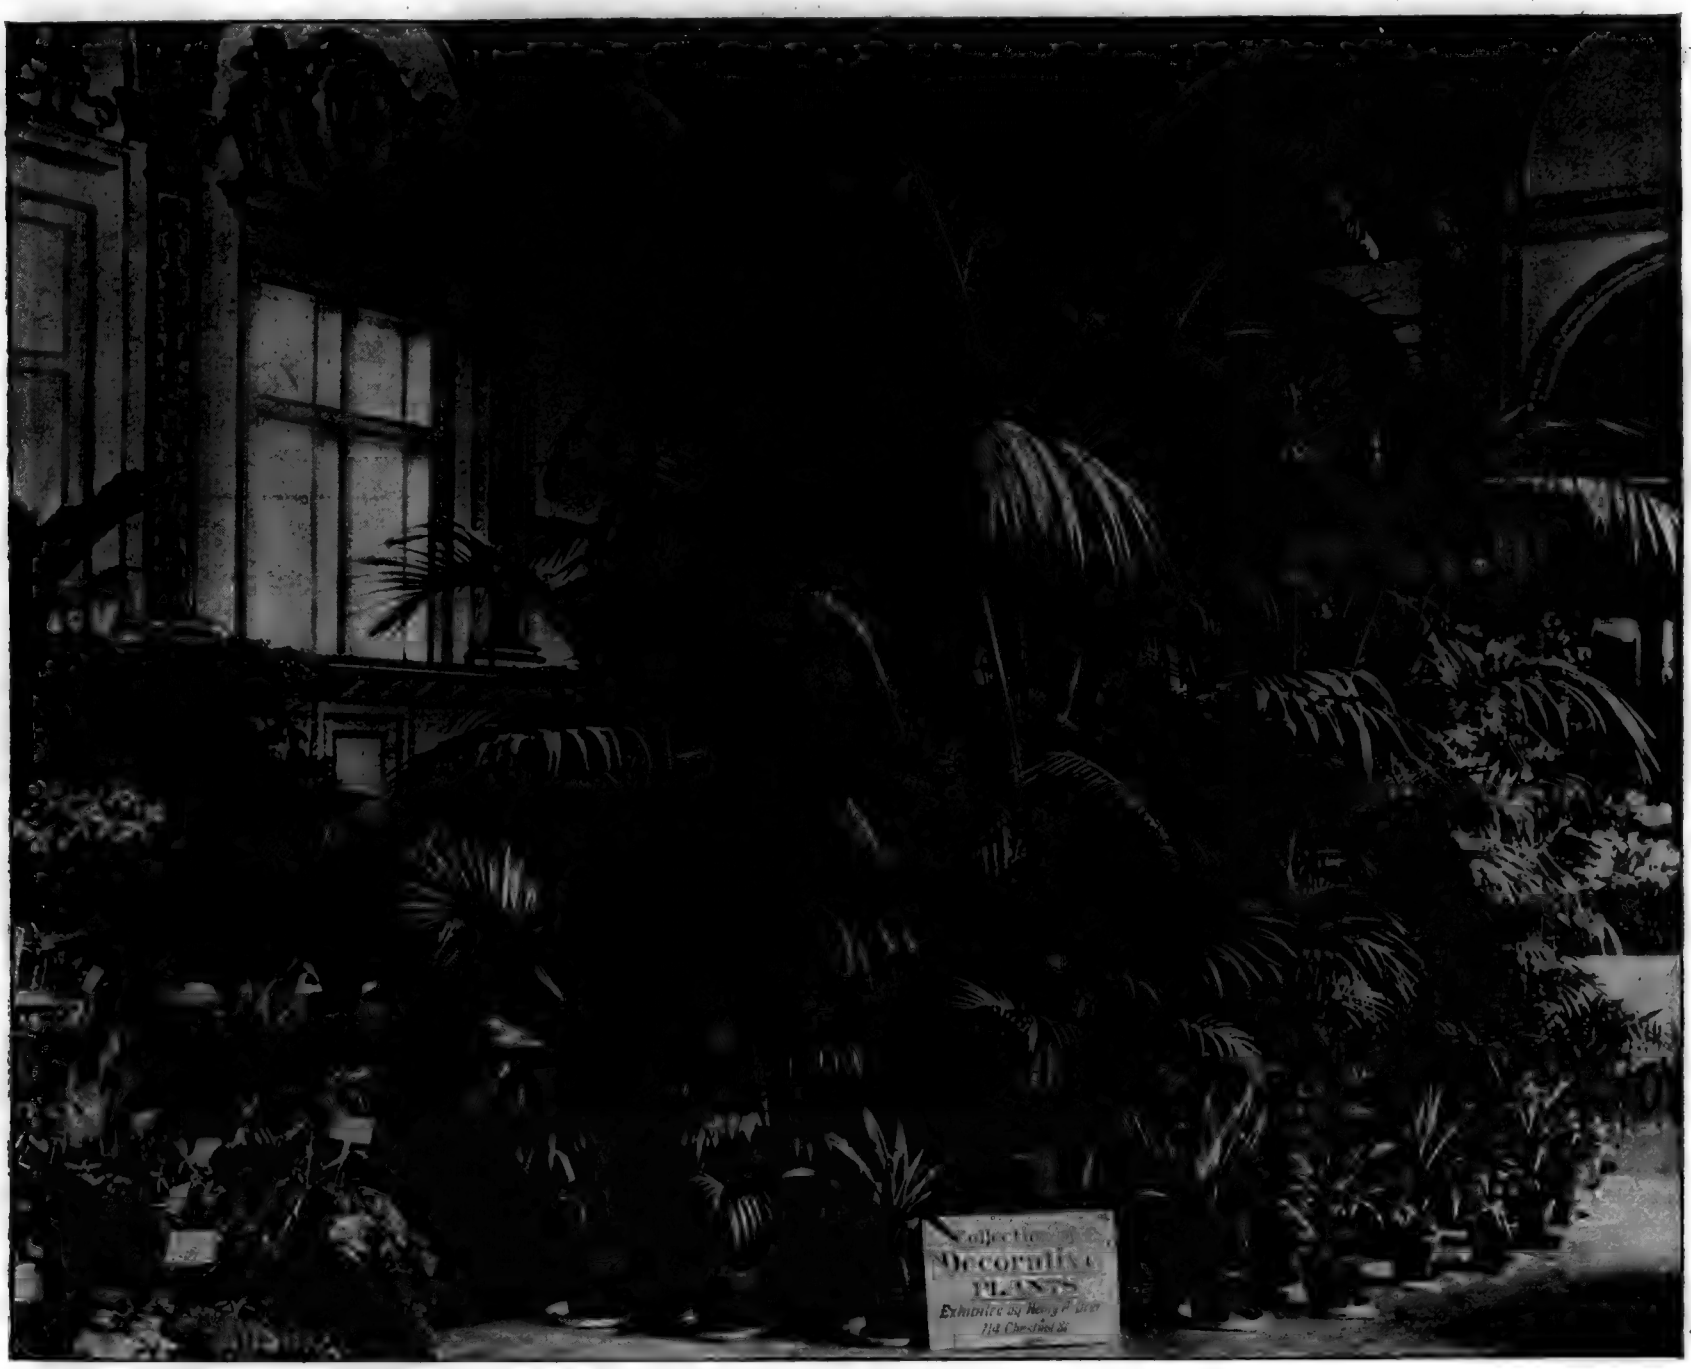
The young man who said he had graduated from a horticultural college was engaged by "the old man" with a good deal of doubt and when he had been detected in the act of sowing cineraria seed in three-inch drills the opinions expressed regarding him would have raised a blush on the cheek of a Greek fakir. However, Jaggs generously observed that even a horticultural college couldn't spoil a man for hustling a hand-barrow full of carnation plants, and the graduate continued to adorn the Lonesomehurst Greenhouses, as long as the rush season lasted.

"It does beat all," observed Jaggs, "what a lot some chaps doesn't know about seeds. There was a place I worked at down Baltimore way; the boss was always gettin' some bloomin' novelty; I reckon he introduced more weeds in a year than all the rest of the population put together. One day he comes to me with a little box, and he says, 'Jaggs' he says, 'this is somethink rare. It come from a Spanish chap in the Philippines; I can't make out just what it is, because he tried to write his letter in English, but its somethink worth having.' 'I looks at the box, and I says they're queer lookin' seeds,' but the boss says 'that shows as they're somethink rare.' Well, I says as I'll just lay 'em in a warm corner o' the propagatin' house till I gets around to plant them, and then forgets all about 'em for about a week. I was just opening the propagatin' house one mornin' when I see a green streak movin' down the walk. When I gets nearer, I see as it was a prickly green caterpillar, about the ugliest beggar I ever see. I don't suppose he was over four or five inches long, but blessed if I didn't think him about the size of an anaconda. There was three or four more like him sittin' up along the bench, and then I noticed as a batch of variegated rubbers as I'd just struck was gone. Them caterpillars had eaten up the whole batch; they'd left the pots, but not another scrap, and there they was, lookin' as if rubbers at $4 a dozen wasn't no object. I looks at them, and they looks at me, and then I strolls off and tells the boss as them Spanish seeds has germinated. He rubs his hands, and says, 'Ah, I reckon as we'll see somethink, as will surprise us.' I says 'I reckon we will,' and strolls after him. He gets a look at one o' them caterpillars, sittin' on the bench, pickin' his teeth with a seedlin' areca, and says, 'Well, I'm blessed! Where did that chap come from?' I says' 'he germinated out o' they Spanish seeds.' The boss says as they're only caterpillars and I'd better remove 'em. I was glad to know they was caterpillars, seein' as they looked like infant boar constrictors.

"Well, when it came to removin o' them caterpillars, I don't mind sayin' as I shied at the job. I wasn't brought up to the snake-charmin' business, and those chaps looked for all the world like them flesh-eatin' caterpillars from Madagascar, that will tackle a lion in the regular way of business"—"Oh, come off," interrupted the college graduate. "Who ever heard of a flesh-eating caterpillar?"

"It ain't likely as you did," retorted Jaggs, with withering scorn. "It ain't likely that a chap as doesn't know cinerarias from Swede turnips has ever heard of the vampire moths of Malaysia. Why, when I was orchid collectin' down by the Straits of Sunda where I found that there blue orchid as all Linden's and Sander's men has been lookin' for ever since—but there, it breaks me all up to think of it. As I was sayin', I thinks I'll try the hose on them bloomin' caterpillars, and I tried a good stream straight from the hydrant, but there they sit up, wavin' their forepaws at me, like as though they enjoyed the bath."

"Say, I never heard before of a caterpillar, waving his forepaws," observed one of the audience.



"Well, which of their paws do you suppose they'd be wavin' at a chap?" inquired Jaggs sarcastically. "I thought then as I'd try the boss's terrier—he was a bloomin' terror at rats, but them caterpillars just chivied him out of the house."

"I should think the government entomologist would like to hear about those caterpillars," observed the college graduate ironically.

"He was," continued Jaggs. "I never see a chap more grateful than he was when I chloroformed the whole outfit, and took 'em across to Washington. They was quite tame so long as they got lots of raw beef and variegated rubbers, and there's no tellin' what they might a' growed into if one of the chaps hadn't borrowed that there big nepenthes from the Andamans, and put it into the place where they kept the caterpillars. It was like puttin' a parrot and a monkey in the same cage. Course the pitcher plant eat the caterpillars, and it shows how curi's things is in nature—the very next batch of leaves as that pitcher plant made was covered with prickles identical like them on the caterpillars!"

"Did you keep that there pitcher plant chained up?" inquired one of the audience, with an air of deep anxiety.

Jaggs stuffed a quantity of tobacco into his black little cutty pipe, lit it with great elaboration and, after drawing a few whiffs, observed: "You chaps remind me of a fellow I used to know; used to work under me when I was head gardener to the Rajah at Nagapore afore I came to this bloomin' desert. You know they Mohammedans is reg'lar prohibitionists; there wasn't a chap on the place as would take a glass of anythink, 'ceptin' the elephants, and it aint always safe to get too chummy with an elephant. Well, in the Rajah's private garden there was an arched walk covered with pitcher plants growin' into a reg'lar gallery; splendid specimens they was, too, with pitchers

Group of Decorative Plants Exhibited by H.A.Dreer at the Recent Chrysanthemum Show of the Pennsylvania Horticultural Society, Phila.

like quart jugs, filled with liquor as I knew was intoxicatin'; though o'course bein' white ribbon myself, I can't say what it was like. Well, one day I see one of the elephants as was used to draw water, loiterin' round them plants; when he see me he starts off, sort of unsteady like, and I wonder what was up Looked to me like he wasn't quite sober, but an elephant aint got much expression anyway, 'ceptin' in his ears, and it wasn't my funeral, so I goes on with my work. The next day, just as I set down to dinner, I hear a row out in the garden. I rushes out with the rest of the fellows, and there we find that disreputable elephant, in a state o' disgustin' intoxication, rootin' up them pitcher plants with his trunk, and wavin' them around his head, like he was invitin' the crowd to take somethink at his expense. I was reg'larly shocked; you can't have no idea what drunkenness is till you've seen an elephant on a tear. You see, that depraved animal had learned as the liquor in the pitchers was intoxicatin', and he'd kept at it till he saw a reg'lar menagerie every step he took. I've never wanted a pitcher plant on the place since."

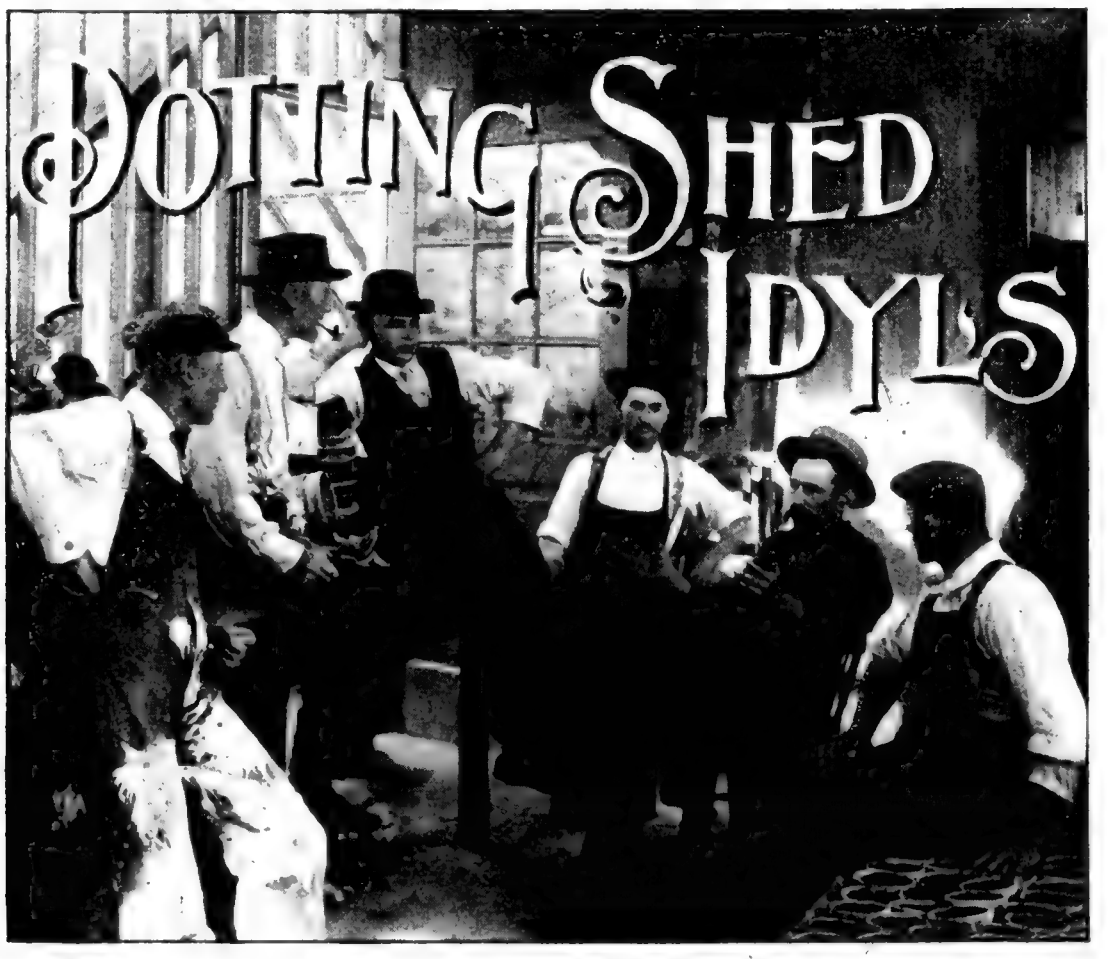
Jaggs reached down a 10-inch pot full of sulphur with the air of a man who had conveyed a deep moral lesson, and started for a rose house before his audience had recovered sufficiently to ask any questions. The session was over for the day.

CULTURAL NOTES.

As winter sets in, and in fact throughout that season, one of the most important matters is firing, and second only in importance to the man who waters with judgment is the watchful and experienced fireman.

It is, of course, understood that every small grower cannot afford a regular night fireman, but it would probably be found a paying investment on any well-conducted establishment comprising 25,000 square feet of glass or upwards, from the fact that greater economy of fuel and a much more even temperature may be thus maintained, beside enabling the proprietor to enjoy many a peaceful night's rest that could not be had under other conditions. The maintenance of an even temperature is one of the essentials to success in the many forcing operations that are carried on at this season, for even the easiest subjects to force into growth at an unnatural season are quite susceptible to a check after that growth has been started, and, on the other hand, too high a temperature will result in a weakened and spindly growth.

In the plant houses, also, the evil effects of over-firing are soon apparent, and among decorative plants, palms, for example, a weak growth, thin foliage, and a predisposition to disease is liable to result, and at the same time the various insect pests increase rapidly. The majority of our regular decorative palms are found to take at least a short period of rest from active growth, though in the case of the kentias this period is much less marked than with latanias, arecas, and phœnix.



Araucaria excelsa kept in a temperature of not higher than 55° at night, seems to stop growing from about December 1st to February 1st, and thus gives us a hint that repotting at that time of year is not likely to be very beneficial, and had better be deferred until the latter part of March at least

more. Plants suffer no injury by this method, and we think for cut flowers, that they do not have so much tobacco odor from this light smoke, as when houses are filled with heavy smoke by the usual method.

Another advantage we find, a house may be free from aphis, save a certain batch of plants is affected. By setting a tray or two underneath such, the aphis can be dislodged without filling the whole house alike with smoke; or any part of the house can be fumigated heavier than other parts if necessary. A set of six trays will do for as many houses by fumigating in succession.

Lancaster, Pa.

JAGGS DISCOURSES.

The young man who said he had graduated from a horticultural college was engaged by "the old man" with a good deal of doubt and when he had been detected in the act of sowing cineraria seed in three-inch drills the opinions expressed regarding him would have raised a blush on the cheek of a Greek fakir. However, Jaggs generously observed that even a horticultural college couldn't spoil a man for hustling a hand-barrow full of carnation plants, and the graduate continued to adorn the Lonesomehurst Greenhouses, as long as the rush season lasted.

"It does beat all," observed Jaggs, "what a lot some chaps doesn't know about seeds. There was a place I worked at down Baltimore way; the boss was always gettin' some bloomin' novelty; I reckon he introduced more weeds in a year than all the rest of the population put together. One day he comes to me with a little box, and he says, 'Jaggs' he says, 'this is somethink rare. It come from a Spanish chap in the Philippines; I can't make out just what it is, because he tried to write his letter in English, but its somethink worth having.' 'I looks at the box, and I says they're queer lookin' seeds,' but the boss says 'that shows as they're somethink rare.' Well, I says as I'll just lay 'em in a warm corner o' the propagatin' house till I gets around to plant them, and then forgets all about 'em for about a week. I was just opening the propagatin' house one mornin' when I see a green streak movin' down the walk. When I gets nearer, I see as it was a prickly green caterpillar, about the ugliest beggar I ever see. I don't suppose he was over four or five inches long, but blessed if I didn't think him about the size of an anaconda. There was three or four more like him sittin' up along the bench, and then I noticed as a batch of variegated rubbers as I'd just struck was gone. Them caterpillars had eaten up the whole batch; they'd left the pots, but not another scrap, and there they was, lookin' as if rubbers at $4 a dozen wasn't no object. I looks at them, and they looks at me, and then I strolls off and tells the boss as them Spanish seeds has germinated. He rubs his hands, and says, 'Ah, I reckon as we'll see somethink, as will surprise us.' I says 'I reckon we will,' and strolls after him. He gets a look at one o' them caterpillars, sittin' on the bench, pickin' his teeth with a seedlin' areca, and says, 'Well, I'm blessed! Where did that chap come from?' I says' 'he germinated out o' they Spanish seeds.' The boss says as they're only caterpillars and I'd better remove 'em. I was glad to know they was caterpillars, seein' as they looked like infant boar constrictors.

"Well, when it came to removin o' them caterpillars, I don't mind sayin' as I shied at the job. I wasn't brought up to the snake-charmin' business, and those chaps looked for all the world like them flesh-eatin' caterpillars from Madagascar, that will tackle a lion in the regular way of business"—"Oh, come off," interrupted the college graduate. "Who ever heard of a flesh-eating caterpillar?"

"It ain't likely as you did," retorted Jaggs, with withering scorn. "It ain't likely that a chap as doesn't know cinerarias from Swede turnips has ever heard of the vampire moths of Malaysia. Why, when I was orchid collectin' down by the Straits of Sunda where I found that there blue orchid as all Linden's and Sander's men has been lookin' for ever since—but there, it breaks me all up to think of it. As I was sayin', I thinks I'll try the hose on them bloomin' caterpillars, and I tried a good stream straight from the hydrant, but there they sit up, wavin' their forepaws at me, like as though they enjoyed the bath."

"Say, I never heard before of a caterpillar, waving his forepaws," observed one of the audience.

"Well, which of their paws do you suppose they'd be wavin' at a chap?" inquired Jaggs sarcastically. "I thought then as I'd try the boss's terrier—he was a bloomin' terror at rats, but them caterpillars just chivied him out of the house."

"I should think the government entomologist would like to hear about those caterpillars," observed the college graduate ironically.

"He was," continued Jaggs. "I never see a chap more grateful than he was when I chloroformed the whole outfit, and took 'em across to Washington. They was quite tame so long as they got lots of raw beef and variegated rubbers, and there's no tellin' what they might a' growed into if one of the chaps hadn't borrowed that there big nepenthes from the Andamans, and put it into the place where they kept the caterpillars. It was like puttin' a parrot and a monkey in the same cage. Course the pitcher plant eat the caterpillars, and it shows how curi's things is in nature—the very next batch of leaves as that pitcher plant made was covered with prickles identical like them on the caterpillars!"

"Did you keep that there pitcher plant chained up?" inquired one of the audience, with an air of deep anxiety.

Jaggs stuffed a quantity of tobacco into his black little cutty pipe, lit it with great elaboration and, after drawing a few whiffs, observed: "You chaps remind me of a fellow I used to know; used to work under me when I was head gardener to the Rajah at Nagapore afore I came to this bloomin' desert. You know they Mohammedans is reg'lar prohibitionists; there wasn't a chap on the place as would take a glass of anythink, 'ceptin' the elephants, and it aint always safe to get too chummy with an elephant. Well, in the Rajah's private garden there was an arched walk covered with pitcher plants growin' into a reg'lar gallery; splendid specimens they was, too, with pitchers

like quart jugs, filled with liquor as I knew was intoxicatin'; though o'course bein' white ribbon myself, I can't say what it was like. Well, one day I see one of the elephants as was used to draw water, loiterin' round them plants; when he see me he starts off, sort of unsteady like, and I wonder what was up Looked to me like he wasn't quite sober, but an elephant aint got much expression anyway, 'ceptin' in his ears, and it wasn't my funeral, so I goes on with my work. The next day, just as I set down to dinner, I hear a row out in the garden. I rushes out with the rest of the fellows, and there we find that disreputable elephant, in a state o' disgustin' intoxication, rootin' up them pitcher plants with his trunk, and wavin' them around his head, like he was invitin' the crowd to take somethink at his expense. I was reg'larly shocked; you can't have no idea what drunkenness is till you've seen an elephant on a tear. You see, that depraved animal had learned as the liquor in the pitchers was intoxicatin', and he'd kept at it till he saw a reg'lar menagerie every step he took. I've never wanted a pitcher plant on the place since."

Jaggs reached down a 10-inch pot full of sulphur with the air of a man who had conveyed a deep moral lesson, and started for a rose house before his audience had recovered sufficiently to ask any questions. The session was over for the day.

CULTURAL NOTES.

As winter sets in, and in fact throughout that season, one of the most important matters is firing, and second only in importance to the man who waters with judgment is the watchful and experienced fireman.

It is, of course, understood that every small grower cannot afford a regular night fireman, but it would probably be found a paying investment on any well-conducted establishment comprising 25,000 square feet of glass or upwards, from the fact that greater economy of fuel and a much more even temperature may be thus maintained, beside enabling the proprietor to enjoy many a peaceful night's rest that could not be had under other conditions. The maintenance of an even temperature is one of the essentials to success in the many forcing operations that are carried on at this season, for even the easiest subjects to force into growth at an unnatural season are quite susceptible to a check after that growth has been started, and, on the other hand, too high a temperature will result in a weakened and spindly growth.

In the plant houses, also, the evil effects of over-firing are soon apparent, and among decorative plants, palms, for example, a weak growth, thin foliage, and a predisposition to disease is liable to result, and at the same time the various insect pests increase rapidly. The majority of our regular decorative palms are found to take at least a short period of rest from active growth, though in the case of the kentias this period is much less marked than with latanias, arecas, and phœnix.

Araucaria excelsa kept in a temperature of not higher than 55° at night, seems to stop growing from about December 1st to February 1st, and thus gives us a hint that repotting at that time of year is not likely to be very beneficial, and had better be deferred until the latter part of March at least

The temperature above noted should be the maximum for this plant during the winter nights, and there is less liability to attacks of red spiders and thrips if the house is kept down to 50° and thorough syringing is given every bright day.

No alarm need be felt if the moisture hangs on the leaves of the araucarias over night this being a favorable condition for many plants of the Pine family, in witness of which the magnificent growth of coniferous trees in the States of Washington and Oregon may be instanced, these States having probably the greatest rainfall of any portion of the Union.

The requirements of the trade in different localities vary greatly, and therefore the choice of flowering and fruiting plants for the retail business must be made in accordance with the needs of the locality, but it would seem as though some nicely-grown cyclamens would find a ready market anywhere. These plants should be coming into bloom now in readiness for the holiday trade, and it is well to remember that at this period especially, care must be exercised in watering, the flowers being easily injured by too much moisture, but requiring plenty of fresh air whenever the weather permits. Well-grown cyclamens are very satisfactory as window plants, and last a long time in bloom providing the room in which they are placed is not kept too warm, but where a dwelling is kept up near to the 80° mark, as many modern homes are, it is rather unreasonable to expect a cool-grown plant to flourish.

Chinese primulas are also good stock in some places, and can be handled nicely under very similar conditions as to heat and moisture as the cyclamen, and from the improved strains offered by the leading seedsmen some very large flowered and showy specimens may be grown.

The seedlings of last summer should now be in their blooming pots (5-inch to 6-inch pots usually), and during dull weather need careful watering, a go-as-you-please application with the hose being out of the question. The primulas are but little troubled by insects, with the exception of green aphis, and this is easily controlled by the proper and regular use of tobacco stems.

The double white Chinese primula was once a valued portion of the cut-flower stock, and in the apprentice days of the writer, many a weary hour has been spent in picking and stemming primula flowers for funeral work, but that day is long past and the primula has settled down to the prosaic level of a low-priced pot plant.

The early crop of Lilium Harrisii should now be moving along rapidly, and will stand a fair amount of heat, 70° at night not being too much after the buds show, but in such a temperature aphis also grow rapidly, and frequent applications of tobacco water will be needed. It is quite convenient to have a few Harrisii flowers to use during the winter for home trade, but the large markets receive quantities of such flowers of late years, and consequently no very high prices are now realized by those who grow them.

Up to New Year's the cold storage pips of Lily of the Valley are likely to give the best results both in flowers and foliage, but after that time the new crop of pips is generally satisfactory, providing they have been well frozen and kept moist.

A steady temperature of 85° in the forcing frame is plenty for this purpose, and will bring the Lily of the Valley up enough for removal to cooler quarters in twenty to twenty-three days.

W. H. Taplin.

Nephrolepis Davalloides Furcans.

NEPHROLEPIS DAVALLIOIDES FURCANS.

The sword ferns have become deservedly popular of late years, from the fact that they are easily managed, readily propagated, and in the case of several of the species and varieties can be relied upon as house plants.

These general characteristics apply very well to the subject of our illustration, N. davallioides furcans, one of the strongest and most rapid growers of the genus, and an admirable plant in any size from a 6-inch pot upwards. The fronds of this variety grow to a length of three to four feet, are usually of a pale green color, and both the tips of fronds and also the individual pinnules are forked, thus giving a somewhat crested appearance to the fronds.

As this variety does not seed very freely, it is best propagated from the stolons or runners that soon surround an established plant, this process being facilitated by planting out the stock plants in light soil in a house in which a temperature of 60 degrees is maintained.

W. H. Taplin.

OUR GENERAL INTRODUCTION. No. 1.

NEW YORK.

In the Wholesale District.

After a period of unprecedented dullness things have started on the upward grade, and a cold snap of long duration will help to bring the long looked for reaction. As it is, the demand is not quite equal to the supply, and though fair prices are realized, nothing like a scarcity is or has been felt yet. Trade boomed somewhat during the day before Thanksgiving and up to noon of that day, but fell very flat during the afternoon, to the benefit of the Greeks, who are the people who profit when the ill wind of a surplus "blows." A peculiar fact was registered; that violets did not sell so readily, in fact, only brought about half as much as at the same time last week, when big lots were shipped to New Haven for the Yale-Princeton football game, the best selling for 75 cents to $1.50 per 100. Carnations, however, sold well at $2.00 to $5.00 per 100, according to stock. Roses average $4.00 to $6.00, while fancies, always scarce, realized $8 to $12.

Orchids in variety, including Vanda cærulea, Oncidium varicosum, Dendrobrium formosum giganteum, undoubtedly the best white commercial orchid from a growers' or shippers' standpoint, sell readily. Cattleyas are not very plentiful. Just now the "Labiatas" are about over and "Trianæs" are hardly ready. A few Cypripedium insigne are coming in and sell fairly well at 10 cents to 12 cents, though I saw a poor lot that a wholesaler said he would accept 5 cents for. This proves to the grower that good stock in this, as in all others, nets the best financial results, and increases his bank account.

The beautiful Bougainvillea glabra Sanderiana sells pretty well for decorative purposes and is caught up quickly by the knowing ones; it is a handsome acquisition to our rather limited variety of winter flowers.

Bulbous stock is coming in gradually. Lilium Harrisii is the harbinger and they are plentiful for this time of year. They are selling at from $6 to $8 per 100. Cold storage valley, which like the poor, "we now have with us always," returns $3 to $4 to the grower. Romans realize $2 to $3 and quantity is increasing daily. Chrysanthemums are an "endless chain" and prices are "what you can get." The variety Frank Hardy, an importation from the other side, though believed to have originated in America, has run the gauntlet of wholesale and retail criticism and is considered a marvel from all standpoints. More than 2,000 blooms passed through one wholesale house at $4 to $6 per 12, while they lasted.

By the time this is published Christmas will be only three weeks away and the growers, wholesalers and retailers are already counting their chickens. We hope there wont be any dead ones among them and that the price of salt will not take an upward tendency.

Auctions.

The auctioneer's hammer will soon be stilled and not heard till spring again. The present season has been fairly good and sales are about over. William Elliott & Sons held a successful sale of hardy roses, rhododendrons, azaleas, etc., last Tuesday and will hold another to-morrow, Friday.

J. P. Cleary & Co. also held a sale of roses and miscellaneous plants and good prices were realized. Our happy friend John says if his balance sheet shows a credit in his favor he is going to join the "Benedicts." Welcome! It's your bid.

Seed and Bulb Trade.

Peter Henderson & Co. have addressed a letter to their patrons in the seed trade, that in future they will sell direct to the planter.

The fall bulb trade is about over and surpluses are being cleaned out fast. The tariff has had but little effect on the general trade and consignments were about as heavy as usual. The heaviest shipment of valley arrived this week and is fast being distributed. High grade stock is scarce with a plethora of lower quality.

Tuberoses are and will be exceedingly scarce this season. The long drought in the growing district has cut down the crop considerably and prices will rule higher than during the last few years.

All the wholesale and retail houses are busy putting the final touches to their "spring catalogues" and these promise to be as elaborate as ever. Sweet peas will be the leader with several houses and novelties of unusual merit are announced.

Mr. Robt. W. Clucas returned from an extended trip south.

Among the Retailers.

Patience is about to be rewarded to a long suffering people by a long looked for revival of business. To use one of the oldest retailer's expressions, things have been decidedly of the "porcine" order. The horse show "didn't pan out" and the "feetball games" as they call them in Chicago, have not netted more than $200 to the ton. "Reform" and the torn up street have had a demoralizing effect, but things will not always be so, and so it is that the far away future has extended the "glad hand" and the cash register will echo and re-echo the dollar mark from now on, and THE REVIEW sends you greeting.

The store windows are always a feature and are at all times a standing advertisement. The retailers try to "out-Herod Herod." Adiantum Farleyense suspended in pots in the window is a pretty feature; the fronds of this beautiful plant are also being extensively used in all "made up" and "loose work," and it gives a richness that no other "greenery" can approach.

Among the many novelties being used this season are the lace handkerchiefs for violets, there being embroidered in the corner the initial of the fair one who is to receive the gift; it is decidedly chic.

Some of the new wagons are very elaborate, and it is rumored that one will be used as a state carriage when the mayor-elect take office next January.

Mr. Alfred Dimmock, the popular representative of Sander & Co., England, sails for home December 15th to eat Christmas dinner with his family. He takes home a pocket full of orders in spite of the Dingley Bill. Come again, Alfred, meantime "Bon voyage"

William Grey died Friday, November 26th, at his home in Kenwood, near Albany, N. Y., at an advanced age. Mr. Grey was gardener to the Senior and Junior Erastus Cornings for over forty years and was one of the oldest and best known private gardeners in the United States. His specialty was orchids and he was the first to raise and hybridize orchids in this country, Cypripedium Corningii being one of the best examples of his skill.

All the florists in the vicinity of Queens, L. I., were out "Bar" hunting when I called, with C. W. Ward as chief scout. The aforesaid "Bar" escaped from confinement last summer and is still at large at this writing. A pinch of salt applied to his caudal appendage is a good way to catch your "hare." Try it, brother Ward. You can send the skin to our office; we need a rug for the winter.

There was only one seedling before the New York committee of the Chrysanthemum Society. It was a white incurved named W. H. Chadwick, shown by Grove P. Rawson, Elmira, N. Y. It is of the type of Mrs. Jerome Jones.

Wholesale trade shows a falling off this week, though quantities of flowers were used at the funeral of Mrs. Islin at New Rochelle on Tuesday.

Visitors: F. A. Herendeen, Geneva, N. Y.; Paul Pierson and Frank Hamilton, Scarborough, N. Y. H. A. B.

BUFFALO.

We don't know that any frivolities will be expected from Buffalo to welcome the new journal on its new existence and wish it God speed on what we feel sure will be a long and prosperous journey, but to refrain from being one of the first to offer congratulations is more than we could deny ourselves. Horticultural, and particularly floricultural literature, has made enormous growth this past dozen years. Editors and publishers of journals of all descriptions are much given to chaff, ridicule, and sometimes personal abuse of a more or less virulent type towards their fellow journalists, but it is most always exploded and ends in their columns, and largely because their readers like that sort of thing. Florists and those connected with our trade papers will, I know, stoop to nothing of the sort. There is most likely room for all, but if the contrary is the case, then let the best man win.

We feel that the FLORISTS' REVIEW, with its able editor, manager and publisher, has assured prosperity before it, and this I do not say because I will have the honor to contribute to its columns, not in the least, for the FLORISTS' REVIEW will not be dependent on any man or set of men, but I look to the untrammeled ability and energy of the man at the helm to steer the new craft into pleasant seas of knowledge, to shores of beauty and rivers of wealth. Grant it may be so.

For what little I have done for the *American Florist* I have received substantial remuneration, but that I do not look back to, although very useful at the time, with the pleasure with which were received many letters thanking me for my feeble efforts. In future my procrastinating and erratic ability, with what per-

severance I can command, will be devoted to the welfare of the FLORISTS' REVIEW.

Sad and depressing indeed have been the atmospheric conditions and precipitation superfluous for some days past in this region, and from the dark clouds which hung around it must have extended far and wide. In spite of wretched weather Thanksgiving trade wasn't so bad. It finished up most of the good "mums" and as there is no house of *Bonnaffon* or *"Liberty"* in store for later on, we have possibly seen the last of the chryanthemum for '97. Taken all in all the grower as well as the retailer will have to say they have gone quite as well and a little better than last year. Of course I only speak for Erie Co., N. Y.

Violets have kept up steadily in good demand and the price has consequently been aristocratic. Carnations are good and now they will have their innings and that is usually a long one in spite of all competitors.

There have been no events of any great magnitude that would warrant special mention. It was a litttle hard on a man after nearly three months' immunity from drummers to have two of the species call in on one morning, but such was the case yesterday A. M. They appeared in the shape of the little gentleman who represents various goods of Mr. Nick McCarthy, of Boston, and offers everything a florist wants, and many more he does not want, anything from a rubber hose to a glass encased florists' wagon, including a New England coachman, if thought an improvement over our native ones. The other was Mr. Killen, so well known in the west as well as the east. Mr. Killen looks after the interests of Mr. C. H. Joosten in a meditative and philosophical way.

I was induced a few days ago in company with our learned professor to run down to Rochester and see our neighbors in the Flour (not flower) City. It is a run of only sixty-eight miles in sixty-eight minutes on the Empire State Express, the fastest train in the world. We made the very most of our time and took most all the store men in, and several of the growers. Main St., Rochester, is certainly a busy street. Its business may not radiate to the north and south many blocks, but it is truly a thronged thoroughfare. I was well pleased to see the stores so busy. It was a Saturday afternoon, balmy and bright, and you would expect a business day, but it appeared a little better than I looked for. Our last call was on Allie Salter, when in strolled Charlie Vick, our old opposing base ball pitcher. To show you how well we had spent our time, in discussing some cheese and crackers and its concomitants, Mr. Vick gave us a searching look and said: "When did you come here?" answer, "10:30 A. M." "Have you seen George Savage?" "We have." "Then I must say you are in mighty good condition for what you've passed through?" Strange notions some people get.

W. S.

The Drummer Getting in his Work.

THE DRUMMER.

The accompanying snap shot will be much appreciated by the many friends of genial Walter Mott, traveling man for H. A. Dreer. The artist caught him in the characteristic pose which he always assumes after writing down a lengthy order for palms. It will be noticed that his book sags a little from the weight of the orders. Walter's order book is generally in that condition before he returns home from a trip.

"IF YOU don't see what you want, ask for it." We refer to trade supplies. If you want something not offered by our advertisers, write us about it and we will ascertain for you where you may get it.

Messrs. Bassett & Washburn, Chicago, have a red-flowered sport from carnation Mrs. Geo. M. Bradt. The sport produces flowers fully equal to those of Mrs. Bradt in size and the color is very pleasing.

BOSTON.

The annual exhibition of dried specimens of native wild flowers, grasses, etc., was held in the Horticultural Hall on November 26th and 27th, and was a perfect success. Over 1,400 specimens were exhibited and proved highly interesting, the more so when taken into consideration that this large exhibit was got together by a number of children whose ages range from nine years upward, little botanists who may sometime become shining lights in the horticultural profession. All the varieties were named botanically, and very correctly, which must have taken the collectors a considerable amount of work in classifying and pressing ready for exhibition.

Among our visitors to "The Hub" this week we were pleased to note Mr. Paul Berkowitz, representing the well-known firm of H. Bayersdorfer & Co. of Philadelphia, and Mr. Fotheringham, representing F. R. Pierson & Co., of Tarrytown, N. Y.

While visiting the different florists' stores within the last few days I could not help noticing the bang-up American Beauty and Bridesmaid roses at the City Hall Flower Market, which is conducted by the well-known Welch Bros., who are always amiability itself.

It is very satisfactory to be able to report a general improvement in the flower market during Thanksgiving week, fully realizing expectations. The notable feature of the increase in demand, and at the same time the somewhat shortened supply, was the means of advancing prices. The long depression we have had was undoubtedly the means of keeping prices somewhat lower than would have been, for had it been a few years ago, with the same scarcity the prices would have jumped away up. The following is near the prices realized. Roses, Beauties, $1.50 to $5.00 per dozen; Brides and Bridesmaids, $2.00 to $8.00 per 100; Perles and other varieties from $2.00 to $5.00 per 100; carnations, $1.00 to $2.00 per 100. Violets were scarce and maintained full price.

Last Monday being the fiftieth anniversary of the established business formerly conducted by the firm of Galvin Bros., but now owned by Mr. Thos. F. Galvin, it was commemorated by opening his new store and conservatory at the corner of Boylston and Fairfield streets, a very handsome Building. The building is 115 feet in length, and 34 feet wide, subdivided into sections suitable to their different requirements, the store being in the front, and the conservatory in the rear. The decorations of the store are of a very elaborate character, and a work of art. The floor is laid in mosaic patterns and a large plate glass mirror, twelve feet by nine feet, adorns one of the side walls. The refrigerator is also an elaborate piece of work, built of mahogany, and elegantly carved. The conservatory, which is approached from the store, is 75 feet long, 34 feet wide, and 36 feet high, with a dome running the whole length, and is filled with a choice collection of plants of all kinds suitable for decorative purposes. The staging is so arranged on benches, pyramids, etc., that every opportunity is

afforded for the inspection of the plants by their visitors.

Mr. John Galvin, father of Thos. F. Galvin, laid the foundation of this now extremely large business in 1847, in Somerville, and by his indomitable energy soon carried his business into Boston, on Washington Street, and in 1863 removed again, this time, to Tremont Street, where it has been steadily increasing, and in later years under the able management of the present owner (Mr. Thos. F. Galvin), has still continued on the road to success. May you still tread the same successful course Mr. Thomas, and good luck attend.

The Gardeners and Florists' Club of Brockton, Mass., will hold a meeting during the ensuing week for the election of officers to manage their business for the coming year. Although a new club they have many very successful growers and able talent among them, and we wish them every success.

Thomas J. Grey & Co., seed merchants, etc., will commence to remove to their new store, 30 and 32 South Market street, about December 1st. Their new premises are much larger and more commodious than those they are leaving, and they hope by the middle of the month to be open for business. C. H. J.

PHILADELPHIA.

An interested visitor to the recent chrysanthemum show was Paul Binder, Sup't of the H. A. Parr estate at Sherwood, Md., where mushrooms are raised for profit. Two thousand pounds were marketed this season, a Baltimore house handling the product at a good margin.

J. L. Dillon, of Bloomsburg, told of the fine house 300x22 feet he has just completed for the new seedling carnations of which we shall hear more later on.

A. M. Herr, of Lancaster, showed some splendid blooms of carnations Flora Hill and Triumph that vied with locally grown stock for honors. Messrs. Schroyer and Barr, of the same city accompanied him.

I believe it is the first time Geo. Fancourt missed taking in our show. Wm. Cart, of Kingston, who was along, explained his absence on account of an extra rush of business just at that time. He is sending some grand stock to New York.

H. Weber, Jr., of Oakland, Md., was one of many who complimented our superintendent upon the excellence of the show, which is the best he has yet seen.

Messrs. Montgomery, of Natick, and Nicholson, of Framingham, astonished the natives, the former with magnificent blooms of Golden Wedding and Mrs. Jerome Jones; the latter with a grand bunch of a seedling pink carnation which met with most favorable comment.

Hugh Graham is upholding the reputation of the Keystone State in naming his superb sport after it; it will doubtless prove as valuable as has its parent, Philadelphia. The exhibit of orchids made by this firm deserves especial mention; it was arranged as natural as it could possibly be and evoked much praise.

Chas. Fox exhibited some noble specimens of Areca lutescens, the like of which has seldom if ever been seen in public before. Chester Davis, gardener to Mr. Hinzey, also had a superb plant in his group; it is only upon such occasions as this one sees these plants at their best. Chas. Fox, Jr., had a fine display, the first I believe that he has made; it augurs well when the outsiders fall in so gracefully.

Henry A. Dreer made the largest exhibit ever yet attempted, filling 500 square feet of space scattered in various groups about the upper and lower halls, most effective; especially so was a group of Cocos Weddeliana, each plant nearly six feet tall. The golden latania (L. aurea) showed up well under the electric light. The Mexican tree fern (Cibotum Schiedeii) was very handsome. This is a most graceful plant and comparatively easy of culture. Their magnificent sweet bays were loaned after the show to the Bourse, to which much of the stock was also taken by other exhibitors.

Robert Craig cheered the hearts of the veterans with his splendid show of crotons, admittedly the finest ever seen in this hemisphere, and we strongly question if ever eclipsed in the other.

Jno. Shellem staged a fine lot of crotons and dracænas of exquisite color.

It pays to have a center of attraction. There has always been one here since the time of Jno. Thorpe's famous blue chrysanthemum. This year it was the new cypripedium "Edwin Lonsdale," the only duplicate or companion being on exhibition at New York and computed by a reporter of one of our dailies to be valued at $15,000, and so the world wags.

Of the plants of recent introduction a pretty saintpaulia was shown by H. Thatcher, gardener to Mr. Dissel, also some Erica hyemalis, reminding one of Covent Garden Market at this season. The new Dracæna Godseffiana shown by Henry A. Dreer is a departure amongst dracænas. The spotted aucuba like foliage makes it distinct and novel. The winter flowering Begonia Gloire de la Reine introduces one of the most free flowering and attractive varieties to the public.

W. K. Harris had a fine specimen of Dracæna Sanderiana on show. Grown in a pan and topped to sucker this makes a handsome plant.

Jno. Westcott's pair of noble vases, filled as only he can fill them, and J. Kift's Beauties took the cake.

The S. Moon Co. and Stoke-Pogis Nurseries made excellent displays of evergreens. Chas. Ribsam & Sons, of Trenton, owing to an accident were prevented from exhibiting. They have a first-class collection of well-grown stock.

The Model House interested the adults and charmed the young folks. Jno. Reig's illustration of an European grapery was well done and deserved the encomiums passed upon it.

Jno. T. Morris exhibited a sturdy plant of the uncommon Musa coccinea, grown in a 10-inch pot, throwing two flower spikes on the order of a gladiolus. The following description by Nicholson is entertaining: "A native of Cochin-China. Flower, inflorescence terminal, about one foot long, furnished with spathes of a brilliant scarlet tipped with yellow, flowering at various times throughout the season. Leaves entire, oblong, about three feet in length and six inches in breadth, color bright green. Height of plant about four feet." W. M.

CHICAGO.

Kennicott Brothers Company report that their business for the month of November was fully double that of the same month last year. This is certainly a very cheering report and is a good harbinger for better business this season. They find the quality of stock improving and an excellent demand for extra grade stock, which brings very good prices. They find violets scarce and quality not up to the mark. In fact they consider the price rather high in view of the inferior quality. They are beginning to receive Roman hyacinths and narcissus, which are very good,

Bassett & Washburn also report business for the last month as fully double that of last year. They are receiving some very fine stock from their place at Hinsdale, and sales are very satisfactory.

Reinberg Brothers are receiving some remarkably fine La France roses and are showing some grand specimens of carnations, Mayor Pingree, Flora Hill, and Triumph. They are receiving from their houses at Summerdale a very large supply of roses—the only shortage being in Brides and Bridesmaids, which are now off crop. La France, Meteors, and Beauties are now coming in in quantity.

E. H. Hunt reports receipts as rather lighter than usual, and it would appear that many of his growers are off crop at present. Carnations have been quite scarce until within the last day or so, when the cut increased, and now the supply is fair.

Vaughan, McKellar & Winterson report supply and demand about equal and business not as brisk as it might be at this season but all stock received finds a market and particularly extra good stock. They report good sales of bouquet green and wreathing and show samples of some very fine sheet moss.

Winter & Glover found carnations scarce early in the week and white sorts are still somewhat scarce. The supply of colored sorts is now larger. The stock of roses about equals the demand for them.

A. G. Prince & Co. find supply and demand about equal and feel encouraged over the outlook for the season.

A. L. Randall is receiving liberal consignments of good stock but found carnations rather scarce early in the week. Stock is now coming in better.

The Rogers Park Floral Co. are fortunate in that they are in full crop with the stock in their greenhouses at Rogers Park. They are having large receipts and sales are good, both shipping and local. They find business very much better than last year; in fact twice as large as for the same period last season.

E. C. Amling finds supply and demand about equal, with business a little less brisk than a few days ago. Indications of an improvement are, however, noticeable.

W. E. Lynch finds demand and supply about equal, with a tendency to somewhat lower prices. He displays some very good stock.

The next Meeting of the Florists' Club will be held Thursday evening, December 9th. The committee has arranged a very attractive program for this meeting and a large attendance is anticipated.

Francis Ludlow, well known to all in the trade as one of the old time gardeners in Chicago, died last week of pneumonia after a short illness, aged 64 years. Mr. Ludlow was born Dec. 31, 1833, near Derby, England. He learned his trade there and came to this country in 1863, settling in Chicago. He was for a time with the late Samuel Brooks, the pioneer florist of this city, and was, later, for several years, gardener for E. B. McCagg. Afterwards he was for many years foreman for Edgar Sanders and married Mr. Sanders' eldest daughter in 1871. At this time he started in business for himself, but soon merged his business with that of the firm of Miller & Hunt, which became the firm of Miller, Hunt & Ludlow. After this partnership was dissolved by limitation, he conducted greenhouses for a while at Naperville, Illinois, and for the past 16 years he has been one of the staff of gardeners at the Lincoln Park greenhouses. Mr. Ludlow has always been a faithful, honest, hard working man in all his varied positions and made many friends. He leaves a widow, one son and three daughters.

Burglars recently paid A G. Prince & Co. a visit but were frightened away before securing anything of much value.

ST. LOUIS.

For Thanksgiving day we had rain all day and it made things bad for the florist, but in spite of the rain, trade was fair. This is the universal verdict by wholesale and retail dealers. It helped to stiffen up prices somewhat. The wholesalers claim they did a better business than last year, but the retailers did not do so well.

The supply of stock, and particularly in roses and carnations, was good. In quality they were up to the average. American Beauties averaged fairly good in quality and quantity and were in brisk demand at top prices. First quality sold at $4.00 per dozen and the shorter stemmed ones brought from $1.00 to $3.00 at wholesale. The average price for other roses, such as Kaiserin, Carnot, Bride, Meteor, Bridesmaid, Perle, and La France, was from $4.00 to $6.00. Some extra fine blooms brought as high as $7.00. Red roses were short in supply, and Woottons had to take the place of Meteors in some cases.

Of carnations the supply was about equal to the demand except in good red, and of course the demand was heaviest for them. The price for the best stock was $2.50 and $3.00; short, common stock sold at $2.00. Scotts and Daybreaks seem most plentiful. The bulbous stock is coming in more freely just now. Narcissus (paper white) are coming in in fine shape and were quite plentiful for Thanksgiving day trade; price, $4.00. Romans are not so plentiful yet; the few that do come in are fine and brought $4.00. Valley also held its own at $4.00.

We have not seen any Harrisii in this market yet. Violets were also plentiful, Californias having the call at $1.50 per 100; for the best double, $1.00; small single (home grown), 40 cents; Southern, 25 cents. The commission men sold out clean on them, except a few Southern left. Stevia, of which there is always a good supply in season, sold at 25 and 50 cents a bunch. Mignonette was very fine and brought $2.00 and $3.00.

Some good chrysanthemums were also to be had. The varieties now on the market are Major Bonnaffon, L. Canning, H. Balsley, Ivory, Maud Dean, and H. W. Rieman. Prices range from 50 cents to $2.00 per dozen, but the majority are selling at from 75 cents to $1.50 per dozen. Smilax sold at $12.50 and $15.00 per 100 strings.

House plants are selling better, and from now on until after the holidays there should be a good demand for this class of plants.

The street fakir as well as the store fakir had a hard time to get stock for their class of trade for Thanksgiving day, and only one or two were seen on the streets.

The Diemer Floral Company has opened a floral establishment at 1631 South Broadway. E. K. Diemer and A. J. Falkenhainer comprise the firm.

Mayor Ziegenheim on Friday morning last planted the first tree in the new City Hall Park. The tree is a soft maple. The mayor said, after the planting: "I never had a tree die which I planted, yet. That tree will grow and flourish like St. Louis."

W. G. Bunde, representing Vaughan's Seed Store, Chicago, is in the city for a few days. This is Mr. Bunde's first visit to St. Louis.

C. W. Wors has moved from 313 North Leffingwell avenue to 2740 Olive street. The store was formerly occupied by the Connon Floral Company. Charlie claims that he had to move to larger quarters as his business is growing. He also reports that he will have an opening in about a week with cigars and refreshments and that the trade will be invited.

Charles A. Kuehn is enlarging his store, having built out to the alley, giving him about fifty feet more. He will also have the upper floor for wire work. Charlie is now doing a large business in cut flowers, wire work, and supplies.

The Mound City Cut Flower Company are also contemplating the enlargement of their already large store and getting in a full line of supplies.

The above three wholesale houses are all doing a large business and are supplying all the best trade.

At a meeting of the executive committee of the late chyrsanthemum show, held Saturday night, it was decided not to hold the special meeting of the club, as the following Thursday would be the regular monthly meeting of the club. This would give the committee a week's more time to collect up, so at that meeting on Thursday, December 9th, the full report will be read by the committee. Every member of the club is requested to be present, as business of great importance will come up for the full membership to act upon.

Mrs. Wm. Ellison, of Ellison & Tesson, returned last week after a two weeks' trip east attending the flower shows. Mrs. E. reports that she benefited greatly and had a delightful trip going and coming.

The Bowling Club rolled the usual three games Monday night. The cold weather must have kept some of the members at home as only a few put in their appearance. In the three games rolled, Beneke was high man with 583, J. Kunz second with 463, and Kuehn third with 459. The highest single scores were made by Beneke, 230 and 231; Kuehn 182, John Young 180, and Kunz 177. Next Monday night the Club will roll for two large turkeys, one for the best three games and one for the highest single score. All members are requested to attend this roll without fail.

J. J. B.

INDIANAPOLIS.

Not much can be said about the trade in this vicinity so far this season. There are spurts of good business, decorations for receptions and an occasional good wedding helping the florists out. It seems the "Upper Ten" are spending money more freely than last season, but the middle classes are very conservative.

Among the first-class decorations this season might be mentioned the annual Flower Mission fair for which Bertermann had the job. The decorations from the chrysanthemum show were left partly in place. Besides this a big lot of laurel and galax leaves were used. Arches, fences and gateways made the scene a very rich one and it was the talk of the city for some days.

Another choice decoration was a reception at the residence of Allen W. Fletcher. An original panel and fretwork of wild smilax, asparagus, delicate artificial colored morning glories, Beauties, chrysanthemums and other flowers were used in profusion.

Thanksgiving day trade was spoiled by two wet, rainy days. All day Thursday it rained without stopping, making it unpleasant to be on the street. The Public Market people report a very slow trade on plants; in cut flowers a little better but altogether very unsatisfactory as compared with last year.

Prices on chrysanthemums have kept up well but the supply is running short, in one way a blessing and then again they are fine when plenty flowers are needed and some showy effects are to be made. The white and good pink have been extremely fine this season and were in good demand; no oversupply was noticed in these colors; in yellows, however, too many were in the market. American Beauties are selling extremely well, so are Meteors. Carnations have been scarce for several weeks; scarlets are especially hard to get. There are many planted and very likely later in the season there will be an overabundance. Violets that are coming in are not very fine but all sell in a way; they must be arranged and made as inviting as possible. A few Harrisii lilies can be seen here and there, but as long as fine white chrysanthemums

are around lilies are not much inquired for. Roman hyacinths and paper whites are also coming in lively. Cyclamen plants are very fine this season and ought to be in every florists' window.

Among the coming decorations of note may be mentioned the one to be given by Mrs. Benjamin Harrison on Dec. 14th. Bertermanns have full sway to get up something fine.

It is amusing many times to hear customers and others exclaim, "Oh, what a beautiful business, there must be lots of money in the flower business; and what pure thoughts ought the florists to have," etc., etc. When it comes right down to facts, it is a very nice business to work in, but how many drawbacks, how many hours of anxiety, how much mean competition and other mean things does not a florist have to put up with! An instance of how far near sighted competition can go. The usual price for decorative plants, medium sizes, was taken for granted at $3 a dozen, but now several firms have cut these prices to $2 and $1.50 a dozen. There is no excuse for anything of this kind in our business; it does not pay and is of no use; it only still more reduces the florist's business to a mere nothing as to profits. It cheapens these perishable goods in the eyes of the public and many will do without these decorations, reasoning that everybody has them, let us get something else.

Since the past chrysanthemum show many ideas of different members of the society have come up as to what to do about another show. In spite of a state appropriation and a liberal special premium list, premiums had to be cut a good slice. The most feasible plan at this time seems to be that the executive committee of the state society shall meet with a few prominent merchants of this city to formulate a plan to make up a sufficient amount to cover all expenses and premiums and to arrange with the railroads for low rates, etc., the society to make a uniform admission fee of 10 cents and probably one evening at a high admission, with special attractions. Another plan much favored by florists outside of Indianapolis is to hold the exhibition either at Richmond or Anderson. Still another plan is to hold a good rich display of flowers at the annual meeting, free to the public.

The regular monthly meeting of the local club and also the annual election will be held at Mr. E. A. Parkers's residence, Tuesday evening, Dec. 7. Very likely the show question will come up for discussion and some ideas formed as to what to do. W. B.

In our advertising pages you will find all the best Chicago wholesale cut flower houses well represented. If you want anything in the Chicago market you can get it from those advertising in this issue, and you can be assured of the right kind of treatment.

The Florists' Manual, by William Scott, will be the most important contribution ever made to the literature of the profession in America. Extracts from the advance sheets will appear from time to time in the Florists' Review.

The Florists' Review

G. L. GRANT, Editor and Manager.

PUBLISHED EVERY THURSDAY BY

THE FLORISTS' PUBLISHING CO.

530-535 Caxton Bldg., Chicago.

334 Dearborn St.

Eastern Manager:
Harry A. Bunyard, 56 Pierce Building, New York.
104 Hudson St.

Subscription, $1.00 a year. To Europe, $2.00. Subscriptions accepted from those in the trade only.

Advertising rates: Per inch, $1.00; ⅛ page, $13.00; full page, $25.00. Discounts: 6 times, 5 per cent; 13 times, 10 per cent; 26 times, 20 per cent; 52 times, 30 per cent. Discounts allowed only on consecutive insertions. Only strictly trade advertising accepted. Advertisements must reach us by Tuesday to assure insertion in the issue of the following Thursday.

Copyright 1897.

When you are in Chicago we shall be glad to have you call on us.

Send in your photograph for our general introduction. See our announcement about it.

There are many good things in course of preparation for the readers of the Florists' Review.

When you send an order to an advertiser please say that you saw his adv. in the Florists' Review.

Please let us have your subscription promptly. We will appreciate a quick response to our liberal offer.

If this sample number pleases you please show your appreciation by sending in your subscription promptly.

Send in your advertisements of help wanted and situations wanted. Where they do not exceed five lines in length, (seven words to a line) we will insert them free.

The editor invites you to send in any questions of trade interest you would like answered. He will get a practical and helpful answer for you if the question is answerable.

If you need any trade supplies not offered by our advertisers write us about it and we will see that you are placed in communication with someone who can supply what you want.

Send us items of news about new greenhouses, new florists, business changes or anything you think may be of interest to others in the trade. We want all the news of all the trade.

Advertisements of help wanted and situations wanted, not exceeding five lines (seven words to the line) will be inserted free until further notice. Additional lines 10 cents each, per insertion.

We are not ashamed of this issue of the Florists' Review but we shall do better in future. We intend to make this paper one which will compare favorably with any other publication in the world.

Messrs. Bassett & Washburn, Chicago, report that the volume of their business for Thanksgiving was nearly double that of any previous year. Commencing with Monday and including Thursday they cut ten thousand good, merchantable American Beauty roses and sold them all, even then being unable to fill all orders received. This is certainly a very cheering report and shows that there is a decidedly better feeling in the business world, and among buyers of flowers.

OUR GENERAL INTRODUCTION.

In this number we start our general introduction. We intend to present to our readers every legitimate florist in the United States and Canada who joins the Florists' Review family. Send in your photograph with your subscription, or at any time you wish afterward. We shall publish page groups as rapidly as we can make space for them. When the introduction is complete we shall probably republish all the plates in book form with a general alphabetical arrangement of the names, so any portrait can be quickly looked up. In sending photographs please be careful to write your name and address on the back, and do not send us any photos that must be returned, as we have to cut them up in arranging the groups. Cabinet size photos are preferred.

Chicago, Dec. 1.

Such a complete picture of the Chicago market is given in our advertisements that quotations seem unnecessary. You will find up-to-date quotations of nearly every house among the advs. A review of the market conditions will be found in our Chicago news report.

GLADIOLUS FOR FORCING

Shakespeare, white, per thousand, $40; per hundred, $5. Isaac Buchanan, yellow, per thousand, $25; per hundred, $3. Mme. Monneret, pink, per thousand, $10; per hundred, $1.50. White and Light Mixed, per thousand $25; per hundred, $3. Now is the time to secure your Gladiolus for forcing, and being a grower of this bulb inside and out, I know that I can give you just what you need. You will find my White and Light Mixture superior to anything on the market as a forcing mixture. If you have failed to force Gladiolus to a profit just give them a good strong bottom heat and note the results.

CANNAS:::

We have Cannas too, large roots and small roots, either for forcing, counter trade or mailing. By the hundred, thousand or hundred thousand. Please mention just how you want them and when you want them, the sooner the better for you, as the stock is finer this year than ever and that is saying a great deal, for this locality is the best for Cannas. Alphonse Bouvier, Chas. Henderson, Mme. Crozy, Paul Marquant, Paul Bruant, $3 per hundred; $25 per thousand. Austria, Chicago, Eldorado, John White, $6 per hundred. Egandale, Florence Vaughan, Queen Charlotte, $4 per hundred; $35 per thousand. Italia, Papa, Pierson's Premier, $10 per hundred.

We will have all of the best new ones to offer after Jan. 1st. You will hear about them later. Remember our roots are not cut to the single eye but are natural division and have from two to four eyes. Those with whom I am not acquainted will please send cash with the order.

CHARLES H. ALLEN, FLORAL PARK, LONG ISLAND, NEW YORK.....

AN UNPARALLELED SUBSCRIPTION OFFER.

EVERY one to whom this issue of the FLORISTS' REVIEW is addressed, and who fills out, signs and returns the accompanying subscription blank, accompanied by $1.00, within 30 days from date, will receive not only the FLORISTS' REVIEW for one year but also a certificate entitling him to the earnings on one-tenth of a share of stock in the company formed to publish the paper. The shares will be of a par value of $10.00 each.

Why do we make such an unparalleled offer? It is very simple.

You will have an interest in the success of the paper.

You will see that you can buy everything that you want to just as good advantage from advertisers in the FLORISTS' REVIEW as elsewhere and at the same time benefit yourself by increasing the earning power of your certificate.

This mutual arrangement cannot fail to bring to the paper a heavy advertising patronage, and as a result the stock represented by your certificate will earn good dividends.

And the more you buy of advertisers in the FLORISTS' REVIEW (always mentioning the paper) the larger your dividends will be.

You will get a better paper than has yet been published in this field, and a share of its earnings. Please let us hear from you by early mail.

Wholesale Cut Flowers

51 WABASH AVENUE, CHICAGO.

ROSES AND CARNATIONS GROWING UNDER 500,000 FEET OF GLASS ENABLE US TO SUPPLY ANY QUANTITY.

WE grow our own stock, and when you order from us you will get strictly fresh goods. Don't be afraid to take orders for American Beauties. We can supply you. We are headquarters for AMERICAN BEAUTIES. We also grow bulb stock, such as VALLEY, ROMANS, DAFFODILS, HARRISII, LILIES and TULIPS, of which we have secured the best bulbs the market affords.

We will this Spring, as heretofore, have large quantities of young roses for sale. Before ordering elsewhere write us for prices. Stock ready for shipment March 1 next.

Following is the form of certificate we issue to subscribers:

$1.00 **$1.00**

The Florists' Publishing Company, Chicago.

This Certifies that _____ of _____

_____, is entitled to the annual dividends on one-tenth of a share (par value of each share $10.00) of the stock of the FLORISTS' PUBLISHING COMPANY, of Chicago, Ill., that has been placed in my custody as Trustee, so long only as

_____ shall remain a paying subscriber to the FLORISTS' REVIEW.

This certificate is transferable only to _____ successor in business, and then only on application to the undersigned. Dividends will be made of net profits on the first day of January of each year.

Certificate holders are reminded that by confining their purchases to those who advertise in the FLORISTS' REVIEW (always mentioning the paper when writing) they will greatly enhance the earning power of their certificates.

Buy to best advantage always, but, everything else being equal, give the preference to those who advertise in the paper in which you have an interest.

Witness my hand and seal at Chicago, Ill., this _____ day of _____, 1897.

(SEAL)

_____,
Trustee.

TELEGRAPH CODE.

In telegraphing orders to any of the wholesale dealers in cut flowers use the following code:

Assume—Do not answer if cannot fill order.
Abrogate—In case you cannot fill order, telegraph at once.
Anticipate—Answer at once, stating whether you can or cannot fill order.
Ambition—If you can only partially fill order, do so, and reply, stating what.
Admiral—Order must be sent on train mentioned only.
Ambulance—Want all of order filled or none, and prompt answer back.
Adjacent—If cannot send on train mentioned, next one will do.
Affable—Send prepaid by baggage master, if no express messenger on train.
Decorate—If cannot send all on train mentioned, send all you can, and send balance on next train.
Admission—This order is a substitute for my regular order.
Dancing—If cannot fill order exactly as specified, you may substitute according to your best judgment.
Ancestor—This order is an addition to my regular order.
Durable—Colored flowers must not be substituted for white.
Affection—Fill if possible, even at extra expense.
Fabricate—Flowers ordered are to be re-shipped to a distance, therefore buds must be cut specially close.
Fortunate—Select extra stock and charge accordingly.
Devotion—For cheap work, and can use second-class flowers, if at reduced price.
Flattery—If price has advanced since last quotation, do not send goods, but telegraph.
Forgery—This order countermands all previous orders.
Formation—Add these items to the order which you already have, but in case first order is already shipped, cancel this addition.
Flamingo—We are in a bad pinch; send us something to help us out, even if of poor quality.
Flocking—Have sent mail order; if not yet received, send following at once, and cancel mail order when received.
Foraging—This order includes all items previously ordered and wanted for this date.
Superior—Can use something especially fine, and am willing to pay accordingly.
Skip—If you are out, buy the best you can; we accept risk of getting "pickled" stock.
Corporal—If cannot send on night train, morning train will do.

THE CODE BELOW WILL BE USED IN ANSWERING YOU, WHEN NECESSARY.

Elope—Cannot fill your order to-day. Stock is scarce. Have tried to buy at other houses for you.
Lecture—Our store was closed yesterday when your telegram came. Received it this morning. Will ship by first train to-day, unless countermanded at once.
Willing—Cannot ship on train mentioned. Will send on next train possible to-day.
Eclipse—Will send part of your order. Balance scarce. Cannot get it at any price to-day.
Artistic—Cannot fill order to-day, if you want order filled (same order) to-morrow, wire us at once.
Favorite—Stock very poor, none better to be had. Will ship unless countermanded by..... o'clock
Fundament—Stock named in this telegram has been sent, and balance, unless countermanded by telegram, will be sent on.....

ASPARAGUS SPRENGERI specimen 12 feet in circumference.

THE MOST USEFUL NEW PLANTS FOR FLORISTS

ASPARAGUS SPRENGERI.

This is now grown extensively by all the leading eastern florists, not only for cutting, but also for all decorative purposes. It forms specimens 12 ft. in circumference, like cut, with plume-like sprays, 8 ft. long.

Fine Plants, 2½ inch Pots, $6.00 per 100; 3½ inch, $10.00 per 100; 6 inch, $50 00 per 100; 25 at 100 rate.

Seed of above to arrive December, $1.75 per 100; $15.00 per 1000.

NEW GOLDEN CALLA (Richardia Pentlandii.)

The only true **Golden Yellow Calla**, flowers as large as the White Calla; very free bloomer and good grower. Not long ago 90 guineas were refused for two plants offered at auction in England. Strong blooming size bulbs, $1.50 each; $15.00 per 12.

PURPLE FRINGED CALLA. Flowers 9 inches long, purple and white, curiously fringed, 50 cts., each; $4.00 per 12.

BLACK CALLAS, FINE BULBS, $6.00 PER 100.

NEW CANNAS.

The following New Cannas were originated in our establishment and first sent out by us:

Philadelphia, the finest crimson scarlet to date.
Duke of Marlborough, the darkest of all Cannas, an improved Philadelphia.
Lorraine, pink, broadly edged white.
Topaz, the only pure yellow.
Cuba, largest gilt edge.
Duchess of Marlborough, the only pure pink.
Klondike, the only large pure orange.
Champion, largest and finest scarlet.
Maiden's Blush, rosy flesh.
Moonlight, nearly white.
Triumph, Mephisto, Sensation and others.

Parties wishing to catalogue these in 1898, will be given liberal terms. Electros and colored plates at cost. Send for list.

Canna ,Italia, $6.00 per 100. Canna Austria, $4.00 per 100.

DAHLIAS Prize Winners, Grand Duke Alexis, Gilt Edge (new), Red and Black, Mrs. Agnew, Snowclad and all leading novelties.

SUMMER BLOOMING BULBS.

For catalogue men—very large assortment at very lowest prices.

RUELLIA MAKOYANA.
Fine novelty for florists' use. $2.50 per 12.

DUTCH BULBS.
Send for list of surplus bulbs at very low prices.

Electrotypes for Florists and Seedsmen.

We have more than 12,000 electros of Flowers, Plants, Fruits, etc. List of catalogues on application. Wood Engraving and Process Work made to order at lowest possible prices.

PETER MACDONALD JAMES MCMANUS

MacDONALD & McMANUS

WHOLESALE FLORISTS.....

'PHONE, 2778 38TH ST.

50 West 30th St. NEW YORK.

SHIPPING CUT FLOWERS.—We have had the privilege of examining the novel shipping frame for cut flowers invented by Mr. J. M. Clark, Des Moines, Ia. These frames hold ten blooms each, so adjusted that each flower is held firmly but gently in place and the frames nest together, being held firmly in position in the case by slipping the edges into thin slits in the sides. The flowers can go from the grower to the consumer without any rehandling whatever. The benefit to the stock by doing away with all rehandling would certainly be considerable. Mr. Clark is preparing to manufacture these frames in quantity and says they can be sold at so moderate a price that returning the frames will not be necessary.

THE "Rose leaf" tobacco extract has now become a real necessity to every florist. Vaporizing is far superior to "smoking" in every way and is even more effective.

Orchid Growers and Importers

AN UNPARALLELED SUBSCRIPTION OFFER.

EVERY one to whom this issue of the FLORISTS' REVIEW is addressed, and who fills out, signs and returns the accompanying subscription blank, accompanied by $1.00, within 30 days from date, will receive not only the FLORISTS' REVIEW for one year but also a certificate entitling him to the earnings on one-tenth of a share of stock in the company formed to publish the paper. The shares will be of a par value of $10.00 each.

Why do we make such an unparalleled offer? It is very simple.

You will have an interest in the success of the paper.

You will see that you can buy everything that you want to just as good advantage from advertisers in the FLORISTS' REVIEW as elsewhere and at the same time benefit yourself by increasing the earning power of your certificate.

This mutual arrangement cannot fail to bring to the paper a heavy advertising patronage, and as a result the stock represented by your certificate will earn good dividends.

And the more you buy of advertisers in the FLORISTS' REVIEW (always mentioning the paper) the larger your dividends will be.

You will get a better paper than has yet been published in this field, and a share of its earnings. Please let us hear from you by early mail.

PALM GROWERS
COMMISSION FLORISTS

Milwaukee, Wisconsin

PROVIDENCE, R. I.

Farquhar Macrae cut some excellent chrysanthemums Thanksgiving week. Of the many whites he considers Mrs. Robt. Crawford the best for this season and intends growing it in place of Wanamaker, which is very unsatisfactory this year, almost the only variety showing disease. Western King is a good thing. A white sport from Pres. Smith is well thought of. It has a long neck like its parent but a good stem, with foliage similar to Mrs. Jerome Jones. It is a little later than that variety, which after its many successes this year, will doubtless be grown largely another season. Of late yellows, Maud Adams is considered the finest; a compact head on a grand stem and a bright color. There is a place for Mrs. E. Buettner. It is a curious bloom, but pleasing, solid and bright yellow.

Francis B. Hayes will be planted more largely when better known. It follows Maud Dean and when shaded it comes a beautiful deep pink. G. P. Rawson's "Thanksgiving" is represented by some trial plants. It is a noble bloom, a shell pink; looks very promising.

In carnations Flora Hill is pre-eminent. Alaska next. The never failing Lizzie McGowan still holds i's own. Eldorado is fine. Mrs. Fisher was sadly affected by the unfavorable spring weather and had to be entirely discarded for this year, the first time this variety has failed to do well here.

Roses both on benches and in solid beds are looking well, with promise of a heavy crop for Xmas. One house was changed from solid bed to bench to avoid the ravages of the hard-shelled bug. The change has had the desired effect. The grafting method will be adopted to some extent next season.

At the R. I. Greenhouses Alex. Miller is congratulating himself upon the disappearance of the early 'mums which at this time crowd out all else. The space is being utilized for lilies. His roses are in fine shape and a good holiday crop can be banked upon. Carnations are first-class; with the houses built directly opposite to the popular idea and assuredly the correct one, it is surprising such returns are shown. W. M.

Special clearing sale of wire work at Kennicott Bros. Co., Chicago.

THE NEW WHITE CARNATION...

"EVELINA"

has had many visitors who were delighted with her presence, and were so well pleased at her cheerful disposition and behavior that a second audience was requested.

She takes this opportunity of extending a most hearty invitation to all interested in her species to call upon her while in her city, and will be pleased to return the call at an early date, whenever an invitation is extended.

INTRODUCTION.

Is a pure white, of large size, good form and substance. An extraordinary strong Calyx, is fragrant, and borne on long stiff stems that always carry the bloom erect. It is a free, early, and continuous bloomer, is of good habit; a strong, free and healthy grower; last year quite a few plants produced from 30 to 50 flowers by the first of January. She won the Ward cup for best Commercial White at the Cincinnati meeting of the American Carnation Society; also a certificate of merit at the Indianapolis and St. Louis Chrysanthemum shows.

Have already booked orders for over 7,000 for Cincinnati alone, which proves the popularity of this sterling variety. You will make no mistake in giv ng it a trial. Orders filled strictly in rotation. Price: Strong well rooted cuttings, $10.00 per 100; $45.00 per 500; $80.00 per 1,000. Cash, or satisfactory reference, please.

R. WITTERSTAETTER,

Carnations

Cottage Garden Collection of New Seedlings for 1898.

NEW YORK: Scott x Daybreak. Bright cerise pink resembling Bridesmaid. Strong vigorous habit. One of the best and most constant bloomers we have thus far grown. Magnificent color under gas or electric light. Awarded first prize wherever shown. Certificated.

MRS. JAMES DEAN: Scott x Storm King. Clear, silvery pink, strong vigorous habit, large bloom on a long, wiry stem, free and constant bloomer. The ideal light pink. Winner of first prize and certificate of merit at Philadelphia for the best American seedling.

WHITE CLOUD: (Dorner) Wood x Daybreak. Pure white, strong vigorous habit, extra long and strong stem, large fragrant flower, early and abundant bloomer. Winner of first prize wherever exhibited. A grand commercial white. Certificated.

JOHN YOUNG: Scott x Storm King. Very double snow white flower deeply fringed, strong clove fragrance, on long stiff stem. Strong, vigorous habit, free constant bloomer, exceptionally healthy plant. The nearest to Scott in habit of any white that we have thus far grown. A first-class commercial carnation.

BON TON: (Raised by F. A. Blake, Rochdale, Mass.) Bright, warm scarlet, exceptionally strong habit resembling Portia. Large, deeply fringed very fragrant flower on a very stiff stem. With us, plant does not require staking. Certificated.

GOLD NUGGET: (Dorner) Clear, deep yellow slightly marked with red. Good sized flower on a very stiff stem. Habit vigorous and free. An early and continuous bloomer. The best yellow that we have thus far grown. Winner of first prize wherever exhibited. Certificated.

Prices for the above carnations, $2.00 per dozen, $10.00 per 100, $75.00 per 1,000.

Also Mrs. Geo. M. Bradt, Flora Hill, Victor, Harrison's White, Mayor Pingree, C. A. Dana and other standard varieties, at reasonable prices.

KENTIA BELMOREANA:
6-inch pots 24 inches high, $1.50 to $2.00 each.
5-inch pots 18 to 20 inches high, 75 cents each.

QUEENS, L. I., N.Y.

PINK CUPID SWEET PEA.

This gives promise of being one of the best sweet pea novelties that we have been favored with. The sweet pea has of late years taken a very prominent place in the florists' stock of flowers, and its popularity seems to steadily increase with the people. But as a pot plant the sweet pea has undoubtedly a useful future before it now that we have a race of dwarf growing sorts. A well-bloomed pot of sweet peas is bound to appeal to all lovers of this flower. We believe Mr. Burpee has an excellent thing in his new Pink Cupid.

HOLLY AND GREENS.

Of holly there seems a likelihood of a shortage this year, but of bouquet green the supply is abundant. At the low prices at which the latter is quoted it will undoubtedly pay retailers to push it as freely as they can. The quality seems generally excellent and it ought to give satisfaction wherever used. It would probably prove a good investment for every retailer with any considerable trade to issue to his customers a printed announcement stating that the supply of bouquet green is generous this year and that prices are such that all can afford to use it freely in their Christmas decorations.

JADOO FIBRE.

This substitute for soil in growing plants seems to be meeting with much favor with those who have given it a trial. Many of the prize winning plants and flowers at the recent chrysanthemum show of the Pennsylvania Horticultural Society, Philadelphia, were grown in Jadoo fibre, and the superb crotons shown at the Providence convention by Robert Craig, Philadelphia, were also grown in Jadoo. Those crotons will linger long in the memory of all who saw them. Perfection seems the only word to apply to both growth and coloring. Mr. Craig attributed his success to the Jadoo fibre in which they were grown. It is certainly worthy of a thorough trial by every one who grows plants and flowers.

AMERICAN BULB CO.

WHOLESALE GROWERS AND IMPORTERS

Bulbs, Palms, Ferns and Flower Seeds....

Props. U. S. Exotic Nurseries, Short Hills, N. J. (Formerly Pitcher & Manda.)

The American Bulb Company does an Exclusively Wholesale Business with Florists.

Devoting all our time and attention to the growing, importing and supplying our customers in the trade with their requirements, we are, in consequence, enabled to furnish a high-grade article promptly upon receipt of order or early in season.

We Aim to Give Satisfaction and that we succeed is proven by the fact that our clientage covers upwards of five thousand Florists in the United States and Canada, nearly all of whom have been steady customers with us (and the old firm) for the past ten years.

Our Palm and Fern Department at Short Hills, N. J., ranks as one of the largest horticultural establishments in the world.

Our Wholesale Bulb and Seed Warehouse in Jersey City, the best located shipping point in the United States, has ample facilities for receiving, repacking and shipping with dispatch our large Bulb and Seed importations.

Write Us when in want of anything in **Bulbs, Palms, Ferns and Flower Seeds** (our specialties) or anything in the line of Horticultural Stock. If one of our traveling salesmen is in your vicinity we will have him call upon you, otherwise we will make you a special low offer by mail. Do not place your order for Begonias, Gloxinias, Gladiolus, Caladiums, Dahlias, Cannas, etc., and Florists' Flower Seeds before writing us for a special estimate. Send list of requirements.

Please Address All Correspondence:

AMERICAN BULB COMPANY, Short Hills, N. J.

AN UNPARALLELED SUBSCRIPTION OFFER.

EVERY one to whom this issue of the FLORISTS' REVIEW is addressed, and who fills out, signs and returns the accompanying subscription blank, accompanied by $1.00, within 30 days from date, will receive not only the FLORISTS' REVIEW for one year but also a certificate entitling him to the earnings on one-tenth of a share of stock in the company formed to publish the paper. The shares will be of a par value of $10.00 each.

Why do we make such an unparalleled offer? It is very simple.

You will have an interest in the success of the paper.

You will see that you can buy everything that you want to just as good advantage from advertisers in the FLORISTS' REVIEW as elsewhere and at the same time benefit yourself by increasing the earning power of your certificate.

This mutual arrangement cannot fail to bring to the paper a heavy advertising patronage, and as a result the stock represented by your certificate will earn good dividends.

And the more you buy of advertisers in the FLORISTS' REVIEW (always mentioning the paper) the larger your dividends will be.

You will get a better paper than has yet been published in this field, and a share of its earnings. Please let us hear from you by early mail.

FLORISTS' PUBLISHING COMPANY,

530-535 Caxton Building, - - - CHICAGO, ILL.

CHRYSANTHEMUMS

We Are.....

Headquarters

. . . . . for all the best varieties of Chrysanthemums. All the new sorts of 1897-98. Full information given in our January list of all the newer sorts and how they have ranked compared with standard sorts; also heights, bud to take and time of blooming, as far as possible.

Ready Now--

Stock Plants of the two commercial early varieties.

LADY FITZWYGRAM, the earliest, finest and most graceful white variety, $8.00 per hundred; Sept. 22; use crown bud; height 2½ ft. It is earlier and sells better than *Bergmann.*

GOLDEN TROPHY, follows *Marion Henderson;* height 2½ ft.; elegant foliage; very large compact globular yellow flower. $15 per hundred.

Also stock plants of 12 of the finest introductions of the past spring—American Novelties, for $2.00.

Carnations

FLORA HILL. The finest white to date, orders now being booked for rooted cuttings which will be delivered in rotation, beginning in January. We have an immense stock in elegant condition. $5.00 per hundred, $40 per thousand. See our January list for other varieties and novelties.

Rose

PREST. CARNOT. A limited number of strong 2-year old plants at $10 per hundred. The grandest market rose extant; every shoot brings a perfect bud.

FICUS BELGICA, (the long-leaved Rubber). Perfect plants from top cuttings in 4-inch pots, $3 per dozen, $22.50 per hundred. This stock is in elegant condition.

Palms (Must have the room)

ARECA LUTESCENS. Three plants in 6-inch pots, in perfect condition, 20 to 24 in. high, $40 per hundred.

LATANIA BORBONICA, 6-inch pots, nicely furnished, just what you want for the holiday trade. First size, $50 per hundred; second size, $40 per hundred.

Asparagus

SPRENGERII. Invaluable to every florist. 2½-inch, $6 per hundred.

PLUMOSUS. 2½-inch, $6 per hundred.

Our **January List** will describe and price some very pleasant surprises in the way of novelties for we have never had so many fine new things to offer—among them some extraordinary departures in **Geraniums** (gathered from all the best foreign growers). **Cannas,** Italian, French and American. Two new varieties of the Giant Race of **Heliotropes.** A few good new **Roses.** A new **Russellia. Paris Daisy.** A set of **Phloxes,** etc., etc.

SEND FOR OUR LIST.

E. G. HILL & CO., Richmond, Ind.

DREER'S SPECIAL HOLIDAY OFFER.

Our stock of Palms has never before been so complete at this season of the year as now, forty of our largest houses being filled with stock, from little seedlings up to specimens 10 ft. high. Our stock of Kentias, that best of all Palms, is especially fine. Of these we are carrying the largest stock and best assortment of sizes to be found in any one establishment in the world.

For a full line Decorative Plants and General Florists' stock, see our QUARTERLY WHOLESALE LIST of September 1st. If you have no copy of this or of our SPECIAL DECEMBER LIST of NEW CROP FLOWER SEEDS, which have been mailed to every Florist in the country, a postal card will bring duplicates.

HENRY A. DREER, 714 Chestnut St., Philadelphia.

NATHAN SMITH & SON'S

ARE UNRIVALED

Five of our Twelve Blooms in the International Contest at Chicago, which were awarded the capital prize, were varieties originating with us.

Our Collections of new varieties for 1898 will be few in number but great in quality. Descriptions and prices will be announced later.

Stock Plants we have in large variety and will be pleased to quote prices on receipt of list wanted.

NATHAN SMITH & SON, 167 W. Maumee St., ADRIAN, MICH.

Following is the form of certificate we issue to subscribers:

$1.00 **$1.00**

The Florists' Publishing Company, Chicago.

This Certifies that _____ of _____

_____, is entitled to the annual dividends on one-tenth of a share (par value of each share $10.00) of the stock of the FLORISTS' PUBLISHING COMPANY, of Chicago, Ill., that has been placed in my custody as Trustee, so long only as

_____ shall remain a paying subscriber to the FLORISTS' REVIEW.

This certificate is transferable only to _____ successor in business, and then only on application to the undersigned. Dividends will be made of net profits on the first day of January of each year.

Certificate holders are reminded that by confining their purchases to those who advertise in the FLORISTS' REVIEW (always mentioning the paper when writing) they will greatly enhance the earning power of their certificates.

Buy to best advantage always, but, everything else being equal, give the preference to those who advertise in the paper in which you have an interest.

Witness my hand and seal at Chicago, Ill., this _____ day of _____, 1897.

(SEAL) _____,

Trustee.

DESCRIPTION—Incurved Japanese, white, flower of extraordinary depth, foliage up to the flower, stem very stiff and erect; midseason, good keeper and shipper. The ideal commercial and exhibition bloom.

Price 50c each, $3.00 per dozen, $20.00 per hundred, $150.00 per thousand.

Ready for delivery March 1st, 1898.

A. HERRINGTON, Florham Farms, Madison, N. J.

TORONTO.

The weather having turned decidedly colder, the cut-flower trade picked up quite a bit during the last week, and prices were considerably firmer. Chrysanthemums are still coming in apace, some very fine ones, too. Some growers will have some right up to Christmas, but their general popularity, and the general supply, too, will be on the wane after this week, and roses and carnations will again take the precedence. Thanksgiving day was about as disagreeable a day as could be imagined—the weather turned mild, and it rained the whole day, but there was a big rush on cut flowers of all kinds, and everything in sight was cleaned out. I think many people must have missed the chrysanthemum show on that day—five or six years of it had got them into the habit of going. Why should it be so late? It is not a fixture in this country. A great effort should be made to get the government to set the date at least two weeks earlier.

I mentioned in another place that a "Canadian Horticultural Association" had been formed during the late show somewhat on the lines of the S. A. F. A. O. H. It does not take quite so many letters to designate the new society, but it is hoped and believed that it will do as much good to the trade of this country as the old society did during the first few years of its existence. The financial condition of the majority of the trade here has hitherto made it next to an impossibility for them to attend the conventions of the S. A. F. and at the same time hold their end up as they would wish to do. The C. H. A. has been formed strictly for business, and in whatever place it meets it will not expect to have large amounts of money spent on its reception and entertainment, nor will its individual members be expected to spend more than their railway fare and hotel expenses. Though, of course, if any of them feel inclined to "paint the town red" or have a "hot time" it is nobody's business but their own. There is a great deal for an association of this kind to do which if done faithfully and conscientiously will result in much good.

A trade paper will probably be carried on in connection with the association, in a small way at first, but increasing as it gathers weight. Great efforts will be made to make it a *national* affair, not merely local or even provincial. Mr. Gammage, of London, and Mr. McLean, of St. Thomas, the president and secretary pro tem., will be given every encouragement from this part of the country. I may also say, I hope without being too premature, that in order that the *whole* trade, big and little, may be enabled to join, an annual fee of $2.00 was decided on, life members $25.00. Whether this will be sufficiently high to carry on the work expected, remains to be proved; with careful management I believe it will. E.

Holly and Green

It is said there is no trade so sure, so much to be depended on under all conditions as the "Holiday Trade." The demand is sure to be with us again this season and we believe to an increased volume.

In the line of CHRISTMAS DECORATIONS we have prepared for it with an ample stock of

Green in Bulk, Evergreen Wreathing, Holly, Holly Wreaths, Mistletoe, etc., etc.

Does QUALITY interest you in these goods? It should. You will find the BEST QUALITY is that which sells, and in buying, this fact must be constantly considered.

We claim to give you the best the season produces, and are we not in position to do this? The large quantities we handle each year acquaint us with the right sources of supply, enable us to give extra labor and attention to inspection and sorting, the unsurpassed facilities we possess for storing and handling, together with our experience and knowledge of the trade wants, all combine to put us in position to offer you the very best service in this line.

Why take risks? Barnard's brand in these goods signifies the standard of excellence. We will not disappoint you either in quality or prompt service.

Bouquet Green in Bulk

It is necessary to seek new localities for supplies of this article if one is to get the dark green color and bushy growth demanded by the florist trade. Our pickers each season must go farther and farther into the deep woods and swamps which have not been cleared and where the sun does not injure the color. Freights are more from these points but quantity used gives us advantage of carload rates and we can offer this better article at very reasonable and competing prices.

Please write for prices, stating QUANTITY WANTED, and lowest possible quotations will be promptly given.

EVERGREEN WREATHING.

For the convenience of those who prefer to purchase Green ready for immediate use we manufacture large quantities of Wreathing. It is made of selected Green, wire wound, tied in coils of twenty yards each; can be cut to any length without unrolling.

Medium or standard grade, per 100 yds., $ 2.75
" " " " " 1,000 " 25.00

For larger quantities special figures will be given, also for different grades, Light and Heavy.

EVERGREEN WREATHS.

These will be found very salable, and the low price at which they are offered affords a good margin of profit. They are made on rattan, wound on both sides with bright, fresh Green, trimmed with colored Immortelles or Cape Flowers.

Per doz ..... $ 1.20
Per 100..... 7.50
Per 1,000..... 70.00

HOLLY--Choicest Eastern Stock.

Well berried, selected grade, is not in large supply this year. We have contracted from one of the most careful packers and are assured of a good quantity of fine Holly. *Secure your supply early.*

Full-sized cases of 16 cu. ft., per case, $4.75
3 cases for.. ..... $13.00

HOLLY WREATHS.

Made of strictly first-class well berried Holly, wound on 12-inch rattan rings.

Per doz..... $ 1.50
Per 100..... 11.50
Per 1,000..... 100.00

MISTLETOE--Ready Dec. 18th.

Very choice, well berried.

Per pound..... 20c
10 pounds..... $1.80
Per barrel, about 25 lbs..... 4.00

SELECTED CHRISTMAS TREES.

Please do not confound these with the common stock, *cut* to *count* only, which annually flood the market. Our Trees are selected for form, quality, and appearance, under the supervision of our own agent. Write for prices, stating size and number wanted, and we will quote.

Order at once, no better stock can be had. Address

FRED. SCHNEIDER, 751 Crawford Rd., Cleveland, O.

BALTIMORE.

During the past week the elements have given Baltimore and its vicinity many varied experiences, and those of the trade know only too well the disastrous results which sometimes occur when the weather goes back on us by not attending to business. It is no exaggeration to say that the mercury has been playing an ad libitum cadenza up and down the thermometric scale from summer-heat to freezing; while the barometer was equally as unstable. In consequence of which good stuff was inclined to be scarce, and the prices fluctuated accordingly.

In spite of the three unfavorable conditions the Thanksgiving trade was generally brisk, both wholesale and retail. Violets and carnations are steadily on the increase and in great demand. Harrisii and longiflorums have put in an early appearance at novelty prices, likewise a few cypripediums. Chrysanthemums are still holding their own, for there are yet lots of good blooms to be had. The indiscriminate glut that could be bought for "5 cents an armful" has materially diminished only to make the price more uniform on the better grades.

Several of our store keepers have had an excellent sale of the high grade ferns such as Farleyense, Cordata compacta, the Boston ferns, etc. Potted plants of this character are gradually coming into favor with the public.

The Gardeners' Club meeting on the 22nd of Nov., was quite largely attended. Our president, Mr. James Pentland, was in the chair and a second time disappointed us by his failure to read his essay upon the culture of Adiantum Farleyense. Mr. Pentland is quite a veteran in the trade and is generally recognized as high authority on the methods of the old school. We hope soon to have the pleasure of hearing this paper and profiting by its advice.

Mr. Robert Patterson, of Madison Street, has been dangerously ill for several weeks, suffering from complications. His fellow-craftsmen and friends hope for his speedy recovery. CHAS. F. FEAST.

A Field of Burpee's Pink Cupid Sweet Pea.

CONCENTRATED Louisville Tobacco Extract of 30 degrees density; one gallon equals about 200 lbs of Tobacco Stems; applied by spraying or evaporating; no more need of the nasty smoking; handier and cheaper than Stems! NEW DWARF Sweet Pea Burpee's Pink Cupid

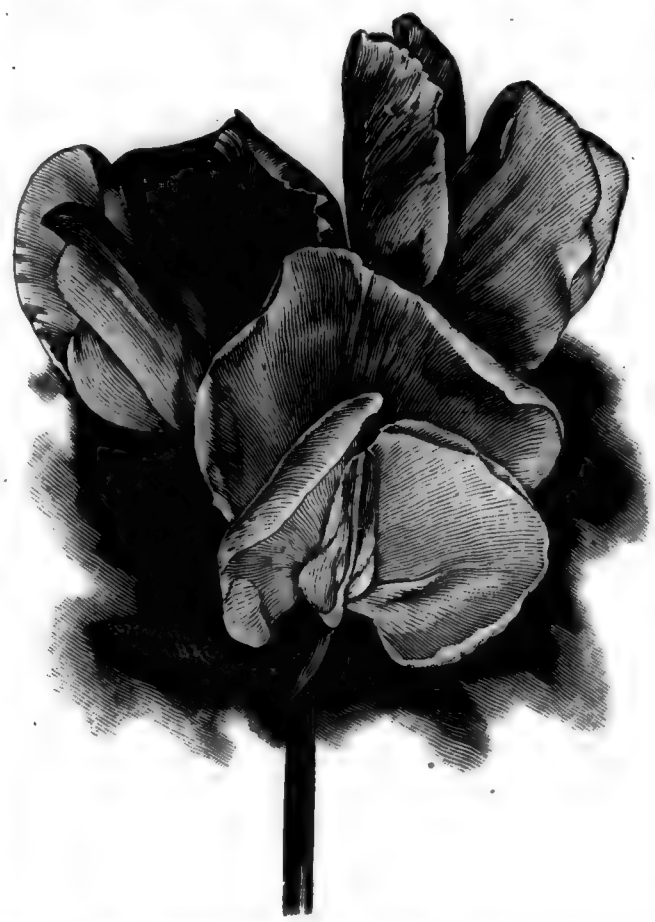
A SINGLE PLANT, EXACTLY ENGRAVED FROM A PHOTOGRAPH OF BURPEE'S PINK CUPID.

This little wonder, like the original Cupid, hails from California, having been discovered by C. C. Morse & Co., to whom we paid fifteen hundred dollars cash for the exclusive ownership when there were only 1060 seeds in existence. It is not a sport from the original White Cupid, but an actual departure from its parent, the tall Blanche Ferry. In habit and manner of growth it is strictly a Cupid, spreading from the root, from a foot to eighteen inches around, growing from six to eight inches high, and shoots up stems about six inches long, which bear, in full bloom at once, from three to four handsome blossoms, all borne close to the end of the stem.

The illustration above has been accurately engraved from a photograph of a single plant, grown in ordinary field culture, lifted and set in a pot on a platform, for the purpose of photographing on a level with the camera. Every plant in our fields in California and New York, and at Fordhook Farm was absolutely true—a perfect "Blanche Ferry Cupid." The Flowers are always of full size, measuring from one and a quarter to one and three-eighths inches across the standard—covering a silver dollar.

Burpee's Pink Cupid bears generally three and sometimes four flowers to a stem. The illustration below was accurately engraved from a photograph EXACTLY NATURAL SIZE. The flowers are identical with the tall growing Blanche Ferry and always fully equal in size.



The flower itself is pretty enough, but its attractiveness is doubled by its association with CUPID—the first colored Cupid to follow the famous dwarf white.

The standard of the flower is wide, not infrequently measuring an inch and a half, but not over an inch high, being developed laterally. It usually curves over a trifle at the top, partly concave, which gives the standard a distinct shell-shaped appearance. The standard is a bright rose pink, while the wings are pure white or light pink. The wings are very large and finely formed; when pressed back against the standard they extend fully a quarter of an inch beyond it.

The substance of the blossom is peculiarly heavy and it will appear fresh and vigorous in a glass of water long after its long-stemmed parent has withered and died. The plant itself is vigorous and hardy, and those who had poor or indifferent success with White Cupid will find this variety **easy to grow anywhere.** The seed, which is *black*, is of wonderfully strong germination and the plant an early bloomer, coming into bloom simultaneously with White Cupid.

Though flowering early it continues in bloom very late, bearing a profusion of blossoms so thick as to completely hide the plant itself. It will be without a rival as a bedding and border annual, for its color and fragrance make it a rare novelty.

In our field crops the past season, both in California and New York, a large piece of them looks as if the ground were literally strewn with bright pink rose buds. No novelty of recent introduction has such beauty and grace combined in it as has **Burpee's PINK Cupid.** It is also delightfully fragrant, and will be admired by everyone who sees it.

In regular sized packets (each containing twenty-four seeds): Per pkt. 25 cts.; 5 pkts. for $1.00; per doz. pkts. $2.00. **Per 100 pkts. $12.50.**

In half-sized packets (each containing twelve seeds): Per pkt. 15 cts.; 2 pkts. for 25 cts.; or 10 pkts. for $1.00. **Per 100 pkts. $7.50.**

Directions for culture in English, French and German printed upon each packet.

TWO OF MANY.

REPORT FROM MR. ECKFORD.

WEM, SHROPSHIRE, ENGLAND, September 13, 1897.

MESSRS. W. ATLEE BURPEE & CO., Phila., Pa.

GENTLEMEN:—I am pleased to tell you that the "PINK CUPID" Sweet Pea you were good enough to send me for trial has been a great success. White Cupid has done much better than last year, but still not up to the Pink variety, which holds its bloom better and consequently gives a much better display. I don't think too much can be said in favor of Pink Cupid. At present, it occupies a place of honor in dwarf Sweet Peas. I am, gentlemen,

Yours faithfully, HENRY ECKFORD.

AMERICAN GARDENING.

NEW YORK, September 9, 1897.

MESSRS W. ATLEE BURPEE & CO., Phila., Pa.

GENTLEMEN:—I have just returned from a trip to Jefferson County, New York, where one of the most beautiful sights to me was a bed of PINK CUPID. It was a mass of blossoms exhaling a delicious fragrance into the air; and that its past had been equally grand was evidenced by the seed pods, while the promise for the rest of the season lay in the multitude of buds yet to expand. Truly as a flowering bedder Pink Cupid is a success.

Yours faithfully, LEONARD BARRON, Editor A. G.

FOR OTHER REPORTS see Special Catalogue mailed on application.

Wholesale Catalogue of Sweet Peas for the trade only, giving testimonials from expert Horticulturists in England, France, Germany and America, as to the hardy growth and rare beauty of **Burpee's Pink Cupid,** will be mailed to dealers on application.

W. ATLEE BURPEE & CO.

Seed Growers, **PHILADELPHIA, PA.**

WASHINGTON, D. C.

It is not generally known by the florists outside of Washington, even those at our gates, for Baltimore has only within a week sent us word that they are with us in our fight, that we have the National Government as a competitor in the cut flower and plant trade.

It is an undeniable fact when I say that every official holding a high office, including cabinet officials, representatives, justices of the supreme court, army officials and others, are the beneficiaries of boxes of cut flowers sent at regular periods. The more prominent the official, the more frequent the boxes.

Also that such plants as are necessary for use during a reception are not only furnished for the occasion, but delivered at Uncle Sam's expense. At present there is going the rounds of the various firms here and elsewhere, an agent of our powerful competitor getting prices on plants for free distribution to the extent of several thousand dollars.

Congress makes liberal appropriations for the adornment of the public reservations and maintenance of greenhouses for the necessary propagation and care of plants solely for these parks; but the custom of giving a few plants to members of Congress has grown to such an extent within the past few years, that it seriously menaces the welfare of the florists. From a few plants it has grown at the present time to include cut flowers.

Congress legislated to have the plant for the specific use to propagate and care for plants to be used in the public parks, but we find now houses in carnations, smilax, roses, azaleas, poinsettias, Dutch bulbs, chrysanthemums, etc.

The florists called upon the Commissioner of Public Grounds, have also petitioned the Secretary of War, and are now getting a petition signed by the business men of the city to present to Congress, and are making every effort to get Uncle Sam to withdraw, he being too powerful and rich a rival to compete with.

The stores did a good business during Thanksgiving week, prices being good. Chrysanthemums were of good quality and plentiful. Some excellent specimens of J. Jones and Maud Dean were exhibited at one of the local shows. Roses, carnations and violets are coming in in quantities and are fine. An F street firm is cutting a fine lot of Harrisii, which find a ready market.

W. H. K.

See the weekly price list of Kennicott Bros. Co. in this issue. It pays to buy at headquarters.

Good ventilating apparatus is as essential as a good house or a good boiler. The best is none too good in such an important matter and the Evans' Challenge Ventilating Apparatus is unquestionably the best. Quaker City Machine Co., Richmond, Ind.

Pennsylvania Horticultural Society, Philadelphia, Nov. 1897. 8 First Prizes for Chrysanthemums; 1 Second Prize for Chrysanthemums; 2 Prizes for Crotons; 1 First Prize for Asparagus Sprengerii; 1 Second Prize for Asparagus Sprengerii; 1 Special Prize for Dracaenas; 1 Prize for Window Box filled with Ornamental Foliage Plants.
Bordeaux, France, Nov., 1897. Silver Medal for Chrysanthemums.
Birmingham, England (Bingley Hall), Nov., 1897. Special Certificate of Merit for Jadoo Fibre and Liquid and First Prize for Cyclamens.

From the Pennrock Co., Wilmington, Del., winners of the largest Prize at the Exhibition of Pennsylvania Horticultural Society, Nov., 1897

"In regard to your inquiry about Jadoo Liquid and Fibre we beg to state that we have used it this last season with good results. We grew our Exhibition plants of Chrysanthemums, which took first prize at the Pennsylvania Show, **in soil up to ten-inch pots. In those sized pots the plants became very sick and all the leaves turned yellow. We then shifted them into Jadoo Fibre and the result was simply wonderful. The plants quickly regained lost vigor and the leaves gradually assumed their natural green color. On becoming pot bound we used the Liquid twice a week and this was all the fertilizer we used. We have had excellent results also with Asparagus Sprengerii, Crotons and large Ferns grown in the Fibre and shall use it more extensively hereafter.**"

ECONOMIZE IN FUEL BY USING S. TAPLIN'S

Double Action Clay and Slack Burning Hot Water Boiler

Merits I Claim for it over any other Boiler

First. It can be worked with the cheapest kind of fuel. In this case, the fuel consists of clay and hard coal screenings in about equal parts. Such fuel cannot be used in any other boiler to advantage, for the reason that it takes too long before the required heat is given off. This objection is met in my double furnace boiler by arranging the fires alternately, and while one fire is burning up, the other is giving off the required heat.

Second. The economy in time required in attending fires. One fire started the first day with part of a charge which is allowed to take fire when the furnace is filled up, requires scarcely any further attention until cleaned out on the third day. Second fire, started on the second day, runs till fourth day, giving each fire forty-eight hours.

Third. As one fire is taking care of the boiler, the other is allowed to burn out clean; no partly-burned fuel being wasted, as is so often the case in other boilers.

Fourth. When fires have burned out, nothing is left in furnace but light, brittle clinkers and dust—the latter making a splendid material for propagating in place of sand; also for mixing with soil for potting, and benches for roses, etc., as nearly all plants like it. The clinkers are much better than gravel or broken brick for making walks; also for concrete for under-ground walls or foundations.

Fifth. There is no smoke, consequently no soot. The boiler is set in brick-work, with soot doors so arranged that every part can be reached and any dust that settles wiped out in a few minutes, as well when fires are burning as when out, thus avoiding loss of heat by letting fires out to clean flues.

Sixth. The boiler consists of four-inch water spaces all of which are exposed to direct heat both below and above. No tubes are used, so there is no trouble with replacing tubes every few years, as is necessary in any hot-water boiler that is out of use four or five months in the year.

Seventh. Simplicity of construction. It can be easily cast or made of wrought iron or steel, welded or riveted.

Eighth. The same principle can be adapted to special advantage in the construction of steam boilers, where waste or any kind of cheap fuel, such as coal screenings, sawdust, spent tan bark, pressed hay or peat bog, is used. With all such fuel, the fire requires frequent feeding, and every time fuel is thrown in, the fire is deadened by the amount of cold air admitted. Every practical engineer knows the loss of power caused by constantly opening the furnace door.

Ninth. The great power of the boiler. One having over five thousand feet of four-inch pipe, which was in use through the last severe winter, did the work formerly done by three number seventeen and one number fifteen Hitching's boilers, and the cheap fuel used cost less than the hard coal to run one Hitching's number seventeen would have cost for the same time.

Tenth. Where a little warmth is required, as is so often the case for roses, till quite late into summer and very early in the fall, a fire can be started about every three days, and with draft shut off it will keep a steady warmth in the pipes at a cost of fuel and attendance which must be seen to be believed. With other boilers, time and fuel are such important items, that fires are dropped as early as possible and started again in the fall often after mildew has got in its destructive work.

I expect it will be extensively used in Europe, where economy is almost a science.

Thanksgiving day, universally acknowledged as "Turkey day," is also becoming a "Flower day." Invitations for dinner are usually reciprocated by a box of flowers. Dinner parties are given and table decorations are in order, hence the florist comes in for a good share of the trade given on the day of thanks. All social clubs had open house and decorations were numerous. John Rost captured the largest job, he doing the work for the Calumet Club's annual hop on this day. Trade on the whole exceeded last year, good stock being very scarce.

Cold weather has struck us and stock has shortened up considerably. Carnations are especially scarce and readily fetch $1.50 to $2.00 per 100. Roses run from $2.00 to $3.00 for second grade, $5.00 to $6.00 for extra choice. Violets are coming in and are of fine quality. Romans and paper whites are also selling well.

Binzell & Kellner are the latest addition in the way of new firms here, having opened at 314 Third street.

Ellis & Pollworth are putting in a new boiler at their palm houses, for safety in extreme cold weather.

It will be to your advantage to look into the Merits of the

Scollay "Invincible" Hot Water Boiler

IT IS ALL THAT ITS NAME IMPLIES, AND DON'T FORGET IT. . . . . .

Cuts and full information mailed on application

FARMINGTON, CONN., March 9, 1896.

Dear Sir: — The "INVINCIBLE" boiler you placed in my Carnation houses I am pleased to say, has given me great satisfaction. It has done all that you claimed it would do and could have done more if called upon. I did not have to run the boiler hard even when the thermometer stood 18 degrees below zero outside; it has proven itself to be "Invincible" in every respect. I find it to be a very economical boiler.

The one thing I like about it is that the heat does not all go up the chimney, which cannot be said about other makes of boilers I have on my place.

Your PORTABLE boiler I have run for three years and find it to be very economical and has done its work well in every way. Your boilers will do a great deal more than you claim for them. They are both "Invincible."

Yours very truly,
HUGH CHESNEY, Florist.

WESTBURY STATION, QUEENS CO., N. Y.
March 10, 1896.

Dear Sir: — It gives me great pleasure to inform you that the "Invincible" boiler you put in my latest greenhouses has given me the greatest satisfaction in every detail.

All the good qualities you claim for it I have found to be just as represented by you and in every way I highly recommend it.

Very truly,
MRS. CHAS. RUSSELL HONE.

AN UNPARALLELED SUBSCRIPTION OFFER.

EVERY one to whom this issue of the FLORISTS' REVIEW is addressed, and who fills out, signs and returns the accompanying subscription blank, accompanied by $1.00, within 30 days from date, will receive not only the FLORISTS' REVIEW for one year but also a certificate entitling him to the earnings on one-tenth of a share of stock in the company formed to publish the paper. The shares will be of a par value of $10.00 each.

Why do we make such an unparalleled offer? It is very simple.

You will have an interest in the success of the paper.

You will see that you can buy everything that you want to just as good advantage from advertisers in the FLORISTS' REVIEW as elsewhere and at the same time benefit yourself by increasing the earning power of your certificate.

This mutual arrangement cannot fail to bring to the paper a heavy advertising patronage, and as a result the stock represented by your certificate will earn good dividends.

And the more you buy of advertisers in the FLORISTS' REVIEW (always mentioning the paper) the larger your dividends will be.

You will get a better paper than has yet been published in this field, and a share of its earnings. Please let us hear from you by early mail.

FLORISTS' PUBLISHING COMPANY,

THE WEEKLY

FLORISTS' REVIEW

G. L. GRANT, Editor and Manager (late Editor and Manager of the American Florist), 530-535 Caxton Building, Chicago.

Vol. 1. CHICAGO AND NEW YORK, DECEMBER 9, 1897. No. 2.

The Garden of Hardy Plants at Lincoln Park, Chicago.

THE GARDEN OF HARDY PLANTS AT LINCOLN PARK, CHICAGO.

The illustration shows the perennial border in Lincoln Park, Chicago, as it appeared Sept. 15th last. Most of the taller native perennials were then in bloom and the gorgeous leaf tints from nature's glowing palette had begun to reveal themselves. All the trees bore exceptionally fine leafage this year and it was comparatively free from the defacing inroads of destructive insects to the end of the season.

Beginning with the lowest group at the right of the picture, the prominent plants in bloom are the tall western sunflower (Helianthus orgyalis), New England aster (rosea), tall serrate-leaved sunflower, perennial phlox, Golden Glow rudbeckia, with Egandale canna and bocconia in the center, and Perilla nankinensis at the extreme left point.

The second group at the right has in addition to the plants named a bunch of the very strong small headed sunflower (H. microcephalus, Tor. and Gray—H. parviflorus, Brunk.), with ricinus in the center and physianthus and ipomæa (I. rubro-cærulea) climbing over the shrubbery in the rear. Well to the front of the group may be seen the bold star-like flowers of the giant yellow hibiscus (H. manihot) which bloomed freely all through October this year.

The third point at the right consists of

unusually tall masses of Golden Rod (Solidago canadensis and S. serotina), ricinus, Golden Glow rudbeckia, Helianthus doronicoides, Hibiscus manihot and Amaranthus speciosus, edged by perennial phlox.

At the left the lower point shows ricinus, masses of helenium, boltonia, New England aster (purple), and Dolichos japonica climbing to the trees at back.

The second point at the left has masses of helenium, boltonia, Giant Daisy (Pyrethrum uliginosum), Helianthus decapetalus, Eulalia japonica, Phlox decussata varieties, and Aster lævis.

In the middle of the view is a group of sunflowers (Helianthus doronicoides) which attained a height of twelve feet this summer, and bloomed profusely. Prominent in the same section were some plants of Virginia tobacco, much admired for their bold leaves and pretty flowers which continued to appear long after many apparently hardier plants had ceased to bloom.

Among late blooming plants the most remarkable is Aster trinervis, a small shrubby looking plant with leaves lobe-toothed somewhat like a chrysanthemum, medium sized, dark purple heads. It came into bloom late in October and was still in full flower Nov. 15. Last year it had not bloomed when hard frost set in.

J. H.

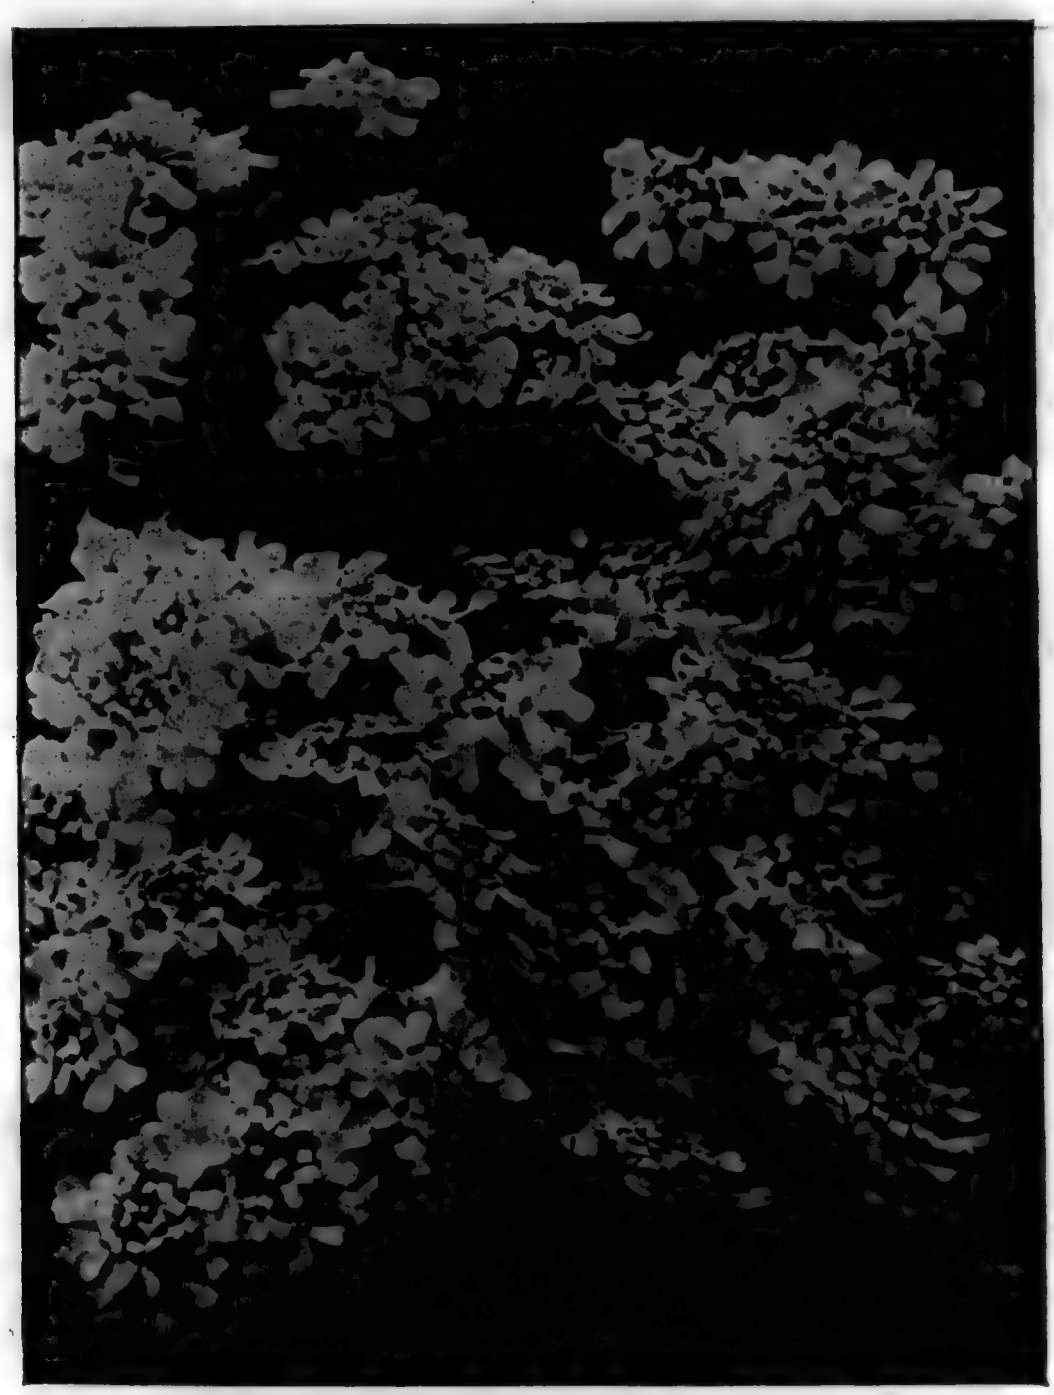
A FEW PERENNIALS FOR CUT FLOWER PURPOSES.

When we look over the list of hardy plants we are puzzled by the great variety of good things suitable for this purpose, and to select a half dozen of the best species is a rather difficult task, for it seems almost impossible for me to decide on any one of them in preference to another. It would be comparatively easy to prepare a list of a hundred species, but the average florist of moderate means has neither time nor space to waste on a large collection and only cares to have a few things perhaps which grow and bloom readily with the least possible care and attendance.

Below I will mention a few of the many worthy species which will succeed in any ordinary garden soil and require only every day treatment. Anybody may grow them successfully in field rows, hoeing and cultivating them in the same manner as we would a row of corn or potatoes. No protection is needed for them in the severest weather; they can be depended upon to bloom profusely every season and their flowers are extremely useful in the home trade, at least with us, for we can always use up the whole of the crop to the last flower.

Early in spring the hardy candytuft (Iberis sempervirens) furnishes us with a great quantity of very serviceable white flowers which are almost indispensable in making up designs or baskets. They are also much in demand in loose bunches where a cemetery trade is carried on; beginning so early as May, it will continue well into June. The elongated racemes can be cut with stems eight to ten inches long, they keep perfectly fresh for a week or more in water, and are of the purest snowy white. Within a small space we may accommodate quite a large number of plants which can remain in the same position for an indefinite period; the older the plants are the more flowers we may expect from them. Propagation by cuttings in autumn, winter or spring, or by seeds, are the means of increasing the stock. Old stools will not divide readily, but under good treatment one-year-old cuttings will form bushy little plants and flower quite freely the first season. Soon after flowering we should not neglect to shear the plants back evenly and rather close to the ground so as to encourage an even, vigorous growth of stout and straight stems.

I. corraefolia is several weeks later and has broader, flat flower-heads when first opening, becoming elongated as the remaining buds open out from the center. This is a robust, stout growing species, but somewhat dwarfer than the first named. Both will force readily in winter and years ago were used extensively as a winter cut flower, especially around Easter. Very little heat is required to bring them out and I do not see why they should not now be profitable in the home trade of the average florist. When planted in pots on the approach of spring and placed in a cold frame they will be in full bloom at Decoration Day. Good prices can be demanded for well-shaped plants and quantities of them can be disposed of annually in the retail trade.



For a second choice I would recommend the pyrethrums, single and double. The China aster-like flowers are borne on long, stiff stems, are of good size and very handsome. They vary in color from white to deep bright crimson and are a most popular flower in their season (June and July), but not enough of them are grown anywhere to supply the market regularly. We can grow them cheaply in field rows and they should remain there undisturbed for some years. The stock is increased readily by division in fall or early spring, or also just after the flowering season is over, but not much bloom may be expected from newly divided plants, especially where they are cut up to one or two crowns. Rank fresh manure should not be used in the soil, still they like a rich and somewhat moist but well drained ground, where the individual flowers attain greater size and substance and are also richer in color. As these plants grow two feet or a little over in height, we must provide a support of some sort for them; stakes, at intervals of eight or ten feet, and twine stretched on both sides of the row, as recommended for achilleas, is the quickest and most economical way I know of. The stems are stiff enough to uphold the flower in closely planted beds where one plant supports the other, but in rows the wind and rain may break them down if left without the aid of the twine. As soon as the flowering season is past, we should go over the plants and cut out all remaining parts of stems down to the ground. This will induce the young side-growth springing from the old crowns to start more vigorously, and when this is attended to early enough, generally insures a fairly good fall crop of flowers. Some catalogue descriptions are rather misleading by calling some varieties "fiery scarlet" or "brilliant scarlet." I have never seen any varieties which could be considered a scarlet, though many of the sorts described as such have come under my observation; they are very brilliantly colored, but I can not find any real scarlet among them.

The flowers of this most valuable hardy plant can be used in every imaginable way, the same as we employ at the present season the chrysanthemum; in vases, bouquets, or in all sorts of room or table decorations and designs, they are always attractive and universally admired by everybody. All our attempts to force the pyrethrum during winter or spring have been unsatisfactory, and I doubt whether we ever will be able to offer any of these charming flowers at any other time but their natural flowering season.

For No. 3, the golden yellow Anthemis tinctoria may be found a profitable subject. Single, daisy-like flowers are always in great demand, and there is no more profuse bloomer of this description than this composite during the summer months, beginning in July and lasting until fall. It is a compact, bushy grower, and perfects hundreds of flowers on long, wiry stems in its season. Propagates quickly by division; small pieces will soon spread and form large plants in a single season, therefore plenty of room should be allowed in the rows at planting time; eighteen inches is the average height of the plants, and when the ground is not too poor or dry, a succession of bloom may be expected until late in fall. They are excellent keepers even in the hottest weather, and are generally used in loose bunches for vases, etc.

The light and airy, rather narrow panicles of Phlox suffruticosa in variety are without rival among the summer and fall flowers for general purposes. Their colors are more delicate than those we find in the decussata section and the florets are not so closely arranged in the panicles. The stem is considerably thinner, the foliage narrow, deep, glossy green, not disfigured by mildew at any time as is the case frequently with the other, and the whole appearance of the panicle is decidedly graceful in every detail. None of them grow taller than eighteen or twenty inches. They flower considerably earlier than the ordinary decussatas and bring a succession of bloom until November.

Why this section should have been neglected for so long a time is a mystery to me, for they possess so many superior qualities which should entitle them to universal attention, much more so than the large family of decussatas, of which new varieties of more or less value are sent out every year, while the undoubtedly more graceful and slender form has received hardly any additions in the last thirty or forty years, though it would not be more difficult to raise new varieties of this than the other. While the robust growth of the common species requires frequent divisions, our favorite can remain undisturbed for five or six years; an annual topdressing in early spring is enough to encourage all the underground eyes into healthy growth, and when the first panicles are cut in June, the eyes at the

Iberis Sempervirens. Perennials for Cut Flowers.

base of the old stalk will in turn form new flower stems, thus keeping up a succession until frost stops all further growth; but where the flowers are left to mature and decay on the plants we must not expect a great quantity of flowers after their first blooming. They are propagated either by cuttings or divisions, preferably in the early spring.

In August and September the helianthuses are generally in great demand. Various good sorts may be recommended, but if only one kind is to be planted, H. lætiflorus is by all means the one which takes best in the market. The flowers are of medium size, very regularly shaped, brilliant yellow in color, and the heads are just heavy enough to slightly bend over the stems so as to add to the general graceful appearance of the long sprays. Two rows of petals make this a semi-double variety, otherwise it very nearly resembles H. rigidus in h bit and growth. About five feet is its height. It is easily increased by division; no special care is needed in successfully growing this plant, but too dry a situation should be avoided.

As I am restricted to but half a dozen species, we are nearing the end. Only one more is to be mentioned, and with so much material to select from, considering everything, I decide in favor of the often mentioned Anemone japonica. We can work these up everywhere, in large and small decorations, in vases, baskets, or designs, with long or short stems. They are never objected to, and come at a time when desirable white flowers are not overplenty. I have seen it recommended many times to give these plants a place partially shaded by trees, but have never seen them in such situations to grow as vigorously and bloom so abundantly as they will in full exposure to the sun. Old plantings will attain a height of six feet, the whole sides and tops a mass of buds and bloom and the foliage large and luxuriant. No such results can be expected for the first two years after planting, whether we use small young plants or several well developed old crowns in a hill to start with. If we are in possession of only a few old plants, root cuttings an inch or so long can be potted singly in small pots, and this is a quick way of working up a stock. In spring the young plants should be planted out in their permanent position; these will generally bloom freely the first fall and increase their crop with every succeeding year. Nobody can afford to do without a row or bed of this useful and profitable plant.

K.

SUPPORT OF FLOWER SHOWS.

In a report of the New York Gardeners' Society's exhibition published in a contemporary, it is written that "it is evident that the key to New York's appreciation and support of flower shows has not yet been discovered." It strikes me very forcibly that the same may be said of any other city's appreciation and support on this continent. In none of the accounts does it appear that the shows have aroused that enthusiasm which brings everybody —young and old, rich and poor—out to see them. I am not one of those who believe that this enthusiasm can be aroused in a single year, but I do believe that the key that will unlock the first and most important door of the safe in which this enthusiasm is stored is nothing else than the *price of admission*. Of course the show must be a good one—they generally are good, though more attention might be paid to small details than is usually done—but what is the use of having a good show if the people don't come and see it? In this city when the show was open on Thanksgiving day the hall was always simply jammed both afternoon and evening, the price of admission being twenty-five cents; the people were all out for a good time and they did not mind so much what money they spent. But this year the show was held earlier by two weeks, and it was a better show, but the crowd did not come, the reason being I contend that the crowd thought they could not afford it. The show was open *free* for a few hours on Sunday afternoon (this not being advertised until after 8 p. m. on the Saturday) and an admiring and most orderly crowd filled the building all the time. I mention this instance to demonstrate the fact that the *crowd* wants to attend these shows but (except on a holiday) cannot or will not pay the admission fee.

Twenty-five cents certainly does not seem to be much, and to those who always attend any way it does not amount to much, but to by far the larger portion of the population of a city who live fully up to their income it amounts to a great deal, especially when the wife, mother-in-law, daughters, cousins or aunts have to be taken too.

Now no show is really successful unless it is attended by a great number of people, in proportion to the population of the city in which the show is held. Those who love flowers and have plenty of money can be easily brought, and some will come to show their good clothes, but there are those who love flowers and have very little money, and many more who don't know anything about flowers into whom it is desirable to instil the love for

them, and it is these two latter classes it is so necessary to get at in order to make an all round successful show. Would a ten cent day draw them out?

I would suggest for a four day show in cities from 100,000 to 200,000 population, twenty-five cents the first day when things are in a rather disordered condition and the exhibits probably not all in, fifty cents the second day when everything should be in and in perfect order; this would be the fashionable day for the upper ten, twenty-five cents the third day and ten cents for the fourth day which should if possible be a Saturday or in some places Sunday. In very large cities the prices for the first two days might be higher perhaps, but leave the last day at ten cents.

Toronto. A. H Ewing.

ORCHIDS

THE NEW CYPRIPEDIUM EDWIN LONSDALE.

The interest that is usually manifested upon the appearance of the first born following the union of two illustrious individuals has not been lacking in regard to the recent advent of the new cypripedium as above named. Both of your trade contemporaries give some prominence to the statement that it is the first Rothschildianum cross yet raised and flowered.

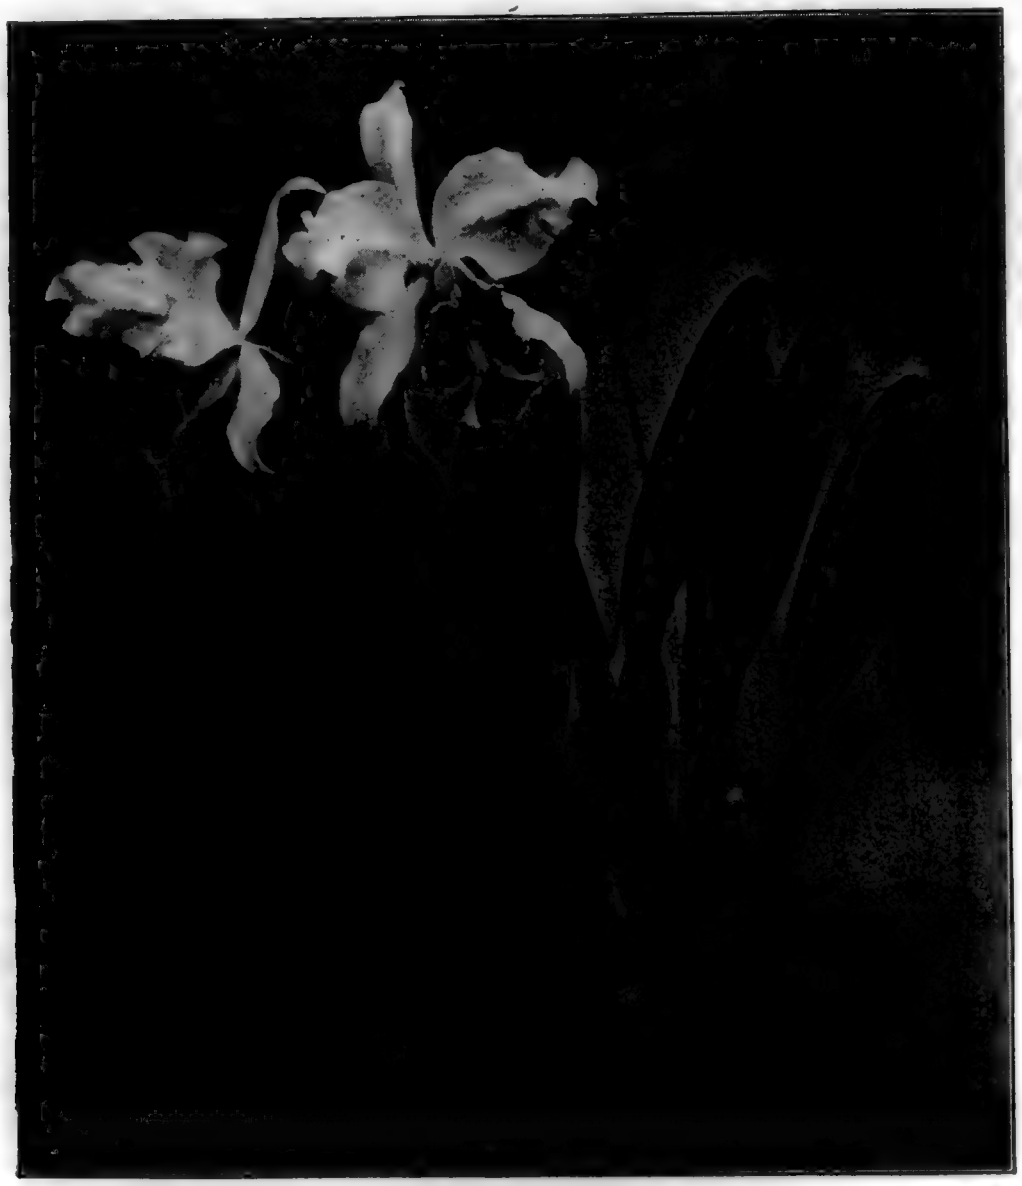
"K," of Philadelphia, see *American Florist* of November 20, page 588, has let his enthusiasm get the better of his judgment, or otherwise badly ignored facts when making such a statement that it is "the first American cypripedium ever raised and flowered." This is a very poor commentary on the excellent work that was done and the superb varieties that were raised and flowered by Mr. Gray when in charge of Jno. H. Grave's unique collection of "cyps" at Orange, which good work still goes on and from Mr. Grave's collection has emanated some of the very finest latter day hybrids. Again, our friend Geo. Savage, in charge of the Kimball collection at Rochester, frequently flashes forth evidence that he is not sleeping among his "cyps." How many American raised "cyps" went to Europe from the Pitcher & Manda collection at Short Hills? This is enough, however, to show how much K's assertion is at variance with facts.

In the report of the Philadelphia show that appeared in the pages of your other contemporary, the *Florists' Exchange*, Nov. 13, page 1034, I read the Cyp. Edwin Lonsdale is the first cross from Rothschildianum that has ever bloomed.

It is decidedly late in the day to claim for it the honor of being the first born, there are so many others that have come before. Just how many hybrids there are of which C. Rothschildianum is one of the parents I am not sure, but this newly recorded first-born is certainly the ninth.

F. Sander & Co., St. Albans, England, have raised and sent out four, their names and parentage being Massavanum (superciliare X Rothschildianum), A. De Lairesse (Curtisi X Rothschildianum), Mars (Harrisianum X Rothschildianum), and Neptune (Io-grande X Rothschildianum). From the great collection of T. Statter, Stand Hall, Manchester, England, has appeared two, Lord Derby (Rothschildianum X superbiens), Excelsior (Rothschildianum X Harrisianum). From the R. I. Measure's collection has come Y'mir (Hookeri X Rothschildianum), and W. R. Lee records the name of its raiser, the cross being (superbiens X Rothschildianum). After all these comes in proper sequence Mr. Clinkaberry's new hybrid Edwin Lonsdale (Rothschildianum X barbatum superbum), and in justice to Mr. Clinkaberry I would like to remark that where *his own* description of the new variety has been printed elsewhere, no absurd claims are advanced.

A course in cypripediums would appear to be in order or is certainly needed at some of the winter meetings of the florists' societies. A. Herrington.



Madison, N. J.

CATTLEYAS CHRYSOTOXA AND GIGAS.

The home of these beautiful cattleyas is the State of Antiaguia in Colombia, where occasionally they are found growing together. Cattleya chrysotoxa is becoming exceedingly scarce and is consequently difficult to obtain. Plants of this beautiful species are seldom seen except in private greenhouses, where its striking colors always attract attention. The sepals and petals are pale yellow and the

Cattleya Chrysotoxa.

Cattleya Gigas.

lips velvety crimson, veined with golden yellow. It flowers here mostly during the summer months, beginning with June.

C. gigas, although not so striking in colors as the preceding one, is nevertheless one of our best and finest cattleyas for summer flowering purposes that we have. The flowers are very large and showy, the sepals and petals of which are of a rosy color with a large, broad lip with deep purple, and with two yellow blotches in the throat.

Where the two above mentioned cattleyas grow there is occasionally a natural hybrid found, which for beauty eclipses the parents; it is, however, scarce and commands fancy prices whenever found.

C. gigas is one of the most desirable kinds for florists to grow wherever orchid flowers are required in the summer months. The demand for this class of flowers at that time of the year is on the increase and is likely to assume greater proportions than ever in the near future. The flowers sell readily at good prices.

The culture of C. gigas and that of C. chrysotoxa is more or less the same. They delight in the sunny end of the cattleya house, suspended in baskets. When growing they require plenty of water, admitting air at every possible opportunity. LAGER & HURRELL.

Summit, N. J.

CHRYSANTHEMUM NOTES.

The following varieties are, from our observation, the most reliable and profitable for a florist to grow. There are others, undoubtedly, but these will cover the whole season and can everyone be depended upon.

WHITE: Mrs. H. Robinson, Frank Hardy, Mayflower, Mrs. J. Peabody, Niveus, Mrs. Jerome Jones.

YELLOW: Miss G. Bramhall, Major Bonnaffon, Minerva, Golden Wedding, Modesto, H. W. Rieman.

PINK: Glory of the Pacific, Iora, Viviand-Morel, Mrs. Perrin, Erminilda, Maud Dean.

CRIMSON: Wm. Seward, G. W. Childs. And in the any other class we will place Silver Cloud.

Mrs. Robinson stands supreme as *the* earliest white. Its only fault is its rather weak neck, a fault, however, that we have not had to contend with. If it is started early enough and grown properly it will stand up all right.

Frank Hardy, the present sensation, is, to use a slang term, a peach. I question if any other variety shows so many good features. It has a marvelous stem and no variety, without exception, carries its foliage up to the flower as does this one. It has no neck, for the bottom petals hardly clear the foliage. As a shipper it cannot be beaten. Wherever it went the report was always: "Traveled in fine condition," and the fact that it scored ninety-five points at New York, ninety-four at Boston, ninety-three at Chicago, and eighty-nine at Philadelphia, shows plainly what the experts think of it.

Mayflower is a splendid white but it has some disadvantages, chief of which is the fact that it is easily bruised, consequently not valuable as a shipper, and it is a hard variety to work up a stock of.

Mrs. J. Peabody is very fine. Mrs. Jerome Jones is too well known to need description, and Niveus, on account of its purity, will long be welcome.

In yellows, Bonnaffon ranks highest with us. For any purpose it is superb and has been placed first oftener than any other yellow at exhibitions this season. It is a splendid keeper and if I had to limit my yellows to one it would be Bonnaffon. Miss G. Bramhall is a little off color but its form is superb, it is a fine keeper and is valuable on account of its earliness.

Minerva is a good grower and a fine flower but loses its shape somewhat as it gets older. Golden Wedding is great in its season. It is one of the hardest to grow, being so subject to mildew and leaf spot, but when it is well done it is a grand yellow. Modesto is fine in sections where Wedding is swept off by disease. It is even deeper in color but its bare, rather weak neck, places it at a disadvantage with Wedding when both are well done. H. W. Rieman is excellent as a late yellow.

In pink, Glory of the Pacific is earliest and has proved itself a useful and valuable kind this season. Iora makes a big flower of pleasing character and color though I regret to say its keeping qualities are scanty and it should be cut as soon as developed. Viviand-Morel is one of the varieties that crop up with a perennial freshness as a prize-taker. It is still peerless in its class and will long remain so, though it has sportive proclivities. The terminal bud should always be taken with Morel. Mrs. Perrin is a bright, well-finished flower, and with Mrs. Perrin one does not want the Pink Ivory. Erminilda will be found very useful, while Maud Dean as a late pink and fine keeper will hold its own.

In dark shades, William Seward and G. W. Childs are the best. Both are good, but both burn badly in bright weather if they are not shaded.

To those who stand or fall by decided colors, Silver Cloud is useless, but none the less it is a beautiful delicate looking flower, and as the old bachelor remarked of the baby's face: "It grows on one." Stem and foliage are both A 1.

I have not touched on the very early ones, Yellow Monarch, Lady Fitzwygram and others. They can be and are produced so cheaply and in such quantities that there is nothing in them.

Every grower has his own favorities which do well with his treatment and locality and to such I say hang onto them. In the multitude of varieties sent out every year, few stand the test of time, though the march of progress is onward and upward still. To those who like Philadelphia, Pennsylvania will be an acquisition, as its color is away ahead of its parent. C. TOTTY.

Cattleya Hardyana.
(Natural Hybrid, Gigas X Chrysotoxa.)

A PRETTY WEDDING DECORATION.

The illustration on page 79 shows the altar decoration for the King-Van Cise wedding which occurred at Summit, N. J., recently, at the Methodist Episcopal church.

Autumn foliage, chrysanthemums, smilax, Florida palm leaves, palms and colored dracænas were the subjects used, and while the whole was on quite an elaborate scale, the body of the church being decorated also, the expense was small considering the result, as the following tabulation will show:

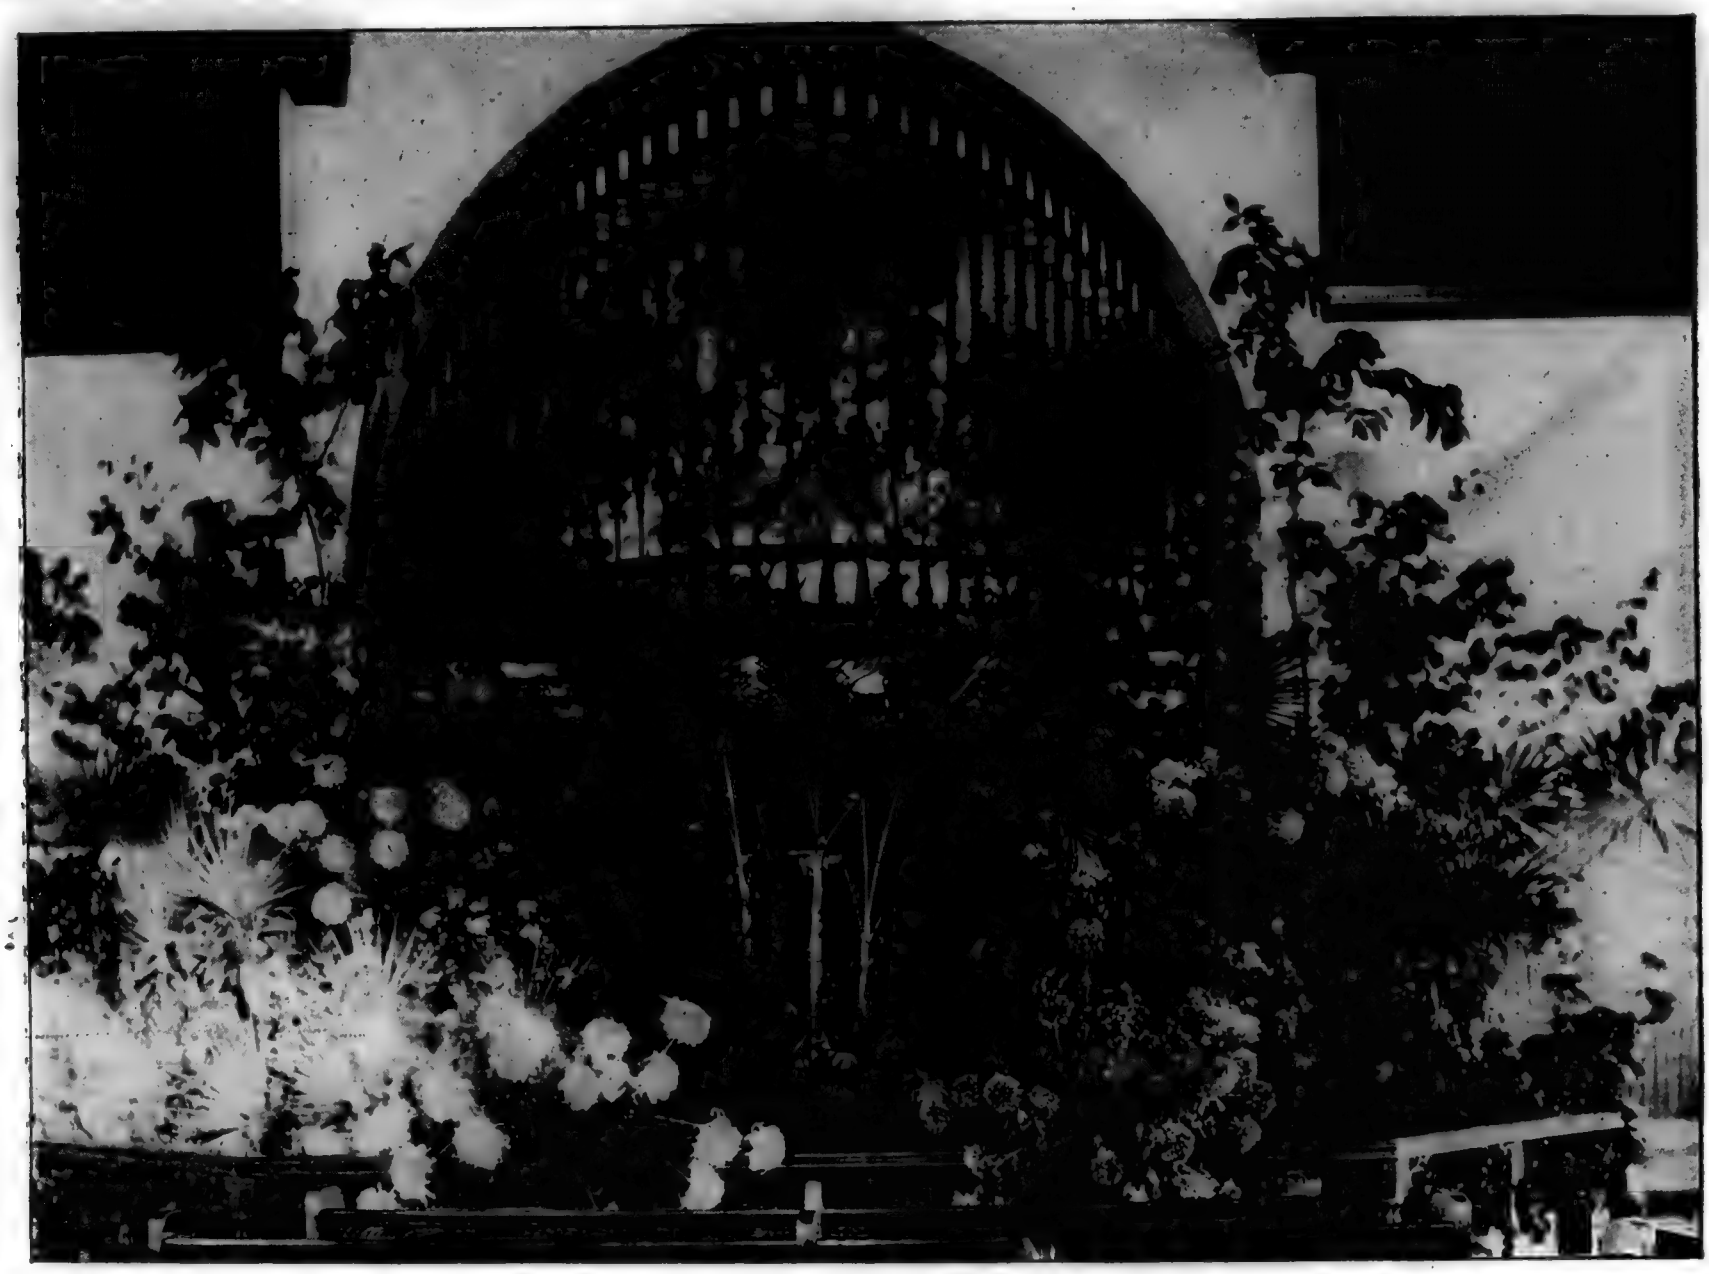
One double horse team with driver, securing autumn foliage, one-half day	$ 2 00
Man's time for one-half day	1 00
100 Chrysanthemums, 2nd quality	10 00
100 Chrysanthemums, 1st quality	25 00
100 Florida palm leaves	2 00
50 strings smilax	6 00
Man's time at church, one day	2 00
One double horse wagon of palms, etc., fetching and returning	10 00
Net actual cost	$58 00

To this of course must be added your own time looking after previous details, time at church, etc., figuring your profit between the actual net cost and the price secured for the decoration, say $100.00.

While the church was not very large, a schoolroom divided only by revolving shutters, which were raised during the ceremony, and also decorated, were included in the work. The amount of material used might be increased or decreased according to the contract made, the church being larger or smaller.

The autumn foliage used included oak, dogwood, maple, and some (yellow) which the walnut furnishes at this time of the year; the color plan of the decoration, autumn tints, yellow and white chrysanthemums and green palms produced an excellent effect for evening with electric light.

As in the illustration here reproduced the altar was of course the "piece de resistance." There were three platforms, including the organ floor, the rails serving as an excellent support for attaching the branches. Against the organ pipes one large, handsome piece of "dogwood" was wired, giving it a lace like appearance. Then the pillars on either side were pieces of "walnut" 18 feet high. Around the first rail were large pieces of "maple," very bold in effect and color, then came a perfect hedge of oak, in the center of which was a group of palms, the big arecas seen arching nicely where the "knot" was tied, and on the altar rail proper smilax was looped and the standards entwined with the same. Here and there among the foliage were placed palm leaves and single chrysanthemum flowers, and as seen in the illustration, large vases of blooms were placed, some hanging in "graceful revelry" over the rail, yellow and white predominating, the former chiefly Major Bonnaffon and Henry Hurrell, and the latter Mayflower and Ivory.



In the windows were a colored dracæna, harmonizing prettily with the foliage, flanked on either side with a palm, pots covered with autumn foliage, and the gothic arches looped with smilax a la Schuyler Mathews. The walls were covered with flat pieces of foliage, with palm leaves for a "base." The woodwork of the gallery was also massed with foliage and on the pillars between the church and the schoolroom large bunches of "mums" were tied, backed by foliage also. The seats reserved for the family were ruled off by smilax wreathed and festooned along the backs.

One of the main points is to secure large, bold, highly colored pieces of autumn foliage, as these can be easily trimmed at the place of action. Flat pieces are preferable, though for the altar large, artistic, scraggy pieces gave a bold and natural effect that smaller pieces would have failed to give. H. A. B.

THE STORY OF AN EMIGRANT (NOT EMINENT) FLORIST.

There is nothing particularly good or wilfully bad in the career of the writer that would in any way deserve an autobiography. Neither is it meant as such. It is merely the relating of a few incidents of one who was born and reared in a beautiful garden, of recollections and incidents connected with his early gardening life and his more or less severe struggle to make a living in this land of his adoption. If the simple story which is to follow will have amused a few kindred spirits and maybe brought back old memories, it will be a gratification that the acquisition of wealth would not equal. Some thinkers tell us that much good as well as evil arises from that strongest of all human attributes, selfishness, so perhaps it is the case in this instance—under the mask of amusing others I am exercising self gratification.

For things unseen and unknown I have perhaps less veneration than the majority, but for the memory of a beloved parent, who was the most benevolent of men, the most eminent in his profession, who was a model to his children and neighbors both in example and precept, "whose failings leaned to virtue's side," I have the most humble reverence and respect. In the autumn of life we think of the many deeds left undone, of how many times we could have added to our parents' joy by obedience to their virtuous wishes, but that is futile now and the best thing left for us is to make those with whom we dwell, and all with whom we come in contact, glad that we are with them to cheer and to help, even if it be by only a kind word. As the narrator wishes to keep his name a solemn secret he will subscribe himself by the name given him by an infant lisping brother. "Bibber" was his name at four years of age, when these memories begin, and it is good enough for the rest of his life.

A Pretty Wedding Decoration.

Till within twenty or thirty years it was seldom that our men of great wealth went into the country, bought a few hundred acres, built a country residence and embellished the surrounding grounds. They did not care, or could not afford, to be far away from their business, so when they found themselves the happy possessors of superfluous wealth they bought the first vacant lot to be had on the most fashionable street or avenue of a great city and built a quarter of a million dollar house on a forty thousand dollar lot, with not enough room left for Bridget to hang the linen or swing a cat by the tail without hitting the neighbor's fence. But this is changing fast. In every part of the country our men of means are seeking rest for themselves and family in some beautiful rural retreat. They are employing the highest skill of the landscape gardener, and to perpetuate the beauties of the garden employ a skilled and educated gardener. They will take delight in friendly rivalry, that *their* gardener has the finest show of orchids, the largest bunch of Muscat grapes, the best crop of mushrooms, and the largest "mums" they have seen anywhere, in fact, they are much superior to their neighbor's, Mr. Manhattan Van Struckoil.

I do not say that fine private gardens did not exist years ago. Some did, but they were few and wide apart. Of those that did exist I recall Mr. Gordon's, of Cleveland; Mr. Hunnewell's, of Wellesley, Mass., presided over by that prince of gardeners, Mr. Harris. Then there is the late Mr. Geo. W. Child's fine place, Wootton, but this, and many places on the Hudson, are quite modern and only prove what I say, that they are coming, and I believe, coming fast. The refined and cultivated employer will demand, and he will get, a refined, cultivated and skillful gardener, whose services will be appreciated, and whose standing among his fellowmen will be what his profession deserves, and very different from the "milk a cow, set a hen" kind of a gardener that has so long passed muster among so large a class of our people, and whose conception of a gardener is taken from Dr. Johnson's definition. The great lexicographer says: "Gardener, one who works in a garden."

It is well known that Europe is studded thickly with these fine establishments and it must be admitted that Great Britain has her share. We will be sure to hear some say: "More's the pity; these parks and gardens should be turned into wheat fields." I am not writing this to extol or defend any kind of land system, but certain it is that on the private estates with which I have been intimately acquainted, there was more labor employed and at better wages, in the care of the gardens, the parks and the woods, per acre, than there would have been had the same area been devoted to wheat or turnips. And is not the beautiful as essential to the world as the useful, many times of more lasting value! For centuries money and skill have been expended to make these parks and gardens beautiful, and all that contemporary knowledge could add to their embellishment was given with a free hand.

In almost the midst of one of the most beautiful gardens of England I first made my step abroad. The roomy but old-fashioned home with its thick covering of straw thatch, impervious to winter's cold and proof against the solar rays, the house that has entertained many of England's most illustrious nurserymen and gardeners of the old school, the big yew tree whose branches touched our bedroom window, where countless sparrows chirped their morning greeting, the long porch whose pillars were wreathed with roses; all these I see now vividly, and will as long as memory lasts.

Now let me take you for a stroll around this garden and while admiring the fruits

and flowers point out the objects of interest in the surrounding country. We will stroll first to the highest point and ascend a spiral stairway to the top of what was called the "lookout," a wooden structure of modest height yet elevated enough to give us a commanding view for many miles around. To the west we look upon what appears an endless forest with here and there an opening showing some well cultivated farm, or perhaps we are attracted by some stately house with a background of forest. They are the homes of well-to-do people, some landed proprietors, some only renting these pretty homes. The large white house is the residence of Lady Napier, the widow of Sir Charles, the Hero of the Sikh war. But I must not stop to tell you of all the people who make their homes in these pretty places or I shall never reach the flower garden.

While we have been looking at the distant wooded scenery we have looked completely over as pretty a miniature lake as ever swan rode upon, and it is within a few hundred yards of where we stand, and all in the pleasure ground proper. It is not so small but what there is an island in this lake, where an old garden hand has reared a family and cultivated a small garden plot. A full-rigged man of war, and a schooner, each about thirty feet long, rode at anchor from spring to fall. More animated was a pair of swans, who truly deserve to be called "majestic," except when they are busy with domestic matters. Look out, small boy in a boat, for an old he-swan if his missus is sitting on the nest or shielding her pair of young. Mr. Swan will break your little arm with a flap of his powerful wing, so do your fishing and boating in another part of the lake, and let his swanship be lord of all he surveys for (to him) that very interesting season of the year. This little lake of four or five acres with its bays and coves was surrounded with groups of shrubs and here and there an open glade of velvety lawn. The rhododendron, arbutus, sweet bay, Portugal laurel, common laurel, holly, and numberless other evergreens in groups and belts, made a pretty margin to this tiny piece of water.

The proprietor of the estate had spent many years of his young life in China, being attached to the British embassy to China at the end of the last and beginning of this century. So he had surrounded this lake, in nooks where they looked at home, with imitations of Chinese buildings. There were Chinese boat-houses, Chinese pagodas, bell-houses, temples, Chinese bridges, and other remembrances of the land he knew so well.

We will look to the north and there again the oak forests almost fill the eye, but within half a mile is a straggling village, for whose beauty and picturesqueness I have nothing to say, for it had little of either. Several of its inhabitants worked in the garden, and one old rugged giant, who had brought up a family too large for his income, had fought in the battle of Trafalgar. Gypsies of the genuine sort were as common there as tramps are here, and far more interesting. There was the village "common," where all alike have a right to turn out to graze their pony, pig, goose, or that long-suffering animal, the donkey, or any other live stock they were lucky enough to own. More conspicuous to the view, at the crossing of the roads on the hill, was the village inn

Where graybeard mirth and smiling toil retired,
Where village statesmen talked with looks profound,
And news much older than the ale went round.

We cannot see it, for it is in a little valley, but half a mile farther is a much prettier village. Near it are huge blocks of concrete, the remains most likely of a Roman wall or stronghold. In the ages that this village's name has been handed down it has been corrupted from "Romans" to "Rowlands" castle. Here is a village green as you would expect to see it, and where the sweet lines of Goldsmith may be again quoted:

And many a gambol frolicked o'er the ground,
And sleights of art and feats of strength went round.

Near the end of the village, to the north, began one of those magnificent avenues that can be seen only in a country that has long been devoting her leisure hours to planting, not for her present sons but for future generations. This avenue starts within a few feet of the boundary line between the counties of Hampshire and Sussex, and is perhaps eighty yards wide and considerably more than a mile in length. It is bordered on both sides by gigantic beech trees. The avenue is grass kept nibbled short by South Down sheep, assisted by thousands of rabbits. At the north end of the avenue stands the stately pile of Stanstead House, for many years the property and home of Mrs. Dixon, and where for twenty years the superb garden was in charge of Mr. George Thompson. As good there might have been, but no better all-round gardener ever lived than George Thompson. He has since been superintendent of the Crystal Palace, Sydenham, and although an old man now, I hope he lives to enjoy the fruits of his labor.

I cannot tell you who lives in that large red brick castle-like house, because you are not interested. If you could see that little town just due north about ten miles, it is Petersfield, long the residence of Gibbon, the historian. If you could see still a few miles to the east of Petersfield you would discern that most ancient little town of Midhurst, a few miles south of which Richard Cobden lived and died. Richard Cobden, who with John Bright, fought so hard to give the British workmen cheap bread, and won the fight, and incidentally while winning the fight did not hurt the American farmer. To show the antiquity of Midhurst I noticed when there twelve years ago a sign over a butcher's shop reading: "Established 1626."

Many places of interest could I point out to you but you will be weary. I must try and point out Dangsteen, once famous for a most wonderful collection of rare and choice plants. Lady Dorothy Neville was an enthusiast in her day, and was ably assisted by her studious gardener, Mr. James Vair, brother to Mr. George Vair, of Toronto. It would not be proper to leave this lovely neighborhood where so many pretty places are nestling among the chalk hills of the South Downs without telling you that in a little village full of good gardens between Midhurst and Chichester called Westdean, Fred and Sammy Goldring first saw the light, and first in a garden "did delve." Their father, an excellent gardener and worthy man, lived and died there.

Look East and you will see in the distance the tall spire of Chichester cathedral, which dwarfs all surrounding buildings. But three miles farther to the northeast is the far famed Goodwood, famed for the glorious weeks' racing on its downs, the home of the Duke of Richmond and Gordon.

I have kept you from viewing the south because it is the most interesting. There is more here that everybody has heard of. Looking straight south from our perch up aloft, the farthest land you see is the far-famed and beautiful Isle of Wight. It is the eastern end you see and the sea on this side of it, or the channel between the mainland and the island, is known as Spithead, where last summer rode at anchor the mightiest fleet the world ever saw. There is always a fleet riding there. The writer stood on the same spot in 1856 and saw the wooden fleet illuminated shortly after the close of the Crimean war. What would those wooden walls do now! One armored gunboat would sink that majestic looking fleet of '56.

The Isle of Wight is twenty-one miles long and fourteen miles wide at its broadest part. The climate of the southern part of it is so mild that our common zonale geraniums grow trained to the walls as we grow clematis, fuchsias (such kinds as "Rose of Castile" make shrubs). Camellias grow and blossom the year round, planted out as we would a hardy shrub. Following west the nearest coast line of the island we come to the pretty town of Ryde, where with all its beauty the hack driver and hotel keeper subdues his reverence for the beautiful and charges for services a la Niagara. A few miles more to the west is the point where the mainland and island nearest meet, and where "Her Gracious Majesty" makes a short cut across to one of her favorite homes, Osborn House, famous for its grand garden. A few miles from Osborn is the town of Cowes, more intimately connected with yacht building and racing than any other town in the world. If our eye could reach to the western end of the island we would see in that narrow strip of water between the island and the English coast those peaks of jagged rock that stand in the way of the mariner, "The needles," through which our American liners, the St. Paul and the St. Louis weekly wend their way to their dock at Southampton.

While admiring the beauty of this fair island in the English channel we have not noticed the great town of Portsmouth with its dock yards, its barracks, its forts and its thousands of Tommy (not Fred) Atkins. The old wooden ship lying but a short distance from the shore is the "Victory." Where Nelson was shot is marked on the deck. Where he died, down in the cockpit, is also shown you. The battle was over and victory won,

but a French marine shot him down. You will notice that the coast line for many miles is indented with land-locked harbors, but they are of little use for commerce, for every twelve hours they are a broad expanse of mud and the other twelve hours are a fine sheet of water.

But I have had you up here long enough and you will be tired straining your eyes at what you only dimly see. Let us descend to the garden again.

BIBBER.

[To be continued.]

CARNATION NOTES.

Temperature—Ventilation.

To keep up a desired temperature we need the help of fire heat, and ventilation to modify the climatic influences of too warm and too cold. The average temperature at night is at our place 55°, day temperature on cloudy days from 60° to 65°, on sunny bright days from 65° to 75°. As soon as the day temperature rises above 60° we commence to open the ventilators and strive to maintain the desired temperature as nearly as possible. To do this we have of course to consult the outside temperature. These rules we observe at all times, whether the outside temperature be moderate or freezing, so long as it is in our power to uphold the desired inside temperature. This certainly will require fire heat and may often be apparently against economy in heating. But let me say right here there is no saving, as we will see further on, when heat is withheld at the expense of another element.

There is another point in ventilating far more prominent than the help it gives to regulate the inside temperature, and that is the admittance of the pure, fresh air from the outside, and the expulsion from the inside of that which is often stagnant—in other words, an exchange of air. This is readily accomplished as long as the outside temperature comes near the one desired inside, and when even lower if we have the benefit of bright sunshine when regular ventilation takes place. But in cloudy weather with a lower temperature, when we may be able to maintain the proper temperature with closed ventilators without fire heat, we need the help of the same to effect a change of air, if we do not wish to chill and check the plants in their growth. Now, would it be economical to save some expense in heating when the plants may suffer twice that amount for want of fresh, pure air? We should always bear in mind that the first object of ventilating is to supply fresh air; secondary but in conjunction with this is the help it gives in regulating the temperature.

We have also other ways of regulating temperature. In summer we shade and use the cooling evaporation of water, in winter we use fire heat; but fresh air we must have at all times and supply it at all times through the same channel. It is hardly necessary to remind how the carnation delights in a fresh buoyant atmosphere, and how they turn soft, sickly and yellow in a close one, and thus fall an easy prey to parasitic diseases.

As I have said before, we commence to raise the ventilators when the inside temperature rises above 60°, in all kinds of weather, cloudy or sunshine, warm or cold, often when as low as zero but with bright sunshine, and the ventilators are in a condition so they can be raised, that is, when they are not frozen fast, providing we can sustain the inside temperature to the proper degree with fire heat.

It is not necessary in severe weather to have the houses open for a long time; a change of air is quickly effected; we generally open two to three inches, an hour or two over noon time, or open quite wide for five or ten minutes. Many may think that is a sure way to chill the plants. I would think so too with houses narrow and low, but ours are high and roomy and the ventilators open at the ridge. The cold air entering will be thoroughly moderated before it reaches the plants; when not blown in by a gust it will pass down along the damp glass, striking the heating pipes on the sides of the walls, distributing through the lower strata of the house and pushing the impure stagnant air up and out. Such a change is quickly effected with no injury to the plants and only about 5° fall in the temperature. Notice the atmosphere in a house that has not been ventilated for a day or two; the air is heavy, your breathing is oppressed, and then notice it again after a quick change, how light and delightful the air feels and breathes; the plants will feel just the same way. It must be very severe weather before we omit ventilating for one day.

The carnation adapts itself very readily to the winter culture, but we must never forget that it is a plant of the temperate zone and as such it requires a moderate temperature and an abundance of fresh, pure air.

A close observer will notice two peculiar characteristics in the carnation. The plants show their greatest activity late in the afternoon and evening. When the sun sets the buds commence to open, and there are visible signs that the plant is at work, building new cells, extending its growth; the luster of vitality is spread over it. Incited by the warmer day temperature it begins when the temperature is cooling down. These are all unmistakable signs as to what temperature the plants require. But this knowledge is often misunderstood and leads to carelessness. Now, suppose the temperature has been all day from 65° to 70° and the outside temperature is 40°. When the sun sets and the ventilators are not closed in time and no fire heat is ready, the temperature will drop in a short time to 50°, even before the sun has set in the west. What effect this sudden drop below the night temperature will have on the plants during their most active time cannot be misunderstood. That means to close the ventilators in time, have fire heat ready, so the drop from the day to the night temperature comes gradually and reaches the average point, say about at 8 or 9 o'clock. After midnight it may drop two or three below 55°.

The other characteristic peculiarity is the working of the plant in daytime and especially so on sunny days. This is of a more delicate nature, for it is the working in the expanded flower for reproduction, producing seed. No fertilization will take place in a temperature below 60°. With this I wish to remind what day temperature the plants require to keep them in their routine action for a full day, and to point out the error of many who attempt to grow their plants in too low a temperature.

I notice in the WEEKLY FLORISTS' REVIEW that Messrs. Bassett & Washburn are the happy possessors of a red-flowered Mrs. G. M. Bradt. I regret to destroy the illusion of it being the only one, for any possessor of a dozen or more plants may find them among his. This variety sports very easily. The color of the red flower is the same as the stripes in the normal bloom. It is not unusual that we cut often a dozen at a time in a house filled with this variety. They appear here and there but are never constant, and for this reason I have never tried to set the sport and cultivate it separately. The flower is of equal form and size as the striped ones, only of a pleasing soft red, a not unwelcome addition to this excellent variety.

FRED DORNER.

LILIES, CARNATIONS AND STONE WALLS.

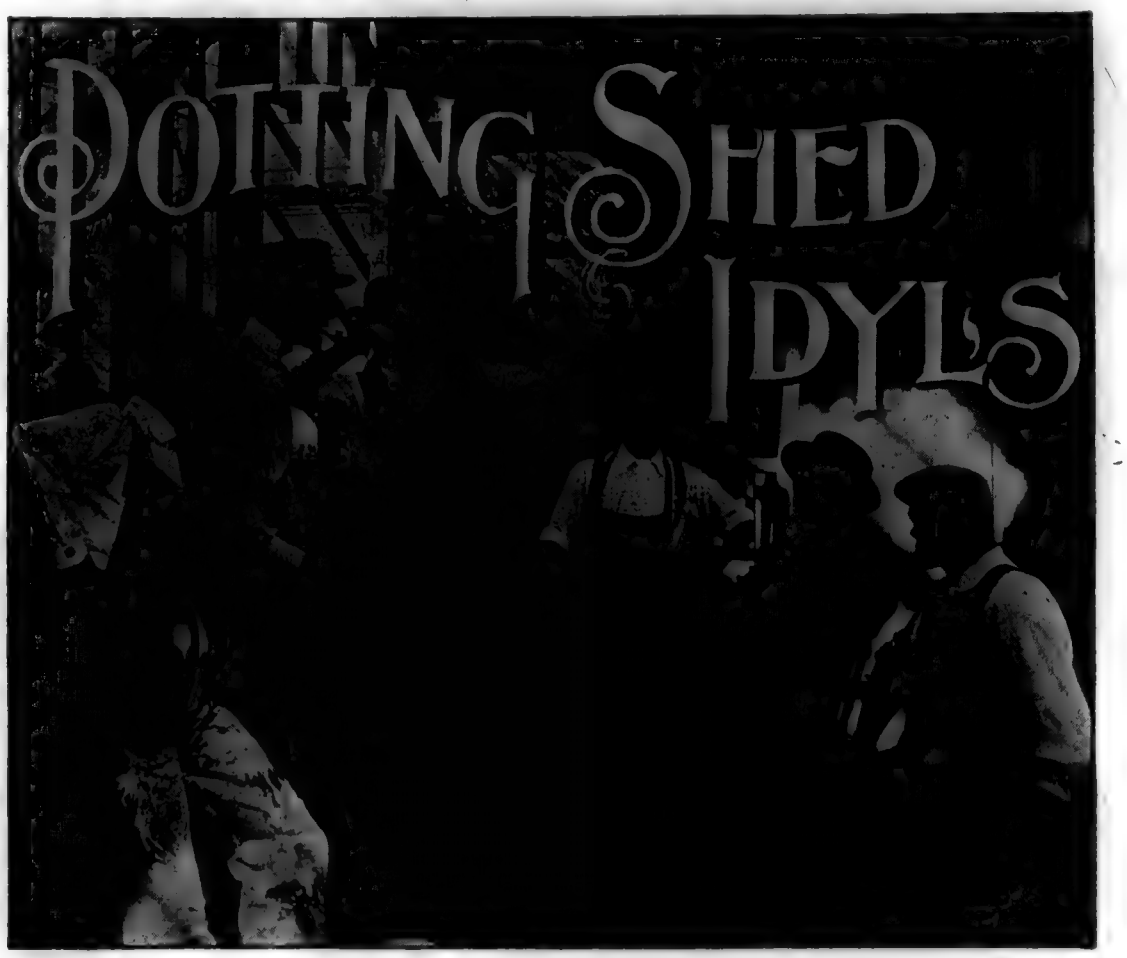
Several questions come from Sparta, Wis., and are as follows:

"First, about Easter lilies. Our earliest lot got a start and have continued to grow in spite of the coolest treatment we could give them. Now, however, we are able to keep them just above the freezing point. They are from twelve to twenty inches high. If we continue to keep them cool can we keep them back for Easter?"

Yes, I think you can if you will keep them down to 35° to 36° at night and not over 40° to 45°, if possible, by day. Remember that if you keep them very cool they will not need as much water as if growing fast.

"Those potted later were left out till within a few days ago when our below zero weather arrived. On examining them we were surprised to find no top growth and scarcely any root growth. We thought

the pots ought to be quite full of roots. Is it right to bring them into the greenhouse and excite top growth with so little root growth?"



It is not easy to explain why your later potted lilies have made no roots. Either you potted them very late or you have kept them dry and they have never got a start. It will do them no harm to start them growing in the greenhouse. Many lilies that are forced are never put outside at all. They are potted and started in the greenhouse. This treatment would be fatal to a hyacinth or tulip, but with a lily it is all right. They will make growth and roots together. Don't give them too much heat at first; 45° at night will do nicely till they are well rooted.

"In the matter of rust on carnations would you advise keeping every leaf picked off as soon as it shows traces of disease? We have been doing that and the result is plants quite bereft of lower leaves. The varieties are Daybreak and Silver Spray, and not yielding many or strong stemmed flowers. Does it weaken the plant more than the disease if allowed to run its course? Would you advise propagating from our own plants? We had quite an outbreak of the rust soon after housing, scarcely a plant or variety escaping some trace."

I have seen instances within a few years where the rust has been allowed to have full swing, nothing done to check it, and in two months it utterly destroyed the plants. To denude the plant of its leaves must weaken the plant, and how can you expect good flowers from a plant that has lost a large part of its leaves. The two varieties mentioned are unfortunately the worst of all for rust. Daybreak we cannot do without and with it the rust must be fought. Poor old Silver Spray is played out. In most parts of the country it has lost all vitality. Wise men from the East as well as the West have come to the conclusion that all the cures for the rust yet discovered are about as bad as the disease and depend more on keeping the plants healthy in the field, lifting early, cleanliness, and care inside, with heat and air in abundance, etc., than they do on any of the antidotes for killing the rust.

In your case I would say pick off all leaves showing traces of rust and weekly syringe with one of the copper mixtures. The ammoniacal mixture is as good as any and easily made. This will certainly hold the rust in check. Sulphur painted on your hottest steam or hot water pipes will also help to prevent further spread of the rust. By all means get a clean stock of Daybreak for your next winter s crop, and throw Silver Spray away, there are others so much better. Flora Hill is a grand white, is with me free of rust and a wonderful flower, "and there are others."

"How would stone walls be for greenhouses in this climate?" If you have plenty of good building stone that would cost you little they would make a most substantial wall. But even the building of it would be expensive. You cannot build a stone wall less than fifteen inches thick and it takes a lot of material to lay it up. If the stone was small I would rather break it up, gathering all the small rubble stone to be had, and make a concrete wall; one foot would be thick enough, using two-thirds of sand to one of cement. That would be cheaper, warmer, neater and a better wall in every respect than one made of large stone laid up with lime. William Scott.

OUR ANIMAL FRIENDS.

The Lonesomehurst potting-shed assumed quite a festive appearance the week before Christmas, when the "old man," who had a frugal mind, brought in from the woods great loads of laurel, hemlock and cedar, to be made into wreathing. Consequently all hands spent the evenings in making up evergreens, instead of spending the time, as usual, in harrassing the unfortunate night fireman, and educating the parrot. This evil bird which bore the name of Marmaduke, had lately returned to the potting-shed after a brief promotion to the house. He had formerly been free of the palm houses until, one morning, the boss was amazed at the sudden disappearance of a batch of speciosum lilies. The pots were there and the soil was there, neatly smoothed over the surface, but the bulbs were not. It was obviously impossible for the parrot to have eaten them, but the guileless manner in which Marmaduke sat upon a cycas stump, while the "old man" with many horticultural observations, hunted for the missing bulbs, aroused suspicion. The bulbs were discovered sometime afterwards, carefully interred in the tanbark surrounding some palm pots, "showin'," as Jaggs observed, "as that there blessed bird had his own notions about forcin' bulbs." Marmaduke did not long remain in the house, his conversation being regarded as rather unsuited for polite society, and he was returned to the potting-shed coterie.

"The missis says to me," observed Jaggs, as he tried to get the kink out of a length of wire, "as that there bird must 'a' been 'round with some chap as used language' and I says to her, 'what could you expect, ma'am, when the boss went around huntin' for them bulbs and sayin' just what he thought, with Marmaduke right there, hearin' every word? 'Course the poor bird thinks as how it must be all right.' So she says as I'd better take the bird where he belongs. Hey Marmaduke, old chap?"

Marmaduke responded by hanging head down from a gates ajar frame hooked to the rafters, at the same time eliciting a sudden howl of anguish from the night fireman, by plowing up the victim's scalp with his iron bill. When the temporary excitement had subsided, Jaggs observed, thoughtfully, "Strange, aint it, how much them birds will learn. Not as a parrot is ever up to a talkin' mina, like that bird as I had when I was gardener to the Rajah."

"That was where you tried to give that athletic tournament with the Rajah's white helephant for a side partner—sort o' 'Rabian Nights gymkhana, wasn't it?" inquired Tommy Atkins with a grin. Tommy always insisted that his name was Talbot Smythe, but as he had upheld the honor of the British army in several quarters of the globe, finally retiring from Halifax without consulting the commander-in-chief, he was affectionately christened Tommy Atkins, a name more in harmony with his character than that of Talbot.

"As I was sayin," observed Jaggs, with a withering glance at his interrupter, "them there minas is as smart as they make 'em—'andsome, velvety black birds, with big yellow wattles and yellow legs. 'Course I give him a good eddication. The Rajah says to me, when he see what

that bird know, 'Jaggs,' says he, 'If I 'ad your talent I'd be something more than just a bloomin' Rajah.'"

Jaggs broke off to fill his old pipe with very rank tobacco, while the others coiled up a long garland of laurel wreathing. Then he continued:

"One day that there bird disappeared. The Rajah was all broke up about it, and we all turns out to hunt him up. Seemed as though he'd got out in the jungle, and the natives all say as the wild birds will kill him. I knows better than that, but I feel a bit uneasy myself. Well, we don't see nothink o' the bird for two or three days, and we give it up. Well, a few days later—maybe a week—I has to go to a village where they had some orchids for us, and I was just joggin' along through the jungle road, when I come to a clearin' with a big banyan tree in the middle. There I see a sight as pretty near took my breath away. There was my mina, on the top branch o' the banyan tree, lookin' as pleased as Punch to see me, and there, on the lower branches, was a whole flock o' wild minas—I guess there was a hundred of 'em. And what do you suppose my bird was doin'?"

There was a breathless pause, only varied by a hoarse crow from Marmaduke, who had been endeavoring to drop a lump of coal down the back of Tommy's neck. Jaggs affectionately shied a lump of peat at the parrot, and continued—

"That there bird sat up there with them wild birds ranged around like a class o' Sunday school kids, and blessed if he wasn't a trying to teach them to sing 'God save the Queen!'"

There was another pause, while the stunned auditors tried to recover their breath, and then Jaggs continued:

"I might 'a' made my fortune out o' that bird; there was a chap as run a sing-song place down in Meerut as would give any money for him, but I give him to the Rajah's butler when I left. I used to feel pretty homesick when I think about that bird after I get to Australia."

"How did you get to Australia? Did you walk?" derisively inquired the young man who had graduated from a horticultural college.

"I s'pose that's your usual way o' travelin'," observed Jaggs, calmly. "That is, when you ain't able to get a lift on a freight train. But when I go as botanist to an explorin' expedition, there ain't nothink too good for me. Ever been in Australia, any o' you chaps?"

"I was there, afore I chucked the harmy," observed Tommy Atkins, briefly.

"I never see such a blessed lot o' freaks as I run across there. You should 'ear the carpet snakes of an evenin', cooin' away like a whole dovecote—"

"That's enough," observed the horticultural graduate with deep scorn. "Maybe the fellows can swallow that yarn about the bird that sang 'God save the Queen,' but I like to draw the line somewheres, and I draw it at cooin' snakes."

"You know, Johnny," observed Jaggs, in a tone of friendly sympathy, "us fellows is always willin' to make allowances for a poor chap as took a course in 'orticulture, 'stead o' servin' prentice in a real garden. Just you listen to us, and yer faculties will be reg'larly drawed out. Well, as I was sayin', just wander outside at twilight, anywheres in West Australia, and you'll hear the snakes cooin' away till a pigeon-show wasn't in it—"

"I s'pose they was tryin' to combine the wisdom o' the serpent with the heloquence o' the dove," observed Tommy cheerfully.

"They wasn't much like doves, except in their voices," observed Jaggs, "for rattlesnakes is innocent infants along side o' them. Just let one o' them cooin' chaps bite you and you was a subject for a gates ajar inside of an hour. But the land crabs was what struck me most; big chaps the size of a wash-basin, with claws like ice-tongs. Say, when one o' them chaps came dancin' over near me, his eyes stickin' out like props, and his claws rattlin' like a Salvation Army tambourine, I wished there was a telegraph pole to climb. Not but what them crabs was harmless enough."

"I s'pose they was the pet of all the children," remarked the night fireman, who was modestly rubbing a brass oil-can in the rear.

"I don't know as I'd call 'em improvin' society for the kids," said Jaggs, "but there was a chap I knew, on a sheep farm, as tamed a pair o' them, so as they'd do for watchdogs. Just let a stranger come into the yard, and them crabs would rush out, snappin' their claws, and wouldn't let him come inside the door till the boss came around. Punch and Judy was their names, and they'd come runnin' as fast as their six legs 'ud carry 'em, whenever he whistled to them. They— Say, Johnny," suddenly breaking off, "do you happen to have any idear what you're tryin' to do. I s'pose that's somethink you learned at that bloomin' college!"

All eyes were turned upon the unfortunate collegian, who was always called Johnny because his given name was Mortimer. He was discovered in the act of putting a backing of dagger ferns upon a star frame which was to be covered with holly, and became so uneasy under the enthusiasm displayed by his companions that he subsided without a single question on the subject of land crabs. Tommy and the Scotch propagator began to gather up the wreathing, and by the time the "old man" dropped in to make his final inspection, the shed was vacant except for the night fireman, who, with Jaggs's talking mina in mind, was trying to teach Marmaduke to sing "Rosy O'Grady," with very indifferent success.

NEW YORK.

Chrysanthemum Committee.

There were no seedling chrysanthemums presented at the N. Y. Cut Flower Co.'s rooms to be judged by the National Chrysanthemum Committee last Saturday. Evidently Mr. Grove P. Rawson's W. H. Chadwick was the last for this season, but the committee was on hand for emergencies.

Mr. Eugene Dailledouze was of the opinion that there had not been the quantity of former years (this was, perhaps, accountable to the fact that two of the former largest exhibitors of seedlings, Pitcher & Manda and Thos. H. Spaulding, having retired from the business), though the quality was quite up to the average, and considered the three best exhibited to be Frank Hardy, white; Pennsylvania, yellow; and Autumn Glory, pink.

A vote of thanks should be tendered to the committee, Mr. Ernst Asmus and Mr. Eugene Dailledouze, who have expended considerable of their valuable time in judging these novelties during the season.

Signs of Xmas.

Christmas trees are already to be seen on the docks, and something like 200 cars will arrive during the season, prices ranging from 25 cents up to as high as $10.00. Most of these come from Maine, and are well formed and shapely trees.

The Market Project.

The idea of forming a market patterned somewhat after the famous Covent Garden, took tangible form last Wednesday, the first of December, when a meeting of plant growers, called to meet at Lynch's restaurant, organized themselves into the "New York Market Florists' Association."

When the meeting was called to order about thirty growers were present, twenty-nine Jerseymen and one Long Islander. Mr. W. F. Koenig and Mr. J. Withers were respectively president and secretary pro tem for the meeting.

At a former meeting held Nov. 17th a committee containing the following prominent growers: Mr. J. Nichols, (chairman), Mr. H. C. Schaefer and Mr. G. Dietz, was appointed to see the comptroller and Mr. O'Brien, superintendent of Clinton market, and get information with regard to space, stalls and prices for same to be rented individually or collectively as an organization.

Before the business of the evening was discussed Mr. J. H. Rapp, representing the city, escorted the members present through the market and disclosed the fact that there were sixty-five stands or stalls averaging each about 100 square feet, thirty-two of which fronted on Canal and West Streets.

On returning Mr. Nichols as chairman of the committee made his report, saying he had been somewhat handicapped by the fact that on Jan. 1, a new administration would have control and that the present one was seemingly unwilling to make any contract. Mr. Rapp, however, volunteered the information that the price of stands would range from $1.00 to $1.25 and $1.30 per week according to location. In answer to a question he said he could not give price of the whole of the vacant stands; sidewalk privileges rent with the outside stands and there was in the neighborhood of about 8,000 square feet in the combined space to let.

After this there was an animated and desultory conversation among the members present, in which Mr. Nichol became

reminiscent and Ex-Alderman Morris aggressive and Messrs. Birnie and Rose also took a hand. A motion to table the whole thing till March, by Mr. Nichols, was voted down and the organization to be known as above was formed with the following officers elected: Pres., F. Lehnig, Hackensack, N. J.; Vice-Pres., A. Schultheis, College Pt., L. I.; Sec'y, A. D. Rose, Jersey City, N. J.; Treas., H. C. Steinhoff, W. Hoboken, N. J. The first Tuesday in each month was selected for time of meeting and Lynch's restaurant the place. Those promising to take stalls subscribed $1.00 towards the association.

The following were among those present: J. Birnie, C. Dietz, F. Lehnig, A. Schultheis, W. F. Koenig, H. C. Steinhoff, A. D. Rose, P. F. Daly, J. Pierson, E. J. Elliott, Julius Roehrs, F. Engel, A. C. Schroeder, Leach Bros,, Alfred Funke, P. Riess, W. Baencke, W. Barth, J. Nichol, Fred Wackenhats.

Among the Wholesalers.

Trade among the wholesale men is scarcely what it ought to be at this time of the year and if roses were in crop instead of "off" a big glut would be the result. As it is these are realizing all the way from $15.00 per 1000 to $15.00 per 100. Good stock always commands good prices, and Brides and Bridesmaids are the most sought after though Beauties continue to hold their own, price somewhat lower for the finest stock however. Fancy stock outside of Beauties realizes $12.00 to $15.00 per 100 while President Carnot, extra choice, sell readily in small lots at $2.00 per twelve. Violets are about the same; some extra "Up the Hudson" stock, however, finds ready sale at $2.50, several consignments being re-shipped to Chicago during the week.

Mr. Benjamin Dorrance, of Dorrancetown, is shipping some splendid Meteors in to Thomas Young, while Millang & Co. are handling some excellent smilax and cycas leaves.

Among the Retailers.

Last week I mentioned that the retailers' windows were a feature, and splendidly kept up. I hope to describe weekly one of these. Chas. Thorley, the Broadway florist and as well known as Huyler and Brentano, was undoubtedly the pioneer in this line. His window is about two feet up from the sidewalk. Along the front is a double row of 4-inch Adiantum cuneatum, next alternately Dracæna terminalis grandis and Azalea Empress of India, the whole backed by Azalea Vervæneana, Poinsettia pulcherrima and palms in various sizes, Dracæna Neo-Caledonia, and Dracæna Lindenii, fine specimens, standing on the floor six feet deep, reaching to the ceiling, and Adiantum Farleyense suspended from the same, the whole giving a rich and brilliant effect, more so when the electric light is on. The side windows are usually filled with handsome vases of roses, carnations, or whatever flowers are in season.

New York Cut Flower Co.

At a special meeting on Monday of the directors of the New York Cut Flower Co. the following members were present: J. N. May (President), Geo. W. Hillman (Vice-Pres.), Paul M. Pierson (Secretary), Ernst Asmus, Eugene Dailledouze, F. L. Moore, S. C. Nash, L. M. Noe, John H. Taylor.

Seed and Bulb Trade.

All surpluses are thinning perceptibly, though Chinese lilies seem to hang somewhat this year. They seem to have seen their day, though several consignments at auction realized $30.00 per 100.

Mr. Eug. Schaettel, the American representative of Messrs. Vilmorin-Andrieux et Cie, Paris, who has been calling on the trade in this country and Canada, reports a very satisfactory trip and the average order taken good. He returns per S. S. La Bretagne next Saturday.

A Snow Storm.

Chief Dun of the Weather Bureau hoisted the snow storm signal last Friday and said same was centering in Chicago, though it moved East stepping off at Buffalo, presumably to visit Friend Scott. Later reports proved that it was the big first edition of the FLORISTS' REVIEW which reached here to-day, Monday. Here's to you, Brother Grant, and "May it be the father of a line of presidents."

Visitors.

John Walker, manager for Robert Craig, Philadelphia; E. Kauffman, Walden; A. Herrington, Madison; H. M. Bradley, Derby, Conn.; J. L. Fotheringham, Tarrytown.

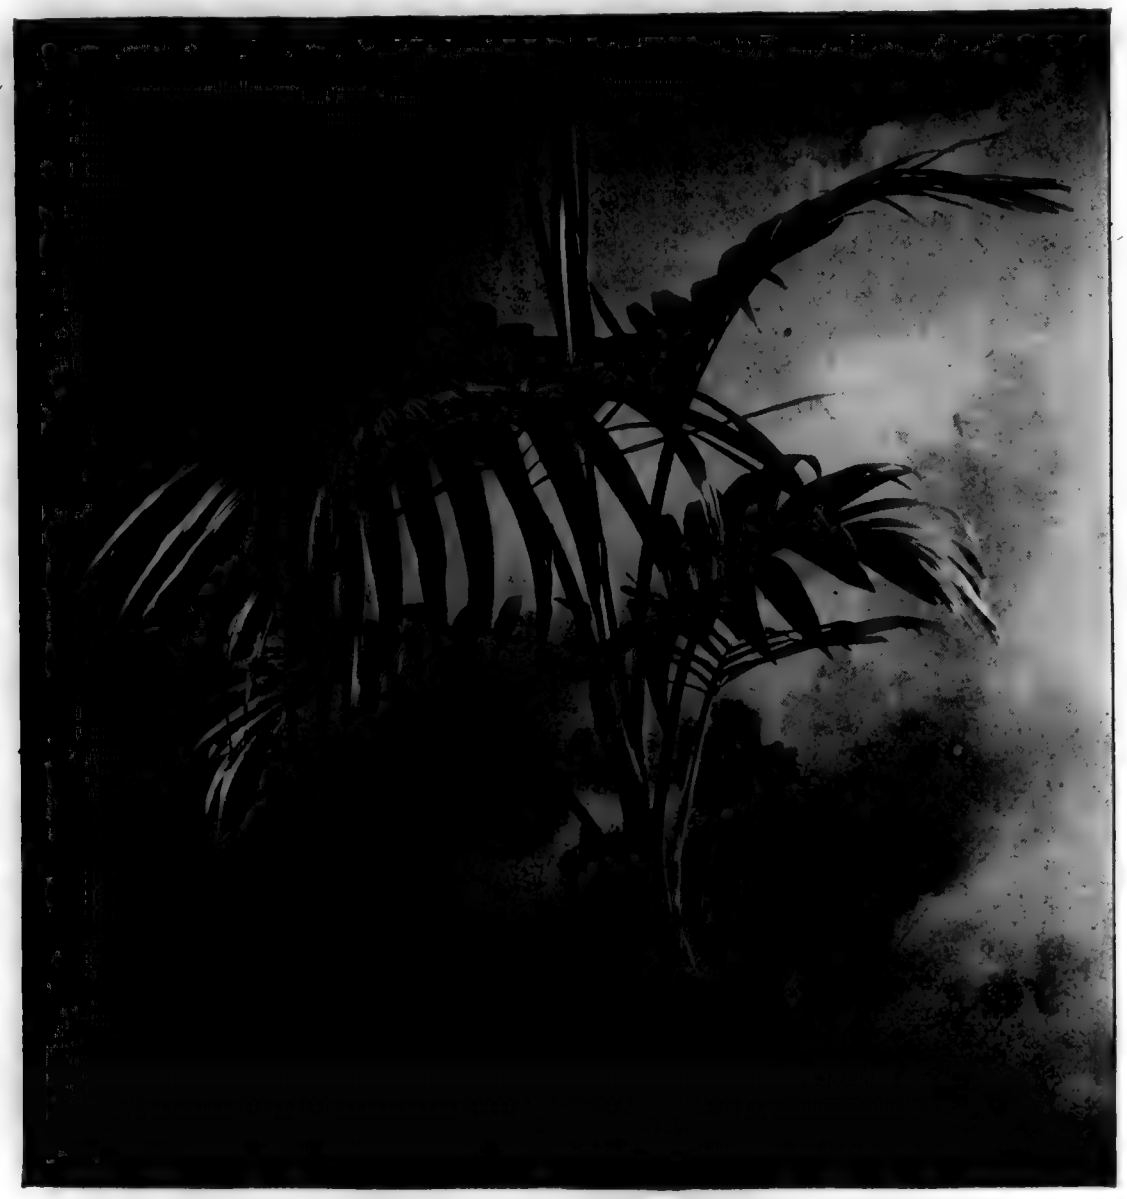
BOSTON.

Mass. Hort. Society.

The regular monthly meeting of the Mass. Horticultural Society was held Dec. 4. In the absence of the president Mr. Sam'l Hartwell conducted the proceedings of the meeting. This meeting was held for hearing reports of committees, establishing prizes, and election of new members. Mr. E. M. Wood, Waban Conservatories, Natick, was unanimously elected a member. Mr. F. L. Harris, gardener to H. H. Hunnewell, Wellesley, exhibited a very handsome and well grown plant of Begonia Gloire de la Reine. This variety is also well adapted for growing in hanging baskets, and from its pendulous habit, free growth and floriferous qualities must be a great acquisition for conservatory and other decorations. The flowers are of a bright pink and produced in such profusion as to almost hide the foliage.

Visitors.

Mr. Comont, representing James Carter & Co., of London, England, paid a flying visit here, previous to his return to England the early part of next week. He reports business as slightly improved, although the seed trade (as last year) seems to be somewhat overstocked. He also reports very favorably of business prospects through Canada; the crops have been good, and in general good in quality, and every indication for a largely increasing business in spring trade.



Mr. D. McRory, representing W. A. Manda, of South Orange, N. J., is also in town.

A Surprise Party.

A few of the old representative florists of this neighborhood, and known by the cognomen of "The Old Guard," gave a complimentary dinner to Mr. E. M. Wood, of Natick, of Waban fame. The dinner was held at the Crescent Hotel, Waltham. The decoration of the reception and dining rooms was of a most elaborate nature and conducted under the able and skillful supervision of Mr. Fred Mathison, florist, of Waltham. The rooms, so it is said, were complete tropical bowers of choice palms, crotons of exquisite brilliancy, roses, chrysanthemums, and other choice plants and flowers, and the whole so superbly arranged that the display was most gorgeous and effective.

Mr. Ed. Hatch, auctioneer, was appointed chairman for the occasion, a position which he most ably filled. Mr. Lawrence Cotter was elected toastmaster but through some unknown circumstances was unable to be present hence the two duties devolved upon the chairman who acquitted himself in a most creditable manner. He was ably assisted by the following members of the committee: Mr. P. Welch, Mr. Pettigrew, Superintendent of Parks, M. H. Norton, Fred Mathison, John Galvin, Warren Ewell (the eminent bulb grower of Dorchester), W. J. Stewart, Wm. Edgar, Jackson Dawson, and others; in all about twenty covers were laid.

The dinner was served in a very liberal manner, and the good things of this world, in the shape of solids, were washed down with equal quantities of the very best liquids, which were highly praised and appreciated, as every member of "The Old Guard" is a connoisseur of a high order. The dinner was arranged to take place about 3:30 p. m., and great care was displayed to keep their guest as much in the dark as to the proceedings concerning himself as possible, until the time it should be upon him in all its brilliancy. This is where the surprise was turned upon the entertaining party. After many able speeches by the members of the committee eulogizing their guest's good and generous nature, and the introduction by the chairman, in the most able and flowing language, their guest arose to respond. He drew from his pocket, with all sang froid, several folios, all type-written, with his replies already formed for utterance, then the astonishment or surprise was all on the other side, and in the chairman's comments he said that he liked to hear a convivial speech spoken as from the heart, instead of from cold lead or type, but withal Mr. Wood made a very able reply, and while accepting graciously the high honors done to him, said that his position in the floral world is more owing to his very enterprising foreman and manager, Mr. Alex. Montgomery. During the entertainment an eminent quartette and band discoursed beautiful music and songs to help sharpen the appetite and lead to the pleasure of those assembled for a good time, and we are happy to state that everything went off with eclat. C. H. J.

Kentia Canterburyana.

KENTIA CANTERBURYANA.

This handsome palm will not be new to many of our readers, and while palm cuts do not always do full justice to the species delineated, yet we feel sure that the accompanying illustration will be readily identified, the photo from which it was prepared having been a good specimen of the art.

Kentia Canterburyana, which by the way, has been renamed Hedycepe Canterburyana, is closely related to that favorite palm commonly known as Kentia Belmoreana, but is usually more dwarf in habit than the latter, and has heavier leaf stalks and a stouter stem.

The leaves of this species droop gracefully as the plant attains age, and are divided into many narrow segments, both leaves and stems being dark green, and the plant most symmetrical in habit.

Unfortunately K. Canterburyana is quite a slow grower in a small state, and it has therefore never become a popular palm in the trade. If this species can be induced to progress to a salable size within a reasonable period of time it would doubtless soon find a larger market, the foliage being tough and the plant having much endurance.

W. H. TAPLIN.

ST. LOUIS.

The first issue of the WEEKLY FLORISTS' REVIEW created a genuine surprise in this city, and the verdict of the trade is that it's the only paper. The pictures of our old friends William Scott, President-elect Gude, Adam Graham, and others, were also commented upon. A great many mistook Charlie McKellar for William J. Byran and F. R. Pierson for ex-Governor Altgelt.

In the cut flower line roses have not advanced in value since my last report. Good firsts in Meteors, Brides, Kaiserins, Bridesmaids, and La France are selling at from $5.00 to $8.00; seconds from $2.00 to $4.00. American Beauties, first-class long ones, are sold at $35.00; seconds, $25.00, and short-stemmed ones from $5.00 to $10.00.

Carnations are not plentiful, and bring a good price; the best are $3.00, and some extra fancy go at $4.00. The best sellers are Jubilee, Scott, Daybreak, and Eldorado, and many kinds of white.

Harrisii and Romans are only few and seem scarce. The former bring $15.00 and $18.00, and the latter $4.00 per 100. Paper whites and valley are good and sell at $4.00. In violets, the Californias are in best demand at $1.50 and $2.00; double scarce at $1.00; single (home grown), 40 cents, and Southern 25 cents. Smilax is plentiful and is selling slowly at $10.00 to $15.00.

The retail trade is only fairly good and a great many of the retail florists about town complain that their business has fallen off considerably as far as selling good first-class stock. A Cheap John store down town is content with the old motto: "Quick sales and small profits." They have the best location in the city and also a handsome store and could ask the best prices and get them, but were selling roses on Thanksgiving Day at 35 cents per dozen and carnations at 25 cents per dozen. They were rubbish in the eyes of a florist, but the public seemed satisfied. The wholesaler at the same time asks the retailer $2.50 and $3.00 for carnations and from $4.00 to $8.00 for roses. Not saying that they were not worth the price they ask, but how can we compete with the man who handles the rubbish? The only way out of this is for the grower to keep his rubbish out of the market or take less for that he calls his first quality stock. This same Cheap John concern is not spending its own money, but has a good backer who knows nothing of the business. How long they can pull the wool over his eyes remains to be seen.

In the West End it is different. They all seem to be doing a good business and can't use any of the so-called rubbish. They handle only the best of stock, get good, fair prices, and the public seems satisfied. The same thing could be done down town if things were so the grower with rubbish would have to go to the dump pile or grow better stock and get good returns. You can't educate the flower-loving people of St. Louis into buying rubbish. You may do it once, but they never come back. The old saying is, "Give a fool rope enough and he will hang himself, and you will not have to wait long to see the hanging."

I am happy to note that the Chicago Bowling Club will pay us a visit next Sunday (December 12), for a return game at bowling. Well, boys, we will give you the best we have got and try to return the compliment if it's in our power to do so.

This reminds me of something that happened a few days after the St. Louis bowlers came back from Chicago. It was a contest between a Chicago drummer and a St. Louis florist as to which of the two was the best liar, and it was won by the St. Louis man. He began by saying, "There was once upon a time a bowler in St. Louis — " whereupon the Chicago drummer gave up the contest, saying no one could tell a greater lie than that.

The Ohio Valley Floral Company at 20 South Broadway closed its doors last week, and was reopened this week by Mr. and Mrs. Thoman. The firm is known as Holmes & Thoman.

At the next meeting of the Florists' Club the following applications will be presented for membership: F. W. Weber, with F. C. Weber; Andy Hoffman, with George Waldbart; and Will Adles, with Ayres Floral Company (better known as the big three); also Andrew Meyer, Jr., Mr. Meinhardt, and William Lingenrink.

Al. J. Bauer, of the Mound City Cut Flower Company, had an exciting adventure with a large mastiff dog who was stealing his chickens at his home, 5829 Cates avenue, last week. Al. was aroused by his wife, who heard the noise. He grabbed his pistol, and clad only in his night robe, ventured out in the cold night and shot the dog, at least he thought so, not knowing what a good shot he was until the next morning, when he found the animal dead on the back porch. Al. is now going to join the St. Louis Gun Club.

Last Saturday night Mr. C. W. Wors gave the trade an opening at his new location. Some thirty florists were present and found everything they wanted to eat, drink, and smoke. The company was entertained by John Morris and Charles Richards, two of Mr. Wors' employes, with songs and dances. Songs and humorous stories were contributed by Fillmore, F. Ellis, Beneke, and others. Mr. Charles Thoenle presented Mr. Wors with a very handsome basket made of all kinds of vegetables. The crowd stayed until the small hours in the morning. Before they left Mr. Wors thanked them all for their entertainment. We had a great time and everybody went home happy.

The Bowling Club on Monday rolled its usual three games. The boys all seemed in good trim and feeling happy to think that they will have another chance to meet their enemy, the Chicagos. Charlie Kuehn especially covered himself with glory in the three games; he rolled 671. His high single scores were 216, 246 and 209. Emil Schray was second, 578; his high single score was 257; and C. C. Sanders third, 521; high single score 237. After the rolling a committee was appointed to make arrangements to entertain the Chicago Florists' Bowling Club, who will be here Sunday, Dec. 12th, to spend the day with us. The committee was ordered to do everything in their power to entertain them, but don't let them beat you on your own alleys.

J. J. B.

BED OF BEGONIA ERFURTAE.

The bed in the central foreground of the accompanying engraving is filled with Begonia Erfurtæ bordered with Alternanthera latifolia. The begonias are considerably taller in the center of the bed but this is purely the result of accident. Mr. Stromback thinks that in making up the bed the best soil was thrown in the center and not afterward distributed throughout the bed. The accident certainly adds to the effectiveness of the bed.

This begonia is grown from seed which is sown the latter part of February or early in March in a very light soil composed of leaf mold and sand. The seed is very fine, and after the surface of the soil is smoothed the seed is sown very lightly and thinly, then pressed into the soil and very lightly covered. The soil should be moderately damp before sowing and afterward lightly sprinkled with a Scollay sprinkler. Water from the rose of an ordinary watering can would wash all the seed to one side. A pane of glass should then be placed over the box, resting right on the box, and the box placed in a temperature of 65 degrees. For the first few days it must be shaded from the sun; a newspaper laid over the glass will answer. When the seedlings appear the glass should be raised and air given, being still shaded from the sun during the middle of the day. As growth advances more light should gradually be given.

About three weeks after sowing they should be pricked out in a flat of soil such as they were sown in, in rows about half an inch apart and about a quarter inch apart in the rows. They will be too small to handle with the fingers. Use a goose quill cut like an old-fashioned pen, but with a V shaped opening in the end to admit the stem of the tiny plant. Prepare your flat of soil, smooth the surface and draw the furrows a half an inch apart with a penknife against a straight edge. Then with the goose quill lift the seedlings out of the seed box and place in the furrows about a quarter inch apart. When a few rows are in position water with a Scollay sprinkler, which will settle the soil around the little plants. Glass should still be kept over them, but raised a half inch on one side to admit air. Give same temperature and light as before, and give partial shade in middle of the day when sun is strong. As growth advances give more air, less shade, and eventually remove glass entirely. If soil should become green or crusted it should be loosened to admit air.

When the plants have four or five leaves they should be shifted into thumb pots, placed on a bench, in same temperature as before and watered moderately. When well rooted in these they should be shifted into a 2½-inch and later into a 3-inch or 4-inch, using same soil. It is a fine rooted plant and requires soil named to do well.

They can be bedded out early in June and planted about 10 inches apart. An even moisture must be maintained in the soil. Water in the morning so the foliage can dry off before night. The plant is a continuous bloomer and very satisfactory as a bedding plant. The flowers vary from light pink to nearly white.

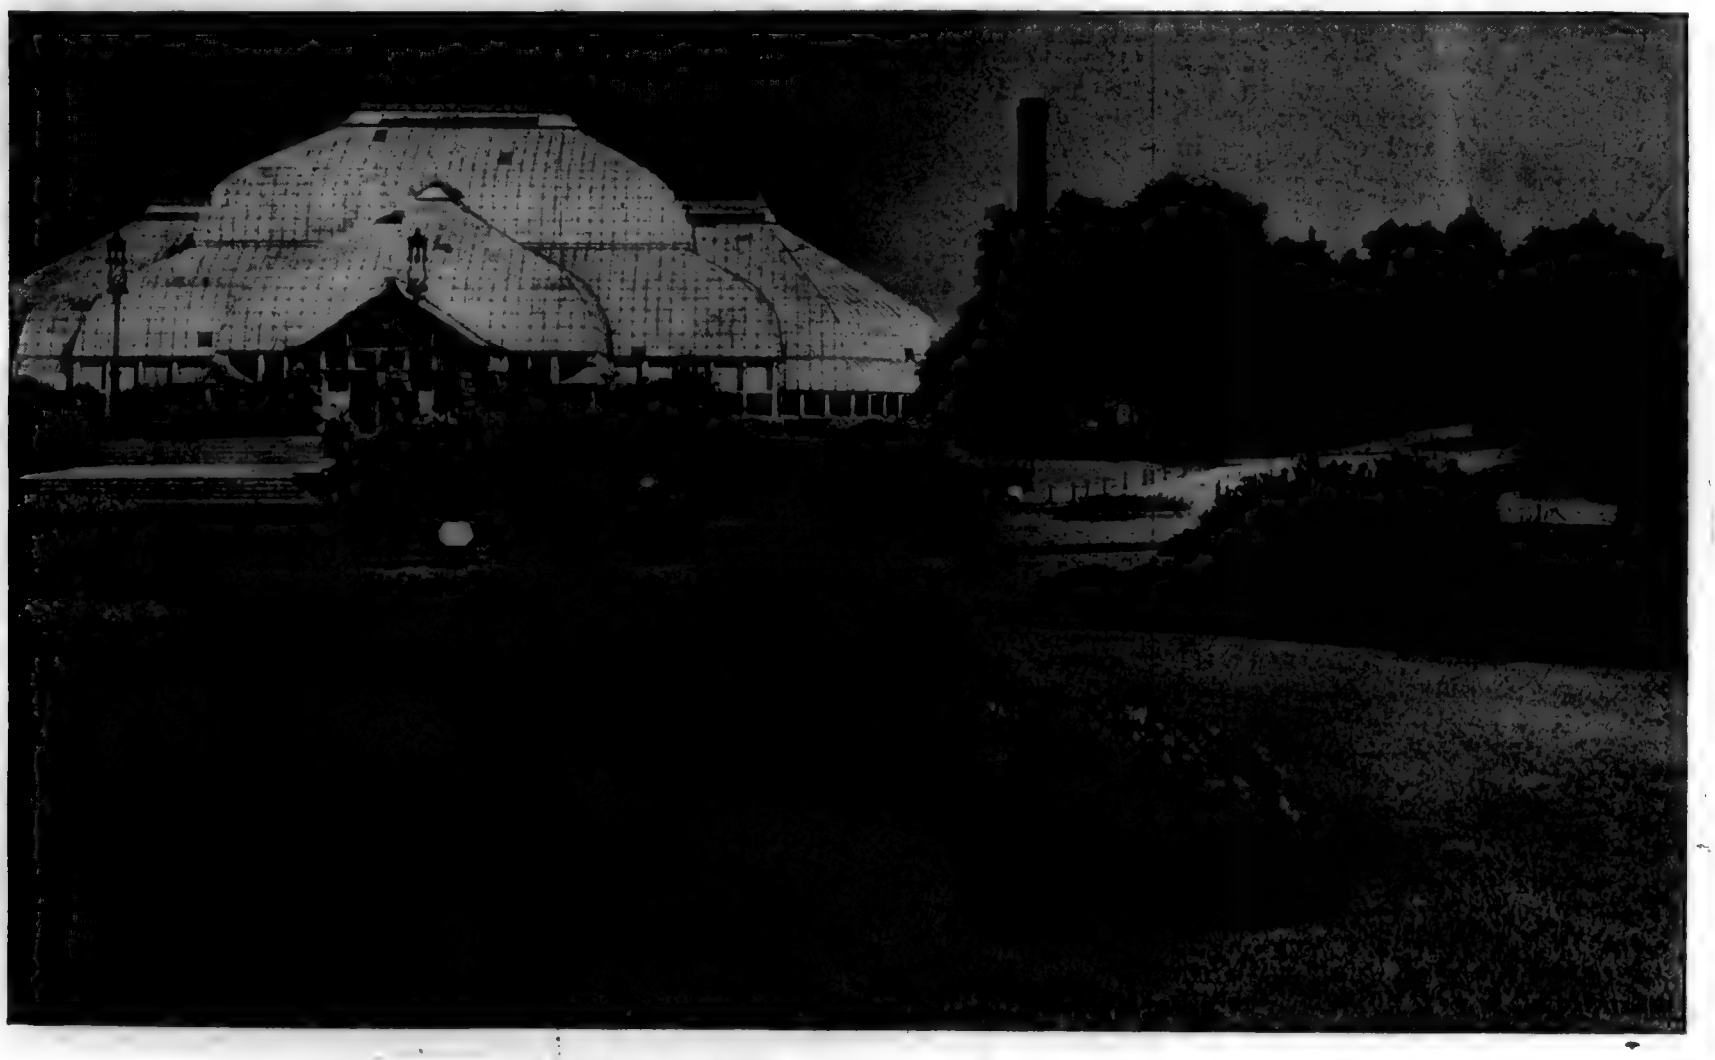
The border is Alternanthera latifolia, one of the tallest growing alternantheras, and is a very suitable height for bordering a bed of these begonias. The foliage is dark brown with a little rose color. It is propagated the same as Alternanthera paronychioides major.

At the left is seen a bed of the semi-double red geranium Bruantii. It is a strong grower and good bloomer. There is a double border, the inner one of rose geraniums and the outer one of santolina. The contrast in size and color between the two makes a very pleasing effect.

BED OF BEGONIA SCHMIDTII.

The accompanying engraving is from a photograph taken last September of a bed of Begonia Schmidtii in Lincoln Park, Chicago. Mr. Stromback, the head gardener, considers this decidedly the best bedding begonia, and is very much pleased with it. It blooms continuously and with great freedom all summer, clear up to frost. It is also one of the freest blooming begonias inside in winter. When bedded out the plants grow to a height of a foot to a foot and a half. Grown inside the flowers are a light pink and foliage light green, but when bedded out the flowers are much darker and the foliage turns a reddish brown and becomes very glossy.

For bedding plants it is propagated in February by cuttings taken from shoots of the younger growth from the bottom, with an eye on. Cuttings must not be taken from the top shoots, as they go all to flowers and do not make a plant. The cuttings are put in sand in a temperature of 60 degrees, and a little bottom heat will make them root quicker. Water sparingly, and in fifteen to twenty days they will be rooted, when they should be potted in 2¼-inch pots, using the same soil as mentioned for Erfurtæ. When well rooted in these shift into 3-inch, and later into 4-inch. The plant is bushier than Erfurtæ, making a larger cluster at the bottom, and should be bedded fifteen inches apart. Water same as prescribed for Erfurtæ.



Mr. Stromback's experience is that this variety does not come true from seed, but it propagates so readily from cuttings that this is the most economical way of producing plants.

BUFFALO.

Business must be called decidedly quiet the past week. No buds, no splices, no "notings." The calm has begun before the storm, and the storm I hope will be a cyclone of orders and good business for Christmas. Greens and holly are now discussed where florists do congregate. The former is likely to be good and plentiful. Holly, we are assured by a Southern shipper, will not be consigned to the Northern commission markets this year. We hope not; for the past few years it came in by the carload and everybody handled it. One man says in his letter of solicitation for trade that his boxes are made of clear pine lumber, surfaced on both sides, and substantially made. Possibly these extra trimmings make up for lack of berries.

The President's message is in this evening's press (Monday). He is in favor of annexing the Sandwich Islands (so much easier to pronounce than Hawaii). I trust there will be enough sensible men in Congress to prevent this Jingo un-American policy. Think of the consequences. They would flood the country with poinsettias, orchids, passifloras, and a general assortment of epiphytes, and some Smart Aleck would go over there and start a palm garden and shut up our large Eastern growers. Let them remain as they are, happy in the cultivation of sugar cane and fig leaves and other textile fabrics which the climate demands.

There are plenty of flowers. Carnations good, roses fine, especially those that waft their way over the Niagara gorge. Violets are scarce, but I object to the remarks of a correspondent of a contemporary that Corfu is a desert; not by a jug-full. I will take that large blonde one some day and convince him that there is an occasional oasis in the desert.

Bed of Begonia Erfurtae at Lincoln Park, Chicago.

Bed of Begonia Schmidtii at Lincoln Park, Chicago.

If new and stylish stores are an indication of business, then we are booming. Mr. Thrall, originally of Jamestown, opens up to-morrow his store on Main street, near Chippewa, which is said to be a corker, no expense spared in any feature. The ice box is large enough to hold a horse show, and everything in keeping, not only in size but taste and finish. We expect Thorley will be up next week to get a few points.

Mr. Harry Millatt, late and for some years with Grove P. Rawson, of Elmira, has opened a store on Main street, between Mohawk and Genesee. Harry is well known as a young man of most exemplary character, plenty of experience and business tact, and should certainly command his share.

Most of the visitors this week had something to sell except Mrs. Edwards, of Dunkirk, whose keeping qualities are equal to a Meteor rose. She does not look a day older than the first day I saw her, some twenty years ago, when she could ask questions and put down your answers in long hand as fast as you could talk. She has returned to active business in her greenhouses.

Mr. Mott, of Riverton, N. J., called to pay his respects to one who was laid up with the poor man's gout. Merely a social call and to discuss the outlook of things in general. Close on his heels came brainy Mr. Skidelsky, also of the Delaware region. It was pleasant to know that he was representing (as well as other firms) Mr. Robert Craig. It's good to hear that name up this way occasionally; it produces a thaw in our otherwise austere life. W. S.

ST. PAUL, MINN.

St. Paul sends greetings to the Florists' Review with the hope that its days may be long, its usefulness great, and its success financially and otherwise overwhelming.

"Thanksgiving" trade was good in this city, and business since has been good, notwithstanding the unusual cold wave through which we have just passed. While orders are not for large amounts they are coming in freely and the dawn of better times seems to have at last burst upon us.

Mums in this market are about all gone, though August Swanson is still cutting some excellent blooms. Other stock is fairly abundant. Roses are of good quality and quantity, the only shortage being in Meteors and Beauties. These are being shipped in from Milwaukee and Chicago. Notwithstanding the cry of "hard times" since 1893, nearly every grower in the city has enlarged his plant (some even being double), the total product now being fully fifty per cent. more than four years ago, and still the supply in this market is not equal to the demand. While it is true that prices are somewhat lower than four years ago, still they are remunerative enough to encourage new building with increased facilities for producing stock.

Carnations are in better demand than ever, while the quality of the stock has improved, owing to improved methods of culture, disbudding, etc. Rust is prevalent again, though not to an alarming extent. This enemy must be fought early and late and all the time in order to secure success in cultivation. Of the newer varieties being tried for the first time, Morello easily has first honors, with Jubilee a good second. It seems as though the ideal red had at last been found. L. L. May & Co. have two very promising whites of their own introduction, one being a chance sport of the Daybreak, retaining all the good qualities of plant and bloom of that grand variety; the other was produced by crossing Portia with Storm King. The plant is vigorous, the stem long and stiff, bloom very large, never bursting, of a very firm texture. This is the third season's trial of the former, and the second of the latter. As they improve each season they will probably be placed upon the market another year. This firm has a house of Daybreak containing 1,800 plants which would be very hard to beat.

The demand for violets is much larger than the supply, consequently a great many are being shipped in, those from Milwaukee being very fine. The California is gaining in popularity and should be more largely planted.

Shipping trade is reported very brisk, the demand being for funeral work, wedding and party flowers.

Holly, lycopodium, etc., are greatly in evidence now, these being the ordinary forerunners of Christmas. Green is quite plentiful and cheap this season and festooning is being sold at lower prices than ever before.

Several new stores are noted this season. L. L. May & Co.'s on East Sixth street, Christian Hansen's nearly opposite, Vogt Bros. on West Third in the store formerly occupied by Elfelt, who has retired on account of ill health, Anderson, the Hill Florist, nearly opposite his old stand on Western Ave., J. Haitomt, on Mackeebin street in the residence district. These all seem to be doing a thriving business.

Retail prices now are: Roses, $1.00 per dozen, with $1.50 the top notch for best Meteors, Siebrechts and Testouts. Beauties $3.00 to $6.00 per dozen. Carnations 50 cents per dozen. Violets $2.00 per 100. "Roses at 25 cents per dozen" was a prominent sign in one of the largest stores recently.

The crop for Christmas will be good judging from present appearances. The weather is now mild and bright, conducive to good flowers and plenty of them.

Harrisii, paper whites, Romans and valleys will all be in for the holidays, the former three being in already.

Our recent callers were Mr. Roach, representing J. B. Rice & Co.; Mr. J. M. Kimberlin and nephew of California, and Frank Berry, of Stillwater.

Mrs. James Souden, who was very seriously ill, is so far improved as to sit up, and hopes for her speedy recovery are now assured. X. Y. Z.

BALTIMORE.

We are now having a marked improvement over the gloomy and changeable weather of last week, but, as it is an established fact that florists are never satisfied, I feel privileged to modify the above statement by saying it could still be better. Despite this fact, however, things have brightened up considerably.

The week opened with one of the season's great social events, namely the first German. There were more than the usual number of debutantes, and the stores were all more or less busy, bouquets and cut flowers being in almost double the demand of previous years.

Prices advanced slightly, but have now fallen back to their old place again, and stand as follows: Good roses $3.00 to $5.00 per hundred, Beauties $2.00 to $3.00 per dozen, carnations $2.00 to $3.00 per hundred, violets 50 cents to 75 cents per hundred. Chrysanthemums are now over. A few stragglers are bringing $1.50 to $2.00 per dozen.

Maryland has a much larger number of growers than our brother florists of other States have an idea of. Perhaps the chief reason of this seeming obscurity is that the majority of them do a retail business. We have really very few *strictly wholesale* growers, the balance contributing only their surplus stock to the trade, in consequence of which our commission houses, in the busy season, are very seldom overstocked as stuff finds a very ready market at home. It is more often the case that we are obliged to call upon the other cities for their stock, than to seek a foreign market for our own.

The question is now being generally agitated as to the advisability of holding a show next fall. There is one thing quite evident (and previous experiences have proved it), that the Baltimore public is greatly averse to being "faked," while on the contrary they will appreciate and patronize something good. Now would be the chance to rekindle this spark of public interest, by all hands combining their efforts to give a first-class flower show. Not to confine it to chrysanthemums alone, for the people are tired of seeing the same general mass of "mums" year after year (which can be seen in the windows of any first-class florist's store), but to give them a *variety* in the form of cut flowers, specimen ferns, palms, decorations, designs, etc. On the whole, give them everything that is *floral;* and if this is done under proper management, confining ourselves to the domains of a less expensive hall, and with a decreased premium list, a show could be held which would be patronized, and made a financial success.

Upon a recent visit to Messrs. Halliday Bros'. place, Liberty Road, the writer found their extensive lot of greenhouses in a very flourishing condition. To a large list of standard roses they have added the Carnot, which they find very satisfactory. They are equally successful with carnations, of which they have four large houses. Violets are grown in quantities and a batch of Asparagus Sprengeri (which they are using as a decorative feature) can also be seen. They have recently completed a new potting and packing shed, which connects a range of nine large houses.

Mr. Robt. Paterson, who last week was reported very ill, is now on the convalescent list.

The writer has just seen in one of the stores a large vase of the Baltimore carnation, each bloom measuring about three

Bedding at Lincoln Park, Chicago.

inches in diameter. The Baltimore (which is a seedling of Mr. Conrad Hess) is a darker pink than the Scott, very full, long stiff stemmed, dark in foliage and an excellent keeper.

On November 26th Mr. Jno. C. Wilhelm died suddenly at his residence, 912 North Gay street. Mr. Wilhelm was quite a familiar figure about town, being many years engaged in the retail trade.

CHAS. F. FEAST.

BEDDING AT LINCOLN PARK, CHICAGO.

We present herewith a view of the main parterre at Lincoln Park, Chicago, from a photograph taken last September. The view is from the north and is taken from the terrace in front of the conservatory. The various beds shown will be illustrated and described in detail, and we will here refer only to the row of vases seen bordering the parterre at the left between the trees.

These vases have been a feature of the park for years, and are always much admired. They are simple wooden boxes set on posts, and are not ornamented in any way, the plants and vines completely hiding the boxes. The tall pyramidal effect is obtained by setting a smaller box in the center of the larger one, and elevated slightly above it. The upper box is filled with plants only, while in the lower one both plants and vines are used, the plants being tall enough to hide the body of the upper box. The plants used are geraniums, both flowering and foliage, Cineraria maritima, petunias, double sweet alyssum, Calceolaria annua, verbenas, ivy-leaved geraniums, lobelias, Maurandya Barclayana, tropæolums, vincas, German ivy, and occasionally Lophospermum scandens.

The soil used for these vases is carefully prepared and must be of medium weight, for if too heavy it will turn into mud when watered, and afterward bake hard, and if too light it will not hold moisture long enough. To the regular compost is added one-third of well-rotted cow manure, and then a generous sprinkling of bone meal.

CHICAGO.

In a little over two months the annual meeting of the American Carnation Society will be held in this city. Every florist in this vicinity should do his share toward making that meeting a success. It will be a small matter to each individual if all take hold. And no better initial step can be taken than to join the Chicago Florist Club if you are not already a member. The recent changes in the by-laws have practically abolished the entrance fee and the dues are only one dollar a quarter, thirty-three and one-third cents a month. Is it not worth far more than this to be a member of the representative trade organization of your city. Send in your application. The club needs you. You will assist it to do effective work and you will receive a full share of substantial benefits in return. In union there is strength. Contribute your mite toward making the Chicago Club the strongest in the country.

The Chicago Bowlers will return the visit of the St. Louis Bowling Club, starting from Chicago Saturday evening at 10:15 via the Wabash Railroad. Satisfactory rates have been secured for this trip and all information regarding it can be obtained from Mr. P. J. Hauswirth, 318 Wabash avenue. The party will leave Chicago on the train noted and reach St. Louis at 7:32 a. m. Sunday, where they will be met by a committee of the St. Louis Club. The day will be spent in St. Louis and the party will leave that city on the return at 9:05 p. m., via the same railroad, reaching Chicago again at 7:30 a. m., in time for business Monday.

It goes without saying that the St. Louis boys will make it very pleasant for the visiting party and all who can arrange to do so should certainly avail themselves of this opportunity to experience the famed hospitality of the metropolis of Missouri. In the meantime, it would be well for the bowling contingent to get into good training. While it would not be nice to beat the St. Louis boys on their own alleys, the Chicago Club certainly ought to put up a good, bold front and not allow themselves to be beaten too bad. Certainly these visits between the congenial spirits of the various cities ought to be encouraged, as a fraternal feeling in the trade is engendered thereby.

The Klehm Nursery will have the usual big crop of Gontiers, Beauties and Siebrechts in for Christmas. They seem to never fail to have a full crop in at just the right time to corral the dollars at Christ-

mas. Why can't other growers do it? Have the Klehm boys a "secret?"

Poehlmann Bros. will remove from 24 Randolph St. to 53-55 Wabash Ave., where they will have more satisfactory quarters.

Among recent visitors to the city was Mrs. C. W. Pike, the pioneer florist of Racine, Wis.

In a vase of seedling carnations sent to Kennicott Bros. Co. by Crabb & Hunter, Grand Rapids, Mich., we noted a pink variety that was of much promise. No name was attached. Give it a name, gentlemen!

All the wholesalers report stock scarce and in lively demand. Kennicott Bros. Co. say they never before saw Christmas orders coming in so early.

Franz Danzer, of A. W. Livingston's Sons, Columbus, O. was a recent visitor.

Nixon H. Gano, of Knightstown, Ind., is visiting the trade here.

FLOWERS AT THE HOLIDAYS.

The holidays are approaching and many of the growers are looking forward to this festive season to make up for losses at other times. All will admit that they need a season of good sales at good prices to enable them to strike a fair average for the year. But the experience of many years has shown that the right way to get the most money out of the holiday crops is to keep the stock going to market as fast as it is in fit condition.

Every year is repeated the same old story of pickled stock that would have brought a good price if marketed while fresh but which was held till the day before Christmas and then came in to swell the glut on that day and he sold for a song, or go to the barrel. Every year there is a great scarcity just before the holidays, with prices stiff, and a teriffic slump at the last minute, due to the quantity of stock dropped on the market in one or two days.

It is not only a mistaken policy but a costly one to the grower. Speculating in futures is ordinarily a risky business, but experience has shown that the chances are all one way as regards pickled stock, and those chances are decidedly against the pickler. The inevitable result is loss to the grower and dissatisfaction to the buyer, while the commission dealer catches it both ways.

OUR GENERAL INTRODUCTION.

We are sorry to say that an accident prevents us from presenting group No. 2 this week. It will appear next week, and, probably, group No. 3 also. Keep the photos coming in. We must have a little time in which to prepare the plates satisfactorily.

THE CERTIFICATES.

It will take a week or so to get the issue of certificates to subscribers started in proper legal shape. But every subscriber will receive one inside of two weeks. The red tape of incorporating has taken a little longer than anticipated, but is now nearly completed. We cannot legally issue the certificates until the stock has been issued and placed in the hands of the trustee. This will have been accomplished very shortly, and we can then go ahead.

THE FLORISTS' REVIEW

G. L. GRANT, EDITOR AND MANAGER.

Subscription, $1.00 a year. To Europe, $2.00. Subscriptions accepted from those in the trade only.

Advertising rates: Per inch, $1.00; ⅛ page, $13.00; full page, $25.00. Discounts: 6 times, 5 per cent; 13 times, 10 per cent; 26 times, 20 per cent; 52 times, 30 per cent. Discounts allowed only on consecutive insertions. Only strictly trade advertising accepted. Advertis ements must reach us by Tuesday to assure insertion in the issue of the following Thursday.

COPYRIGHT 1897.

WE WISH we had time to acknowledge by personal correspondence the many congratulatory letters we have received regarding our first issue, but must ask our friends to accept this general acknowledgement as personal. Your commendation is most thoroughly appreciated and will spur us on to greater effort. The paper is still much short of our ideal, but with a fully organized staff we expect to approach it more closely. We shall leave no stone unturned to make the REVIEW as near the ideal trade paper as it can be made.

WE WANT to call special attention to the article on "Park Planting" in last issue by Mr. J. A. Pettigrew. We consider it by far the best short article on the subject yet published. It teaches the highest type of the art. It breathes the spirit of the real artist and true lover of natural beauty. It is honest. It is practical. We have been surfeited by visionary ideals that beclouded the subject, and were probably not thoroughly understood, even by the writers thereof. Mr. Pettigrew has given us in one short article a clear exposition of the true principles of the art. Let us profit by it. And we shall endeavor to induce him to now go more into detail.

IT IS NOT too early to consider the question of attending the next convention of the Society of American Florists, to be held at Omaha, Neb., next August. Indications are that all railroads will make a rate of one fare for the round trip to the Trans-Mississippi Exposition, to be held at Omaha next summer, and that the exposition will be a beautiful one. This double attraction will make the visit to Omaha unusually pleasurable. At the time Omaha was selected as the place for the next meeting, fears were expressed that the attendance would be light, as the western florists did not usually attend the annual meetings in large numbers. Those in the trade in the West will now have an opportunity to show that they are as appreciative of the work of the society as their eastern brethren. Let them turn out to a man and make the Omaha meeting the largest one in the history of the society. It can be done. Why not do it? If the western florists show earnestness in the matter it will stimulate attendance from the East. Let them begin the good work now.

THE PRINTED REPORT of the proceedings of the Thirteenth Annual Convention of the Society of American Florists, held at Providence last August, has been issued. It contains 150 pages, is nicely printed and contains all the essays read at the Providence convention, together with the discussions on same, in addition to a vast amount of other useful information. An excellent feature is a list of plant introductions in America during 1897, including new roses, carnations, chrysanthemums, cannas, dahlias, geraniums, begonias, sweet peas and miscellaneous. This report is sent free to all members of the society. Anyone in the trade can become a member of the society by sending an application and $3.00 to the secretary, Mr. Wm. J. Stewart, 67 Bromfield St., Boston, Mass.

THE FUTURE of the business is looked forward to doubtfully by some and occasionally we hear grave fears expressed. "The business isn't what it used to be" is a common expression. It has a very familiar sound, for it has been heard continuously ever since the trade existed, even during flush times when trade was gaining by leaps and bounds. It is true that for the last few years the trade has suffered, just as all other business has suffered, but the florists' business seems to have felt it less than many others. That the business is still in its infancy in this country there can be no doubt and that there will be an enormous expansion during the next decade is equally certain. We had become so accustomed to a large yearly increase in the volume of trade that we had come to look upon it as something to which we were entitled. We must, however, realize the fact that we have new conditions to face and the wise man will prepare to meet them. We can not succeed by following the methods of five years ago any more than we could have succeeded then by the methods prevailing five years before that time. Conditions have changed and are still changing with great rapidity and we must change with them or be left behind in the race. In last issue will be found a number of articles touching upon this important matter. They should be read carefully and thoughtfully by all.

"CHRISTMAS DECORATIONS."—Under this title W. W. Barnard & Co., Chicago, have issued a very neatly printed little booklet describing and quoting prices on such items as evergreen wreathing, bouquet green, evergreen wreaths, holly, holly wreaths, mistletoe, evergreens from the South, palmetto leaves, wild smilax, needle pines, Christmas trees, immortelles, Christmas bell frames, and all other supplies needed for the Christmas trade. It should be very useful to the retailer.

Many Thanks...

for the flood of congratulations and subscriptions.

We shall spare no effort to fully deserve them.

The General Introduction will be continued next week.

Certificates for subscribers will be ready within a week or ten days.

Chicago, Dec. 8.

Such a complete picture of the Chicago market is given in our advertisements that quotations seem unnecessary. You will find up-to-date quotations of nearly every house among the advs. A review of the market conditions will be found in our Chicago news report.

Boston, Dec. 8.

Trade this week has been slow and dull, consequently has resulted in reduced prices. Chrysanthemums are about played out, only a very few first-class being offered. Roses, pinks, violets and valley seem to be the leaders. Below I quote average prices:

Roses, Beauties	$8.00@35.00
" Brides, Bridesmaids	2.00@ 8.00
" Meteors	2.00@ 6.00
" Perles, etc	2.00@ 6.00
Carnations	.75@ 1.50
Violets	.75@ 1.00
Valley	2.00@ 4.00
Paper white narcissus	1.00@ 2.00

HUNT'S REVIEW OF THE CHICAGO MARKET.

Since date of last report (Nov. 27th) there has been no material change in the situation. As predicted by us then, stock has been scarce and of rather inferior quality, judging not by stock shipped but by the run as received from the grower before grading. Had there been any extra calls for stock or had trade been even what might be called brisk, prices would have soared far beyond top notches quoted.

There has not been, nor is there at this w iting, any reserve stock with the growers to draw upon for extra heavy or rush orders. Heavy, lowering weather, with frequent rains, snows and a continuous steady low temperature, not merely local, but extended generally throughout territory tributary to this market, does not meet requirements for flower producing.

Stocks, speaking now not of cut blooms but of the growing plants, are daily deteriorating. This is apparent on entering almost every place. Every grower has a tale of some one house or some particular variety that "isn't doing right" and they can't understand it. We can't either, but just at a venture to hit the most birds with one stone, we will say that less fuel and water and more labor to the square foot of glass might produce better results. This of course is onlya generality and we don't say that it will, but we fancy the word "might" is the right one and used where we use it is worth thinking of.

Without a week of sunshine soon—right now—flowers for the holidays are going to be short in all lines excepting bulbous.

"Mums" in quantities to be depended on have disappeared. Stevia is strong and getting plentiful. Violets are farther and farther between and having hard work to maintain quality. Harrisii are fine and Romans, valley and paper whites are first-class with good stems. Carnations are good, seemingly, however, growing a trifle smaller. Scotts are the most plentiful and whites the scarcest. Reds are coming in more plentifully.

In roses, Testout, La France and Siebrecht are badly off, and Carnots are hardly to be seen. Perles, that have been in best shape of any for so long, are going back. Maids, Meteor, Brides and Kaisers are good. Maids, to prove the rule of contraries, are gaining in color and all four varieties show a gain in quality, the stiffening of stems being marked. The cut is less than it was ten days ago, however. Beauties are shortening up and while generally good many crocked necks appear; lots of one sided buds and variegated foliage also among them.

Holly, the best in years, is to be seen everywhere. Wreathing galore and a brisk trade in cape flowers, immortelles and kindred lines is reported by all. Retailers figuring on large jobs for the holidays may possibly save money and customers by pushing decorative material to the limit. It is plentiful and good this year.

The increase in the price of coal is quite a serious item to the large growers. Mr. Peter Reinberg, of Reinberg Bros., Chicago, says it will increase their coal bill fully $3,000 for the present season.

Holly and Green

It is said there is no trade so sure, so much to be depended on under all conditions as the "Holiday Trade." The demand is sure to be with us again this season and we believe to an increased volume.

In the line of CHRISTMAS DECORATIONS we have prepared for it with an ample stock of

Green in Bulk,
Evergreen Wreathing,
Holly, Holly Wreaths,
Mistletoe, etc., etc.

Does QUALITY interest you in these goods? It should. You will find the BEST QUALITY is that which sells, and in buying, this fact must be constantly considered.
We claim to give you the best the season produces, and are we not in position to do this? The large quantities we handle each year acquaint us with the right sources of supply, enable us to give extra labor and attention to inspection and sorting, the unsurpassed facilities we possess for storing and handling, together with our experience and knowledge of the trade wants, all combine to put us in position to offer you the very best service in this line.
Why take risks? Barnard's brand in these goods signifies the standard of excellence. We will not disappoint you either in quality or prompt service.

Bouquet Green in Bulk

It is necessary to seek new localities for supplies of this article if one is to get the dark green color and bushy growth demanded by the florist trade. Our pickers each season must go farther and farther into the deep woods and swamps which have not been cleared and where the sun does not injure the color. Freights are more from these points but quantity used gives us advantage of carload rates and we can offer this better article at very reasonable and competing prices.

Please write for prices, stating QUANTITY WANTED, and lowest possible quotations will be promptly given.

EVERGREEN WREATHING.

For the convenience of those who prefer to purchase Green ready for immediate use we manufacture large quantities of Wreathing. It is made of selected Green, wire wound, tied in coils of twenty yards each; can be cut to any length without unrolling.

Medium or standard grade, per 100 yds., $ 2.75
" " " " " 1,000 " 25.00

For larger quantities special figures will be given, also for different grades, Light and Heavy.

EVERGREEN WREATHS.

These will be found very salable, and the low price at which they are offered affords a good margin of profit. They are made on rattan, wound on both sides with bright, fresh Green, trimmed with colored Immortelles or Cape Flowers.

Per doz ..... $ 1.20
Per 100..... 7.50
Per 1,000..... 70.00

HOLLY--Choicest Eastern Stock.

Well berried, selected grade, is not in large supply this year. We have contracted from one of the most careful packers and are assured of a good quantity of fine Holly. *Secure your supply early.*

Full-sized cases of 16 cu. ft , per case, $4.75
3 cases for..... $13.00

HOLLY WREATHS.

Made of strictly first-class well berried Holly, wound on 12-inch rattan rings.

When Writing Advertisers.

SEND IN YOUR PHOTOGRAPH FOR OUR GENERAL INTRODUCTION.

CINCINNATI.

For the last two weeks trade has been moving along satisfactorily and it looks as if it would continue so for the balance of this month. Social events have been more numerous here of late, which created an active demand for really good stock of all kinds. The supply of carnations is very limited at present and the outlook for Xmas slim. Violets are scarce and roses enough to meet demand. Lilium Harrisii are with us again and sell readily at $10.00 per 100; Callas at $1.00 per dozen.

Mr. Ed. Fries is on the sick list.

James O'Malley and Foley have newly opened up a flower store in the central part of the city, Walnut and Sixth streets.

Mr. Tom Hardesty has retired on this side and moved to Newport.

The first copy of the FLORISTS' REVIEW made its appearance here a few days since and was much admired by those who saw it. Mr. B. P. Critchell said of it when asked: "It's full of news and advs., the cuts are excellent, and the paper as a whole makes a good showing." Mr. Will Gray, of Peterson's, in sizing it up remarked: "Nothing slow about this paper; this is surely up to date."

NEGRUM.

WASHINGTON, D. C.

Washington for the past week has had wretched weather, dull and wet, with the mercury hovering around the freezing point. There have been but a few bright days during the past six weeks, which is telling on the quantity and quality of stuff coming in, though the supply is equal to the demand. The season begins with the assembling of Congress, and from now on business should be brisk.

The coming out of the young debutantes and afternoon teas have created the only demand for flowers; outside of this there has been little or no entertaining.

The Gude Bros. have a new delivery wagon which is a model of its kind, startling in elegance, and drawn by two fine mouse-colored ponies.

From the ruins of the old Florists' Club, which ceased to exist about two years ago, a new club was organized last week, with J. R. Freeman, Pres.; Robt. Bowdler, Vice-Pres.; Chas. F. Hale, Treas., and M. Boyle, Sec'y. As anticipated the boys turned up in goodly numbers. The new constitution and by-laws differ from that of the old organization in one respect, viz.: only those in active business being eligible to membership.

The club has received and accepted an invitation from the Baltimore club to visit them the evening of the 13th, and a large delegation will go over. The Baltimore florists are in sympathy with our movement against the free distribution of cut flowers by the Government, and wish to discuss that question with the club.

W. H. K.

FRANKFORT, KY.—E. Power, the florist, has made an assignment to W. C. Herindon.

Special Attention given to the Shipping Trade.

Following is the form of certificate we issue to subscribers:

$1.00 **$1.00**

The Florists' Publishing Company, Chicago.

This Certifies that _____ of _____

_____, is entitled to the annual dividends on one-tenth of a share (par value of each share $10.00) of the stock of the FLORISTS' PUBLISHING COMPANY, of Chicago, Ill., that has been placed in my custody as Trustee, so long only as

_____ shall remain a paying subscriber to the FLORISTS' REVIEW.

This certificate is transferable only to _____ successor in business, and then only on application to the undersigned. Dividends will be made of net profits on the first day of January of each year.

Certificate holders are reminded that by confining their purchases to those who advertise in the FLORISTS' REVIEW (always mentioning the paper when writing) they will greatly enhance the earning power of their certificates.

Buy to best advantage always, but, everything else being equal, give the preference to those who advertise in the paper in which you have an interest.

Witness my hand and seal at Chicago, Ill., this _____ day of _____, 1897.

(SEAL)

_____,
Trustee.

TELEGRAPH CODE.

In telegraphing orders to any of the wholesale dealers in cut flowers use the following code:

Assume—Do not answer if cannot fill order.
Abrogate—In case you cannot fill order, telegraph at once.
Anticipate—Answer at once, stating whether you can or cannot fill order.
Ambition—If you can only partially fill order, do so, and reply, stating what.
Admiral—Order must be sent on train mentioned only.
Ambulance—Want all of order filled or none, and prompt answer back.
Adjacent—If cannot send on train mentioned, next one will do.
Affable—Send prepaid by baggage master, if no express messenger on train.
Decorate—If cannot send all on train mentioned, send all you can, and send balance on next train.
Admission—This order is a substitute for my regular order.
Dancing—If cannot fill order exactly as specified, you may substitute according to your best judgment.
Ancestor—This order is an addition to my regular order.
Durable—Colored flowers must not be substituted for white.
Affection—Fill if possible, even at extra expense.
Fabricate—Flowers ordered are to be re-shipped to a distance, therefore buds must be cut specially close.
Fortunate—Select extra stock and charge accordingly.
Devotion—For cheap work, and can use second-class flowers, if at reduced price.
Flattery—If price has advanced since last quotation, do not send goods, but telegraph.
Forgery—This order countermands all previous orders.
Formation—Add these items to the order which you already have, but in case first order is already shipped, cancel this addition.
Flamingo—We are in a bad pinch; send us something to help us out, even if of poor quality.
Flocking—Have sent mail order; if not yet received, send following at once, and cancel mail order when received.
Foraging—This order includes all items previously ordered and wanted for this date.
Superior—Can use something especially fine, and am willing to pay accordingly.
Skip—If you are out, buy the best you can; we accept risk of getting "pickled" stock.
Corporal—If cannot send on night train, morning train will do.

THE CODE BELOW WILL BE USED IN ANSWERING YOU, WHEN NECESSARY.

Elope—Cannot fill your order to-day. Stock is scarce. Have tried to buy at other houses for you.
Lecture—Our store was closed yesterday when your telegram came. Received it this morning. Will ship by first train to-day, unless countermanded at once.
Willing—Cannot ship on train mentioned. Will send on next train possible to-day.
Eclipse—Will send part of your order. Balance scarce. Cannot get it at any price to-day.
Artistic—Cannot fill order to-day, if you want order filled (same order) to-morrow, wire us at once.
Favorite—Stock very poor, none better to be had. Will ship unless countermanded by..... o'clock
Fundament—Stock named in this telegram has been sent, and balance, unless countermanded by telegram, will be sent on..... ...

KEEP THE DEALERS POSTED.

Keep the dealer from whom you order flowers fully posted as to the sort of stock for which you have the largest sale. Write him as fully as possible when you have time to devote to the matter. Keep him fully advised as to the needs of your trade. He will then know much better how to fill your telegraphic orders. He will know whether to send you the best in the market at the top price or to send you a fair grade at a more moderate price. The dealer is anxious to please you but often his information is meagre. Make this information as full as possible by mail and your telegraphic orders will be filled more to your satisfaction.

Our Sabal Palm Crowns are very large, four to six feet high, with from four to six immense perfect leaves, 36 to 48 inches in diameter.

Price per dozen, $5.00.

TORONTO.

Winter appears to have set in—though it may be only a false alarm—and the chrysanthemums are nearly done for. Prices are rising and the demand is lively all around, so that there is really very little to grumble about just now. The vice-regal party are staying at Government House until New Year. The provincial parliament has just opened and dinners, receptions, balls, bazaars and other less important entertainments are too numerous to mention. Take it altogether the cut flower trade is doing very well, better than it has done at this time of year for a long while. The good times we have been looking out for so long are coming slowly but surely. What will they be when millionaires by the score begin to return from the Klondyke?

The essay to be read at the next regular meeting of the horticultural society is entitled "Seasonable Home Decoration," and written by Mr. McP. Ross, who is exceptionally well able to handle the subject. It should attract a goodly crowd.

On Tuesday, the 21st inst., the Gardeners' and Florists' Association will hold their annual election of officers in which, of course, every member will take part. Some years ago a little bird told me beforehand what the result of the elections would be, but the bird turned out to be a liar of the first water. This same little bird has been talking again but I am not going to give it away this time until I see whether he has reformed. At this meeting the treasurer hopes to pay seventy-five per cent. of the prizes won at the late show, which is twenty-five per cent. better than he expected to do at first. All prizetakers are requested to attend.

Mr. C. Tidy has moved into his new store a short distance further west on King St. I am told that it is fitted up in first-class modern style and in every way suitable for carrying on a first-class business. Success to it. E.

CHRYSANTHEMUMS FOR THE CHICAGO MARKET.

Kennicott Bros. Co., Chicago, have issued the following circular to their growers:

Our list of chrysanthemums. Under this heading we grade them in three classes, viz: Best, second, third.

Class 1. Market for all you can grow. Yellow—Golden Wedding, Major Bonnaffon, H. L. Sunderbruch, Modesto. Pink—Maud Dean, Mrs. Murdoch, Mrs. Perrin, Viviand-Morel. White—Ivory, Western King, Minnie Wanamaker, Mrs. Jerome Jones, Mayflower.

Class 2. Market for a fair quantity. Yellow—Golden Gate, Mrs. J. J. Glessner, Lady Playfair. Red—Mrs Drexel. White—Mrs. Robinson. Bronze—Geo. W. Childs, Chas. Davis (odd), John Schrampton.

Class 3. Market for a few, some are new varieties. Yellow—Lincoln, Pennsylvania, Eugene Dailledouze, White—Frank Hardy. Pink—Mrs. Higinbotham, Autumn Glory, Mrs. Allerton.

It is certainly an excellent idea for the commission dealer to keep his growers posted as to what finds ready sale and what does not. It cannot fail to result in benefit to both grower and dealer.

Of our first issue we printed 9,000 copies, which consumed 4,500 lbs. of paper—two and one-fourth tons. Quite a good weight for a "baby."

No. 40 South 16th Street, PHILADELPHIA.

Our Central Location enables us to fill out-of-town orders quick and at short notice.

AN UNPARALLELED SUBSCRIPTION OFFER.

EVERY one to whom this issue of the FLORISTS' REVIEW is addressed, and who fills out, signs and returns the accompanying subscription blank, accompanied by $1.00, within 30 days from date, will receive not only the FLORISTS' REVIEW for one year but also a certificate entitling him to the earnings on one-tenth of a share of stock in the company formed to publish the paper. The shares will be of a par value of $10.00 each.

Why do we make such an unparalleled offer? It is very simple.

You will have an interest in the success of the paper.

You will see that you can buy everything that you want to just as good advantage from advertisers in the FLORISTS' REVIEW as elsewhere and at the same time benefit yourself by increasing the earning power of your certificate.

This mutual arrangement cannot fail to bring to the paper a heavy advertising patronage, and as a result the stock represented by your certificate will earn good dividends.

And the more you buy of advertisers in the FLORISTS' REVIEW (always mentioning the paper) the larger your dividends will be.

You will get a better paper than has yet been published in this field, and a share of its earnings. Please let us hear from you by early mail.

FLORISTS' PUBLISHING COMPANY,

530-535 Caxton Building, - - - CHICAGO, ILL.

PROVIDENCE, R. I.

Looking in on Brother Rennie, who will be remembered especially by the "sports" at our recent convention, as being a most energetic spirit and who is now chafing at an enforced confinement of seven weeks in a sick room, he will I am glad to report, soon be out and with care be as of yore. I had anticipated the pleasure of his company to visit the establishment of S. J. Reuter at that solid little granite locked town of Westerly, the merchants of which place bear as reputable a name.

On arriving I found Mr. Reuter making his evening shipment (he ships twice daily to the Hub). This shipment consisted of some four thousand carnations, which were bunched in fifties by his right bower, Mrs. Reuter, in one hour and a half, the writer acting as timekeeper and who mentally allowed this was one instance where the gentler sex deserves the highest praise one can bestow. The kinds were chiefly Daybreak, Scott, McGowan and Alaska. These are standards. Alaska glistens as those glaciers of the great northwest. The bunches have that pleasing rustle when shaken. Of the dozen big shipping boxes several contained roses, including Morgans of exquisite color, also Bridesmaid and Perle.

After the bustle and following the despatch of this shipment my host piloted me through what is becoming a plant of mammoth proportions. Method and perfectness of detail is conspicuous throughout. The plan of running upon specialties enables this to be done more easily. Mr. Reuter is a firm believer in this principle and attributes his success to its adoption.

While to some this has been an unsatisfactory season, Mr. Reuter is so well pleased and sanguine for the future he has plans to add four houses to connect with the handsome range erected during the past summer, to be each 200x21 ft., and heated by a No. 10 Furman boiler.

While roses will be grown more extensively considerable space will be given to growing carnations, Scotts in solid beds proving very satisfactory, several houses planted in this manner yielding prolific returns.

The trial house is highly interesting. No fewer than fifty varieties are being tested. It is early to report the results but some are disappointing while others are encouraging. Later on I will give our readers the benefit of Mr. Reuter's close observations. W. M.

UTICA, N. Y.—Messrs. Whitton & Sons, have gone quite extensively into importing azaleas, having at the present time three large 100-foot houses devoted exclusively to them. They also have two 100-foot houses in Bermuda Easter lilies and three houses of same size in cinerarias. They have developed an extensive plant trade, keeping two men busy packing plants for shipment. E. J. Glover reports a good trade. His specialties are roses, carnations and violets, with which he is very successful. No mildew, rust or disease is to be found on any of his stock.

Following is the form of certificate we issue to subscribers:

$1.00 **$1.00**

The Florists' Publishing Company, Chicago.

This Certifies that _____ of _____

_____, is entitled to the annual dividends on one-tenth of a share (par value of each share $10.00) of the stock of the FLORISTS' PUBLISHING COMPANY, of Chicago, Ill., that has been placed in my custody as Trustee, so long only as

_____ shall remain a paying subscriber to the FLORISTS' REVIEW.

This certificate is transferable only to _____ successor in business, and then only on application to the undersigned. Dividends will be made of net profits on the first day of January of each year.

Certificate holders are reminded that by confining their purchases to those who advertise in the FLORISTS' REVIEW (always mentioning the paper when writing) they will greatly enhance the earning power of their certificates.

Buy to best advantage always, but, everything else being equal, give the preference to those who advertise in the paper in which you have an interest.

Witness my hand and seal at Chicago, Ill., this _____ day of _____, 1897.

(SEAL) _____,

Trustee.

The Florists' Manual

By WILLIAM SCOTT..

It will cover the whole field of Commercial Floriculture, the articles arranged alphabetically, so that reference may be quick and easy.

It will be a whole library in itself. Thoroughly practical. Terse. Condensed.

It will be published by the

Florists' Publishing Company

530-535 CAXTON BUILDING, CHICAGO.

IT
WILL TELL YOU
JUST WHAT
YOU
WANT TO
KNOW
IN JUST THE WAY
YOU
WANT TO BE
TOLD.

GRAND RAPIDS, MICH.

I notice in the article on exhibitions by E. G. Hill, reviewing the reports of the chrysanthemum shows, that only a few of them were financially a success. He asks where lies the trouble? Are the people growing tired of the shows? Is the admission fee too high? I can only speak of the question so far as our show is concerned, and in my opinion I am sure that there are a great many people who are tired of shows. I have heard of many who say, why there is no use to go to the show, as every flower store is a small show in itself, and if we wish to see further we can go to the greenhouses. And many have said twenty-five cents is too much; we cannot afford it.

I have always advocated a small admission fee, or entirely free. I will say here that at our last show we sold space for our merchants to advertise their goods, which almost paid our rent, and with a little more hustling around we could have sold enough to pay the whole amount. What we want is to get the public to visit the show, and you surely cannot get a very large number there if they are charged to see what they can see every day free. The sale from the booths this year was very small, as compared with last year, owing to the very small attendance. Our exhibitors are very much discouraged, and I doubt if the Florists' Club will ever give another show.

Heretofore the club has been held together by the chrysanthemum show, and now that there is no prospect of another show, they are going to take up a subject for each evening during the winter. The subject for the next meeting, Dec. 7th, is "New Chrysanthemums." Now don't hold your breath, but if you hear of a rival from Grand Rapids of the new yellow, Pennsylvania, it is none other than a very fine yellow sport from Mrs. Jerome Jones; all the good qualities of J. Jones but it is very much larger. Pennsylvania must look to her laurels. Henry Smith is the happy possessor.

The Grand Rapids Floral Co., Alfred Hanna and Wm. Cunningham, have dissolved, Mr. Hanna continuing the business at the old stand. Wm. Cunningham has rented the Schmidt Bros. place for a term of years, and has opened up a first-class store on Canal St.

Carnations in this section are unusually fine and healthy this fall. We had a very dry fall, and when they were lifted and placed in their winter quarters they seemed to move right along.

Look out soon for a brand new red Tidal Wave by the raisers of Morello. Flora Hill is being tried by all our florists and so far is very satisfactory. Silver Spray still reigns supreme as a white and is doing extra fine this winter. A new clear yellow finely fringed carnation will be the next from George Hancock & Son. I may be telling secrets but just think and keep watching. N. B. Stover.

REASONER BROS.
ONECO, FLA.

ROCHESTER, N. Y.

"It was not ever thus," remarked Mr. J. B. Keller to the writer as he showed with great complacency a splendid batch of cyclamens, a house filled with vigorous plants, no sign of rust, covered with bloom and buds, grown in 7 and 8-inch pots; a little bonanza for Xmas. While this plant has been successfully grown heretofore, this stock surpasses all previous efforts. The majority were plunged in open frames covered with clear glass but shaded with lattice; this lattice was taken off about five o'clock each day when the plants were then syringed, being watered in the morning before the lattice was put on. This is evidently the correct method as a batch kept in the house through the summer has not done nearly so well. Sowing was made in October last.

Of the famous herbaceous garden but little is now to be seen. In the meantime Mr. Keller is compiling his notes, the benfit of which will be given your readers from time to time and will prove interesting reading.

Speaking of business, Thanksgiving was a little Xmas. This comment was endorsed by Fred Schlegel, who was rushed with orders for church fairs at time of my visit. He has obtained by careful selection an unsurpassed if equaled strain of Giant White aster, of which large numbers are used for funeral work.

Richard Salter anticipates a heavy holiday business, judging by orders on hand. Brother Al. reports similar news from their uptown store.

To see a table of Cypripedium insigne varieties bearing some four thousand open blooms is not an everyday sight. This can be now seen at the Kimball orchid houses. The genial Geo. Savage informed me he had cut 500 blooms that morning for a charity fair, leaving the first mentioned number remaining, with thousands yet to come. His pet seedling, named Laura Kimball, in honor of his employer, is a charming species. The color is lighter and clearer than the best form of C. insigne. The dorsal sepal is spotless. But one plant has been sent out, this to London, where a good round figure was paid for it. The exact amount not necessary to announce. He has several other seedlings of this valuable species. The whole collection is in excellent shape. W. M.

ROSES

CRIMSON RAMBLER ROSE

EXTRA STRONG FIELDGROWN PLANTS FOR EASTER FORCING.

We offer an extra fine lot of strong fieldgrown plants of the Crimson Rambler Rose for Easter forcing.

We desire to call the attention of the trade to the great value of this rose as a pot plant for Easter sales. It is one of the showiest and most beautiful of all hardy plants, but also makes one of the most beautiful pot plants for florists' sales, and is particularly adapted for forcing for Easter, having proved one of the most valuable novelties grown for this purpose. A Boston grower realized ten dollars each for every plant he had.

We can supply an extra fine lot of extra fine plants for potting and growing on for this purpose—plants four to five feet high, three to four strong canes each—stock in the very best possible shape. These long canes will flower from every joint, and by proper training and winding the plants can be made of immense size, covered with a perfect mass of bloom. We know of no choicer plant for the Easter trade, and florists who do not supply themselves with a lot of this stock for this purpose will regret it.

Strong fieldgrown plants, three to four canes each, four to five feet long, $3.00 per doz; $20.00 per hundred.

HYBRID PERPETUAL ROSES.

We also offer an unusually fine stock of the very choicest and most desirable varieties of **Hybrid Perpetual Roses** for growing for pot plants for florists' use for Easter and spring sales or for outdoor blooming. Our stock is unusually strong, and cannot fail to please. We can supply the following extra choice sorts, viz:

Mrs. John Laing,	Ulrich Brunner,	Paul Neyron,	Gen'l Jacqueminot,
Mme. Gabrielle Luizet,	Anna de Diesbach,	Margaret Dickson,	Magna Charta,
Baroness de Rothschild,	Clio,	Baron de Bonstetten,	Marshall P. Wilder,
Prince Camille de Rohan,	Alfred Colomb,	Etc., etc.	

Strong fieldgrown plants, extra heavy, $2.00 per doz.; $12.00 per hundred.

For the BOSKOOP HOLLAND NURSERY ASSOCIATION.

An Unparalleled Subscription Offer.

EVERY one to whom this issue of the FLORISTS' REVIEW is addressed, and who fills out, signs and returns the accompanying subscription blank, accompanied by $1.00, within 30 days from date, will receive not only the FLORISTS' REVIEW for one year but also a certificate entitling him to the earnings on one-tenth of a share of stock in the company formed to publish the paper. The shares will be of a par value of $10.00 each.

Why do we make such an unparalleled offer? It is very simple.

You will have an interest in the success of the paper.

You will see that you can buy everything that you want to just as good advantage from advertisers in the FLORISTS' REVIEW as elsewhere and at the same time benefit yourself by increasing the earning power of your certificate.

This mutual arrangement cannot fail to bring to the paper a heavy advertising patronage, and as a result the stock represented by your certificate will earn good dividends.

And the more you buy of advertisers in the FLORISTS' REVIEW (always mentioning the paper) the larger your dividends will be.

You will get a better paper than has yet been published in this field, and a share of its earnings. Please let us hear from you by early mail.

MILWAUKEE.

The first edition of the FLORISTS' REVIEW reached its interested readers here last Friday and it is needless to say that it created considerable comment among the craft. At the wholesalers' where the trade congregated, the new paper was the topic of discussion and from remarks heard it certainly will find many friends and subscribers here. The introductory idea is a good one, as considerable impression is gained by seeing the faces of those with whom you are likely to have correspondence.

Trade.

Nothing unusual in the way of trade occurred the past week. The weather has been of the tantalizing order, not enough snow for sleighing and just too much for good wheeling. Good stock is extremely scarce. Beauties of fine quality range from $1.50 to $2.00 per dozen; Maids, Brides, Perles, Meteor from $2.00 to $6.00 and good Carnots bringing $3.00 per 100. Carnations $1.50 to $2.00, Violets $1.00 to $1.50 per 100. Chrysanthemums are about gone; a few good flowers still come straggling in but Thanksgiving day usually winds up their career for the season.

Growers are predicting a scarcity of stock for Xmas, crops all seem to be off at present and the continued dark weather the past week has changed calculations some, for those who had a good supply figured out for Xmas.

Heavy snows in the north have somewhat checked the inflow of green, which up to the present time has been quite plentiful.

As the result of a runaway, Adam Currie, of Currie Bros., is laid up at his home badly bruised. Nick Zweifel is also on the sick list.

The florists are endeavoring to organize a Bowling Club. They already have in view some of the trophies to be competed for at the next convention of the S. A. F. at Omaha.

"EVELINA"

has had many visitors who were delighted with her presence, and were so well pleased at her cheerful disposition and behavior that a second audience was requested.

She takes this opportunity of extending a most hearty invitation to all interested in her species to call upon her while in her city, and will be pleased to return the call at an early date, whenever an invitation is extended.

INTRODUCTION.

Is a pure white, of large size, good form and substance. An extraordinary strong Calyx, is fragrant, and borne on long stiff stems that always carry the bloom erect. It is a free, early, and continuous bloomer, is of good habit; a strong, free and healthy grower; last year quite a few plants produced from 30 to 50 flowers by the first of January. She won the Ward cup for best Commercial White at the Cincinnati meeting of the American Carnation Society; also a certificate of merit at the Indianapolis and St. Louis Chrysanthemum shows.

Have already booked orders for over 7,000 for Cincinnati alone, which proves the popularity of this sterling variety. You will make no mistake in giving it a trial. Orders filled strictly in rotation. Price: Strong well rooted cuttings, $10.00 per 100; $45.00 per 500; $80.00 per 1,000. Cash, or satisfactory reference, please.

Box 226. Kennett Square, Penn.

New Carnations.

White Cloud. An excellent commercial white, strong, vigorous habit, large fragrant flower, long, strong stem, early and constant bloomer. A. C. S. certificate.

Gold Nugget. Conceded the best yellow ever grown, color clear and deep, only slightly marked with red. Large flower, strong stems and vigorous habit. Early and continuous bloomer. Missed A. C. S. certificate by one point for lack of fragrance.

New York (Ward). Bright cerise pink, strong vigorous habit, constant bloomer. Certificate.

Mrs. James Dean (Ward). Clear silvery pink, strong vigorous habit, large flower, constant bloomer. Certificate.

John Young (Ward). White deeply fringed fragrant flowers, strong grower, free bloomer. A first class commercial variety.

Bon Ton (Ward). Bright warm scarlet, strong habit resembling Portia, large flower, stiff stem.

Prices for above varieties: $2.00 per doz.; $10.00 per 100; $75.00 per 1000.

We have all the principal 1897 Novelties and other standard varieties at lowest prices.

New Chrysanthemums.

Mrs. C. H. Peirce. A soft deep yellow of greatest commercial value. Large flower of globular form, with straight petals slightly curved at tip. Full to center and of greatest substance, good stem and heavy foliage. Recommended for certificate by N. C. S., scoring commercial scale: Boston 91, Philadelphia 90, Cincinnati 87, Chicago 90.
35c each; $3.50 per doz.; $25.00 per 100.

Snow Queen. A commercial white. Large, nicely finished rounded flower, full to center, good substance, stem and foliage. N. C. S. certificate. 50c each; $5.00 per doz.; $35.00 per 100.

Merry Christmas. The best and latest of all whites. A well formed flower of style of Mutual Friend but of much greater substance, and full to center. Dec. 20th to Jan. 1st.
25c each; $3.50 per doz.; $25.00 per 100.

SEND FOR DESCRIPTIVE PRICE LIST.

_____,
Trustee.

BUFFALO, N. Y.

I did it, and it did not take me long to run out to this town of Corfu, renowned for the fine carnations produced by Messrs. Giddings, Webb and Scott, all of whom ship to the Bison City, where W. F. Kasting handles the product of the two first named, whilst Mr. Scott handles at his stores on Main St. and Cold Springs all that can be raised on his farm, and 'tis a capital farm at that; excellent soil, pure atmosphere; a pleasure to grow stock under such conditions. Roses are done well also, but to award the palm we must retrace our steps a few miles and drop in on W. J. Palmer, Sr., at Lancaster, where Meteors are grown by the acre (fact) and is the most popular rose in Buffalo to-day.

W. J. Palmer, Jr., reports larger sales then usual at Thanksgiving. This was also the verdict of Philip Scott, S. A. Anderson and Andy Adams, while out at Cold Springs, Louis Neubeck, of the Scott greenhouses, had all he could do. Mr. Scott was around as usual, but at reduced speed, owing to a strained foot consequent upon wearing pumps at the resent meeting of the St. Andrews Society, something he does not often do (dance the Highland fling). This, however, is a small matter, being fully compensated for by the bestowal by the said society of a magnificent diamond studded badge to him as retiring president, an addition to several other mementoes held precious by him. A run through the place showed a fine lot of stock for the holidays.

Mrs. Newlands is working up a big stock for the usual cemetery trade. Mr. Wasson is very successful with Perles, which appreciate the low benches substituted last summer for high ones.

Owing to a flaw the acceptance by the board threw out the estimates submitted for that new range of houses at West Seneca, and the dream of the parties who hoped to help fill them (the houses, not the commissioners) will not be realized for another season. Meanwhile Prof. Cowell, who is equally disappointed, is puzzling himself where to put the surplus stock. He will have shortly a grand show of cyclamens. It is too bad the location is somewhat remote for visitors at this season, as Mr. Cowell has always something worth seeing; but he doesn't mind it, says it gives him opportunity for reflection. W. M.

cannas

PRESIDENT McKINLEY: Color, brilliant crimson, with bright scarlet shading. Truss, large, compact, of good shape, held well above the foliage and the flower spikes are produced freely and evenly. Plant is dwarf, 2½ to 3 feet in rich soil. Foliage deep green with marked chocolate margin. Plant stools freely, is a compact, even grower. It is one of the earliest bloomers, coming into flower when 14 to 18 inches high and blooming continuously thereafter. The effect when massed is extremely brilliant, the contrast between the brilliant flower and deep green foliage being rich, chaste and effective. A marked improvement upon Columbia, Charles Henderson, Flamingo, Beaute Poitevine and all crimson Cannas introduced to date. Undoubtedly the King of Crimson Bedders. Unexcelled as a pot plant and invaluable to those who grow 3 and 4-inch stock for spring sales, as it gives dwarf, compact, well furnished plants with grand heads of striking color. As an all-round florists' canna, this variety has no superior. Certificated. Price 60 cents each, $5.00 per dozen, $40.00 per 100, from 4-inch pots, February delivery.

DEFENDER: Color, clear yellow, striped with bright scarlet Height, 3 to 3½ feet. Habit somewhat resembling Columbia. An early, very profuse bloomer, producing fine large heads of broad petaled flowers. Foliage clean, distinct and a good grower. This canna will prove very effective for massing, as it produces a greater proportion of flowers to the foliage than almost any other yellow canna. Certificated. Price 60 cents each, $5.00 per dozen, $40.00 per 100, from 4-inch pots, February delivery.

Also Tarrytown and President Cleveland at same price. Mrs. Fairman Rogers, 4-inch pots, April delivery, $2.00 per dozen, $15.00 per 100. Souv de Ant Crozy—Pierson's Premier, Florence Vaughan, Eldorado, Queen Charlotte, Egandale, Admiral Avellan, Beaute Poitevine, Madame Crozy, Bouvier and other standard sorts, at lowest market rates.

Four Grand Early Pink Chrysanthemums.

ROSE OWEN: One of the best very early pink chrysanthemums of recent introduction. Ready last of September to 10th of October. Height, 3½ feet. Clean, neat grower, perfect stem, with bright, waxy foliage well up to the bloom. Color bright, clear pink, V. Morel shade. Incurved Japanese flower, large to extra large when well grown. Will bear close planting, as foliage is not dense. We offer this variety with much confidence, knowing it will give satisfaction as an early, commercial pink. Every bloom sent to New York market was snapped up at once by leading florists. Having a fine, clean stock, we shall be prepared to fill large orders. No grower who needs a clean, bright, first early pink should neglect Rose Owen. Dozen, 75 cents; 100, $5.00; 1,000, $45.00.

J. H. WOODFORD: A beautiful, large shell pink shaded to center; high globular form, with heavy, broad, closely incurving petals, strong stem and fine foliage; extra early; can be cut October 5th to 10th. Crowns or terminals; on crowns color is pure white, 4 feet. A grand early pink to follow Rose Owen. Nothing better in its color for a second early. Dozen, 75 cents; 100, $5.00.

GEO. F. ATKINSON: Clear shell or mermaid pink, high built globular bloom of great substance and largest size. Early, flowering immediately after J. H. Woodford. Stiff stems and splendid foliage. A fine commercial sort, 3½ feet. Dozen, 75 cents; 100, $5.00.

BELLE OF CASTLEWOOD: Rich, enameled shell pink, broad petaled incurving Japanese, distinct and pleasing shade. Immense bloom on a grand stem, with splendid foliage. Too much cannot be said in favor of this variety, as it is one of the most chaste and beautiful chrysanthemums in existence. No grower should be without it. Dozen, 75 cents; 100, $5.00.

The Two Best Very Late White Chrysanthemums.

DOROTHY DEVENS: Undoubtedly the very best late white. Magnificent snow white, largest size, globular form, clear delicate finish, grand stem, rich deep green foliage. December 1st to 10th, 3½ to 4 feet. Dozen 75 cts., 100 $5.00.

MRS. R. CRAWFORD: November 20th to December. Extra large clear white, fine in every way. Flower large and well built, one of the very best; 3 feet. Dozen 50 cents, 100 $3.00.

A Grand Late Pink.

THE HARRIOTT: Deep Rose, silvery reverse, large bloom of great substance, 3 feet. Ready December 1st to 15th. A grand commercial pink. Dozen 75 cents, 100 $5.00.

If you need Carnations, Geraniums, Kentias, Boston Fern, &c., write for our January List.

CHRYSANTHEMUMS

We Are.....

Headquarters

. . . . . for all the best varieties of Chrysanthemums. All the new sorts of 1897-98. Full information given in our January list of all the newer sorts and how they have ranked compared with standard sorts; also heights, bud to take and time of blooming, as far as possible.

Ready Now--

Stock Plants of the two commercial early varieties.

LADY FITZWYGRAM, the earliest, finest and most graceful white variety, $8.00 per hundred; Sept. 22; use crown bud; height 2½ ft. It is earlier and sells better than *Bergmann.*

GOLDEN TROPHY, follows *Marion Henderson;* height 2½ ft.; elegant foliage; very large compact globular yellow flower. $15 per hundred.

Also stock plants of 12 of the finest introductions of the past spring—American Novelties, for $2.00.

Carnations

FLORA HILL. The finest white to date, orders now being booked for rooted cuttings which will be delivered in rotation, beginning in January. We have an immense stock in elegant condition. $5.00 per hundred, $40 per thousand. See our January list for other varieties and novelties.

Rose

PREST. CARNOT. A limited number of strong 2-year old plants at $10 per hundred. The grandest market rose extant; every shoot brings a perfect bud.

FICUS BELGICA, (the long-leaved Rubber). Perfect plants from top cuttings in 4-inch pots, $3 per dozen, $22.50 per hundred. This stock is in elegant condition.

Palms (Must have the room)

ARECA LUTESCENS. Three plants in 6-inch pots, in perfect condition, 20 to 24 in. high, $40 per hundred.

LATANIA BORBONICA, 6-inch pots, nicely furnished, just what you want for the holiday trade. First size, $50 per hundred; second size, $40 per hundred.

Asparagus

SPRENGERII. Invaluable to every florist. 2½-inch, $6 per hundred.

PLUMOSUS. 2½-inch, $6 per hundred.

Our **January List** will describe and price some very pleasant surprises in the way of novelties for we have never had so many fine new things to offer—among them some extraordinary departures in **Geraniums** (gathered from all the best foreign growers). **Cannas,** Italian, French and American. Two new varieties of the Giant Race of **Heliotropes.** A few good new **Roses.** A new **Russellia. Paris Daisy.** A set of **Phloxes,** etc., etc.

SEND FOR OUR LIST.

E. G. HILL & CO., Richmond, Ind.

DREER'S SPECIAL HOLIDAY OFFER.

Our stock of Palms has never before been so complete at this season of the year as now, forty of our largest houses being filled with stock, from little seedlings up to specimens 10 ft. high. Our stock of Kentias, that best of all Palms, is especially fine. Of these we are carrying the largest stock and best assortment of sizes to be found in any one establishment in the world.

SCARBOROUGH, N. Y.

A hurried visit to the rose growing establishment of F. R. & P. M. Pierson revealed the roses growing there in excellent condition, three 300-foot houses of Meteors and four 300-foot houses of Beauties fully sustained the reputation of these growers. They contemplate erecting two even-span houses, north and south, the same length as above, during the coming spring. Several benches of A. cuneatum, in small houses running parallel to the rose houses, and on the north side, showed a wealth of fronds, and sell fairly well at seventy-five cents to $1.00 per 100.

Mr. J. Henshaw, the genial foreman, said that next year it was quite possible they might run the whole lot of rose houses in Beauties, "not that they loved Rome less, but Cæsar more," but because their success with Beauties was unprecedented, and the demand for this favorite was always good. B.

HORNELLSVILLE, N. Y.

W. A. Wettlin reports a good season. His grower, Jas. Powers, has a pretty lot of cinerarias and primulas for the holidays. These will sell at sight, being well grown stock. W. M.

The Right Cypress for Greenhouse Material.

Have you heard of Cypress Greenhouse Material that has not been satisfactory? If you have it does not follow that Cypress is not the best lumber to use. There is White Cypress, Yellow Cypress and Red Cypress; there is Cypress that grows on the high lands and Cypress that grows in the swamps.

All of these different kinds are not suitable for greenhouse purposes. Do you know which kind is best and do you know that kind when you see it? If not you would better buy from those that do know and will deliver exactly what they sell. We introduced Cypress for greenhouse construction and pushed it to the front. We know all about it. For fifteen years we have made a specialty of furnishing it, and during this time we have built up a reputation that we can not afford to jeopardize. We send out the best only.

Write for Circulars or Estimates.

Lockland Lumber Co.

LOCKLAND, OHIO.

AN UNPARALLELED SUBSCRIPTION OFFER.

EVERY one to whom this issue of the FLORISTS' REVIEW is addressed, and who fills out, signs and returns the accompanying subscription blank, accompanied by $1.00, within 30 days from date, will receive not only the FLORISTS' REVIEW for one year but also a certificate entitling him to the earnings on one-tenth of a share of stock in the company formed to publish the paper. The shares will be of a par value of $10.00 each.

Why do we make such an unparalleled offer? It is very simple.

You will have an interest in the success of the paper.

You will see that you can buy everything that you want to just as good advantage from advertisers in the FLORISTS' REVIEW as elsewhere and at the same time benefit yourself by increasing the earning power of your certificate.

This mutual arrangement cannot fail to bring to the paper a heavy advertising patronage, and as a result the stock represented by your certificate will earn good dividends.

And the more you buy of advertisers in the FLORISTS' REVIEW (always mentioning the paper) the larger your dividends will be.

You will get a better paper than has yet been published in this field, and a share of its earnings. Please let us hear from you by early mail.

SYRACUSE, N. Y.

L. E. Marquisee has been much flattered with the success obtained at the recent show with but ordinary grown stock which, however, showed much care and close attention. He is very successful in raising seedling carnations. Amongst several which a short time back would be considered fit to place on the market is one especially, a pink on the order of Albertini, but much freer in every respect, is well named Columbia. It is the cream of the collection. Another named Ideal is an improvement upon the old favorite Grace Wilder. These are free from rust. Also a grand house of Daybreaks for the holidays. Jubilee is fine and will be grown more extensively. An improved Lizzie Gilbert is well worth growing. In roses, Kaiserin, Perle, and Sunset are healthy, whilst the Bougere and Pres. Carnot are indispensable, doing immensely. Carnot is a beauty.

Mr. Marquisee will open a store down town in time for Xmas trade. W. M.

ELMIRA, N. Y.

Where, oh, where are the violets this year? That usually successful grower, Grove P. Rawson, has met his Waterloo this season and cannot account for it. But he says, "never say die," and the fact of the possession of the "Yellow Fellow" will not deter him but accelerate his speed to make up for lost crops.

Whilst "mums" have been immense roses are now on top. A splendid crop for the holidays is in sight, and carnations galore.

I noticed a healthy house of Marie Louise violets at Hoffman Bros., but foliage is much smaller than usual, and of course the demand is bigger this season than for some time past. Where is that prophet who predicted the abolition of this sweet, coy flower, and frightened many growers out of growing it? Now they are kicking vigorously because they did it and just wish they hadn't done so.

W. M.

CONCENTRATED Louisville Tobacco Extract of 30 degrees density; one gallon equals about 200 lbs of Tobacco Stems; applied by spraying or evaporating; no more need of the nasty smoking; handier and cheaper than Stems! NEW DWARF Sweet Pea Burpee's Pink Cupid

A SINGLE PLANT, EXACTLY ENGRAVED FROM A PHOTOGRAPH OF BURPEE'S PINK CUPID.

This little wonder, like the original Cupid, hails from California, having been discovered by C. C. Morse & Co., to whom we paid fifteen hundred dollars cash for the exclusive ownership when there were only 1060 seeds in existence. It is not a sport from the original White Cupid, but an actual departure from its parent, the tall Blanche Ferry. In habit and manner of growth it is strictly a Cupid, spreading from the root, from a foot to eighteen inches around, growing from six to eight inches high, and shoots up stems about six inches long, which bear, in full bloom at once, from three to four handsome blossoms, all borne close to the end of the stem.

The illustration above has been accurately engraved from a photograph of a single plant, grown in ordinary field culture, lifted and set in a pot on a platform, for the purpose of photographing on a level with the camera. Every plant in our fields in California and New York, and at Fordhook Farm was absolutely true—a perfect "Blanche Ferry Cupid." The Flowers are always of full size, measuring from one and a quarter to one and three-eighths inches across the standard—covering a silver dollar.

Burpee's Pink Cupid bears generally three and sometimes four flowers to a stem. The illustration below was accurately engraved from a photograph EXACTLY NATURAL SIZE. The flowers are identical with the tall growing Blanche Ferry and always fully equal in size.

The flower itself is pretty enough, but its attractiveness is doubled by its association with CUPID—the first colored Cupid to follow the famous dwarf white.

The standard of the flower is wide, not infrequently measuring an inch and a half, but not over an inch high, being developed laterally. It usually curves over a trifle at the top, partly concave, which gives the standard a distinct shell-shaped appearance. The standard is a bright rose pink, while the wings are pure white or light pink. The wings are very large and finely formed; when pressed back against the standard they extend fully a quarter of an inch beyond it.

The substance of the blossom is peculiarly heavy and it will appear fresh and vigorous in a glass of water long after its long-stemmed parent has withered and died. The plant itself is vigorous and hardy, and those who had poor or indifferent success with White Cupid will find this variety **easy to grow anywhere.** The seed, which is *black*, is of wonderfully strong germination and the plant an early bloomer, coming into bloom simultaneously with White Cupid.

Though flowering early it continues in bloom very late, bearing a profusion of blossoms so thick as to completely hide the plant itself. It will be without a rival as a bedding and border annual, for its color and fragrance make it a rare novelty.

In our field crops the past season, both in California and New York, a large piece of them looks as if the ground were literally strewn with bright pink rose buds. No novelty of recent introduction has such beauty and grace combined in it as has **Burpee's PINK Cupid.** It is also delightfully fragrant, and will be admired by everyone who sees it.

In regular sized packets (each containing twenty-four seeds): Per pkt. 25 cts.; 5 pkts. for $1.00; per doz. pkts. $2.00. **Per 100 pkts. $12.50.**

In half-sized packets (each containing twelve seeds): Per pkt. 15 cts.; 2 pkts. for 25 cts.; or 10 pkts. for $1.00. **Per 100 pkts. $7.50.**

Directions for culture in English, French and German printed upon each packet.

TWO OF MANY.

REPORT FROM MR. ECKFORD.

WEM, SHROPSHIRE, ENGLAND, September 13, 1897.

MESSRS. W. ATLEE BURPEE & CO., Phila., Pa.

GENTLEMEN:—I am pleased to tell you that the "PINK CUPID" Sweet Pea you were good enough to send me for trial has been a great success. White Cupid has done much better than last year, but still not up to the Pink variety, which holds its bloom better and consequently gives a much better display. I don't think too much can be said in favor of Pink Cupid. At present, it occupies a place of honor in dwarf Sweet Peas. I am, gentlemen,

Yours faithfully, HENRY ECKFORD.

AMERICAN GARDENING.

NEW YORK, September 9, 1897.

MESSRS W. ATLEE BURPEE & CO., Phila., Pa.

GENTLEMEN:—I have just returned from a trip to Jefferson County, New York, where one of the most beautiful sights to me was a bed of PINK CUPID. It was a mass of blossoms exhaling a delicious fragrance into the air; and that its past had been equally grand was evidenced by the seed pods, while the promise for the rest of the season lay in the multitude of buds yet to expand. Truly as a flowering bedder Pink Cupid is a success.

Yours faithfully, LEONARD BARRON, Editor A. G.

FOR OTHER REPORTS see Special Catalogue mailed on application.

Wholesale Catalogue of Sweet Peas for the trade only, giving testimonials from expert Horticulturists in England, France, Germany and America, as to the hardy growth and rare beauty of **Burpee's Pink Cupid,** will be mailed to dealers on application.

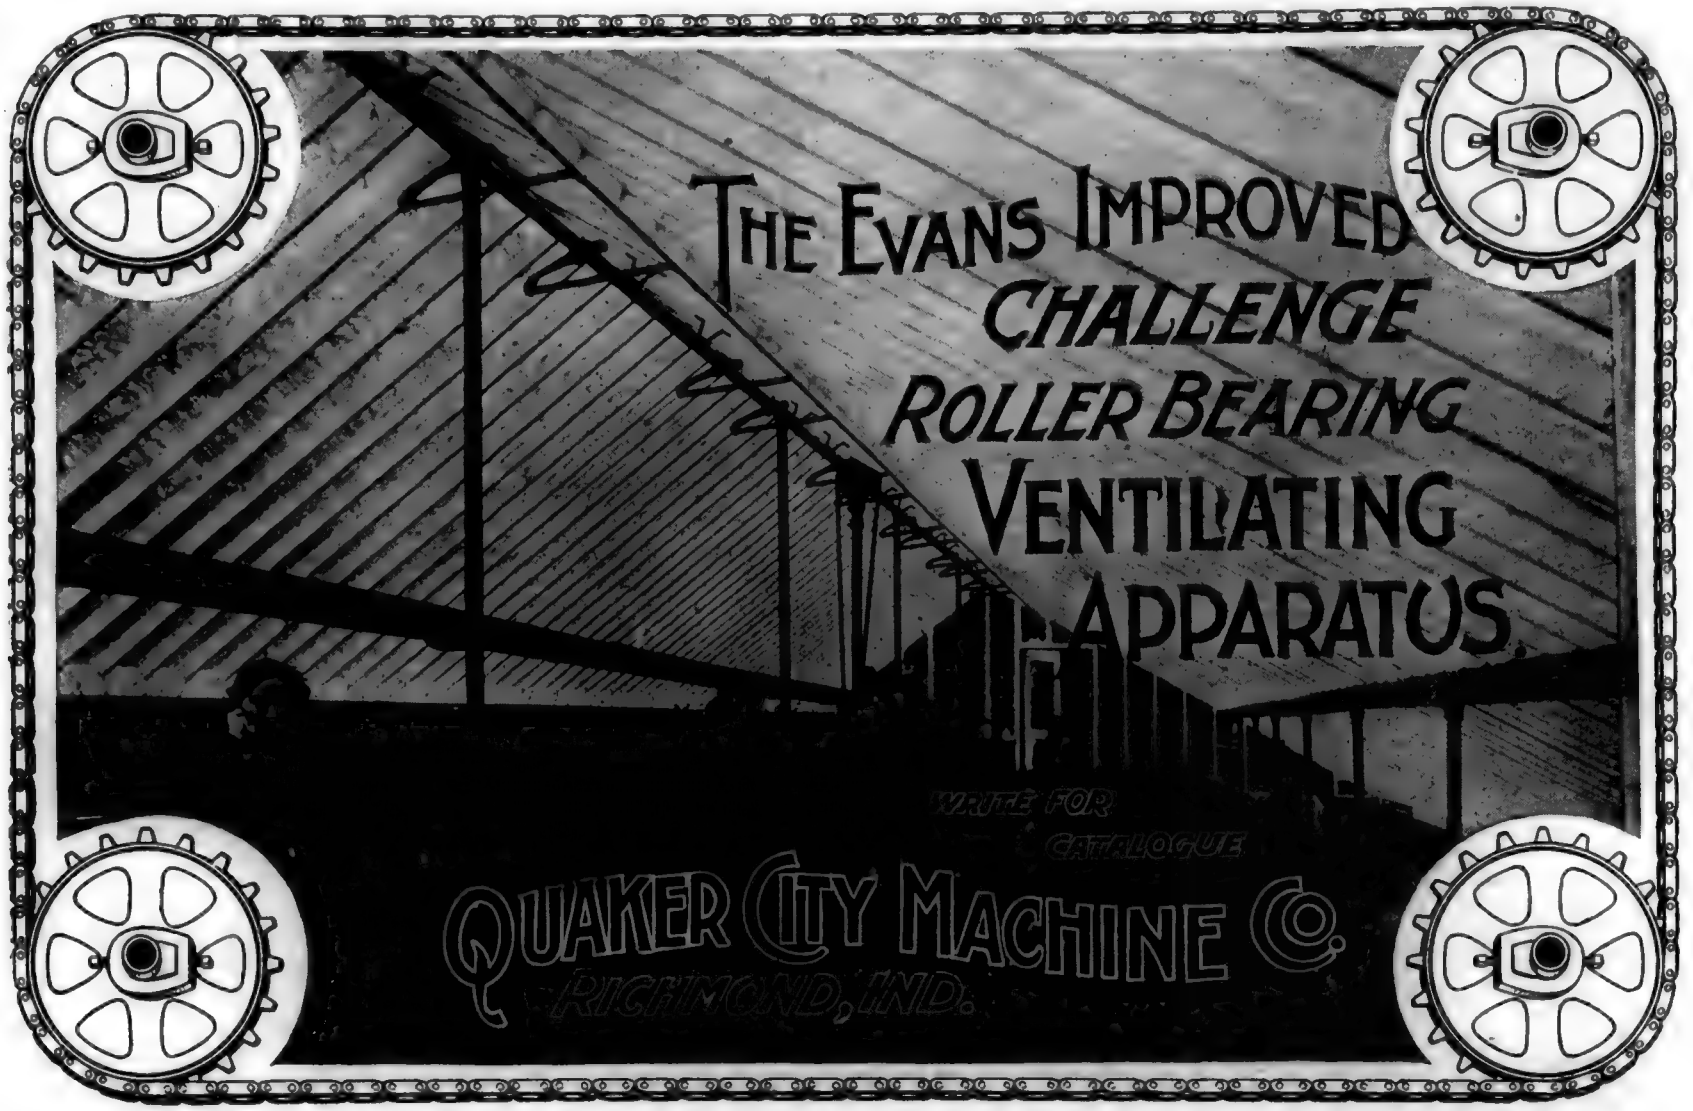
Bordeaux, France, Nov., 1897. Silver Medal for Chrysanthemums.
Birmingham, England (Bingley Hall), Nov., 1897. Special Certificate of Merit for Jadoo Fibre and Liquid and First Prize for Cyclamens.

From the Pennrock Co., Wilmington, Del., winners of the largest Prize at the Exhibition of Pennsylvania Horticultural Society, Nov., 1897



"In regard to your inquiry about Jadoo Liquid and Fibre we beg to state that we have used it this last season with good results. We grew our Exhibition plants of Chrysanthemums, which took first prize at the Pennsylvania Show, **in soil up to ten-inch pots. In those sized pots the plants became very sick and all the leaves turned yellow. We then shifted them into Jadoo Fibre and the result was simply wonderful. The plants quickly regained lost vigor and the leaves gradually assumed their natural green color. On becoming pot bound we used the Liquid twice a week and this was all the fertilizer we used. We have had excellent results also with Asparagus Sprengerii, Crotons and large Ferns grown in the Fibre and shall use it more extensively hereafter."**

We will offer Cash Premiums at all Exhibitions in 1898 for all Plants that are grown in "JADOO FIBRE" or that are watered with "JADOO LIQUID," that win scheduled FIRST PRIZES.

Scollay "Invincible" Hot Water Boiler

IT IS ALL THAT ITS NAME IMPLIES, AND DON'T FORGET IT. . . . . .

Cuts and full information mailed on application

FARMINGTON, CONN., March 9, 1896.

Dear Sir: — The "INVINCIBLE" boiler you placed in my Carnation houses I am pleased to say, has given me great satisfaction. It has done all that you claimed it would do and could have done more if called upon. I did not have to run the boiler hard even when the thermometer stood 18 degrees below zero outside; it has proven itself to be "Invincible" in every respect. I find it to be a very economical boiler.

The one thing I like about it is that the heat does not all go up the chimney, which cannot be said about other makes of boilers I have on my place.

Your PORTABLE boiler I have run for three years and find it to be very economical and has done its work well in every way. Your boilers will do a great deal more than you claim for them. They are both "Invincible."

Yours very truly,
HUGH CHESNEY, Florist.

WESTBURY STATION, QUEENS CO., N. Y.
March 10, 1896.

Dear Sir: — It gives me great pleasure to inform you that the "Invincible" boiler you put in my latest greenhouses has given me the greatest satisfaction in every detail.

All the good qualities you claim for it I have found to be just as represented by you and in every way I highly recommend it.

Very truly,
MRS. CHAS. RUSSELL HONE.

A Thirst for Knowledge.

The country clergyman was nailing a refractory creeper to a piece of trellis work near his front gate when he noticed that a small boy stopped and watched him with great attention. "Well, my young friend," he said, pleased to see the interest he excited, "are you looking out for a hint or two on gardening?" "No," said the youth, "I be waiting to see what a parson do say when he hammers his thoomb."—Pick-Me-Up.

The Weathered.....

IS NOT a new fangled idea, like so many now on the market, of very peculiar shape, and in my opinion more remarkable for the ingenuity of their construction than for practical utility. The Weathered is simple, durable and effective—proven by the large number in use, and duplicate orders from satisfied customers covering a period of 30 years. I don't advertise free boiler fuel—don't have to—you would use so little that you would'nt want me to.

THE WEEKLY

FLORISTS' REVIEW

G. L. GRANT, Editor and Manager (late Editor and Manager of the American Florist), 530-535 Caxton Building, Chicago.

Vol. 1. CHICAGO AND NEW YORK, DECEMBER 16, 1897. No. 3.

Bed of Vincas at Lincoln Park, Chicago.

BED OF VINCAS.

The accompanying engraving is from a photograph of a bed of Vinca alba and rosea, bordered with Achyranthes metallica, as it appeared at Lincoln Park, Chicago, last summer. The beds of vincas were a very attractive feature of the main parterre and led to the belief that commercial florists should give more attention to these vincas as bedding plants.

Mr. Stromback, the head gardener at the park, grows the plants from seed. He saves seed from his plants each year, but the seed can be had from any of the large seedsmen. He sows the seed in January or February in flats of sandy soil in a temperature of 65° to 70°. When the seedlings show the second leaf, they are pricked out about an inch apart in trays of the same soil, and when the little plants have five or six leaves they are potted into 2-inch rose pots, and later shifted to 3-inch. The majority are bedded out from the 3-inch pots but the remainder are shifted into 4-inch and grown on for second planting.

The soil of the bed should be a sandy loam if possible, and the plants will not do well in a very heavy soil. In bedding, place the plants about a foot apart. They require more water than a geranium, and when the bed is watered it should be given a good soaking and then left alone for a few days. The plants will bloom from the time they are set out until frost, and do not require any trimming.

If cramped for space in the greenhouses the plants may be placed in hotbeds in April. They cost somewhat less than geraniums to grow.

The border of Achyranthes metallica

serves a double purpose. It is not only a finish to the bed, but having a stiffer stem than the vincas it holds the latter up in position. They would be apt to sprawl over without this support around them.

MISCELLANEOUS SEASONABLE HINTS.

Wrapping and Delivering Plants.

A reader of the Review has asked me by mail to give him some points about wrapping and delivering plants. As the season is soon here when that will be a most important part of our work, if I can remind my friend and any others of a few useful hints I shall be glad. There is nothing more really annoying than to find after months of care, work and anxiety, you have produced a nice attractive plant, found a purchaser, but the delivery has spoiled all; it has been frozen, or what is more unpardonable, broken or jammed or shaken about until all its beauty is gone.

How much the success of our business depends on the complete way in which it is done! If you are the only florist in a small town your customers may have to put up with dirty pots, frozen plants, or a plant that has lost its flowers in delivery, but in our large cities where we all have about the same quality to offer, where competition is keen, the punctual and perfect way your orders are delivered will redound largely to the welfare of your future business. By far the large majority of your plants and flowers sold at Christmas and New Years are bought and sent to friends as a remembrance of the joyous time, and that is where mistakes and carelessness are more annoying than when a plant is bought to adorn the home of the purchaser. In this case they know when it arrives if it is unsatisfactory and can telephone at once their more or less just complaint, and if you are a wise business man and are convinced the complaint is warranted, you will duplicate the order with expedition and cheerfulness. When plants are sent as presents, as many thousands will be in a few days, the recipient has no chance to grumble and the donor does not know there is any cause to, so all is well for a few days till Mrs. Remembrance calls on Mrs. Thankful, and there she sees a wretched, leafless or broken down plant, with her card attached. Its proper place would be the refuse barrel, but it is given a place in this finely furnished room from respect for Mrs. R.'s kindness. Mrs. R. is deeply vexed. If she calls and gives you a reprimand you are lucky, she intends to give you another chance. If she sulks and you don't get the grumble, she is disgusted with you and intends to try someone else next time. To sum up: Promptness, with neatness and care in delivering, accompanied with a good article, are about all the requisites to command good sales.

I don't know that any new devices have been discovered in wrapping plants of late. It often happens that at Christmas we still have open weather, even mild weather, when little or no wrapping is needed, and at Easter, when we would expect good weather, the frigid air compels us to well protect every plant we send out. This is a calamity and it is far better for all concerned when seasonable weather prevails. We will suppose there is 15° of frost and six inches of snow. That will suit Santa Claus and he is by far the most important personage on earth on Christmas eve.

Small and medium sized palms entered largely into our sales the past two or three years and will increase. The large growers of these have reduced the packing of all their plants to a science, and set you a good example how to tie up a palm, drawing in the bottom leaves with the two hands, and a helper tying them fairly close to the stem, then raising your hands, bringing in other leaves, and following with another tie, till the ends of the leaves are reached. A double thickness of tissue paper surrounding the leaves, with a covering over the whole plant and pot of a heavier paper, will ensure its safe arrival if not exposed too long without the shelter of a close wagon or large box. Dracænas and rubbers can be handled in the same way. For tying the leaves in close, raffia is much to be preferred to string; it is less liable to cut into the leaves, and looks more business-like. Ferns, such as Nephrolepis Bostoniensis, are among the easiest of our plants to tie up, as they admit of their fronds being brought close together. On the packing table lay a sheet of wrapping paper, on it some tissue (or should I call it fine manilla), then lay the fern on its side in the bottom left hand corner, begin to roll the pot with the paper surrounding it. If the paper is large enough to make two coverings of the plant so much the better. A tie about at top of pot or pan will be necessary, and another tie half way up the plant will do. The paper should always be of sufficient length to fold in neatly and be securely fastened with pins, and when you put in the last pin it is an excellent place to pin on the address card of its destination; it is in a conspicuous place, easily seen by your delivery man, and much less trouble than a special piece of string round the plant with the tag dangling from it.

Begonias, cyclamens, primroses, linums, solanums, and many other flowering plants, can be wrapped in the same way, always remembering that the larger and broader the plant, in proportion to the pot, and the more rigid the growth of the plant, the more carefully must you wind round the covering of paper. Primroses, if grown stout, sturdy, and brittle, and that is the only way to grow them, will snap their leaf-stems if quickly or carelessly drawn in. The poinsettia wants very careful handling. After it has had one envelope of the paper draw the whole plant down three or four inches; this will incline every leaf, as well as the bracts, upwards, and greatly obviate the cracking or bruising of the leaves.

The azalea will take a little longer to prepare for safe delivery than any other of our popular plants, and they merit all the time necessary. The head can be tied in very little, and to roll them over in the paper as described for a fern would crush many of the flowers. They must be carefully covered with soft paper, fastening it round the stem below the branches and on top with pins. If a large specimen it would be necessary to put stakes around the plant, then covering with paper. Whatever the weather, even if it were July, no plant should be sent out without the pot being covered, not of course as any protection, but without it it looks crude and is certainly unpleasant for maid or "missus" to handle at the door. It is to be hoped that few florists, even greenhouse men, are yet so far in the gloom as to send out a pretty plant with an unwashed, dirty pot. "If such there be, go mark him well;" he should be relegated to the depths of a stoke-hole to sift ashes for the balance of his working days.

Crepe paper of many pretty shades is now much used for covering the pots. For a stately palm I think this would be much out of place, but for a flowering, medium or small plant it is highly proper. The plebeian red flower pot was all right on the humble window sill, but is not in keeping with the appointments and taste which adorn our present drawing rooms. The card, which in almost every case is left to be attached to the plant, when sent as a remembrance, should not be fastened to the plant with a piece of grocer's string, or worse, wire; it should be tied on with a very narrow ribbon; you can buy it.

You can save an immense amount of the worry, anxiety and unavoidable rush of the last two days preceding one of our harvests, by being well prepared for it. All the plants that you are likely to dispose of should have their pots scrubbed a few days ahead, so that they are clean and dry. Cards and suitable envelopes should be in waiting for your customers. Crepe paper should be cut (it won't tear), in various sizes to suit 4, 5, 6, 7 and 8-inch pots, and in a variety of colors. And many of your plants, particularly in the stores, should be already adorned with its pot covering of crepe; it will often help considerably to catch the eye of the prospective buyer. Don't ask the young man who makes the sale to retire to the rear of the store or the shed of the greenhouse to tie up the plant. Let that be left to one or two good handy fellows who have nothing else to do; and if they are good at it they are valuable help and should be well paid.

If the weather is very severe, a plant, however well it is wrapped, will travel scarcely a city block in the hands of a messenger without getting chilled or frozen, so we have to depend on a close covered wagon; if heated so much the better. But we don't all have a covered wagon with a hot water attachment. In very cold weather I have used long substantial boxes with a tight fitting cover, laying the plants down carefully; the last in, the first out, always giving your delivery man (not the driver) a complete list of the names and addresses of every stop, with description of articles. For instance, "Mrs. Alphonse Myphin, 999 Pansy St., one azalea, one cylcamen, bunch of mistletoe." In that way the man in charge of the delivery can't go far wrong. But you will say, all this is unnecessary. We have done that for years. I hope you have.

In conclusion let me say that whether you send out your plants and flowers in a

Phoenix Rupicola.

heated wagon or a cold wagon, in a big box, or the weather being mild, you send them standing up in an open wagon, never send too many different deliveries in one load. I have had men in my employ who have loaded up with a hundred parcels demanding for fifty calls, a big mistake; it was enough for four trips; the men get confused, the plants are taking too much of a risk, and it is altogether highly unsatisfactory; small loads and quick delivery and you will have better results. If a dictatorial Mrs. Parvenu who thinks "she is the only lady on the avenue," says "Now I want those plants delivered before 12 o'clock noon Xmas eve," don't promise for certain, for you won't keep your promise. Look at her with a solemn pathetic expression and say: "Mrs. ——, we will be driven to death that day. If I promise to have them there *sure* before 4 o'clock won't that do?" The answer will invariably be "All right, I guess that will do, good morning."

WM. SCOTT.

PHOENIX RUPICOLA.

The Date Palms, one of the finest of which we illustrate in the present issue, comprise about a dozen distinct species so far as known up to this time; a larger number than this have been catalogued, but many of them are probably only seedling forms from some of the recognized species, though doubtless possessing in some instances distinctive characteristics that give them value for decorative purposes.

The species under consideration is one of the most graceful of palms, and decidedly the handsomest member of this genus, a well-grown specimen forming a perfect fountain of drooping feathery foliage. P. rupicola is of much dwarfer growth than the typical Date, P. dactylifera, when full sized only attaining a height of fifteen to twenty feet, as compared with 100 to 120 feet for the latter species.

The leaves of P. rupicola are long and slender, divided into a large number of narrow pinnæ, these being dark green on the upper side and pale beneath, the whole leaf arching gracefully, and the pinnæ in turn drooping at the tips.

This plant is well adapted for decorating and also as a house plant, and may be safely recommended for either purpose, the foliage being of a more enduring character than would appear at the first glance, and in addition does not have that stiff and spiny character that is so objectionable in some of the phœnix when used for decorating.

As a native of India, P. rupicola has been usually treated as a warm house palm, but the mere fact that a plant comes from a warm latitude does not necessarily indicate that it requires a high temperature, the altitude at which it grows being a clearer guide to the cultivator than the simple statement that it has been found in a certain country.

But phœnix in general being rather slow growers while young, it is perhaps the wisest plan to err on the side of heat in their cultivation, and with a light and rich soil, and plenty of moisture to encourage them, it does not take very long to grow useful plants in 6 or 7-inch pots.

Seeds of phœnix take but a few weeks to germinate if they are fresh, and should be sown in light soil and placed on bottom heat, remaining in the seed pots until the first leaf is fully formed, after which they are potted off into small pots and need careful watering until they are well established.

W. H. TAPLIN.

THE GARDENIA AS A FLORIST'S FLOWER.

This favorite white, sweet scented flower is again becoming very popular with the buyers of choice flowers and is seen in quantities in the elite flower stores of our large cities at all times of the year. The gardenia belongs to a genus comprising a large variety of species of useful and ornamental tropical plants, but it is only grown for its flowers either by the florist or private gardener; in consequence it is imperative to have the most floriferous variety obtainable to make it a profitable plant to grow. The varieties florida, Fortunei, grandiflora, and one known around New York City as japonica Veitchii are no doubt the most desirable, especially the latter, which will bloom freely during the entire winter. The demand for large gardenias, as in other commercial flowers, will in the near future be the correct idea; hence the old common florida stands in the path of retrogression and the risk of going entirely out of cultivation. Intermedia, a cross between florida and Fortunei, will take its place.

If plants are wanted for winter blooming it will be necessary to prepare them for that purpose; the same also applies to summer blooming plants. Gardenias are certainly of easy culture; no difficulty will be found in their cultivation providing the proper amount of heat and moisture is given and they are always kept free from insects.

If the plants are intended for blooming the coming winter, cuttings should be made during the preceding winter, not later than January. When rooted put them in 2-inch pots in rich, sandy loam; don't allow them under any circumstances to starve and get stunted in this size pot, but pot them on into another size as soon as the others are filled with roots. A well drained and cultivated piece of ground should be selected and prepared for them outside. When the weather is sufficiently warm plant them out, giving enough space so they may make well developed specimens and at the same time allow space to cultivate and care for them.

Instead of the old system of pot culture, growers have discovered that they do infinitely better when planted out in a light, rich loam, as described above. Strict attention must be given to syringing and watering; this will materially help to keep them clean and free from mealy bug, which is their most trouble-

some enemy, assembling in large numbers about the axils of the leaves and young growths, distorting the flowers and embryo leaves, rendering them useless for any purpose. Measures must be applied to prevent this pest getting a foothold; if the following remedy is adopted the bug will be entirely eradicated after a few applications:

Mix half an ordinary tumbler of kerosene in four gallons of water; this must be thoroughly mixed by the one applying it; otherwise the young foliage might be injured and the plants consequently retarded. A good idea is to mix the kerosene in about a pint or quart of milk; this will facilitate mixing it with the water. It will be wise to syringe with a strong force of water a few hours afterwards, to remove all dead bugs and sediments from the foliage. Dull weather will be the most desirable in which to perform the work as the insecticide will have a better opportunity to accomplish the desired end.

In the autumn the plants should be lifted and planted in benches in a light house in about the same depth of soil as ordinarily used for roses, and a similar temperature maintained to ensure continual growth and the development of flower buds throughout the entire winter. Use a rich, sandy loam with a fourth of well decayed cow manure. Care must be taken to well drain the benches with broken bricks or rough cinders, adding a quantity of charcoal if it can be easily procured. A bad case of yellows will be inevitable if this detail fails to get attention.

It will be necessary, when the plants are well established and the roots found to be circulating freely through the soil, to occasionally water with a weak solution of liquid sheep manure, or a light dressing put on the beds will answer the same purpose and at the same time prove beneficial.

Don't use kerosene as an insecticide in the house when the plants are in bud, as the unpleasant odor will be absorbed and given off by the flowers at probably an unfavorable moment. Nicotine will answer the same purpose and act as a fertilizer if made weak and the plants frequently sprayed. In fine weather liberal syringing and airing will give the foliage a glossy dark green color.

If the plants are wanted for summer blooming, they must be propagated in the autumn and grown on during the winter. Early in the spring benches should be made ready and the plants put in them as soon as they are established in their pots or whenever the necessity to plant them may require, the same care being given them as that outlined for winter culture. I would not advocate carrying these plants longer than the second year, as much superior flowers and larger quantities can be obtained from young, vigorous plants.

One important point to be observed before cutting the flowers is to allow them to fully develop on the plants, or the flowers will become yellow in a few hours afterwards; also keep the flowers dry, not allowing any water to touch them; this has also a tendency to make them yellow. Insert the stems in water and put them in an intermediate temperature; the flowers should not be placed where there are icy surroundings.

When shipping the flowers in warm weather, pack them in a small box lined with oil paper, then inclose this in another and pack with excelsior and a little ice; this will prevent the ice coming in contact with the flowers and wetting them and freezing their tender tissues; in this way they will be dry and cool and will keep several days.

If gardenias are well grown, producing perfect well-formed flowers, little difficulty will be experienced in realizing fifty cents each for them at wholesale, this being the predominating price in New York City this winter.

Short Hills, N. J. F. L. Atkins.

ORCHIDS

THE CALANTHE AND ITS COMMERCIAL VALUE.

It is evident that a good many of the growers are trying to arrive at some hypothesis whereby they may revolutionize the cut flower market. A big majority claim that roses, carnations, mignonette, violets or chrysanthemums don't bring in sufficient to keep them warm. Now I am half inclined to think the trouble lies to a certain extent in their own hands. For instance, take a walk through some of the private establishments in your neighborhood and you will perceive in a great many cases that every available corner in the houses is utilized to produce something, and suspended from the roof you will see plants innumerable growing in baskets, pans, or in pots on shelves. In how many commercial establishments will you find this practiced? I presume to say very few. Therefore I consider a laxity of enterprise is apparent. How to remedy that?

I have one or two subjects in mind but at present I would suggest the calanthe. Pay? Certainly! Place them on the market in sufficient quantity and they will sell on sight. For a drawing room or table decoration it is difficult to conceive a more suitable subject, and they have everything in their favor to commend them. They are very easily grown, they produce long stems (about three feet) with abundance of flower, the stock is not over expensive to buy and they increase themselves every year. The varieties here named will flower at a very suitable season, i. e., Christmas. They are much alike in character of growth, etc., but sufficiently dissimilar in color for all decorative purposes.

To strike the Christmas trade you should grow Calanthe Veitchii, the color of which is bright rose; C. rubro-oculata, white with crimson eye; C. lutea, white with lemon eye. Pot up and start growing the first week in March. To prolong the flowering season grow the variety Regnieri; it will flower a month or six weeks later with same treatment and is a good grower.

You must not think, because these are orchids, that you will require the assistance of an orchid specialist to attend them. All they require is thorough drainage and a good compost of fibrous loam, with a little leaf-soil and about a gallon of bone meal to the bushel, with a little sand to keep the whole porous. I fill the pots or pans almost half full of broken pots, then fill up firmly with the compost, and fix the pseudo-bulbs thereon by means of three wooden pegs, which keep the bulbs in position until they strike root. Give plenty of water while growing, and frequent applications of liquid manure. Continue this until the flowers expand, when they should be removed to cool and drier quarters, as the flowers when opening are very susceptible to dampness. If kept thus, say from 45° to 50°, they will color, harden, and last longer when cut, and ship much better than if kept warm.

After the flowers are gathered keep the bulbs perfectly dry, in same temperature, until you wish to pot up and start off growing again. To propagate or increase the varieties Veitchii and Regnieri, simply break off the upper half of the pseudo-bulb and insert in sandy soil, place in a brisk heat and water carefully until they have sufficient root to consume it in greater quantity. They will make bulbs sufficiently strong to flower the following season. The other varieties mentioned, as a rule throw two flowering bulbs every season, thus your stock goes on increasing, and on account of their great floriferous and gross growing propensities, they will, I have no doubt, become general favorites. J. Robertson.

Madison, N. J.

THE HORTICULTURAL BUILDING AT THE TRANS-MISSISSIPPI EXPOSITION.

The decision of the Society of American Florists to hold its next annual convention in Omaha, undoubtedly had considerable weight with the exposition officials in deciding to have a special building devoted to horticulture.

The Horticultural Building for the Trans-Mississippi Exposition, to be held at Omaha, Neb., next summer.

The location of the building will make it a central feature, and it will contain the ornamental plant, fruit and forestry exhibits. In the center under the dome will be placed a crystal cave in a pyramid of rocks covered with plants, down the sides of which will trickle countless little streams to the pool below.

The building is 130x300 feet, and 160 feet to the top of the belfry, which will contain the chimes. Above the dome is an open observatory from which a grand view can be had, not only of the exposition grounds but of the city and adjacent lakes, the picturesque valley of the Missouri river and the city of Council Bluffs, five miles away. Superintendent Taylor has reason to be proud of the building that will be under his charge.

VIOLETS.

"Flushed with splendor I have seen
Both the rose and lily queen,
But no sovereign of the flowers,
Nor of kingdoms such as ours,
Can a robe of purple get
Like my dainty violet.
Peering upward from the stem,
Than a monarch's diadem
Thou art queenlier far to me,
Princess of Humility."

JOEL BENTON.

How true the above is, to every grower of violets, and I think it must be the verdict of the general public, else there would not be the demand for them that there is. However, these "favorites of fashion" do maneuver strangely some times. Take the Farquhar, for instance. When it first came out, we ordered sample blooms for comparison with our Marie Louise, and we really could see no difference in them, although of course ours had the advantage of not having been shipped. However we thought we would try a few plants for comparison, so two years ago last spring we purchased a few, growing them outside all summer, giving them the same care as the other violets. They did not grow quite so large as the Marie Louise but looked all right until the month of December, when they commenced to have the spot badly, still they flowered fairly well. But pick a bunch of the flowers and hold them side by side with a bunch of Marie Louise and one could not tell which was which. These were the only plants we had troubled with the spot, and it did not spread to the violets planted next to them. However we thought to give them a longer trial, therefore we made what cuttings we could that were clean and healthy. We did not plant them outside last spring but along the front of the house, with a row of ventilators right against them, and they have developed in fine shape, not showing any signs of spot whatever, giving large blooms with heavy long stems; a bunch of the blooms being much superior to the Marie Louise.

Again, last spring, we bought stock of another violet, recommended to be very hardy, which we wanted for late spring flowering. These looked fine and made a nice growth till late this fall, when they, too, commenced to spot badly. We have them in cold frames now and cannot tell yet what they will do the second season. But here is a question—is the spot apt to occur when a violet is getting acclimated? It would appear somewhat, by these two trials, as if that were the case, although the second trial has not progressed far enough to tell for any certainty; in fact, we never feel like asserting anything for certain about violet growing.

Now to make a Violet Department a practical success, we believe that a hearty co-operation of all interested must be had, and think the result would be mutually beneficial. Therefore, we wish that you would send in any facts that you may have met with in your experience, touching on this subject. We would also like an open question box on violets, with answers from those who have had any experience in the questions brought out in this manner, and you may be astonished to find that your neighbor follows an entirely different method to attain the same end, than you do, though you may perhaps have thought your way was the only one.

R. E. SHUPHELT.

Chatham, N. Y.

A VIOLET DISCUSSION.

The violet disease was the "bone of contention" at the regular meeting of the New Jersey Horticultural Society, held in Orange, N. J., on Monday night, and though it provided and received a lot of picking from the many present, violet growers got little comfort and less assurance as to the possibility of securing immunity by the adoption of any preventive measures. A perfect galaxy of talent was on hand, and for fully two hours the vexations of violet culture were debated.

The essayist of the evening was Dr. Walter Dodge, who, without notes, in a pleasant conversational style, gave the result of his researches into the nature of the disease familiar to all as the violet leaf spot. As a first experiment he secured a culture in a glass tube by inoculating some "blood serum" with the disease germs, placing the tube in an incu-

bator kept at blood heat. The resultant growth was a ramifying or interlaced mass of fibrous threads whose ends were terminated by little protuberances or heads, apparently spore cases. An attempt to reinfect healthy leaves from this culture, however, gave negative results, though indicating the fungoid nature of the disease.

He next tried another way: Taking some diseased leaves and pounding them up he secured another culture with which he was successful in infecting healthy leaves. From a leaf so infected a section was taken and the resultant appearance as seen under the microscope be explained with the aid of a large diagram, held up to the view of those present. In this he pointed out the thread growths, like white films permeating the inter-cellular spaces of the leaves, whilst round the edges of the all too-familiar dead spot, the cell walls appeared broken down and the chlorophyl appeared as a thick congested mass, which the microscopic rays could not penetrate, though the leaf section was less than one thousandth of an inch in thickness. Where the actual spot appeared to the naked eye the microscope showed hundreds of thread-like growths all turned upwards quite erect, each terminated by a small inflation which contained the spores or germs.

He understood there were other violet diseases but his investigations had been confined to the "spot" alone, and such as they were he placed them at the disposal of those present in the hope that they might assist in the elucidation of the mystery.

Dr. J. M. W. Kitchen opened the discussion by remarking that a distinct point had been gained in that the lecturer's experiments clearly demonstrated it was a specific organism at the root of the evil and to know this must be material assistance in seeking out and applying preventive measures.

Prof. Byron D. Halsted, of the New Jersey Experiment Station, next responded to a unanimous call and gave a lucid account of the workings and effects of other forms of disease, but his explanations of their subtle character though entertainingly and instructively given, foreshadowed no relief measures the afflicted growers could rely upon.

The discussion was continued by Messrs. Bird, Duckham, Manda, Withers, Atkins, Herrington and others, covering the varied details of violet culture, but the prolonging of the discussion only served to multiply the vagaries of the violet as exemplified by the experiences and practices of the different growers near and far.

VIOLA.

CHRYSANTHEMUMS

CHRYSANTHEMUM NOTES.

Spring Flowers.

The "mum" is essentially a fall flower, that being of course the time when it flowers naturally, though it can also be induced to become one of the flowers that "bloom in the spring, tra la la." The way we have accomplished this is here given.

Good cuttings that had not been allowed to get hard and stunted were rooted the first week in December, potted on as they needed it, the last shift being into a 7-inch pot. They were kept in a temperature of about 50° and grown to one stem. The buds appeared and were taken toward the end of February and the flowers developed end of April. The flower had neither the depth nor substance of autumn blooms but were nevertheless very good, and the stem was about two feet long. It is true they seemed to jar on the nerves in a vague, indefinite manner, and could not in my mind be reconciled to the eternal fitness of things, flowering at that season, but the average man soon gets over that if there is anything in it financially, and who knows but that in a few years we shall all be growing a batch for the Easter trade, and spring flowering kinds be so common as to escape comment.

Do not, gentle reader, after reading this get to work and put in a bench or two by way of an experiment. Experiment by all means, but with a few only, and see if your treatment and location are favorable. Varieties I would recommend to use are Bonnaffon, Glory of the Pacific, and Sunderbruch. We had J. H. Troy last year as a white, but the flower damped so badly it was useless. There would be lots more money in "mums" at Easter than there is in October and November, till everybody caught on, and then — well, try something else. The florist is accustomed to seeing good things worked to death these days.

Early Propagation.

It has been oftentimes asserted that cuttings rooted in December and grown right along without any stopping will next fall produce flowers that will beat the earth. Personally we don't see much in it, unless it be in the case of very slow growing kinds, such as Mrs. Jerome Jones or Bonnaffon. The florist could not afford the time or room anyway, and generally leaves such things to the private grower. When plants are struck so early they generally pass through a season when they are neglected more or less and this is fatal to a free growth, the consequence being that cuttings struck in February will oftentimes catch up and overtake the earlier rooted ones. We have got as good flowers from June struck plants as any other, for the whole secret of an exhibition flower is in well-ripened wood, but as before stated slow growing kinds need earlier propagation so as to get the necessary length of stem to sell well.

Specimen Plants.

These are a weariness to the flesh for many long months in summer, as they need unremitting care, but in the fall they are a fine advertisement (if they are done good) for you at the local shows, and in your window. They come high but if you must have them now is the time to get them rooted, and you will find it will pay later on if the eyes that will be below ground are carefully picked out with the point of a knife. They will not need nearly so much attention then as regards suckers. As to varieties the famous old Lincoln is the best yellow, and Ivory the best white for this purpose.

C. TOTTY.

THE EXHIBITIONS.

Mr. E. G. Hill's able article in the first number of the FLORISTS' REVIEW should bring out ideas from others that will help solve the problem of how to make our shows fairly successful. The shows are indispensable to the advancement of horticulture and a great help towards arousing public interest in our profession at a time when interest is much needed. Will not at least one active worker in each of the large cities where shows have been held give his views on where the results at his particular show might have been improved financially?

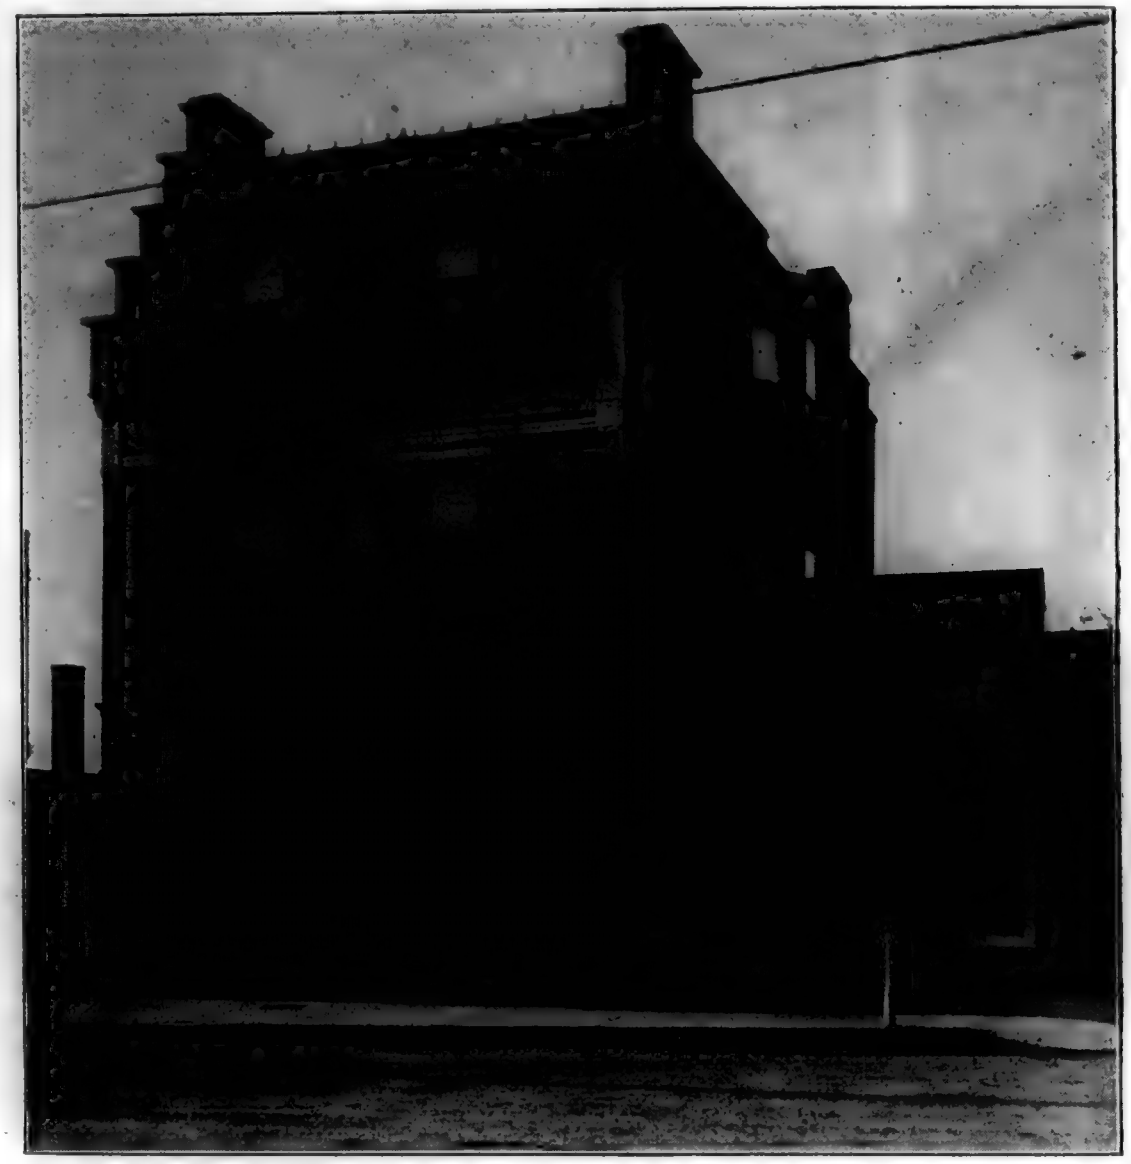
Looking at the matter from a purely business point of view, the question may be put in two parts: First, how to increase the receipts; second, how to decrease the expenses.

The first is undoubtedly the more difficult of the two to solve. I am inclined to think that entirely too much reliance is placed on newspaper advertising. People look in the papers for a play or a sale, but not for a flower show, and when seen it makes little impression. Much more hopeful, it seems to me, is the plan

of securing a number of ladies who will act as patronesses and interest others in the undertaking. Then mail a neat card of invitation with the names of these patronesses on it to one member of every family of prominence, if possible, thus making the exhibition a social affair. This plan would prove a tremendous undertaking in the great cities, but I believe it would be well worth a trial if the work were carefully and systematically done.

With regard to the second question—that of decreasing the expenses, I was struck at one of our large exhibitions, which by the way, while well attended, was a pronounced financial failure, with the number of classes in which there was little or no competition and which might just as well have been omitted from the schedule. Take the roses for an example. A solitary bunch of Perles, that would hardly be better than seconds in all markets, two weak stemmed lots of Niphetos, a poor vase of Mad. Watteville blooms that could not compare with the fine Meteors, Maids and Kaiserins near them, and yet those poor roses cost the Society just as much as the others, for few judges like to withhold a first premium if it is possible to award it, while they actually detracted from the general excellence of the tables.

Ought not the schedules be so changed from year to year that as new features are being added, old ones be dropped when they have lost their attractiveness? The aim being a schedule in which every premium would bring out sharp competition, giving the Society full equivalent, and not one calling for everything under the sun, good, bad or indifferent.



The story of the man who advertised that he would pay $5 for the best bushel of potatoes put in his cellar and after paying the successful competitor kept every bushel sent, certainly applies—the societies might do likewise.

JOHN WELSH YOUNG.

A HANDSOME FLORAL STORE.

We present in this issue several views of the new store of Mr. Fred C. Weber, St. Louis, Mo. We have seen stores that were more elaborately decorated and with more expensive furnishings but we have never seen one that more thoroughly pleased us than this charming store of Mr. Weber's. The view of the exterior shows the store and adjoining conservatory but hardly does justice to the subject, as the new building presents a much finer appearance than is shown in the engraving. While the interior views are very good, the store must really be seen to be appreciated. The style of decoration is plain but exceedingly rich and, to our mind, it is the neatest thing of the sort in the country. Over the store is Mr. Weber's residence, as will be noted in the engraving. The store is situated at 4326 and 4328 Olive street, directly opposite St. George's Episcopal Church and in the very heart of the most fashionable residence district of St. Louis.

The store is 20x52 feet. The floor is Italian mosaic work, the counters of enameled white tiling, with a border of

Exterior of the new store of Mr. Fred. C. Weber, St. Louis.

festooned tile just below the top; this simple decoration seems to be just enough and not too much to meet with the approval of everyone. The counters are thirty-four feet long, thirty inches wide and thirty-two inches high. Not an inch of wood is used in the construction. On the top of part of the counter is laid rubber cloth to prevent the possibility of the breaking of bottoms of vases when setting them down upon the counter.

The fixtures of the store are all finished in pure white, while the walls and ceilings are frescoed in a delicate pea-green and French plate mirrors are freely used around the walls. The ice box is of massive construction and is divided into three parts or sections. The top is used only for the ice and the bottom is fitted with galvanized iron trays, which can be removed at will and then afford a large space for the keeping of filled designs which are ready for delivery. The middle part is for cut flowers in vases and is fitted with large plate-glass doors. The inside is lined with French plate mirrors and the interior is lighted with incandescent electric lights. The show window of the store is 8x12 feet and the bottom is lined with white tiling and the sides and ceiling are French plate mirrors, which are bordered with sixteen incandescent lights.

To the west of the store is the conservatory, 17x52, which is connected with the store in front by a door 8x12. A glimpse of the conservatory is shown in one of the illustrations. In the middle of the store, light is admitted from the conservatory through a window 8x8 feet, and at the rear is another door entering into the conservatory which is 5x12. There are in the conservatory two large show windows which face another street and which can be seen many blocks away. In the front there is also a grotto of fancy rock work, planted with many varieties of ferns. In the middle is a large bench for palms and a bench all around the west side of the house. In the rear of this and connected with it is another greenhouse 18x20 feet which is for blooming plants only. This is also connected with the store in the rear by a large door and there are other large plate glass windows. In the middle of this greenhouse is a large grotto of fancy rock work planted with ferns, and there is also a pool containing many varieties of gold fish.

There is a drive-way from the front to the alley which makes it possible to load and unload plants at the side of the small house. In the rear, there is a large yard, with stable, etc. In the basement is a large and commodius work-room and here is placed the boiler which heats both store and greenhouses.

It is certainly a model store in every respect and the style of decoration reflects great credit upon the taste of Mr. Weber.

Interior view, looking to the front, of the new store of Mr. Fred. C. Weber, St. Louis, Mo.

GRAPES IN POTS.

This is not floriculture but I was reminded to-day by my neighbor and friend, Mr. Harry Swift, when speaking about pot vines, that I have thought often what an attraction for a florist's window in August, September or October, would be a well-grown pot of Black Hamburg grapes. I believe a 12 or 15-inch pot with a dozen perfect bunches of finished grapes mingling with their fine leaves, would be just one of those sights that would halt the crowd and be a constant attraction. And if you had a dozen of them how easily they could be disposed of as a drawing card in any window, particularly where the choicest fruits and vegetables were sold, or even where sparkling Moselle was a leading article; in fact any window where a novel attraction is desired.

As I once made a very successful attempt at fruiting pot vines I shall certainly try it again this coming spring. There is nothing difficult about it when you know how, and I do most humbly accord to myself a little bit of originality in growing, which was almost entirely the key to my success. It was in 1875 that my employer asked me the question could I grow some pot vines to occupy space between the permanent vines till they wanted all the room allotted to them. I had under my care a fine vinery 100 feet long, 16 feet wide, a curvilinear roof leaning against a 12 foot brick wall, heated with five runs of 4-inch hot water pipes. This was not pipes enough to call it a hot grapery, but it was sufficient to start in February, for before the grapes needed much heat the spring weather would help along. I may say here that the permanent grapes were never a great success for two reasons: The border was all inside, a big mistake in any climate, and my employer would not let me go and skin a quarter of an acre of fine sod from his own land; no better ever laid out of doors but it was devoted to the sacred cause of white carrots and mangel wurzels, so I had to hunt around and the best I could do was to buy a lot of stripping from a near-by stone quarry, a poor sandy, gritty soil, very unfit for the purpose. When I grew the pot, or rather tub, vines I was careful not to use that poor stuff; I went in the dead of night and got a cartload of timothy sod and filled up the place robbed with refuse soil from the greenhouse.

On or about February 2nd, 1875, having no propagating bed warm enough to start grape eyes (they take a good brisk bottom heat), I constructed a small box over three runs of pipe by first keeping on the heat side and ends, and a few slates on top, with a few inches of sand, into which I plunged about two dozen 3-inch pots, each of which held an eye. How the wood is cut is perhaps of little consequence. Above the eye I made almost a square cut, and below tapered the cutting off for about an inch and a half, giving plenty of surface to root from. The quality of wood I was careful about; it was neither the largest long-jointed stuff nor the small stunted growth. The wood had, of course, been cut the previous December, and stored away in a cool cellar, with its ends stuck in some sand. With a genial heat and moisture the eyes soon made a start, and in seven or eight weeks had made a growth of a foot or eighteen inches, but what was of more consequence, the pots were well filled with fine white roots. Now they wanted a change.

If I had followed out what I had seen done across the Atlantic and what I believe would be considered orthodox, I would have shifted them into a 6-inch, when needing it into a 9-inch, and from a 9 to a 12. But this I did not do, and as gardeners knew little of each other then, and I was not then privileged to write to Burt Eddy, or P. Welch, or Dennis O'Connell, I had to depend on my own inspiration, so I took a dozen common flour barrels to the nearest cooper and had him cut them just in halves and coopered up strong. The tubs were filled with that excellent sod, a yellow loam in lumps the size of your fist, a fifth of cow manure, rather fresh, a good sprinkling of coarse bone dust, and some old lime rubbish. I don't know why I added the last ingredient—perhaps with no better reason than some men interlard their conversation with numerous strong adjectives and other forms of expressive speech; however, I would use some again; it helped to keep the soil open, with nearly all plants of the greatest benefit. From the 3-inch pots into the tubs went the little vines, and that was where I struck it right.

As the young vines advanced about the

Interior View looking to the rear of the New Store of Mr. Fred. C. Weber, St. Louis.

same as the vines in the border, syringing, air, etc., suited all alike. By September the vines had grown to the whole length of the rafter and were as thick as your thumb (I mean an ordinary thumb, not Peter Crow's). By middle of November the leaves dropped off and the canes were as brown as a hazel nut. I had suffered with mice in this house so about December 1st I took out the vines, laid the tubs on their sides, covered tubs and canes with dry leaves and left them there until the following February (1876).

When the vinery was started again they were brought in, shortened back to ten feet, and after the eyes had made an even break, tied up between the other vines. Now that is not the way a pot vine is usually trained. Four nice stout green stakes four feet above the pot and the cane tied spirally round the stakes; that is the way to have them look handsome, and quite as well for the crop. A heavy mulching of cow manure was put on a few weeks after they were started and during their last swelling liquid manure was given three times a week. A 2-inch pot of real Peruvian guano to three gallons of water was given once a week. The fruit was ripe about the middle of August, nineteen months from the time the tiny piece of wood was put into the 3-inch pot. The varieties were Black Hamburg and Buckland's Sweet Water, but the latter was not nearly so satisfactory as the Hamburg. The best cane had twenty-six bunches with a total weight of sixteen or seventeen pounds, and others were nearly as good. This was altogether too much of a crop and the berries never assumed that rich purple black which is the pride of a good grape grower. With all their imperfections they brought $1.25 per pound in New York City. If I should succeed in getting as good canes again I would be well satisfied to have twelve bunches averaging a pound apiece, and then I believe one could finish them off finely.

Now I would not trouble to write this to encourage those only who have a heated grapery, for what florist has that? But I believe the same can be done by one who has a good rose house, especially one with the long span to the south. We all nowadays have the facilities for starting the young vines and it would be the middle of April before they went into the rose house. No shade is wanted for either and few if any have bottom ventilation, which would be fatal to grapes. When I look back at the achievement it seems a little more than I thought of it at the time. My employer said to me one day in August during the centennial exhibition: "I think, William, we ought to take a few of these vines to Philadelphia." I replied with a sort of grissly Frontignac smile: "Oh lord, no sir, there are wonderful men in Philadelphia, so I have heard; this would be nothing to them. I only wish the vines in the border were as good." "Never mind, William, let us go into the study and sample the juice of some foreign grapes." "Certainly, sir, I will. Mike leave on all the air you can; the grapes are about ripe and want lots of it."

"CANON HALL MUSCAT."

MUSHROOM HOUSE.

During the last few years a good many florists utilize the space underneath greenhouse benches for mushroom growing, securing a crop from house-room which would be otherwise wasted.

When calling on W. H. Cook, Newark, Del., I saw what seemed to me a model mushroom house. The house is built of wood and is seventy-five feet long and twenty feet wide, with a cellar about twelve feet deep, and contains seven center beds seven feet wide, and side beds three feet wide. Four of the beds are below the surface of the ground. A wooden structure is erected, containing seven beds, allowing about three feet between each bed, the whole structure being about twenty-one feet high. The bottom boards of each bed are not nailed down and can be removed when making up new beds and allow plenty of room for making up the bed underneath. There is a passage three feet wide on each side of the house between the center and side benches, with bars across the passage way about ten feet apart, and on the level with each bed. By placing three 12-inch boards across these bars they make a floor the required height when making up or clearing out the old beds.

The whole house is heated with a flue keeping the temperature from 55° to 60°. The beds are made up twelve to fifteen inches deep and covered with from one to two inches of good loamy soil. The whole house is now yielding about forty pounds of mushrooms a day and is expected to yield good crops from now till next March from the same beds.

Ernest Ashley.

View in the Conservatory Attached to the New Store of Mr. F. C. Weber, St. Louis.

THE BOSTON EXHIBITION.

The trade exhibit of specialties and new things was well responded to by both local and outside growers. Manager Kennedy of the Flower Market, feels, as he should, highly pleased with the response. Following is a list of plants staged, with names of exhibitors, carnations being the leading feature.

T. W. Lawson and Morning Star shown by Peter Fisher. The first named variety has been exhibited elsewhere, notably in Philadelphia by Mr. Nicholson, Framingham, and is highly thought of. Edith Foster and Klondike exhibited by Patten & Co. The Klondike, as its name indicates, is a bright yellow with the faintest streak of crimson. Ensign, staged by H. F. A. Lange, Worcester, is a pink and white fancy; a fine flower.

Mayor Quincy, shown by A. Roper, Tewksbury, is a deeply fringed flower, somewhat on the order of Triumph, but darker, very free, and I understand a first-class seller. May Whiteley is an improved Daybreak of an exceptionally spicy odor, which should alone make it veryacceptable. A pink seedling and Nivea, as good as ever, shown by H. A. Cook, Shrewsbury. The white seedling from Jno. Burton, Philadelphia, showed up well, although it laid in the express office over night, proving it a good keeper.

Jahn's Scarlet, exhibited by W. C. Stickel, was the best of its class in the show. A curious name, Conch Shell, is given to a pretty pink by H. Grout Springfield. Wellesley, shown by J. Tailby & Son, is a splendid keeper; one vase gathered four days since looked almost as fresh as though just picked. Empress, exhibited by Wm. Swayne, Kennett Square, Pa., is a noble flower. Priscilla, a lovely white, and a deep pink named Mrs. J. C. Malvin, were shown by Wood Bros., West Newton.

The Cottage Gardens made a handsome showing of fourteen vases, which were the center of attraction. General Maceo, the result of a cross between Meteor and Winter Cheer, a sturdy, defiant flower of deep velvety shade; White Cloud, most appropriately named, of fleecy whiteness, a chaste flower; Gold Nugget, an improvement on Buttercup. Bon Ton, exhibited by F. A. Blake, to be sent out by the Cottage Gardens, is a dazzler of the first water.

Mrs. George M. Bradt was shown with immense blooms, several averaging three and a half inches across, with perfect calyx. Mrs. James Dean, a light pink, was seen, and also John Young, white. I trust its namesake will never take on that color. Lily Dean is a beauty. New York, a cross between Scott and Storm King, from same seed pod, is really a dark Scott, cerise pink; a grand flower.

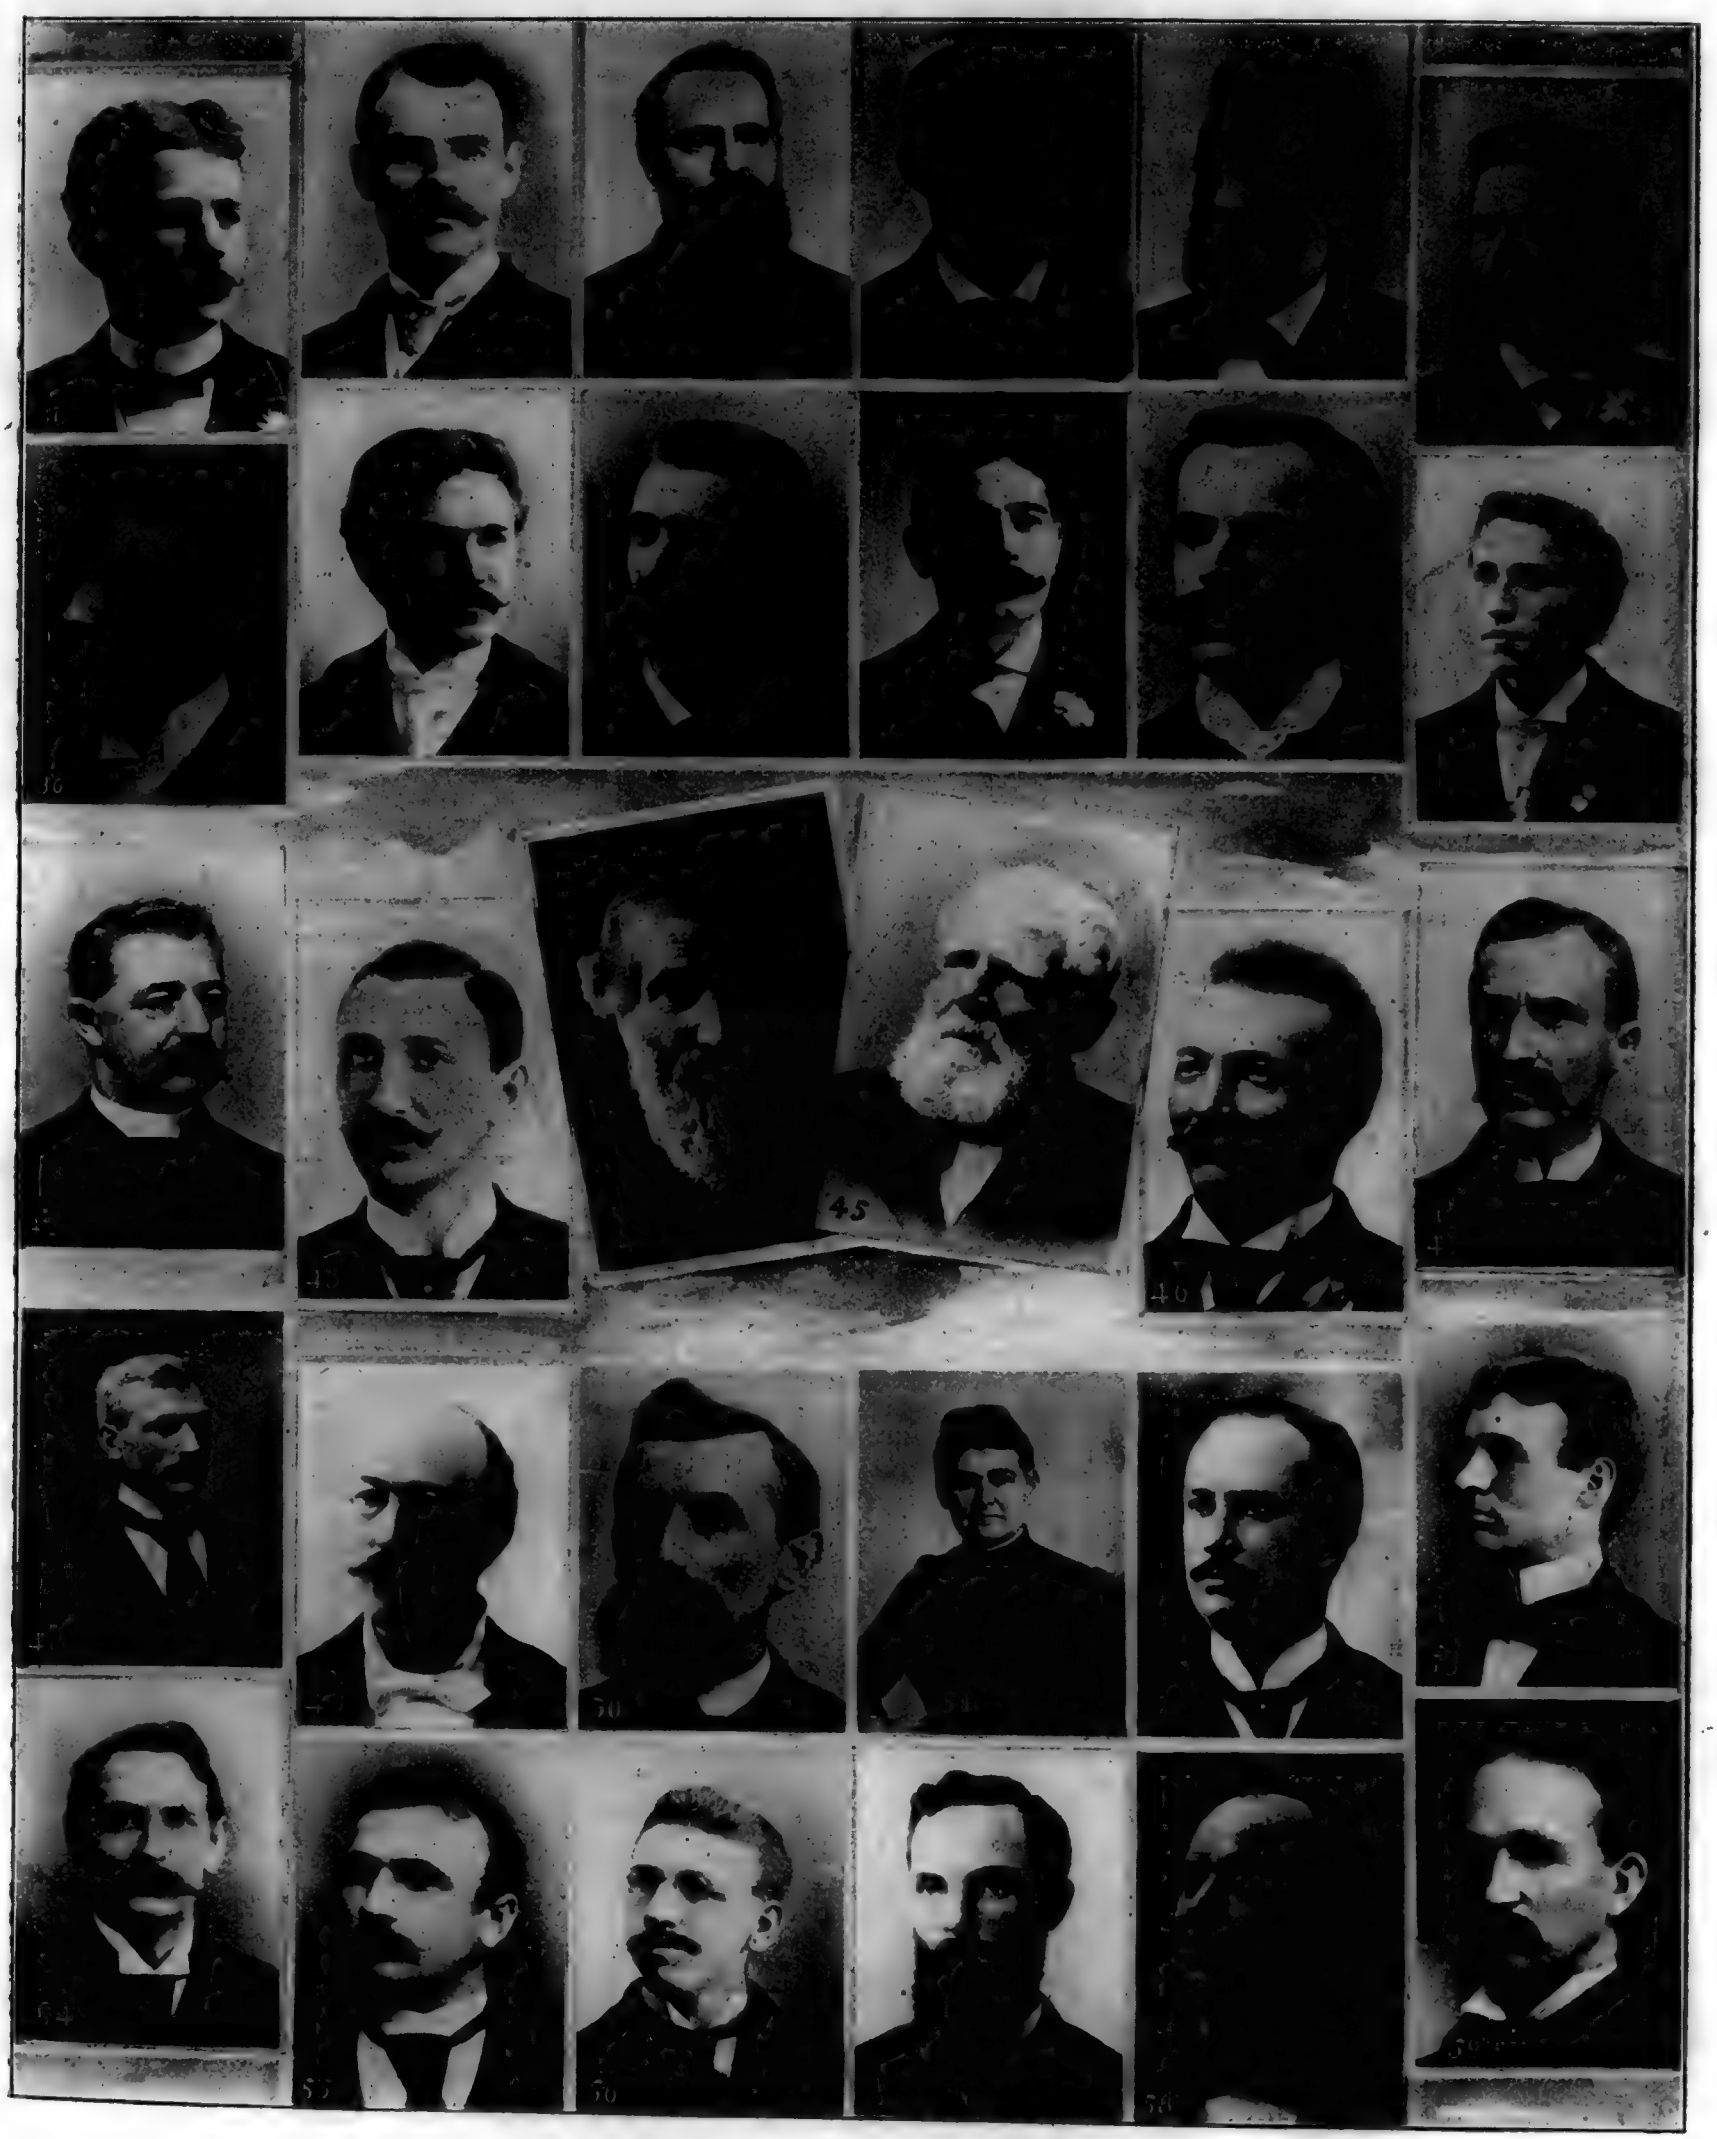
In violets some fine specimens of Lady Campbell were shown by E. Wood, Lexington, and F. S. Esty, West Roxbury. Princess of Wales, as shown by Charles Cummins, Woburn, is an exquisite flower.

E. G. Hill & Co., Richmond, sent on a vase of their new mum Christmas Gift, a grand incurved yellow; looked good enough to keep till that festive season to which we are one and all looking.

A chat with the carnation worthies prognosticated that while buyers of new varieties will be even more conservative in the future than in the past, sterling kinds will find purchasers and increase the exchequers.

I must not omit the handsome batch of primulas shown by Geo. Anderson, of Waverly, some of which found their way to M. B. Bunker's store at the Parker House.

W. A. Manda exhibited specimens of new and rare plants, also some plants for commiercial use, under the care of Dan McRory.



W. M.

OUR GENERAL INTRODUCTION.

30. R. Hoffmann, Elkhart, Ind.
31. Henry Welfare, Corunna, Mich.
32. R. H. Shumway, Rockford, Ill.
33. S. H. Powell, Hempstead, L. I.
34. John Spalding, New London, Conn.
35. Samuel Goldring, Albany, N. Y.
36. John F. Marsden, Far Rockaway, L. I.
37. C. C. Pollworth, of Ellis & Pollworth, Milwaukee, Wis.
38. J. H. Cunningham, Delaware. O.

54. F. L. Atkins, of American Bulb Co., Short Hills, N. J.
55. C. Lengenfelder, Chicago.
56. This gentleman's name and address was unfortunately lost by the engraver.
57. J. E. Black, Grove City, Pa.
58. J. Austin Shaw, U. S. and Canada.
59. A. H. Ewing, Toronto, Ont.

THOSE CERTIFICATES.

We are pleased to be able to announce that Mr. William Scott, of Buffalo, N. Y., has consented to act as trustee in the matter of stock to be held as indicated in our subscription offer. The stock will be issued to him as trustee in a few days, and a certificate will then be sent to each subscriber. Every subscriber will receive

OUR GENERAL INTRODUCTION. No. 2.

one. The signing of such a large number will alone take a little time, so please do not be impatient if there is a slight delay; and a record must be kept of the certificates, which will be numbered, and this will make considerable bookkeeping work. But inside of a week each one of our present subscribers will have received his certificate. This will include all who subscribed before our certificate offer was made.

BUFFALO.

Plants for Christmas.

There are some signs that Christmas is coming; orders are arriving, plants are selected and set aside. We need it all for there is anything but general prosperous times. Other businesses are complaining sadly, and we must not expect to be an exception. There will be a great variety of good plants for our customers to make a selection. Azaleas, poinsettias, cyclamens, begonias, primroses and pans of hyacinths and narcissus will be in abundance. Last year we were surprised at the quantity of medium sized palms that sold and we are ready for them again.

Cut Flowers.

We have not heard of any scarcity of flowers. Carnations are generally very good and sell well. No overplus of violets yet and they are likely to be the scarcest article at the holidays. Begonia incarnata helps us out with cut flowers now, and that cheap but graceful Stevia serratifolia is again almost indispensable. I call it cheap, but it should not be, for it is very unprofitable as it is sold, and according to the space it occupies on the bench should realize quite double the price that it does.

American Beauty, Meteor, Bridesmaid and Bride, cover the list of roses that it is necessary to keep in stock. The first is fast soaring higher than the average mortal can reach. Two five-dollar bills, one on top of the other will scarcely reach the best buds. Contrary to what many have said the "Carnot" is very much admired and when we have two or three dozen in a vase, sells at sight. I believe there will be far more grown another year, and what a grand grower it is. Harmon & Burr are sending in fine bunches of their new white carnation Genesee. It is the best that is coming into this market. Pingree is behaving itself well. I have seen it look cloudy with not enough color, but on the bench it looks fine, and what a sturdy stiff-stemmed grower. Eldorado, the freest of carnations, is a rusted, busted, knock-kneed, weak-necked flower beside it. Nivea, I am sorry to say, with me has turned out a poor fizzle. May be all right in the land of its nativity, but no good in our limestone soil.

Bowling and Drummers.

We have not played bowls since we made a monkey of ourselves at Providence and we have not had any drummers this week. The bowling we leave to St. Louis and the drummers to W. A. Adams, who can make them believe with his jolly manner that they are receiving a substantial order and they awake next morning to find their order sheet a blank.

Mr. Long's Calendars.

Our Mr. D. B. Long, with his complex, intercellular, fertile, reversible gray matter, is getting up a number of beautiful designs for calendars. They are suitable for any business and are truly original and artistic. If earnest application to the object in view deserves success, Mr. Long should draw the first prize.

Mr. W. McMillan Severs Connection with the Parks.

Many of the readers of the Review will learn with surprise that our well-known Mr. William McMillan has severed his connection with our parks, after twenty-six years of faithful service. Mr. McMillan's ability will serve some other community. There has for some time been friction between a majority of the park board and Superintendent McMillan, but whatever differences of opinion there may be as to Mr. McMillan's ideas of park management and improvements, there is an undivided opinion that it has been a most conscientious, earnest, and honest administration of our parks; it is well known that should he desire to again engage as a park superintendent more than one big city are bidding for his services.

W. S.

NEW YORK.

Club Meeting.

At the regular monthly meeting of the New York Florists' Club, held Monday evening, at 7:30 o'clock, the two most important matters before the club were the election of officers, three trustees to be elected for two years and the report of the committee as to the rules and regulations governing the competition for the New York Florists' Club gold medal. About thirty members responded to the call, and a very interesting meeting resulted. President Henshaw was in the chair and gave a very practical farewell address, which was listened to with much attention. He touched upon the welfare of the club past and present, and expressed hopes for a general revival in the club's interest.

Mr. W. A. Manda, as chairman of the committee appointed to arrange rules with regard to the club's gold medal, then read his report as follows:

Rules and regulations governing the competition for the New York Florists' Clubs gold medal.

The exhibition to take place at every meeting of the club during the year 1898.

Intending exhibitors should notify the secretary at least one week before each meeting, of their intending exhibits, stating classes in which they wish to exhibit; also approximate amount of square feet required.

The limit of the space for the exhibits to be as follows, except by special permit, when an exhibitor intends to make an extraordinary exhibit:

Cut flowers	20 square feet
Pot plants	35 square feet
Collections	50 square feet
Decorative and made-up work	20 square feet
Fruits and vegetables	20 square feet
Manufactured articles	35 square feet

All the exhibits are to be staged and in position by six o'clock on the evenings of the meetings of the club.

All the exhibits are to be properly labeled.

The exhibitors should hand as an entry a correct list of their exhibits to the secretary, who will give them a number, by which alone said exhibits should be known, until after the awards have been made and announced by the secretary.

The judges are to finish the judging of the exhibit before the opening of the meeting, during which time no one should be allowed in the room except the judges.

The decision of the judges should be read by the secretary during the meeting, giving in detail the points scored, and any exhibitor having any protest against the judges, same should be entered before the close of the meeting, and the chair be empowered either to affirm or change the decision of the judges.

A committee consisting of six members should be appointed by the chair, selecting one expert in each of the six different classes.

The schedule to be divided into six classes:

CUT FLOWERS.

Inferior exhibitions to be excluded by the committee.

Signed

W. A. Manda.
J. H. Troy.
W. I. Brower.
Alex. Burns.
J H. Keller.

A motion was made that manufactured articles, such as boilers, etc., be excluded on account of their weight and bulk. It was then suggested that the committee appointed visit the exhibitor's factory and pass on the article there. Eventually the boiler question became very "warm" and the whole report was adopted as read, with this very wise exception, that "manufactured and so-called natural prepared plants be barred," with a big B. A vote of thanks was accorded to the committtee.

Election of Officers.

The election of officers and trustees resulted as follows: President, William

Plumb; vice-president, J. M. Logan; treasurer, C. B. Weathered; secretary, John Young; board of trustees, Wm. I. Brower, J. H. Troy, Alex. Burns.

A motion to appropriate the sum of $150, to be given to the essay committee to defray expenses attending the securing of essayists and having their papers copyrighted so that members should receive a copy of same and the plates then be destroyed, was carried.

At the conclusion of the unfinished business, President Henshaw invited the members present to discuss the future of the club, in which Messrs. May, Morris, Burns, Weathered, Withers, and Manda took part. A motion to have the usual annual dinner was referred to the next meeting.

Invitation to Poughkeepsie.

A letter was read from the Dutchess County Horticultural Society inviting the club to attend their annual dinner, to be held January 5, at Poughkeepsie, was referred to the secretary, in order to return a hearty vote of thanks.

A New Carnation.

There was only one novelty exhibited, a carnation named "Francis Joost," by C. Besold, Mineola, L. I. It is a cross between Wm. Scott X McGowan, and besides having the good qualities of both, the color was an exceptionally fine pink, good calyx and long, stiff, erect stems. Mr. Besold explained that he had had the variety four years and that the blooms exhibited were from cuttings taken from the propagating bench in the middle of June and planted in the house at that time; it undoubtedly has a future before it. A vote of thanks was accorded the exhibitor.

"On Change."

Well, Mr. FLORISTS' REVIEW, what kind of weather do you call this, was the greeting I usually received from the wholesale men, and 'tis a fact the warm weather has been knocking things higher than the proverbial kite the last few days and last Saturday the surplus stock usually closed out was carried over to take chances on Monday morning; this applied more especially to violets and carnation stock.

Prices are ruling about the same since sent in my last report. Beauties, fancy stock, slightly higher, however. Good stock of all kinds finds ready sale in spite of the elements. Medium stock sells middling and poor stock realizes what you can get and sometimes less. Carnations fluctuate about as much as anything in the market. The fancy stock, as in all other lines, seems to have the call; the day for "culls" seems to have gone by. Paper white narcissus are coming in slowly, and I haven't seen a "mum" for over a week. Smilax is a little above the demand these days, and orchids, more specially cattleyas, are decidedly scarce. The Cypripedium insigne is plentiful, and is being held back for the holidays.

"We expect dull times for about ten days," said one wholesaler, "the calm before the storm, and we are all laying back for it. We hope it will prove no 'Will o' the Wisp.'"

John Young is making great preparations for Christmas, and a friend of his suggested he had gone into the lumber business, but he was only shipping back some boxes that are "disintegrated" and shipped back "flat."

MacDonald & McManus are handling quite a comprehensive collection of orchid flowers these days.

William Plumb.

Around the Stores.

Preparations for Christmas are evident in all the retail stores, some are making red immortelle wreaths, stars. etc., some wreathing—all busy—for the long looked for harvest. Palm trade has not been so good as it ought to have been, the "large stuff" is scarce for decorative purposes. A great many heaths are in evidence, Erica fragrans and Erica Hyemalis being among the earliest to appear. Cyclamen are here in plenty, while gaudy poinsettia makes a brilliant showing. I notice also a great many Solanum Capsicastrum or "winter cherry" in the windows.

A few novelties are seen in some stores. Miniature golf bags in which are sent violets, and the "new speaking flowers," as if flowers could not speak for themselves. This idea is advertised by a lady who paints, for instance on the petals of an American Beauty, various sentiments, as "Bon voyage," "A Merry Christmas," etc.. etc. Next! I saw another novelty in one store, a "miniature greenhouse" filled with small ferns, etc., like a "Wardian Case."

Late Notes.

Excessive rain has slumped the market.

Mr. A. Dimmock sailed on the Teutonic Wednesday.

Mistletoe from England arrived in very bad condition and almost useless.

Among recent visitors was R. G. Hanford, Norwalk, Conn.

The horticultural section of the American Institute met at 7:30 p. m., Tuesday. This new section promises to be one of the leading features in a horticultural sense, and it is expected that a very elaborate and instructive course of lectures will be delivered during the winter. Dr. N. L. Britton, director of the New York Botanical Garden, is president of this section and is aided by the following committee: James W. Withers, A. L. Don, A. Herrington. All meetings are free, and there is no charge for membership.

An Even Exchange.

I notice one of our contemporaries gives us a few left-handed compliments on our debut. It, however, closes by wishing us all the good things of this life, which reminds me of the two Irishmen, one of whom had been "mixing in" the night before with an intimate friend of his. "And don't yer feel revingeful toward him fer wiping the flure wid ye," said Tim. "Sure, no," said Pat, "didn't yez see him hand me the whist broom to brush meself wid after I got up."

H. A. B.

WILLIAM PLUMB.

Mr. William Plumb, who was elected to the Presidency of the New York Florists' Club, Monday evening, is an Englishman by birth, having been born at Buckden, Huntingdonshire, England, in July 1850. Like all successful English gardeners, he served time as an apprentice and journeyman, starting at Chipstead Place, Sevenoaks, Kent, and from there going to Halifax, Yorkshire, and other places.

Mr. Plumb is at present manager and gardener for C. P. Huntington, Throggs Neck, New York City, the great Pacific railroad magnate, and before this had charge of several other estates during his successful career.

He is a man of fine sensibilities, popular and a "hale fellow well met," takes exceptional interest in his work, is a thorough florist in all senses of the word, and as an organizer showed exceptional ability when he was manager of two of the largest and most successful exhibitions at Madison Square Garden, given by the New York Florists' Club in the fall of 1891-1892.

Mr. Plumb is a Mason and a member of Columbian Commandery No. 1, New York, a Noble of Mecca Temple, Mystic Shrine, New York and an Odd Fellow.

PHILADELPHIA.

Weather Affects Trade.

With the mercury lingering between 65° and 70°, it is difficult to imagine that Christmas is but two weeks off, but such is the case. The weather at this date, 11th inst., is so warm and spring-like, that the effect on trade is decided. In other words it seems to take the starch out of business Trade had made a fair start and we all commenced to feel that we were "in it," but these freaks in the

weather put a damper on us. However, it is safe to say that the present season will prove satisfactory; this seems to be the general opinion about town.

Resume of the Flower Market.

Prices are advancing, and it might be said that the advance is so steady that we see the upward move every day, hence to quote prices today would be misleading. The growers are having their inning now, both the plantsmen as well as the cut flower growers. Plants play an extensive part in the holiday trade in this city, and, it is evident that the sale of decorative and flowering plants increases each year. On every hand the florists are preparing for the coming rush, and all the spare time is devoted to fixing up, preparing the dried work, and innumerable other et ceteras.

Christmas Greens.

At this season we come face to face with the Christmas greens man. This class of merchants hail from the lower counties of New Jersey. They come to town in greater numbers just before Christmas, than at any other time of the year, and each and every one offers the same line. It is well for the city florist that we have a contingency of this kind, as they bring to our doors the rough goods that have become indispensable to the retail dealer, especially those whose trade in large decorations form an important branch of their business. When we consider the vast quantity of this material used, it appears enormous. Take the trade in Christmas trees alone, and imagine the number used. It is reported on reliable authority, that at this writing, there has been received at one of the railroad terminals in this city 165 carloads of Christmas trees, which come from the forests of Maine and New Hampshire. This is only the shipment over one road. What will be the number when the entire output is on hand?

Sickness in the Trade.

Mr. Thomas Cartledge, who has been under the doctor's care for some weeks, is on the improve. When seen in the city this week he showed marked signs of convalescence; may it continue.

Mr. Robert Craig, who is still confined to the house with typhoid, is on the road to recovery.

Mr. Edwin A. Sidewitz, of Baltimore and Annapolis was with us this week.

The appearance of the FLORISTS' REVIEW, which came to hand this week, was complimented on every side, for its valuable contents and artistic makeup. It has a bright prospect before it. F.

CHICAGO.

Club Meeting.

At the last meeting of the Chicago Florists' Club the amendment to the constitution which will make it possible for former members who have been dropped for non payment of dues to come in again on the same basis as new members, was adopted. It is hoped that this will bring into the club a lot of former members who allowed themselves to drop out at that period in the club's history when it was so unfortunate as to have financial secretaries that did not attend to their duties; during this period the dues of the members accumulated to such an extent that the amount seemed too large to liquidate.

A committee, consisting of Messrs. P. J. Hauswirth, E. Wienhoeber. G. Stollery, James Hartshorne, and J. S. Wilson, was appointed to act with the officers of the American Carnation Society in preparing for the annual convention of that body in this city next February. The committee was instructed to invite all the prominent members of the trade in this city to act with them in the matter. Ten new members were added to the roll, as follows: John Degnan, Lloyd Vaughan, J. C. Mulder, John Cook, Robert Lundstrum, Anton Then, Fred. Hills, Henry Hilmers, E. F. Winterson, and William Martin.

The special order of the evening was the discussion of "Fumigation versus Vaporizing." The discussion was opened by Mr. Edgar Sanders, who had with him a sample of tobacco paper, manufactured by the Skabcura Dip Co., of this city. It was a paper which had been saturated in a form of nicotine which the manufacturers thought would, when perfected, take the place of all other forms of tobacco insecticides in the greenhouses. A piece of this paper was lighted and passed around to the members, each one taking a sniff, but all agreed that this would not settle the question as to the value of the fumigation. In the discussion which followed, the majority of the members seemed to pin their faith to vaporizing with the Rose Leaf Extract of tobacco, though in certain cases they found that the old-fashioned method of fumigating with tobacco stems was most effective when there was a bad case of fly and there were no flowers in the house to be injured by the smoke. The general opinion, however, was that such a condition of affairs should never be permitted and that persistent vaporizing with the Rose Leaf Extract would avoid any necessity for the old-fashioned smoking process. One large grower stated that he had found the Rose Leaf Extract efficacious in the case of thrips on roses, though it took large and frequent vaporizations to accomplish the object.

Messrs. W. H. Ellis, of Milwaukee, Wis., and Nixon H. Gano, of Knightstown, Indiana, were present as visitors.

As the date for the next regular meeting falls on December 23rd, when all the members will be rushed with Christmas business, it was decided not to attempt to hold a meeting at that time, therefore the next meeting will be held January 13th. This will be Ladies' Night and the committee on programme will have a special entertainment arranged for the occasion. All the members are requested to bring their wives, daughters and sweethearts on this occasion and a very enjoyable evening is promised.

Among recent visitors to the city was Mr. Alex Galt Robinson, of the Louisville Spirit Cured Tobacco Co., Louisville, Ky. It is to be regretted that he arrived too late to attend the club meeting and hear all the pleasant things the members said about the Rose Leaf Extract.

The Chrysanthemum Show.

The report of the managers of the last chrysanthemum show appears below:

RECEIPTS.

Gate receipts	$4,389.35
Cut flower booth, commission and programme advertisements	355.98
Total receipts	$4.745.33
Premiums given by friends of the Society	$1,393.39
Total receipts from all sources	$6,138.72

EXPENDITURES.

Installation, maintenance and rent	$1,444.16
Advertising	894.64
Preliminary	87.00
Recording and accounting	117.50
Art Exhibit	162.24
Music	165.00
Judges	133.94
Admission	99.00
Programme	204.80
Premiums	1,748.00
Total	$5,056.28
Excess of receipts over expenses	$1,082.44
Deficit of the show on its merits (that is, if donated premiums are not considered)	310.95

The St. Louis Trip.

The pilgrims returning from St. Louis report that they were received with open-handed hospitality by the St. Louis boys and that they were presented with everything in the city except the winning scores in the five games of ten pins. The party was met at the station by a committee from the St. Louis Club, taken to breakfast and then shown all the down town florists' stores, both wholesale and retail, after which the cars were taken to the most accessible stores in the West End. A good deal of territory was covered and it is a question if anyone could have seen more and to better advantage than this party of fifteen or more.

At 1 P. M. the games were started and the mournful tale is told in the scores in the St. Louis notes. After the games came a very enjoyable supper, and then the trip to the station, escorted by a large delegation of the local people. The party reached Chicago with the bowling fever somewhat subdued but with many pleasant recollections of the time that preceded and succeeded the games.

But the games were not so bad either, and we rejoice that the highest average was made by Mr. John Zeck of the Chicago team. And that third game! It is no disgrace to be beaten by such magnificent bowling as the St. Louis boys did. The alleys were strictly regulation and the rules were rigidly enforced. The third match will probably be played in Chicago at the time of the Carnation Society convention next February, and it is hoped that Milwaukee and Cleveland will send teams to take a hand in at that time. St. Louis will stand at the head until then.

Among the Growers.

A trip among the Bowmanville growers will convince one that they "are on to their job." The stock on all the places hereabouts is in excellent shape. On the places of Johnson & Carlson, Otto Ristow, and Magnuson & Pearson, the Brides and Maids were particularly good. Magnuson & Pearson have four houses in

mushrooms, and A. V. Jackson has two houses planted with them. Allen & Ockerland are cutting fine Beauties.

Chas. Schafer has his place planted to carnations excepting one house in which he has some fine Kaiserins. Louis Ristow also grows carnations almost exclusively.

Weber Bros. were not at home, but from the appearance of their carnations one would assume they generally are, for their stock is particularly fine, especially their Scotts and Daybreaks, which are the finest we have seen in many a day.

Anton Then grows largely pot plants in flower. We noticed some good cyclamens and Begonia incarnata in 8-inch pans, and some excellent 6-inch Pteris serrulata.

For a tidy place that of Herman A. Bauske cannot be surpassed. It is as neat and clean as it is possible to keep a greenhouse, a d his stock shows that he does not spend all his time in cleaning up, as that too is in excellent condition. Mr. Bauske was not at home when we called.

J. A. Budlong has a finely equipped place. His heating plant appears as near perfect as it is possible to have it in a commercial place, with valves so arranged that any number of coils of pipe may be used to maintain the desired temperature. And his stock shows that it pays to equip a place in a proper manner.

We found Mr. E. Nelson busy cutting some fine buds. He took time, however, to show us over his place, which is in good order.

At Oakwood Cemetery the stock, which is mostly bedding plants, is in excellent condition. They also grow a house of roses and several houses of carnations. Mr. Reid has a sport from Tidal Wave. It is identical with the parent except in color, which is a bright and pleasing shade of red. This surely will find favor when placed upon the market.

Jacob Meyer, of Niles Center, has two houses of violets in the finest possible condition. None better have been seen in this neighborhood. They are mulched with shavings and sawdust to keep the flowers clean. The blooms are excellent.

Cut Flower Market.

Kennicott Bros. Co. predict a serious shortage of roses for Christmas, and that violets will be good but scarce. Of carnations they hope to have a fair supply. Owing to the gloomy, wet weather, quality will be soft. They report that in previous years there has been a demand for cheap flowers, but this year everyone wants the best and there is not enough extra grade to supply the demand.

Vaughan, McKellar & Winterson report roses off in quality, and that the carnation growers seem to be holding stock back. Violets are selling at good prices.

A. L. Randall says there will be a big shortage in Beauties and violets for Christmas.

Bassett & Washburn fear a serious shortage in roses.

Various Items.

Mr. Roach, representing M. Rice & Co., Philadelphia, is at the Sherman House, where he has been quite ill for several days.

J. D. Busch, Elgin, Ill., was a recent visitor.

Mr. Kelley, shipping clerk for Kennicott Bros. Co., was recently the victim of a "hold up."

Next Monday Mr. E. C. Amling will remove to 51 Wabash avenue, where he will have much larger quarters, and be in better shape to handle his increasing business.

Mr. John J. Ring, who was formerly with various Chicago growers, and who will be remembered as a rose grower of much ability, is now with Mr. Geo. M. Kellogg, Pleasant Hill, Mo.

The Late William Grey.

OBITUARY.

William Grey.

William Grey died at his home on Corning's Farm, Albany, N. Y., November 25th, of dropsy of the heart from which disease he has been afflicted for the past few years. He was buried with Masonic honors, Sunday, November 28th, in Rural Cemetery.

Deceased was widely known both in America and Europe as an ardent lover and successful cultivator of orchids. The collection a few years ago was the largest in America, comprising over 2,300 species, and was brought together at a large expense by the late Hon. Erastus Corning, an enthusiastic admirer of nature who at one time employed three collectors in South America and Borneo.

Mr. Grey was a native of Greenlaw, Scotland, where he was born February 18, 1828, and like his father brought up in the gardening profession. He came to the United States in 1851, worked a while in the nursery of Mr. James Wilson and for Mr. Joel Rathbone, of Albany, N. Y. In 1853 he went to Western Iowa and started in the nursery business, but severity of the climate and hardship soon caused his return East and he entered the employ of Mr. John T. Norton, Farmington, Conn.

In the fall of 1856 he returned to Albany as gardener to Gen. John F. Rathbone and from there engaged with Mr. Corning as superintendent, where he remained nearly forty years, surviving his employer and friend only three months.

Of late years he was much interested in raising hybrid orchids and left behind many noted examples of his skill.

Mr. Grey was also an enthusiastic entomologist and had made a life study of lepidoptera. His collections embracing over 30,000 species, have been left to his son Robert, who is also interested in the same study. He leaves a wife and five children to mourn his loss.

John Rowan.

I regret to report the decease of John Rowan, who for seventeen years performed faithful service with the house of Robert Veitch & Son, of New Haven, Conn. Bright's disease, followed by pneumonia, was the cause of death.

The deceased was a native of Scotland, sixty years of age, and leaves a wife and seven children, with a large circle of friends, to deplore his departure beyond the bourne from whence no traveler returns.

W. M.

CLEVELAND.

Outlook for Christmas Supply.

The weather in conjunction with the outlook for Christmas stock, forms the principal topic of conversation in floricultural circles at present. Ever since the disappearance of the chrysanthemum as a factor in the cut flower situation, there has been more or less difficulty in getting good stock, either locally or from out of town sources, to properly supply the demand. This has been more particularly true of carnations, which have been in very short supply and not of overly good quality in general.

There is nothing intended by the foregoing to imply that trade has been particularly good on the average, for it certainly has not been so with the majority of the florists here. Wherever one went the story was usually about the same. "No, business is nothing extra, but there is enough for the flowers to be had."

Weather Conditions.

The weather possibly has been an important factor in bringing about this undesirable condition of affairs, there having been an exceedingly long spell of very dark, cloudy, rainy and generally disagreeable weather, the most unfavorable that could be imagined. There has been no frost to freeze up the mud under foot and render buying to the average shopper anything but the most disagreeable of necessary duties, hence a good deal of business that might have been developed has not made itself manifest. There has been only about two days of late in which the sun has been visible with sufficient potency to advance the growth of cut flower stock appreciably.

Scarcity of Stock.

Should this state of affairs continue a short time longer, good stock, or very likely stock of any kind, good or bad,

will be in short supply for the holidays, at least among local growers. Roses that have been off-crop and were coming on again for the holidays, are certainly suffering as to prospective quality at that time. Carnations as said before, are now in short supply; there will be small opportunity to accumulate much between now and the time of need without exceptionably favorable weather. Chrysanthemums do not seem to have held on quite as late as usual and have nearly disappeared from the market. Romans of course, as well as narcissus, will be on hand to help out, but outside of these and various greens and some odds and ends, the outlook for a large supply is certainly not very brilliant. In flowering plants, azaleas, Deutsche Perle, Simon Mardner and Vervaeneana, with the usual cyclamens, primulas, begonias, poinsettias and Marguerites comprise the list.

A Graham & Son are cutting some very fine carnations, Flora Hill, Jubilee and Pingree. The same firm have half a house of chrysanthemums, Lincoln, Jerome Jones, Niveus, Eda Prass, Maud Dean and V. H. Hallock, that are in good condition for Christmas.

Bowling.

The bowling club held an extra meeting on the evening of December 6 for the purpose of entertaining the ladies and incidentally eating various good things provided for the festive occasion. There was a large attendance and everybody had a gorgeous time. NEMO.

BOSTON.

Boston Florists' Club.

The last meeting for 1897 was held on Tuesday evening, December 7th, with only a few members present. The business of the meeting was unimportant in character, but a very able essay was read by Mr. Andrew H. Ward, one of the firm of large manufacturers of artificial inodorous concentrated plant food, which he spoke of so minutely that it seemed there was little room left for any discussion, only one or two questions being asked and very easily answered by the lecturer to the satisfaction of all as it brought no further discussion. A vote of thanks was given Mr. Ward which ended the meeting.

It is reported that Mr. Herbert Dumaresq, of Chestnut Hill, has entered into contract with the firm of Lord & Burnham, horticultural builders, for the erection of some new greenhouses which are already under course of construction.

Visitors.

Mr. John Barclay, of the firm of Wm. Elliott & Sons, New York, paid a commercial visit to our township and seems a congenial and well read man. We trust he may do a good stroke of business here. Mr. Littlefield, from Worcester, was here during the carnation show and was representing several of the western growers as well as the home exhibitors.

Results From a Flash Light Photo.

Welsh Bros., City Hall florists, while having a photograph taken of their new and extensive refrigerator, for the exclusive use of our new issue of the FLORISTS' REVIEW, had quite an experience about 10 A. M. Saturday morning. The refrigerator extends across the lower end of their store from Chapman street to Province street, a length of probably 100 feet. To enable the operators to obtain a good and effective production the manager in charge deemed it advisable to put in an extra charge of magnesia powder to gain desired effect, and when all was ready and the word given to touch the matter off, the effect was surely instantaneous, and with the flash came an explosion which was as the report of a cannon and the shock was felt very much over the surrounding neighborhood. With the exception of damaging two windows and otherwise flattening somewhat one or two of the members of the firm and some of their employes, no serious damage was done. A lot of palms and nephrolepis that were in the window that was broken, to all appearances some hours afterwards were not in any way injured, and no damage seemed to have been done to anything except breaking the glass by the concussion.

City Improvements.

Mr. William Doogue, our city forester, who is so well known for his startling surprises in adorning and beautifying our parks and squares, has his experienced gardeners working in Copley Square laying out beds on a very elaborate scale for planting bulbs—tulips chiefly—of which it is calculated to take over 40,000, and, being so late in the season, was a more difficult task to procure than the laying out and planting would be, he having tried all the dealers at home, in New York and Philadelphia, and accidentally found just what he wanted with F. R. Pierson Company, of Tarrytown, N. Y., which I have no doubt was as great a relief to them to rid themselves of their surplus stock as it was to Mr. Doogue to find them. The park system will undoubtedly be a very attractive feature next spring and a pleasing ornamentation to the residents in this neighborhood as well as the thousands who ride past in the cars daily. The planting, as I understand Mr. Doogue, is to be done in all solid and bright colors which will harmonize with the surrounding buildings. The beds are all laid out in a scroll pattern, which must be a very attractive issue, it being a break from the old line of solid beds.

Trade Items

A new florist store has been opened on Main street, Worcester, by Messrs. Potter & Coussins, who it is said are a very enterprising firm and will look out for their share of the patronage of that city as well as the neighboring community.

Charles Ingram, of Reading, Mass., has contracted with the wholesale firm of Welch Bros. to take the whole of his cut of Fisher carnations which are first class in flower with clean and healthy foliage, and it is said to be the best stock in the neighborhood.

Wholesale Notes.

The flower market here has been much on the principle of the preceding week and prices ruling much on the same lines, but with the approach of Christmas it is the general voice that prices and business will jump.

Florist Versus Gas Company.

This was an action brought for trial by Cyrus P. Dorr, florist, Laconia, N. H., against the Winnepesaukee Gas & Electric Company of that place, and I considered it might be very interesting, and of some value to your readers, as many instances have come under my notice where damage has been done by escaping gas permeating the ground, sometimes for a considerable distance, and eventually finding its outlet; in this instance it happened to find its liberty in a greenhouse where it caused great havoc among the plants.

The case was brought in the Belknap County Supreme Court, and tried by Judge F. N. Parsons at the adjourned term of the September court. A verdict was found for the plaintiff in the sum of $763.00. C. H. J.

ST. LOUIS.

Club Meeting.

The regular monthly meeting of the St. Louis Florist Club was held last Thursday afternoon at 3 p. m., with President Halstedt in the chair and twenty-five members present. The large attendance was owing to the final report made by the executive committee of the late chrysanthemum show. The committee made a report showing a loss of about $400, and stated that the special prizes would be paid out in full just as soon as they could be collected; also the Shaw prizes. The club prizes will be paid as per rule fifteen in our premium list of rules governing the exhibition. The committee could not make its final report, and was given until next meeting to do so. Those who were given certificates of merit will receive them by January 1, 1898.

Applications for membership were made by Andrew Meyer, Jr., and Fred. Foster.

William Trillow, of Belleville, Ill., had on exhibition a fine late yellow seedling chyrsanthemum not named which was awarded a certificate of merit by the committee.

The chair then appointed a committee of three to make arrangements to entertain the Chicago Florist Club members who would visit us December 12th. The committee was as follows: J. J. Beneke, Al. J. Bauer, and Will. C. Young.

The secretary then brought forward the bronze medal and certificate sent to the St. Louis florists from the World's Fair. The secretary was instructed to give same to the Missouri Botanical Gardens.

Question Box.

The question box brought on quite a discussion on the question of "How to run a flower show successfully." One member of the committee named a few of the backbiters who did everything they could to harm the show. The committee worked

City Hall Flower Market, 15 Province Street, 9 Chapman Place, Welch Bros. Proprietors, Boston, Mass.
The largest market for sale of flowers in New England.

hard and should be given credit for the way they conducted the show and not have slurs cast upon them. One member will have to give a good account of himself at the next meeting of the club which will be held on Thursday afternoon, January 13, at 3 P. M.

Market Overstocked—Prices.

The cut flower trade as usual at this time of year is dull and the market is stocked up with all kinds of flowers, especially roses, which are a glut just now, with prices away down. Good roses can be bought at from $1.50 to $3.00, extra fancy, $4.00 and $5.00. Choice Beauties are not over plentiful and bring from $25 to $35. Carnations are still bringing from $2 to $3 per 100, and are not overplentiful just now. Harrisii are held at from $15 to $18, callas $8 to $10, valley $4, and Romans and paper whites still at $4. Violets, Californias, bring $1.50; single, home grown, 35 cents, southern, 25 cents, and doubles 75 cents to $1.00. Chrysanthemums are about over and only a few can be seen here and there.

Evidences of Christmas.

Christmas greens are greatly in evidence all over town, the large stores and all the floral establishments being liberally decorated. The outlook for a good Christmas trade is very promising this year. The orders for holiday greens are more than satisfactory and I think the demand for holly will be in keeping with previous years.

Personal Notes.

Mr. Julius Koenig Jr., has just completed a new house, 10x100. Mr. Koenig is cutting some very fine carnations and roses.

Mr. Fred. Ostertag, late of St. Louis, but now of Indianapolis, paid us a visit last week. Fred says he feels homesick.

Chicago Bowling Club's Visit.

The Chicago Florists' Bowling Club, accompanied by quite a number of the craft of Chicago, paid a return visit to this city December 12. It was a decided event in local trade circles, and the St. Louis bowlers did their best to make the visit one that would be long remembered by the Chicago brethren. Although the visitors lost the match it was no disgrace, as they all rolled a good average game.

The party included Messrs. G. L. Grant, of the FLORISTS' REVIEW, J. S. Wilson, Phil. J. Hauswirth, John Zeck, Ed. Winterson, Walter Kreitling, J. B. Deamud, Aug. Lange, G. Stollery, and J. C. Vaughan. They arrived over the Wabash R. R. on time, all decorated with Stollery Bros'. new carnation Argyle. They were met by a committee of the St. Louis club, and taken to Hotel Rozier. After a good breakfast a visit was made to all the wholesale houses, and to Fred Weber's, Reissen Floral Co., C. Young & Sons, George Walbart, Ellison & Tesson, and others that were most conveniently reached.

Promptly at 12.30 the Grand regulation alleys were reached where the bowling was to be done. After a little practice the match game began. A lunch was served on a table at the side of the alleys, with plenty of refreshments, coffee and cigars. A large crowd witnessed the games. Among the local craft present were John Young, Ed. Burchel, C. W. Wors, F. C. Weber, George Waldbart, C. C. Sanders, Dr. Halstedt, Dr. Helwig, Will Young, Chas Young, F. J. Fillmore, R. F. Tesson, Jos. Dickman, R. G. Beneke, Frank Ellis, and a host of others not connected with the trade. William Young and J. B. Deamud acted as scorers.

Five games were played, and St. Louis won by 382 pins, having a total of 4,334 against 3,952 by Chicago. The best five games were rolled by John Zeck, of Chicago, 830; C. Beyer was second with 814. The highest single score was rolled by C. Beyer, of St. Louis, 192; John Zeck, second, with 187, and Chas. Kuehn, third with 186.

Following is the score in detail:

After the games the visitors were taken to supper at Lippe's, and at the table were seated twenty-four florists from Chicago and St. Louis. After supper speeches were made by G. L. Grant, President of the Chicago Florists' Club; Dr. Halstedt, President of the St. Louis Florists' Club, J. C. Vaughan, P. J. Hauswirth, and William Young. Mr. Grant's remarks gave the boys some good advice as to how to make a flower show pay. I think the St. Louis boys profited by this speech.

After this the boys were taken to Union station and placed safely on their train, which left at 9:05. Messrs. Lange and Stollery alone remained over to spend Monday with us. The rest all left happy, everybody having enjoyed themselves hugely.

Project of a Return Match Game.

A return match was talked of in February, when the Carnation Society will meet in Chicago; perhaps we could get Cincinnati, Milwaukee, Cleveland, and Buffalo to join us. The Chicago boys claim they will put up an elegant trophy to be rolled for. Count on St. Louis. Now, let's hear from the rest.

J. J. B.

CINCINNATI.

Funeral Creates Large Demand.

The funeral of the late Senator Charles Fleishman took place Monday, December 12th, from the Scottish Rite Cathedral. This occasion created the largest demand for flowers ever known in Cincinnati. B. P. Critchell's Sons had the bulk of the orders. J. Bear and Sunderbruch's Sons furnished several large and expensive pieces. Every available violet within ten miles of this city was used for this occasion.

Business here of late has been good all around. Carnations and roses are in good supply and meet with a fair demand. Violets are scarce and chrysanthemums about done, with the exception of a few late ones.

Meeting of Club – Exhibition.

The regular monthly meeting of the Cincinnati Florist Society was held at the Sixth street Market house on December 11th with President Gillett in the chair. The meeting was well attended. The flower show brought out quite a number of lady visitors, but owing to disagreeable weather, the attendance was not so large as at previous ones.

F. Dorner and Sons showed four seedling carnations and several standard varieties. One in particular, Gold Nugget, in style of Buttercup, caught the eye of everyone.

Mr. Dorner should be congratulated upon having such a valuable variety. Messrs. E. G. Hill & Co. exhibited a fine collection of seedlings and among them were several of great promise; also a late chrysanthemum called Christmas Gift. The flower is a large globular yellow and desirable on account of being so late. City Greenhouses (Mr. Scheibele gardener) showed some cattleyas and ferns, the only orchids in the hall. The Sunderbruch's made a worthy display; the same may be said of Will Murphy who staged quite a large assortment of carnations. Corbett & Wilson were on hand with violets. George and Allen made a gorgeous display of roses, which were much admired. Of course R. Witterstaetter had Evelina, his pet seedling of '96 there. This was the grandest white on exhibition and comes near Mr. J. Thorpe's prediction of carnations four inches across.

Entertainment.

In the evening the boys had a jolly good time. Ben George outdid his last efforts and Mr. Giesy surprised all present with his negro dialect. Both are ex-members of a minstrel show.

NEGRUM.

TWO VETERANS.

In our general introduction for this week appear the faces of two veterans in the trade.

Louis Menand, of Albany, N. Y., is undoubtedly the oldest living florist in America, being now over ninety years of age. His recollection goes back to the very earliest days of the trade in this country and he is still hale and hearty. Many in the trade have read his interesting autobiography, which was undertaken by Mr. Menand at the suggestion of the writer of these lines, and they will be interested to learn that since that volume appeared Mr. Menand has rewritten his reminiscences in French, finding his native tongue more adapted to the recital, and that this volume is now being translated into English for the benefit of his many friends who are unfamiliar with French. Mr. Menand takes as keen an interest as ever in matters affecting the profession he loves and is one of the most respected citizens of Albany. May he live out a full century and more, for it is good to have such men with us.

In our group for this week will also be found a portrait of Mr. Robert Veitch, of New Haven, Conn., who landed in the Elm City in the fall of 1854, founding the seed business which has been so successfully carried on ever since in the same building, now conducted as a seed and flower store with greenhouses attached, by the firm of R. Veitch & Son. The senior member, though past the eightieth milestone, still takes an active part in the business. He was a friend from boyhood of the late Peter Henderson, and one of the first subscribers to the FLORISTS' REVIEW.

OMAHA, NEB.

Flower Market Conditions.

Trade in general is good and there is considerable going on in the way of entertaining. As 'mums are mostly past the demand is for roses and carnations. The former are good but the latter are not up to former years. Violets, especially double ones, are very scarce. We have violets sent in from California, and considering the distance they come, it is surprising that after three or four days' travel, they should look so well. Hyacinths, narcissus and stevia are plentiful. Well grown potted plants seem to be as much in demand as any cut flowers and are preferred by a certain class of people.

Club Meeting.

The Florists' Club had a meeting Dec. 9 at which Council Bluffs and Lincoln, as well as Omaha, were well represented. The committee of the chrysanthemum show are well pleased with the success of the first show ever held in this locality, and are encouraged to work, so that the show of next year will be even better than the one just past.

Mr. Hesser, of Plattsmouth, has been quite sick and is not yet able to be around.

The Trans-Mississippi Exposition grounds present the appearance of an immense bee-hive and work is rapidly going on to get the large buildings under roof, so that a snow storm or bad weather will not interfere with the progress of the work.

J. J. H.

WASHINGTON.

Trade has been decidedly good the past week and the ruinously low prices which have prevailed, are moving upward to a gratifying notch. The demand for cut flowers for Christmas week looks encouraging, already high prices have been offered for a guaranteed supply for that week.

To get the REVIEW by Saturday morning's mail is what we had hoped for but hardly expected. The unexpected has happened for which we are all very grateful.

The Gude Bros. have purchased the entire Linger property at Anacostia, together with all the improvements thereon, including Studer's nursery and greenhouses for $25,300, which is considered a very reasonable price.

Upon the assembling of congress the biggest floral piece in the senate chamber was on the desk of Senator Foraker and had the appearance of a bush of American beauty roses, at least four feet high and spreading to as great a width. They were magnificent flowers and probably a larger floral token was never before carrieh into the senate chamber.

HUNT'S WEEKLY REVIEW OF THE CHICAGO MARKET.

Steady cloudy weather with frequent rains and light flurries of snow have been continuous and all indications point to a continuance of these conditions for yet a while.

Stock of all sorts scarce and growing scarcer daily—seemingly getting ready for a famine later on. Growers are running houses as cool as possible and not overdo it—even with their evident designs on a reserve supply for Holiday Trade it is doubtful if they can hold much back as wholesalers are raiding all places within reach daily to fill rush and heavy orders.

Violets good in color and stem but exceedingly shy in bloom. Carnations fair to good, but few really high grade coming in. Stems getting shorter and weaker.

Roses while lighter in cut are really improving in color and foliage. Maids particularly showing best rate of improvement. La France, Testout, Siebrecht and Carnot continue to be "off" in both cut and quality.

Harrisii were never so good at this season as at present. Valley also is high grade with nearly everyone.

Bulbous stuff is fine and quite plentiful and is going readily at paying prices—forcers probably will realize more for their cut than for last two seasons—in spite of added cost due to duty.

The shortage of fine white stock is now well filled with first-class stevia which is plentiful.

Extra fine poinsettias have made their appearance. Few will be seen however until Christmas as better prices will be realized then.

"Mums" save for a few holdovers have disappeared. Quite a number of growers have some that will be cut soon now that should be fairly good.

Cut flower stock of all sorts will be scarcer this Christmas than for several seasons.

GLADIOLI, is the title of an interesting pamphlet, issued by Mr. Frank Banning, Kinsman, O. While in it bulbs are offered for sale, it is more than a price list, giving a useful review of proper methods of growing, and of producing new bulbs. It can be had free on application, mentioning the FLORISTS' REVIEW.

LOUISVILLE.

The regular monthly meeting of the Kentucky Society of Florists was held at Mr. Wm. Walker's store on Jefferson street, it being the last meeting of the year. The election of officers for 1898 resulted as follows: Henry Lichtefeld, president; Fred. Haupt, vice president; C. H. Kunzman, recording secretary; Joseph Coenen, financial secretary; Herman Kleinstarink, treasurer; E. G. Reimers, trustee for three years. Mr. Van Pelt was elected an honorary member.

This has been a very successful year for the Kentucky Society of Florists, for both our spring and fall shows were a financial success. The first meeting of 1898 will be held at the establishment of Jos. Coenen, and we are going to start in with a grand installation of officers and supper for both the flori ts and their wives. KY.

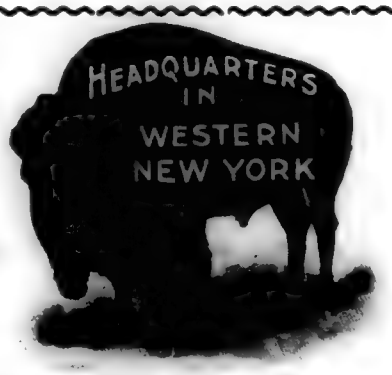
DOVER, DEL.

J. C. Baker has lately started in the florist business and has built three houses 20x80, with an office in front. The houses are well stocked, and being on the main street by the P. R. R. station, all looks promising for a successful business.

ERNEST ASHLEY.

THE TREE'S REPLY.

(LYNNETTE LOQ.)



"Oh, trim little orange tree,
The nursling of tropic lands."
She sighed in her ecstasy
While wringing her jeweled hands.

"Oh, isn't there bloom and bloom,
Your bonny boughs may unsheath,
One day to dispel my gloom
And weave me a bridal wreath?"

"No, no," lisped the leaves of green,
"For alas and alack, ah me,
I am, little blue-eyed queen,
But a fifty-cent rubber tree."

ROSES

CRIMSON RAMBLER ROSE

EXTRA STRONG FIELDGROWN PLANTS FOR EASTER FORCING.

We offer an extra fine lot of strong fieldgrown plants of the Crimson Rambler Rose for Easter forcing.

We desire to call the attention of the trade to the great value of this rose as a pot plant for Easter sales. It is one of the showiest and most beautiful of all hardy plants, but also makes one of the most beautiful pot plants for florists' sales, and is particularly adapted for forcing for Easter, having proved one of the most valuable novelties grown for this purpose. A Boston grower realized ten dollars each for every plant he had.

We can supply an extra fine lot of extra fine plants for potting and growing on for this purpose—plants four to five feet high, three to four strong canes each—stock in the very best possible shape. These long canes will flower from every joint, and by proper training and winding the plants can be made of immense size, covered with a perfect mass of bloom. We know of no choicer plant for the Easter trade, and florists who do not supply themselves with a lot of this stock for this purpose will regret it.

Strong fieldgrown plants, three to four canes each, four to five feet long, $3.00 per doz ; $20.00 per hundred.

HYBRID PERPETUAL ROSES.

Paper White Narcissus, Ferns, Asparagus,
AND ALL STANDARD STOCK.

THOMAS YOUNG, JR.

43 West 28th Street, New York.

AN UNPARALLELED SUBSCRIPTION OFFER.

EVERY one to whom this issue of the FLORISTS' REVIEW is addressed, and who fills out, signs and returns the accompanying subscription blank, accompanied by $1.00, within 30 days from date, will receive not only the FLORISTS' REVIEW for one year but also a certificate entitling him to the earnings on one-tenth of a share of stock in the company formed to publish the paper. The shares will be of a par value of $10.00 each.

Why do we make such an unparalleled offer? It is very simple.

You will have an interest in the success of the paper.

You will see that you can buy everything that you want to just as good advantage from advertisers in the FLORISTS' REVIEW as elsewhere and at the same time benefit yourself by increasing the earning power of your certificate.

This mutual arrangement cannot fail to bring to the paper a heavy advertising patronage, and as a result the stock represented by your certificate will earn good dividends.

And the more you buy of advertisers in the FLORISTS' REVIEW (always mentioning the paper) the larger your dividends will be.

You will get a better paper than has yet been published in this field, and a share of its earnings. Please let us hear from you by early mail.

FLORISTS' PUBLISHING COMPANY,

530-535 Caxton Building, - - - CHICAGO, ILL.

FIRE INSURANCE.

The meeting of the members of the Florists' Fire Association was fixed for December 6. No election was had and the meeting adjourned one week. The principal reason for the postponement was that a number of the persons whom we were instructed to vote for as directors had not filed their applications for insurance. The applications were not sent out until late and are coming in rapidly, but it takes time to round up matters.

As soon as sufficient applications are in, policies will be issued. A misunderstanding has arisen over the requirement that heating pipes shall be properly insulated. The present committee are of the opinion that steam pipes in contact with wood near the boiler when it is very dry are dangerous, but that in the greenhouses or away from the boiler, under ordinary circumstances are not dangerous.

The rate fixed is thought by some to be too high. It is believed by the committee that it is higher than future assessments should be or will be, but it is safer to start too high than too low, and all will benefit by it in the future if too high.

W. J. Vesey.

EACH WON AND YET LOST.

They both had stores in the same street.
And not infrequently they'd meet,
But as they passed they never spoke,
And each one wished the other broke.

The wish is father to the act they say,
And one day there was Cain to pay,
For in one window glared a sign,
"Ten cents a dozen for roses fine."

It didn't take the other long
To sing the next verse of the song.
A nickel a doz. was the price he set,
Announced in letters black as jet.

And so it went from day to day
'Till roses were cheaper than I dare to say,
And the earnings of years had gone up in smoke,
But each got his wish—the other was broke.

OUR GENERAL INTRODUCTION.

Send in your photographs, writing your name and address on the back, but please do not send any that must be returned. We have to cut them to arrange in the groups, and cannot use photos that must be returned uninjured.

THE NEW WHITE CARNATION...

"EVELINA"

has had many visitors who were delighted with her presence, and were so well pleased at her cheerful disposition and behavior that a second audience was requested.

She takes this opportunity of extending a most hearty invitation to all interested in her species to call upon her while in her city, and will be pleased to return the call at an early date, whenever an invitation is extended.

INTRODUCTION.

Is a pure white, of large size, good form and substance. An extraordinary strong Calyx, is fragrant, and borne on long stiff stems that always carry the bloom erect. It is a free, early, and continuous bloomer, is of good habit; a strong, free and healthy grower; last year quite a few plants produced from 30 to 50 flowers by the first of January. She won the Ward cup for best Commercial White at the Cincinnati meeting of the American Carnation Society; also a certificate of merit at the Indianapolis and St. Louis Chrysanthemum shows.

Have already booked orders for over 7,000 for Cincinnati alone, which proves the popularity of this sterling variety. You will make no mistake in giving it a trial. Orders filled strictly in rotation. Price: Strong well rooted cuttings, $10.00 per 100; $45.00 per 500; $80.00 per 1,000. Cash, or satisfactory reference, please.

R. WITTERSTAETTER,
Sedamsville, Ohio.

American Florist Co.

ADDRESS:

G. L. GRANT,
630 Caxton Building,
CHICAGO.

TORONTO.

The regular monthly meeting of the Horticultural Society was fairly well attended on Tuesday last. The paper, "Seasonable House Decoration," read by Mr. McP. Ross, was very interesting and instructive and evoked a good deal of discussion, but I notice that in many instances the amateurs seem afraid to talk and ask questions before so many gardeners and florists—afraid they should "put their foot in it," I suppose. This is a pity, because the gardeners and florists would only be too glad to hear them and answer them. Besides this questioning and answering helps to keep one's mental faculties bright and revives memories of things forgotten. It is good for both parties be the question ever so simple.

The advisability of giving plants to the public school children, to be grown by them for competition at the annual show, was also discussed at length, and it was the general opinion that something might be done in this line to the advantage of the show and to horticulture generally. A scheme will probably be drawn up by the society and the G. and F. Association jointly early next year, meanwhile the school authorities will be interviewed and other points picked up. With good management this would certainly be an efficient way of advertising the show all over the city and would make a ten-cent Saturday in all likelihood beat the record, besides doing a great deal of good in other ways.

Prospects for a very large trade during the Xmas holidays are exceedingly good. The season so far has been altogether better than we have experienced for a long time. May it keep on improving.

Mr. C. Tidy did some elaborate decorating for the Toronto Club ball last night, at which all the élite were present. The round of gaiety owing to the vice-regal presence in the city still continues. E.

A Misplaced Simile.

I to the florist one day went
And ordered quite a lot of roses
And to my love I had them sent
With verses like a swain composes.

Her cheek was to the rose compared
(I'm quite a clever fellow)
But none of this the florist knew—
The rose he sent was yellow.

The Cornell Widow.

SIMMONS'

New Light Colored

CARNATION

Mrs. S. A. Northway

We introduce this variety with even more confidence than we did Portia, Silver Spray, Tidal Wave, Daybreak, Rose Queen, or J. J. Harrison, knowing that it will become as great a cut flower variety as any of the above. Plant of strong, free growing habit, entirely free from disease or rust; large round high built flower with perfect calyx and extra strong and long stem. Color a beautiful soft shell pink becoming almost white when fully open.

Orders booked now and filled in rotation. We shall commence to ship soon after Jan'y 1st. Price, $10.00 per 100; $75.00 per 1000.

Geraniums. Md. Bruant, Md. Jaulen, Fleure Poitevine, J. Ricaud, and J. Sallier, 2¼-in. pot plants, $5.00 per 100. Rooted cuttings, $3.00 per 100; $25.00 per 1000. Our superb stock of all the finest sorts, 2¼-in. pot plants, named, $25.00; unnamed, $20.00 per 1000. Rooted cuttings, $12.50 per 1000.

Fuchsias. A grand lot of summered-over stock in small pots that will make early bloomers, $3.00 per 100.

All Rooted Cuttings Cash with Order.
Our Price List describes many other fine plants. Send for it.

W. P. SIMMONS & CO., - Geneva, Ohio.

The key to success is proper ventilation and watering. The key to proper ventilation is the Evans' Challenge Ventilating Apparatus. Works easily, does the work right, built to last, always satisfactory. No toy imitation but a machine to do its work and do it well. Much the cheapest in the end. Quaker City Machine Co., Richmond, Ind.

FLORISTS FERTILIZER

Made from **VIRGIN NIGHT SOIL** by steam process—**NOT Adulterated.** Complete fertilizer. Soluble, quick in action. Combines all the Elements for Nutrition of Plants. Pleasant to handle. Try Sample Bag, 100 lbs., $1.50.

STANDARD FERTILIZER CO., Inc.

1822 Filbert Street, PHILADELPHIA.

Extra select stock at Kennicott Bros. Co., Chicago. All flowers in season at lowest market rates.

Carnations

New Carnations.

White Cloud. An excellent commercial white, strong, vigorous habit, large fragrant flower, long, strong stem, early and constant bloomer. A. C. S. certificate.

Gold Nugget. Conceded the best yellow ever grown, color clear and deep, only slightly marked with red. Large flower, strong stems and vigorous habit. Early and continuous bloomer. Missed A. C. S. certificate by one point for lack of fragrance.

New York (Ward). Bright cerise pink, strong vigorous habit, constant bloomer. Certificate.

Mrs. James Dean (Ward). Clear silvery pink, strong vigorous habit large flower, constant bloomer. Certificate.

John Young (Ward). White deeply fringed fragrant flowers, strong grower, free bloomer. A first class commercial variety.

Bon Ton (Ward). Bright warm scarlet, strong habit resembling Portia, large flower, stiff stem.

Prices for above varieties: $2.00 per doz.; $10.00 per 100; $75.00 per 1000.

We have all the principal 1897 Novelties and other standard varieties at lowest prices

New Chrysanthemums.

Mrs. C. H. Peirce. A soft deep yellow of greatest commercial value. Large flower of globular form, with straight petals slightly curved at tip. Full to center and of greatest substance, good stem and heavy foliage. Recommended for certificate by N. C. S., scoring commercial scale: Boston 91, Philadelphia 90, Cincinnati 87, Chicago 90.
35c each; $3.50 per doz.; $25.00 per 100.

Snow Queen. A commercial white. Large, nicely finished rounded flower, full to center, good substance, stem and foliage. N. C. S. certificate. 50c each; $5.00 per doz.; $35.00 per 100.

Merry Christmas. The best and latest of all whites. A well formed flower of style of Mutual Friend but of much greater substance, and full to center. Dec. 20th to Jan. 1st.
35c each; $3.50 per doz.; $25.00 per 100.

5 "	"	18	"	"				50	" "	5.00	"

For a full line Decorative Plants and General Florists' stock, see our QUARTERLY WHOLESALE LIST of September 1st. If you have no copy of this or of our SPECIAL DECEMBER LIST of NEW CROP FLOWER SEEDS, which have been mailed to every Florist in the country, a postal card will bring duplicates.

HENRY A. DREER, 714 Chestnut St., Philadelphia.

TELEGRAPH CODE.

In telegraphing orders to any of the wholesale dealers in cut flowers use the following code:

Assume—Do not answer if cannot fill order.
Abrogate—In case you cannot fill order, telegraph at once.
Anticipate—Answer at once, stating whether you can or cannot fill order.
Ambition—If you can only partially fill order, do so, and reply, stating what.
Admiral—Order must be sent on train mentioned only.
Ambulance—Want all of order filled or none, and prompt answer back.
Adjacent—If cannot send on train mentioned, next one will do.
Affable—Send prepaid by baggage master, if no express messenger on train.
Decorate—If cannot send all on train mentioned, send all you can, and send balance on next train.
Admission—This order is a substitute for my regular order.
Dancing—If cannot fill order exactly as specified, you may substitute according to your best judgment.
Ancestor—This order is an addition to my regular order.
Durable—Colored flowers must not be substituted for white.
Affection—Fill if possible, even at extra expense.
Fabricate—Flowers ordered are to be re-shipped to a distance, therefore buds must be cut specially close.
Fortunate—Select extra stock and charge accordingly.
Devotion—For cheap work, and can use second-class flowers, if at reduced price.
Flattery—If price has advanced since last quotation, do not send goods, but telegraph.
Forgery—This order countermands all previous orders.
Formation—Add these items to the order which you already have, but in case first order is already shipped, cancel this addition.
Flamingo—We are in a bad pinch; send us something to help us out, even if of poor quality.
Flocking—Have sent mail order; if not yet received, send following at once, and cancel mail order when received.
Foraging—This order includes all items previously ordered and wanted for this date.
Superior—Can use something especially fine, and am willing to pay accordingly.
Skip—If you are out, buy the best you can; we accept risk of getting "pickled" stock.
Corporal—If cannot send on night train, morning train will do.

THE CODE BELOW WILL BE USED IN ANSWERING YOU, WHEN NECESSARY.

Elope—Cannot fill your order to-day. Stock is scarce. Have tried to buy at other houses for you.
Lecture—Our store was closed yesterday when your telegram came. Received it this morning. Will ship by first train to-day, unless countermanded at once.
Willing—Cannot ship on train mentioned. Will send on next train possible to-day.
Eclipse—Will send part of your order. Balance scarce. Cannot get it at any price to-day.
Artistic—Cannot fill order to-day, if you want order filled (same order) to-morrow, wire us at once.
Favorite—Stock very poor, none better to be had. Will ship unless countermanded by..... o'clock.
Fundament—Stock named in this telegram has been sent, and balance, unless countermanded by telegram, will be sent on..... ...

KEEP THE DEALERS POSTED.

Keep the dealer from whom you order flowers fully posted as to the sort of stock for which you have the largest sale. Write him as fully as possible when you have time to devote to the matter. Keep him fully advised as to the needs of your trade. He will then know much better how to fill your telegraphic orders. He will know whether to send you the best in the market at the top price or to send you a fair grade at a more moderate price. The dealer is anxious to please you but often his information is meagre. Make this information as full as possible by mail and your telegraphic orders will be filled more to your satisfaction.

ROCHESTER, N. Y.

Trade Conditions.

Moderate and mostly very pleasant weather since Thanksgiving had a beneficial influence on the general trade, though we cannot boast of very prosperous times for the present season. No special big event occurred this fall so far; a few weddings and receptions were well divided among the different firms, none being very elaborate or high priced. As everybody's chrysanthemums are now all used up, other stock has advanced slightly above former prices, and more of it is used, but the present supply is not adequate to meet the demand. Roses are only fairly good here. Carnations are the only article which may be called plentiful, but none are wasted. Violets are still very scarce, the month of December having always been noted here for a deficiency in this respect. Harrisii are in, so are good Romans and paper whites in quantity. Valleys are not so good as they might be, but as not too many are offered, all go off readily.

That Visit of "W. S."

Mr. W. S., in his report of two weeks ago, good naturedly called our city, "flour (not flower) city," and I do not know but he is perfectly right this time, for we are in reality very short of posies of all kinds this winter, and apparently have no earthly right to assume such a boasting appellation, in winter at least; but pay us a visit in summer, and behold the out-door display then everywhere, and especially on the acres in Greece where the flower seeds are grown, and where dahlias, gladiolus and tuberoses, et cetera, can be cut by the wagon load, then our friend S. may decide whether we are entitled to that name at least for a few months in the year. We were exceedingly sorry that Mr. S. could not find time to call on us on the hill, or was he scared by the torn-up street a little distance from our place?

Retailers Keep Busy.

Much hard and steady work is being done now daily by all the retailers; not only are they busy decorating their stores and preparing plants for the prospective holiday trade, but a great number of holly and lycopodium wreaths have to be made up for the occasion, and every spare moment is utilized to increase the stock in this line. The first shipment of holly is fairly good, but the warm weather has a bad effect on its keeping quality, and trouble is expected. K.

BALTIMORE.

Everybody Busy Except the Florist.

The spirit of Christmas seems to pervade nearly all other lines of business but that of our own. Clear and mild weather has had the effect of bringing out a miscellaneous throng of shoppers who daily fill the thoroughfares and lend an invigorating air of business to the crowded stores. The fakirs, beggars, and even the police are busy; but with the florist—poor, deserving dispensers of nature's ever beautiful Flora, this holiday boom is yet an expected guest, and as a prelude to this "rush" things have now relapsed into a semi-dormant condition.

Social events, such as banquets, germans, teas, receptions, etc., have all been more or less represented this week and in a measure atoned for this otherwise unseasonable dullness. The windows have never looked prettier any time this season than they do now. Choice roses of all kinds, mignonette, Harrisiis, orchids, violets, valley, hyacinths, narcissus and in fact every available novelty is being tastefully displayed to catch the public's blind yet critical eye. Holly has been in for several weeks, and bids fair this season to be a popular decorative fad.

Advance Christmas Orders.

It is really too early to write intelligently upon the subject of Christmas trade, yet from the reports from our commission houses stock will be scarce and prices high. They have already booked in advance a number of large orders which in a measure go to prove that the retailers are living in anticipation of great results. No one can ever tell though, as the people either regard flowers as an after consideration, or else think a florist's order-book is as unstable and perishable as his goods, for they nearly always put off ordering until the last day or so. Those who cater to the market trade are of late complaining very much. Sales have fallen off considerably, for money is scarce and the buyers are of the cheaper class. In consequence of this, a "cut-price war" among the stall-holders has been the result; some even going so far as to sell at only twenty per cent profit, which not only does them more harm than good, but causes a demoralizing effect upon the trade of their competitors who remain staunch, and hold out for legitimate prices.

Meeting of Gardeners' Club December 13th.

We are anxiously awaiting the arrival of our Washington guests, who are to attend the Gardeners' Club meeting of the 13th inst. Thanks to the courtesy of their correspondent, the object of this delegation, was explained in the last issue of the Florists' Review. The Baltimore boys have always been fast friends, and in sympathy with our forty-mile neighbors. The writer feels confident that this occasion will prove no exception to the rule, and that their cause will receive our entire and hearty support.

Jadoo Fibre and Jadoo Liquid

As well as plants grown in them have been awarded prizes as follows:

National Chrysanthemum Society, London, England, Nov., 1895.
Devon and Exeter Horticultural Society.
Torquay Horticultural Society.
Liverpool Horticultural Society.
Royal Aquarium, Westminster, London.
New Orleans Horticultural Society, Nov., 1896, 11 Firsts and 3 Second Prizes.
Exeter Horticultural Society, April, 1897.
Bordeaux Agricultural College, June, 1897.
Providence, Society of American Florists, August, 1897. (Honorable mention and recommendation for trial.)
The Monmouth County Horticultural Society, Sept., 1897. First Prize for 6 Specimen Crotons; First Prize for Best Centre Piece for Table; First Prize for 6 Specimen Plants of Dracaenas; Special Certificate of Merit for 6 Phrynium Variegatum; Special Certificate of Merit for Rustic Work with plants grown in Jadoo Fibre.
Society of Vine Culture, Cognac, France, Sept., 1897.
Durban and Coast Agricultural Society, South Africa, Sept., 1897.
Pennsylvania Horticultural Society, Philadelphia, Nov. 1897. 8 First Prizes for Chrysanthemums; 1 Second Prize for Chrysanthemums; 2 Prizes for Crotons; 1 First Prize for Asparagus Sprengerii; 1 Second Prize for Asparagus Sprengerii; 1 Special Prize for Dracaenas; 1 Prize for Window Box filled with Ornamental Foliage Plants.
Bordeaux, France, Nov., 1897. Silver Medal for Chrysanthemums.
Birmingham, England (Bingley Hall), Nov., 1897. Special Certificate of Merit for Jadoo Fibre and Liquid and First Prize for Cyclamens.

From the Pennrock Co., Wilmington, Del., winners of the largest Prize at the Exhibition of Pennsylvania Horticultural Society, Nov., 1897

"In regard to your inquiry about Jadoo Liquid and Fibre we beg to state that we have used it this last season with good results. We grew our Exhibition plants of Chrysanthemums, which took first prize at the Pennsylvania Show, **in soil up to ten-inch pots. In those sized pots the plants became very sick and all the leaves turned yellow. We then shifted them into Jadoo Fibre and the result was simply wonderful. The plants quickly regained lost vigor and the leaves gradually assumed their natural green color. On becoming pot bound we used the Liquid twice a week and this was all the fertilizer we used. We have had excellent results also with Asparagus Sprengerii, Crotons and large Ferns grown in the Fibre and shall use it more extensively hereafter."**

We will offer Cash Premiums at all Exhibitions in 1898 for all Plants that are grown in "JADOO FIBRE" or that are watered with "JADOO LIQUID," that win scheduled FIRST PRIZES.

JADOO.

We hear additional reports of the effectiveness of Jadoo, and it appears that the Jadoo liquid can be used on plants growing in earth with almost as good effect as if the plants were growing in the fibre. A gallon of the liquid is diluted with water to make forty-eight gallons and used as any other liquid fertilizer would be.

The advantage of the fibre is, it seems, in enabling the grower to produce a larger plant in a small pot than where soil is used. This latter point will undoubtedly make the fibre very useful for growing plants to be used in table decorations and other places where a small pot is desirable. It should also prove very valuable for filling ferneries, window boxes, hanging baskets, etc., as the fibre absorbs and holds water much better than soil. Let us hope that the problem of successfully meeting the unfavorable conditions to which the average house plant is subjected has been solved. If it has, many a poor florist will be exceedingly thankful and will look forward with less trepidation to the return visit of a customer who has recently invested in a fernery or other plant arrangement.

Vol. 1. CHICAGO AND NEW YORK, DECEMBER 23, 1897. No. 4.

PACKING AS A FINE ART.

The old adage used to be, "First catch your hare, then cook him;" the new one applicable to my article is, "First get your order, then pack it," and when I say pack it, I mean pack it properly. One of the most essential points after receiving an order is to see that the above new adage is carried out, not extravagantly, as I have seen some shipments, but carefully and judiciously. For instance, a basket or case of plants going fifteen or twenty miles away, does not require the elaborate packing of a shipment across the continent or across the ocean. Many a kick has been registered about bad packing, and it exhibits the character of a firm whether the arrival of a shipment of plants is good, bad or indifferent. An order for goods, properly filled, is often spoiled by bad or careless packing; and good packing is as necessary as good stock.

A good packer, like the poet, is "born, not made," and is, indeed, worthy of his hire. Until within a few years a regular packing staff was rather the exception than the rule; now it is a necessary adjunct to all firms doing or contemplating a shipping business, more specially applied to palm and fern growers, which are daily increasing in number, and are scattered over the States of the Union. The time for "any old way," and "any old thing" to pack in, is, I hope, relegated to the past. In future set aside a part of your establishment for a packing "room" or "shed," whichever you like.

One patterned after our illustration will give a fair idea. That it should be roomy goes without saying, and no convenience or labor-saving device should be omitted. A pair of scales will facilitate matters at the express office or freight depot, and will be a check on both. Mark the weight of each case upon it before it leaves the place, and see that every detail of address and shipping instructions are marked also, clearly and distinctly.

As to material, such as boxes, lumber, excelsior, nails, string, paper, etc., the location will determine the price; get price and buy in quantity; don't buy in "dribbles."

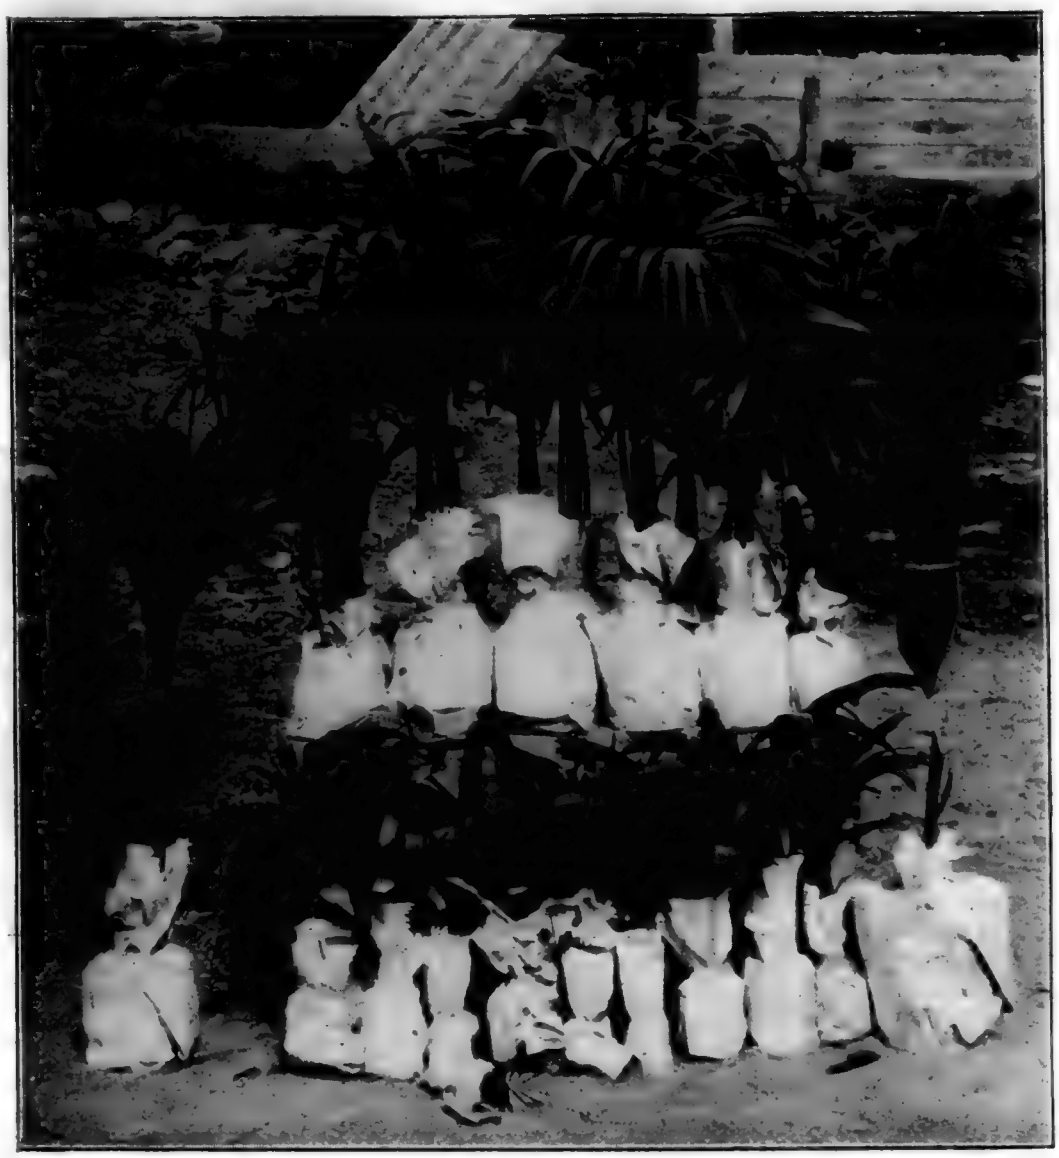

Illustration No. 1. System used for packing plants "out of pots," either for "upright" or "slatted" systems.

Different seasons of the year determine different methods, though the principle remains the same. In my article I shall try to confine myself to fall and winter packing; thoroughness is the key-note of all. The two principal systems I will call "slatted" and "upright" packing, describing the former first.

In picking out your order, which do personally if you can, place yourself in the "buyer's" position, and select only the best every time; the "smaller" stock

Illustration No. 2. System used for packing plants in pots when slatted system is used.

will be "ready" for the next customer. Some stock you can pick out as they come, and some must be selected; like orchids and specimen palms. Perfect plants are what your customer wants. His customers are critical, and he must necessarily be so also. Start your orders on the left side of the left bench, and work down. When I was an apprentice my employer used to drill it into me to start from the left; it was the right way, he said. When you write or walk you start left, and the sun goes down from left to right; plants set on benches should always be started that way. Orders should be separated by boards, and a slip or tag with purchaser's name attached.

Your order is now on the bench, and your order will read "in" or "out of pots." If "out of pots," set your men to work knocking out and wrapping, taking off the "shoulders" of the "ball." If the weather is fairly mild, wrap the ball and tie as in illustration No. 1. If cold, use paper for wrapping (whether the weather is freezing or otherwise, determining the thickness), as in illustration No. 2. The excelsior seen in this illustration is used when plants are packed in pots. Some firms use it either way, but it seems unnecessary to me.

Your order being ready to "box up," you place your plants in rows. We will say they are 6-inch pots, and you are going to "slat" them in (see illustration No. 3.) If "out of pots," and they have been reduced, put seven in a row; this will give your box inside a measurement of three feet. Next, take the height of your plants; if three feet high, and you want to make two layers each end, a box five feet long will do; 112 such plants would require a depth of two feet. This is but an example, and when mixed sizes are packed more computation is necessary; but it "comes easy" when you become expert, and an experienced man can tell at a glance what size box is required.

Your plants measured and your box selected or made, you line it according to weather. Don't stint. Old newspaper, bought by the ton, is very cheap, and a few extra sheets will save you a big kick, and maybe a "replace," or your customer. The slats, 1 x 2, or heavier if necessary, should be sawn into lengths, and used as in illustrations 3 and 4. Pack tight; do not leave any room to slip or budge. Drive your nails in three-fourths way first, then, with your helper, hammer in both sides at once; this seems unreasonable, but is necessary, as experience will teach you. Close in your paper, and put on lid, and mark immediately, or possibly you may forget whose order it is. This is the slatted system, which can be enlarged on with small ferns and small palms, etc., by making four distinct sets of layers, "slatted" as in the foregoing.

The "upright" system, as seen in illustration 5, is simpler, and is better for short distances perhaps. Many freight agents will not, however, take this under the "twenty per cent less" clause applied to plants "properly boxed and closed," though, when finished, it appears as in illustration 6. This box contains twelve Adiantum Farleyense, 7-inch pots, "in pots." When plants are shipped in pots the measurement should be increased, good allowance being made for the excelsior packing. A slat between each row above the box will hold them in place. This box should be at least 36x28 inches inside measurement. A fair amount of room should be given; this will save your pots, or they will be broken in transit. A slight scantling should be used as seen to protect tops. Handles to your boxes will also insure better treatment from the expressmen, and will counteract a little of the "dumping" and "somersaulting" of our mutual enemy, though he is not so bad as painted.

In packing palms this way you can do a little "piling," if done judiciously.

Illustration No. 3. System of "slatted" packing, first layer.

However, a volume might be written on this one subject. Experience is the best teacher, and exercise of good common horse sense leads to success. H. A. B.

BUILDING AND HEATING.

At this season of the year, many florists are planning for the enlargement of their greenhouse ranges, and some are making preparations for leaving the service of others and branching out into a business for themselves, and it is to such that I would address a few words of caution and suggestion.

How often, in our travels, do we see nice appearing ranges of glass, which, when we look into their arrangement relative to convenience, general adaptability, and labor-saving possibilities, are found to be sadly deficient in these important requirements; or, perhaps we visit ranges which may boast of some of these advantages, yet in their general details of construction are so defective as to be injurious to the buildings themselves, or to the plants to be grown therein. These conditions should not, and need not be; the cause being the giving of too

Illustration No. 4. Finished for boxing up.

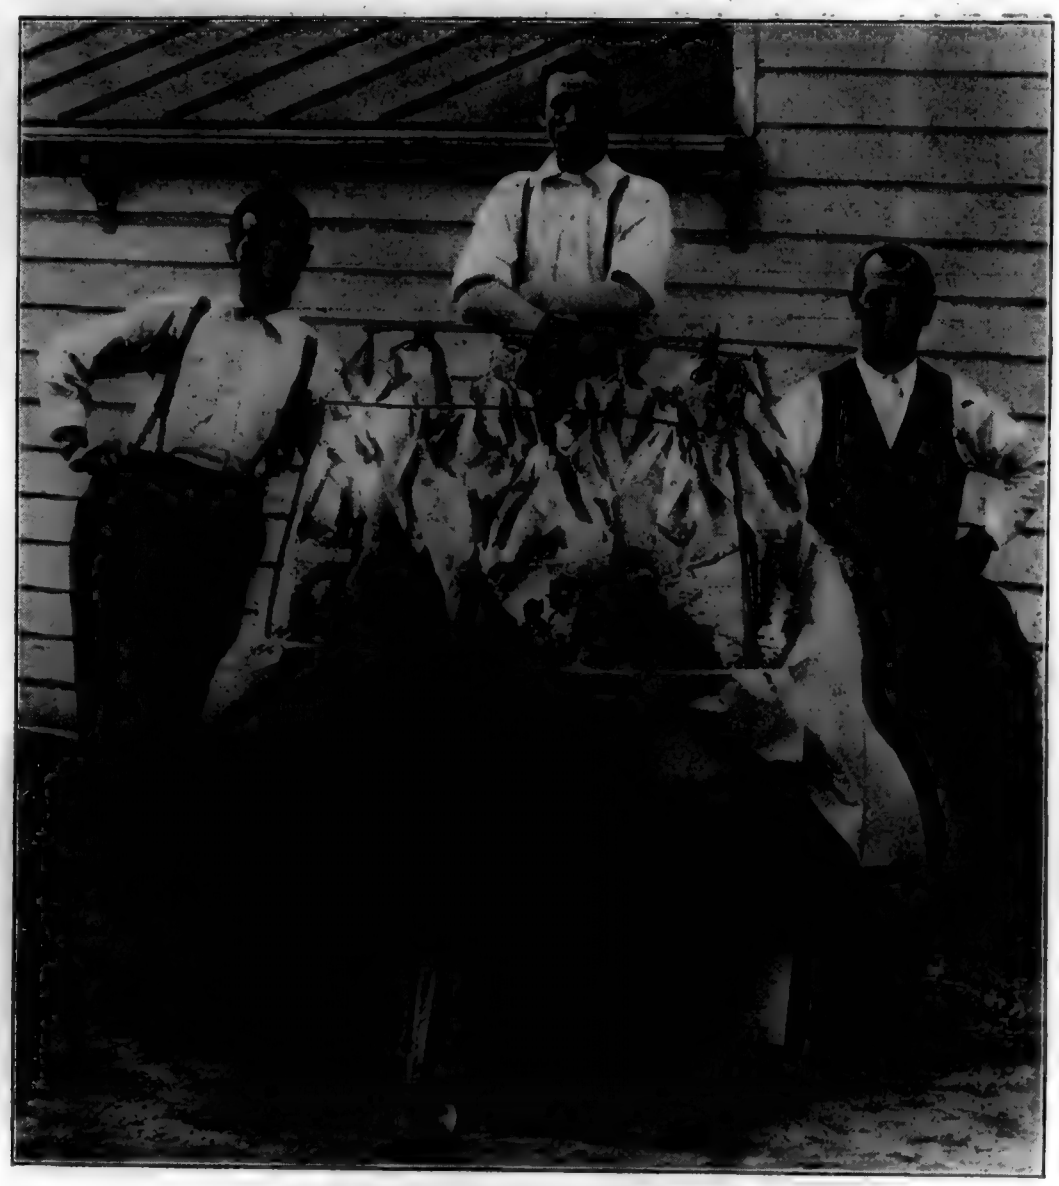

Illustration No. 5. System of upright packing, ready for "closing in."

little thought and consideration to vital points at the first starting out.

You are going into business to grow for the market a certain class of plants or blooms, and we will assume that you are thoroughly conversant with and experienced in their requirements in regard to light, heat, etc., but it is very doubtful if you are thoroughly competent to decide as to the most perfect and economical means of securing these conditions; then again, you may have in mind a plan of an arrangement of houses which you think will please you, but are you sufficiently experienced in the details of planning, building, heating and general equipment of such structures as to be sure that you are not going to come in contact with some unlooked for complications which will add materially to the cost of the work, or detract greatly from some one or more of the advantages which you were aiming for. For instance, in the matter of clothing, you know exactly what you want and how you want it to fit, but you would make a sorry looking suit if you attempted to cut out and make it yourself; or if you want to build a dwelling, you go to an experienced architect and talk over your requirements with him, but you leave the detail planning to him, or in other words, you live up to the old saying "every man to his trade," and so you should do when about to enlarge or develop a range of greenhouses. If you will steer clear of pitfalls and reap the benefit of the numberless economies which are present in a perfectly designed and constructed range of glass, you must unfold your ideas and wishes to some competent greenhouse architect, and with his help and suggestion, reap benefits which you would in all probability otherwise lose.

In planning for a new range, consider well the accessibility to markets, and with this assured, a suitable building site. In considering a site, we should look for one having perfect drainage, and ample sunlight, and if possible a windbreak either of trees or hill on the northwest; also see that you can secure a never failing supply of water. The ideal location is one having a fall towards the south of from one to five inches in a foot; this insures good drainage, ample sunlight, a saving of ground space by allowing the houses to be built closer together without one shading the other, and many other advantages which will be discussed at some future time.

After having secured a suitable site, we must consider the general plan and design, but these will necessarily vary according to the class of stock you intend to grow, and cannot therefore be considered at this time, but it will be my pleasure to give these matters consider-

ation in the future issues of the Florists' Review; and I will at all times be pleased to reply through the columns of this paper to any questions relative to the design, arrangement or heating of greenhouses for any purpose, which our readers may from time to time desire.

Henry W. Gibbons.

New York.

Illustration No. 6. "Closed in." Packing as a fine art.

POINSETTIAS.

One of the most brilliant window decorations I have seen in a long time was on view recently at one of the leading Broadway stores in New York, poinsettias being the chief feature. Florists here have hardly yet appreciated this plant fully for midwinter decorations, in part because roses are to be had in abundance in the desired tones of brightness.

On the other side, in London especially, the poinsettia is an indispensable factor in the midwinter trade, and right well it comes after the chrysanthemums, opening in all its brightness of color beneath leaden skies that hardly permit a rose or carnation to expand. It has everything to commend it to favorable notice here likewise, either in a cut state or as a pot plant, and stands unrivalled in color brilliancy, meeting the wants of the most fastidious in its decisive tones. Further, the public can have it as they want it, in pots or cut, with stems of any length from one foot up to six feet, and with heads or bracts from six inches to eighteen inches in diameter. When one has once become familiar with the routine of cultural details it cannot be called a difficult subject to grow successfully.

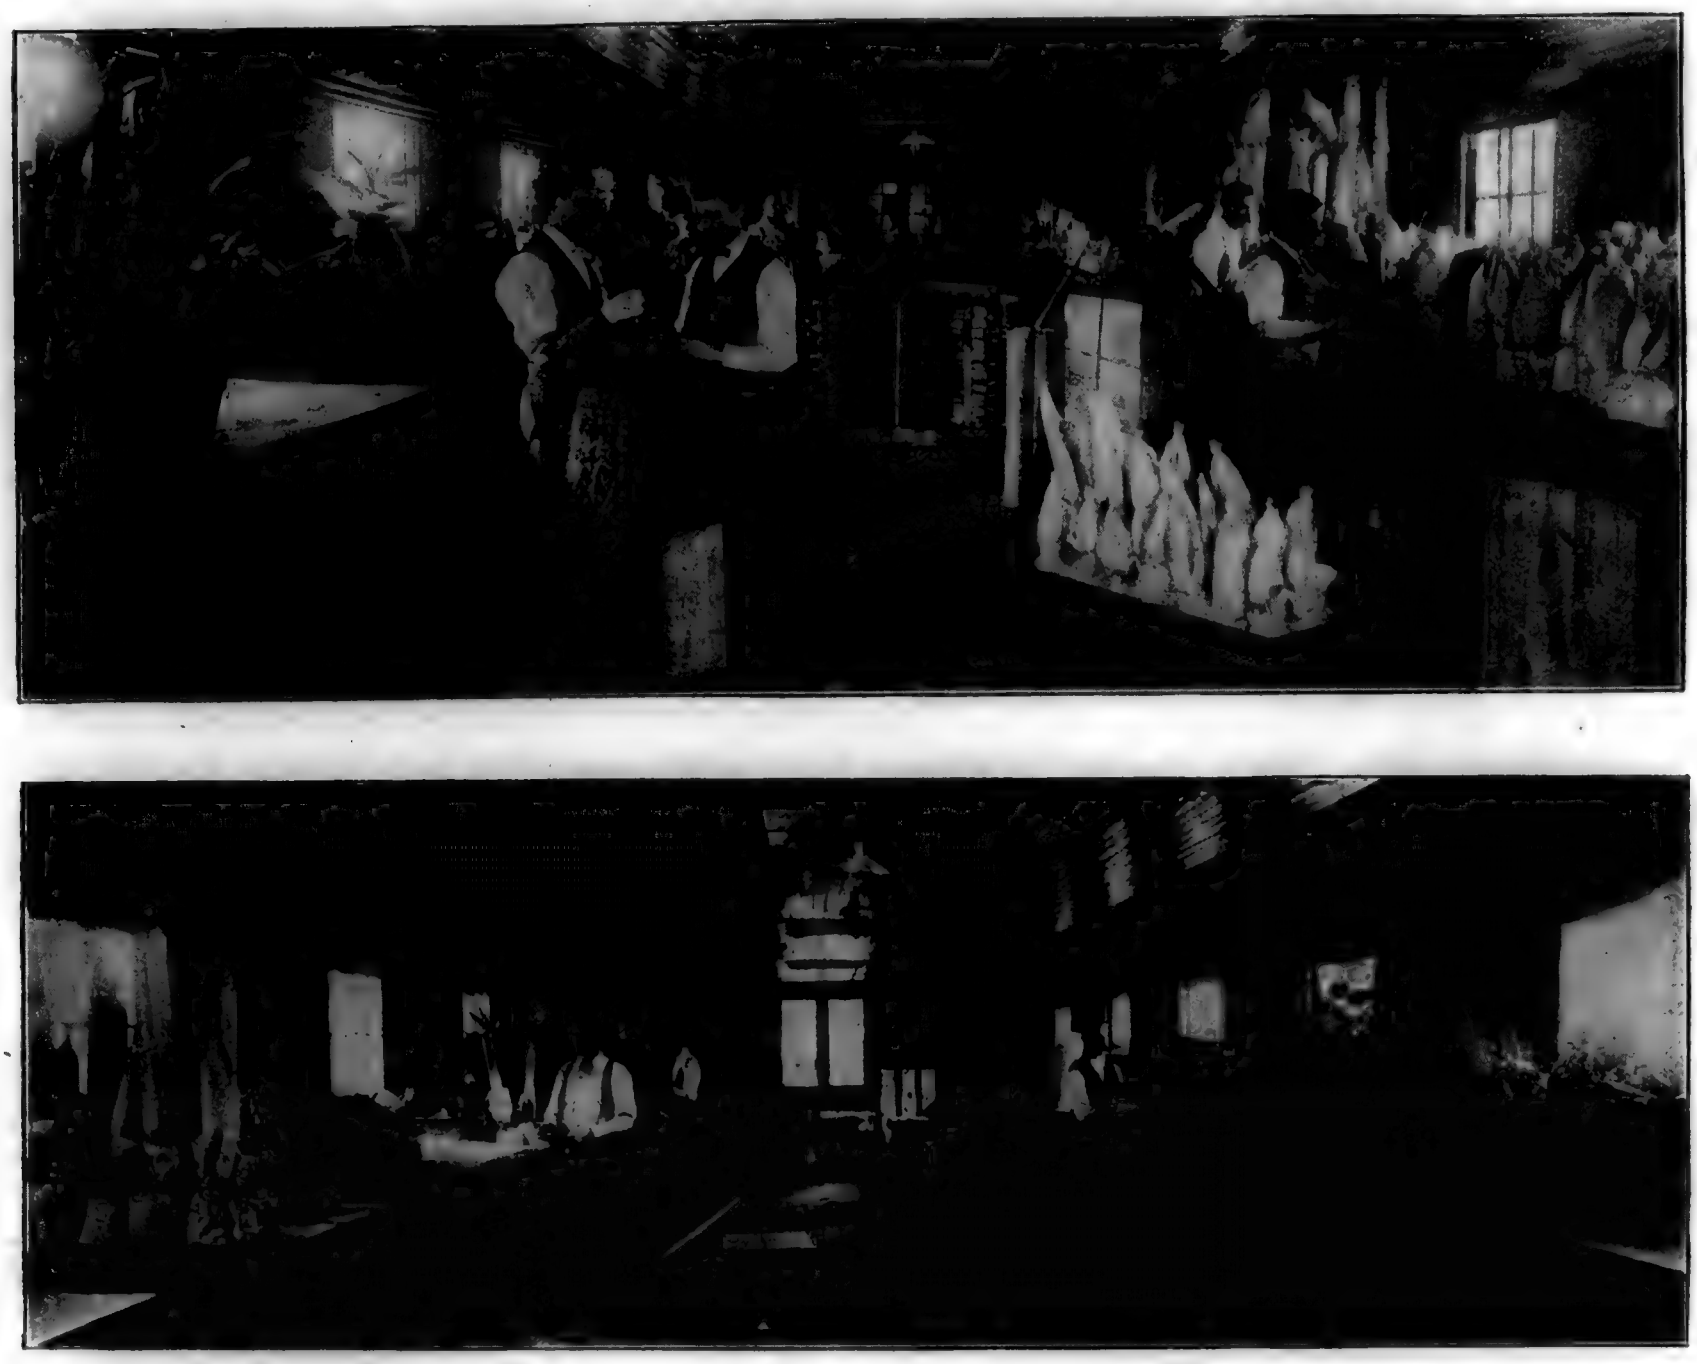
In "Nicholson's Dictionary of Gardening," poinsettia is now classed with the euphorbias, where doubtless it belongs, as in common with other euphorbias the plant when bruised or cut emits a milk-like juice profusely, and thanks to this it enjoys a considerable immunity from plant pests generally, insects ever ready to profit by our best endeavors usually giving this one a wide berth because it is distasteful to their nice discriminating tastes. I will not promise, however, that a taste for it may not be acquired should it be extensively grown and become the first choice.

There is one class of growers to whom the poinsettia may be specially recommended, those who do a lot of spring forcing, because it can be handled in nice rotation. It has a growing season and a resting season of most complete character, so that when at rest it can be conveniently stored away in otherwise unprofitable space.

Assuming that the flowers are now being cut and marketed, the plants to be kept for stock must be gradually dried off by withholding water and may be stored away under the greenhouse bench or in some convenient position, where they can rest completely in a temperature of about 55°, for a period of from three to four months.

When the spring stock is disposed of, say the month of May, is quite early enough to begin growing operations. The plants must then be brought forward by giving them water and a little hotter temperature of about 65° at night with a rise in proportion by day. Young shoots will soon appear and must be watched closely from now onwards, as, if allowed to become too long before cuttings are taken, owing to their softness and the great exudation of juice that follows the cutting, a large proportion may be lost. The greatest success lies in and safety may be ensured by taking the cuttings off with a little heel of the old wood when they have attained a length of from four to six inches. Cuttings taken in this way, inserted in the propagating bed, watered slightly, shaded, and treated to a temperature of about 70° should be abundantly rooted in three weeks, when they may be potted up and gradually inured to full light to keep them stocky with short jointed growth.

Cuttings in their first year are best grown right on without stopping to form single stemmed plants, and naturally from these first cuttings the grower will secure his longest stems and largest bracts. When the roots have taken hold of the soil and the plants are growing vigorously, they will need a shift into a larger sized pot, but if wanted for cutting only it would be better to plant them out on a bench, this form of culture suiting the plant quite well. When well established they will need abundance of water at the root but never in excess, nor must they ever suffer for want of it, either condition rapidly resulting in a loss of many of the lower leaves with consequent disfigurement and diminished selling value later.



Air may be admitted to the house freely and the plants should be sprayed overhead morning and evening, whilst slight shading on the glass may be necessary to prevent the leaves burning but must never be excessive, or long soft growth will result with poor small heads ultimately. Along towards the end of August overhead spraying may cease, but air in abundance should be given by day with an object of consolidating or ripening the wood, still guarding against excess or deficiency of water at the root.

This batch of plants may be had ready for the market immediately chrysanthemums are past. From later struck cuttings similarly treated other batches may be brought along to continue the supply for Christmas and onwards into the new year. Some of these later plants may be grown on in 6-inch pots making admirable material for the Christmas market, and the florist who has much decorative work at that season should find them of great service, as they arrange admirably with palms and ferns, and their brightness is especially fitted for the festive season, when they can be most extensively used.

The plant is really amenable to the most varied treatment. For example, excellent pot plants with fine heads on a foot of stem may be secured by rooting the tops of plants grown in the manner above described. To secure these about the middle or end of September, select those to be treated and about nine inches below the growing point cut the shoot about half through at the joint. It will bleed somewhat, though not to an injurious extent and in ten days a little callous will have formed when the shoot may be severed entirely, treated as advised for cuttings, putting the shoots singly in 6-inch pots. If kept close for a time, root growth will soon be abundant, after which the plants should be grown on in the ordinary way.

Similar dwarf pot plants may be obtained from cuttings taken from stock plants during August. To retard any batches for late work the plants will easily bear comparatively cool night treatment in a temperature of about 50°, but whether early or late, when once the terminal bract appears the plants should have brisk warm treatment with a night temperature of not less than 65°, to ensure good development, with slight overhead sprayings as external conditions suggest.

All this so far applies to young stock, but the plant's possibilities are by no means exhausted if the grower so de-

Two views of the interior of a well appointed packing shed.

sires, and for cutting alone there are advantages in it, the old stock plants may be kept, stored for the winter and early spring and planted on the benches again to grow on. Such old plants, in proportion to their strength, will carry three to five shoots in their second year and finish them all with bracts as large as those from single stemmed plants in their first year. I have seen old plants that have stood several years in one spot, till their stem became six inches or more in circumference at its base, and from these a dozen shoots were taken up, tied out and perfected fine bracts.

Thus the plant can be adapted to one's convenience, though probably in a general way removal and storage would be practiced, otherwise much valuable space would be idle when the plants were resting where grown. On the other hand, as for example, at the ends of houses, some might be planted out and left, thus utilizing space often wasted. The poinsettia is a Mexican shrub but has been in cultivation under glass more than sixty years.

A. HERRINGTON.

Madison, N. J.

DIELYTRA, OR DICENTRA SPECTABILIS FOR FORCING.

Now that hardy flowers which will bear forcing are being sought for, this beautiful old favorite of gardens might be brought into the prominence it deserves. It is bound to be appreciated, grown in this way, having long since taken a prominent place in the outdoor garden, and probably in these latitudes we shall get more satisfaction and beauty from it grown in this way, as owing to its propensity for early growth and the vexatiousness of spring frosts, it is no unusual occurrence to see it nipped in the bud and its display for the season sadly marred in consequence.

Seen in the full vigor of unchecked growth and blossom, few outdoor flowers can compare with it, as it combines the graceful growth and airy elegance of a fern with long arching sprays of blossoms unique in form and of a bright cheerful pink color. Both its popular names of "Bleeding Heart" and "Dutchman's Breeches" have a distinct significance, aptly applying to its quaint form. It has been a favorite forcing plant in European gardens for many years and I can recall memories of handsome specimens filling large tubs, though the flowers lacked somewhat of their wonted color brightness as compared with those of open air growth. Here, however, with very much more sun at forcing times I should anticipate more color, but in any case it could not fail to please. To have it fine and in abundance for the Easter trade is a comparatively easy matter.

Old plants are readily increased by division, strong clumps consisting of many crowns, and it is possible to divide up to single crowns and secure roots with each. To force in quantity, however, and of good marketable size, I would give preference to plants of from five to eight strong crowns which might be potted into 6-inch and 8-inch pots, respectively, and such as these should find a ready sale. No added foliage is here needed to set off or bring out the charms of the flowers. Owing to its readiness of increase a good stock of forcing material could be grown at home in the growing plot as I have previously recommended, and such stock

more than repays the labor involved in its preparation when compared with what can be secured by importation through the usual channels.

For forcing the plants should be potted up in the fall and may be placed outside again in a bed of ashes, or better still in a cold frame where they can have protection if needed and be easily got at when wanted. It should not be submitted to hard forcing however, or much of its beauty will otherwise be lost. Few plants respond more readily to slight increase of temperature, and forcing temperature for it need not be many degrees in excess of what is normal for its outside growth. From 50° to 55° will be found to suit it admirably for night with a slight rise by day, keeping the plants in a position exposed to the fullest light and giving abundance of water at the root. Well grown plants should be furnished with foliage down to their base, the arching sprays of blossom well distributed all over, and such a specimen set in a jardiniere is one of the prettiest room plants that the most fastidious could desire.

Madison, N. J. A. Herrington.

CARNATIONS

WATERING.

Proper ventilation and abundance of fresh air will keep the plants in a healthy condition; judicious watering and feeding will make them grow. We learn from field culture what effects too much and not enough water will have on the plants. Under glass, watering is more completely under our control than is temperature, and any harm arising to the plants from this source deserves no other name than neglect or ignorance; often when arising from both causes we hear the excusing self-satisfying phrase, "good enough." Nothing is good enough unless done to the best ability with which it can be done.

As much as the carnation delights in a light, buoyant atmosphere, it likes a moist soil, though not wet and soggy. To attain and keep that proper degree of moisture through the full depth of the soil, the bench must have good drainage to allow the surplus water to pass off. Drainage is a safeguard, but should not be misused, for too much water draining through the soil will also wash and leach out some of the nourishment contained therein. On the other hand when not enough, the lower strata of the soil are left dry, and the roots passing through this dry soil are rendered unable to support the plant. Such a condition is generally shown by dry points on the leaves. Again, one must learn to know the retentiveness of his soil, and be guided by this, coupled with a close observation and watchfulness "when" to water. I would call it judicious watering to give it when needed, and in the required quantity; and further the water should not be colder than the temperature of the house; a little warmer will be of marked benefit.

It takes a practiced hand to give the required quantity at all times. I have the watering done by two men exclusively. Now with all the teaching and cautioning they have fallen into the habit of pushing the hose back and forth across the bench at a certain gait. When told to water a little heavier or lighter, they observe it for a short time but soon fall into their usual gait again. Now singularly, one waters a little heavier, the other a little lighter, so when I make my rounds and find that one bench or another needs necessarily more or less water I send the corresponding man.

There is no worse practice than watering at regular intervals. The amount of water should depend on sunny or cloudy weather, and the dryness or humidity of the atmosphere. A careful grower will go through his houses every morning and examine to ascertain where water is needed.

The next important point is "how" to water. Dr. Arthur was the first in making his investigations of rust and bacteriosis, to caution against overhead watering, recommending keeping the foliage dry, as much as possible, as the best safeguard against fungous and bacterial diseases. I have practiced the policy and advocated same ever since. At our place no watering overhead is allowed from the time the plants have become fully established on the benches in the fall, until May or June the next year.

The water is applied with the hose, pushing the same across the bench between the rows. We use a sprinkler attached to the hose, which distributes the water over the soil without spraying up into the foliage. This mode of watering requires more time, for to prevent washing we cannot make use of the full stream of water at our disposal, as otherwise we could with the full stream sprinkled over the plants. But we consider this time well spent for the very satisfactory results obtained as regards health and growth of the plants, not to mention that no flowers will be spoiled by the water.

But here some will say, if we do not syringe the plants (and the flowers in the bargain,) they will be spoiled by red spider. To those I will say that my experience, where proper temperature, good ventilation and judicious watering and feeding are observed, no red spider will appear. Every measure that promotes health and growth is a measure to prevent insects and disease.

In connection with this, it is worth mentioning the importance of the fact that the bluish bloom, that lustre of healthfulness and vitality spread over the plants, is washed off with a rough syringing. If we examine sufficiently careful we find that it feels like grease; we find it a substance impervious to water. For what is it there? This question can be answered by observing the effects of continued heavy summer rains on the field plants; an experience that to their sorrow most every grower has met with. This substance washed off, the water has a better chance to lodge on the leaves; the plants are kept wet, and the door is open for the return of fungous diseases. If we have to contend with injurious climatic influences which we cannot control, why not avoid them, where they are under our control.

When watered underneath we can do it any time during the day, there is no anxiety to water early in the day, so the plants will have a chance to dry off before night, a half-way admittance of the advisability of keeping the foliage dry.

Fred Dorner.

A BASKET OF ORCHIDS.

The accompanying engraving is from a photograph of a basket, which was one of the many beautiful creations of the florist's art seen at a reception given recently in Washington, it being the occasion of the debut of the youngest daughter of the Leiter family.

The basket was about four feet in diameter, handle about five feet high. The center was filled with beautiful specimens of Cattleya Trianæ and on each side a fine bunch of Vanda cœrulea intermixed with Farleyense ferns. The handle was trimmed with Asparagus plumosus and was literally covered with fine specimens of Calanthe Veitchii, C. vestita alba oculata, Dendrobium Phalænopsis in variety, Zygopetalum Mackayi, oncidium sprays and large quantities of cypripediums, making a most effective display and one seldom seen. An idea of the quantity of orchids used and expense of the basket can best be judged when one reads what were used in its makeup:

50 spikes C. Vestita alba oculata.
75 spikes Calanthe Veitchii.
50 large sprays Vanda cærulea.
150 cypripediums.
50 Ezeka Petlium Moccaii.
25 Phalænopsis Chiliranum.
75 Dendrobium formosum giganteum.
25 spikes oncidiums.
200 sprays Farleyense ferns, asparagus, etc.

THE STORY OF AN EMIGRANT FLORIST.

II.

The gardens and pleasure grounds proper were only thirty acres, surrounded with a light iron fence, but only here and there was the fence visible, and nowhere an objection to the eye. In walking back to the flower garden and back to where were situated the many hothouses, greenhouses and houses used for forcing fruit, we will have passed many beautiful bits of landscape gardening, here and there an open glade surrounded with fine evergreens, here a sunken walk, but not

A Basket of Orchids.

visible till you reach it. At the end of a walk or in a recess among the evergreens, were many summer houses, but never obtrusive, never a feature of the landscape—a resting place "For talking age and whispering lovers made." Some, the interior of which were shells collected from the neighboring sea shore, others of the cones of many conifers, another with the split wood of the hazel and other native trees and shrubs.

In some quiet nook, seen only as you passed, were pieces of statuary. Speaking of statuary, even in a most natural pleasure garden, it is admissible in certain places. The noble trees, the banks of shrubbery, the well kept grass, the charming views, these are the important features of true landscape art, but the statue of an eminent man and perhaps friend, or the marble figure of a goddess of war or peace or love may find its place in some quiet corner. It should be so situated that you hear the marble figure say, "I am here, you can admire me if you choose," not "here I am, you can't get by without seeing me." One of the most flagrant instances of how not to do it is in our own beautiful park. But a few feet from the most picturesque part of the main park on the most thronged carriage drive, and close to the gravel road, stands the inartistic head and shoulders of that king of melody, Mozart. Our good German citizens did a worthy thing in having the statue executed, but where it stands is as unpicturesque as a scarecrow in a cornfield.

As we approach the garden proper we will walk down "the outside walk," usually called so because it was one of three roads or paths which ran for perhaps 150 yards straight and parallel, one of the few bits of road out of miles that were straight. The north was a carriage drive, the middle a path, called the sand walk, used by the workmen of the garden and gamekeeper journeying from one game preserve to another. The west path was used by sightseers. These three roads were divided by but a few feet, yet such was the judicious planting that pedestrians in either were perfectly invisible to those in another save in one spot, where for a length of perhaps seventy-five feet, shrubbery of many kinds was cut down to a height of about five feet, giving a view from either path east or west of the surrounding park and woodland. In all the many thousands of trees and shrubs and the hundreds of species I cannot recall with this exception a single instance where a tree or shrub was mutilated to conform to any grotesque or formal shape. Cutting out and thinning out there had to be and sometimes on a large scale, but done with such care and skill that no one would suppose a knife had been used.

Little scenes and views, as I have attempted to describe, give one a very erroneous idea of the size of the place. Ask a visitor, when he had completed a round of the pleasure grounds and garden, how many acres he had walked over. He would say one hundred; it was but thirty. This effect could not have been attained had it not been for the help of the park, which on all sides surrounded the garden. The park was rented to a tenant farmer, but not to be ploughed up; to be used for hay or grazing only. The park with its solitary stately oaks, or sombre pines, or clumps of trees and flocks of sheep, was just about the same as the principal part of our American parks. Man had done little to embellish it. Nature had done most.

Don't you think, reader, that the architecture of the majority of our parks has been a little too much in one groove? If a park is surrounded with buildings, in other words the city has grown around it, nothing can be more pleasing or restful than the imitation of nature, or green fields and woods reproduced, with but the slight help of the landscape gardener. But where a park is built on the outskirts of a growing town, and especially where that town is surrounded with river scenery and green woods and fields, is not a little more of the artificial admissible? Will it not be appreciated greatly by the citizens who pay for it? I am not advocating anything so formal or set as the Italian garden, yet something a little more of a departure from our country fields and woods would surely be appreciated, at least until the city had grown so large that a view of trees, shrubs and grass filled the souls of all and nothing more was desired. Parks are built first for amusement and pleasure, second for education. To afford pleasure for the masses is the primary object, to the wealthy of less consideration for pleasure is always at their hand.

I must say good bye to pleasure grounds, but before I do, let me remind the old boys, who were brought up in such scenes, what a paradise it was for us boys to collect birds' eggs. Our city boys know nothing of our native birds and too few of the country lads have limited their ornithological knowledge to the black bird, the blue bird, the gray bird and a few other feathered friends, who are known only by the color of their plumage. I believe we knew seventy-five species of birds and when we found the nest we knew the bird who built it. The nightingale's lovely nest with its chocolate colored eggs, always in a bank in some dense underbrush, was as well known as the missel thrush, who always

built its nest in the strong crotch of an elm or oak. The longtailed tit, whose nest looked like a bunch of leaves with a tiny opening at the side, and whose warm lining was a veritable bower of feathers; alas the golden crested wren was robbed of her exquisite nest, so beautifully made of moss picked from the bark of trees. The chaff finch, the green finch and bull finch follow the design laid down by their parents, follow it faithfully, identically, for how many generations, who shall say?

Old countrymen who do me the favor to read these lines will remember the excitement, the rapid heartbeat, that is produced by the sound of "hounds;" old men are as susceptible to this fever as the young. Nowhere in the British Isles or Ireland is it possible to be many miles away from a pack of foxhounds; a pack hunting a country say of twenty miles square, so every week or two they will be in your neighborhood. If they should pass "full cry" after Reynard, within half a mile of where you are working or loafing, the music of the hounds is irresistible. A workman is excused for dropping his hoe or rake or scythe and rushing to a favorable spot to get a view of the pack as they pass from thicket across the park to copse. There is a sentimental and hypocritical sneer made at this sport by a certain class in this country. They know nothing about it. 'Tis not half so cruel as taking a lamb to slaughter. It is grand exercise for those who have the leisure. It makes courageous men and women, it produces a grand breed of horses, and not half the time does Mr. Fox get caught. He lives to run another day, but a real live fox is so much more interesting than the anise seed bag with which many of our hunting clubs have to be satisfied to follow in imitation of their cousins across the water.

It is very comical to hear a lad converse about the time his voice is breaking. He starts in with his newly acquired man's voice but at the end of a sentence up goes his voice involuntarily to his original treble. You laugh but the boy is confused. All this was spared me, for when about thirteen I caught sight of a magnificent fox passing across the park within two hundred yards of where I stood. I don't think we are taught it at school but by instinct we know that the right thing to do when you sight the fox is to give the view halloo. As the sweet music of the hounds was heard a mile behind I spared not my lungs. When I began I had a treble, in ten minutes I had nothing, and at the end of two weeks' silence speech was restored to me. It was a rich (?) baritone; the transition state I was spared. My efforts so accelerated the speed of the fox that he also was spared, and the fifty-two dogs supped on butcher's meat that night.

At the south end of the three paths we enter the flower garden. At the entrance we have passed under a canopy of roses. The flower garden, or rather this one, was perhaps two acres in extent, bordered by beautiful evergreens. The flower garden of that day antedated the ribbon border, the pin cushion or the carpet bed. Beds of verbenas and heliotrope and old Tom Thumb geraniums, mesembryanthemums and other old favorites were sufficient to produce a most pleasing effect. How differently verbenas were used then and how strong and healthy they grew. They occupied the center of some beds, grew a foot or eighteen inches high and were bordered with geraniums. One large irregular bed in the lower corner I will never forget. It was a mixture of slender growing variegated geraniums with pink flowers called "Mangold" and Purple King verbena. It is a most chaste and pleasing combination and I have seen almost the same arrangement this past summer, variegated geraniums and Verbena venosa. In the center of many of the beds were hybrid perpetual roses with their healthy growth tied down to a circular iron hoop some six feet in diameter, and raised off the ground about a foot. When looking down on them it was a veritable bed of roses.

It may be I look back at these roses through childhood's eyes, but never have I seen such roses since I could walk blindfolded to the spot where bloomed a Souvenir de Malmaison with its hundreds of flowers and buds. I could step a few feet farther and point to where once grew the giant Baronne Prevost. I can see the spot where thousands of blooms of Coupe de Hebe, Jules Margottin, Giant de Battles, Mad. Laffay and other beauties yielded their matchless blossoms for beauty's sake alone. It was no sin (if you were not caught) for a boy of fifteen to cut off an armful (they never would be missed) and trudge off after supper a mile and a half to the little near-by town and lay them at the feet of some damsel ten years older than himself, reward only a sweet goodbye at the gate.

I see the rustic summer house on the east side of the flower garden in whose ivy-covered roof roosted hundreds of that sprightly little bird, the wagtail, the smallest bird that walks (all smaller hop). We will stroll down the west garden bordered on each side with a rare collection of herbaceous plants, with here and there great clumps of pampas grass that reared their feathery plumes high above the background of arbutus and laurel. Near the margins were hundreds of little patches of annuals, the nemophila, the erysimum and the eschscholtzia (Californian poppy) are among the best remembered. The maize (our Indian corn) grew seven or eight feet high in this border, a few seeds sown in the houses and planted out in June. It grew and ripened its ear as well, I think, as it does in New York state. How many times I have been conducting a party of visitors through the garden, when in the company there would be some lady or gentleman, who was either an American or had lived in this country; many times have I listened to the merits of the maize as a vegetable and how it was cooked and eaten "in the States." Little did I think then that I would ever be surrounded with a family of young Americans who devour corn with the relish of a Narragansett papoose. They can have it, I prefer cauliflower.

At the end of this interesting walk, were two immense clumps of Arundo Donax, which I believe grew to a height of twelve feet. We boys used to make fishing rods of them and catch carp from the little lake. By the bye, our friends and neighbors, the Germans, make a great deal of fuss about carp. Their carp must surely be a different variety. Our carp were interesting to catch, so is any fish that weighs five or six pounds and is strong enough to pull a small boy into the lake, but as a table delicacy, preserve us from them, they are composed principally of mud and bones. The only sensible method of cooking them was discovered by the proprietor of the estate. He said "they should be boiled in port wine and then thrown away."

We now enter the arboretum, where fine specimens of most of the choice conifers hardy in that latitude, showed off their perfect symmetry. No crowding, but each one was given ample room to show its perfect form. Araucaria imbricata, whose branches swept the grass and would defy even a rat to enter among its fierce points; Picea pinsapo, I will never forget for its symmetry was matchless. Pinus Douglasii, a grand specimen, and even Sequoi gigantea was a good sized tree before I was fifteen. This is the California giant that makes man feel very new on earth. Perhaps some fine specimens were flourishing in California when Noah drove the South American sloth into the ark.

To enter the first of the glass structures we must pass under a trellis roof covered for many feet with the Dutchman's pipe (Aristolochia Sipho), and while you are admiring this curious flower, it will be a good place to leave you and say good night. Bibber.

[To be continued.]

BEDDING AT LINCOLN PARK, CHICAGO.

The engraving on opposite page gives a view of the parterre at Lincoln Park, Chicago, looking from the south end. In the distance is seen the palm house and in the foreground is a bed of cannas bordered with acalyphas. The various beds will be described in detail.

THE "POINT SYSTEM" OF JUDGING.

Those who are not familiar with the subject, may suppose that the adoption of this plan will secure absolute accuracy in judging, prevent favoritism, satisfy everybody, and do away with the, heretofore, all too prevalent "kicking" by exhibitors. Average exhibitors, however, will not be satisfied until some system is devised whereby each one will be awarded a first prize; and a great deal of nonsense has been spoken and written about judging by points.

The plan is not new, but has been in use for many years; if not in flower shows, at least in the case of other exhibitions; and it will not prove to be the wished-for panacea for the ills of judgment; but after being tried with varying results for some time, it will probably be dropped, for the older and better way of judging by comparison.

If the various qualities that go to make up a complete flower or plant were capa-

Bedding at Lincoln Park, Chicago.

ble of being measured or weighed, then anyone who could use the tape line or the scales could tell exactly how much to allow and how much to deduct from the scale of points, in passing on the merits of any particular exhibit; and having decided the points named in the scale, nothing else would require consideration; it would simply be a case of applied mathematics. But beauty and grace, the delicate gradations of color and texture, the condition and arrangement, and all the subtile unmeasureable and imponderable qualities that combine to make the object a pleasure to the observer, can never be judged in this way.

It is true the rules may provide, and very properly, too, that between two competing flowers or plants, otherwise equal in merit, the specimen having the largest size shall be given the prize; and to settle this point, gauging must be resorted to; but you cannot gauge the difference between an Armosa rose and a Bridesmaid with a yardstick or a ten-foot pole.

If it were possible to make some fixed starting place, or zero point, in judging the quality of flowers, from which a graduated scale could be marked up and down, this would simplify the matter; but beauty is a relative, not an absolute quality; and we estimate the degree of beauty of any object by comparing it with other objects of the same kind, either by having them before our eyes or by looking at one object and comparing it with the mental images of others that we have seen.

When we can make a satisfactory job of judging a flower show by a fixed scale of points then it will be possible to judge all the various details that give us pleasure when we look at a fine landscape, a pretty child, or a beautiful woman in the same way. The fact that there is no fixed point to start from in applying a scale of points, is one of the chief sources of trouble with this system, and has done more than anything else—unless it be the bungling work of some of the judges—to cause dissatisfaction with it.

Exhibits are usually looked over first, and a mental comparison of their merits made, and they are then scored to correspond with this prejudgment. If numerous and meritorious the scale will be applied rather strictly; if few, the best exhibits will be scored well up. If the judge awards the prizes in the order of merit, no matter how his score cards may read, and the competition ends there, his course may give satisfaction; but if the same specimens appear at another exhibition, in stronger competition, the real trouble begins. If the same judge officiates he will see at a glance that he has been too liberal with his scores in the first instance, and will probably not have enough points left, before reaching his limit of 100, to express the amount of difference between two competing exhibits. If judged by another the different value placed on the merits of the same specimen by the two judges is likely to cause laughter to all who learn of it, barring the owner of the specimen.

Notice the difference in the scores given the same variety of chrysanthemum, by the several Chrysanthemum committees—composed of men supposed to be expert judges—during the autumn just passed. Being such an uncertain measure of merit, of what value is such a score card to an exhibitor. It is the first prize he wants; and if he shows a vase of Bonnaffon at Boston, New York, Philadelphia, and Chicago, and is awarded first prize at each place, what cares he that the vase of his closest competitor was scored up to 98¾ points.

A competent, careful, and conscientious judge will do good work with the scale of points; but such a judge will do better work, and do it much more quickly, without it. Exhibitors are not clamoring loudly for the adoption of the point system of judging, they only want to have their entries fairly compared with others, by a competent and honest judge. Visitors do not care what plan is adopted, so long as they can see which specimens have been awarded prizes; but they do object, and rightly, to going to a flower show, or a poultry show, on the second or third day, and finding no prize cards up, because the judge is not through scoring.

Awarding prizes could be done very simply and quickly in this fashion. Let an active superintendent, with a sufficient force of assistants, see that all the exhibits are in place at the time the schedule requires. Then the superintendent, provided by the secretary with a list of all entries properly numbered, takes the judge to each class in its order, and shows him all entries competing in that class, arranged side by side. The judge looks at them carefully, and if he is worthy of the name, one glance is usually sufficient; if not he takes two glances, or more. When he has reached a decision, he takes the prize cards, and places them on the successful exhibits; the superintendent notes the numbers on his list to which the prizes have been awarded, and they go to the next class, and so on through the entire show; and at the hour for opening the hall to the

public, the judging is completed, the prize cards are affixed, and the prudent judge, if at all apprehensive, has left the town. W. T. Bell.

MISCELLANEOUS SEASONABLE HINTS.

When these lines reach the reader we shall be all too busy to study any hints, but will soon be cleaning up the houses for a new start. Remember to save enough of several things for your next year's supply. I refer to plants that you are liable to sell clean out of or cut your entire crop for Christmas or latest at New Year's.

Stevia Serratifolia.

Stevia serratifolia, commonly called sweet stevia, is most useful just now, but it is sure to all go within a week or two. Save a few old plants cut down within six inches of the pot and keep on some cool bench as you would chrysanthemums. March is plenty early enough to propagate it.

Begonia Incarnata.

The begonia which we call incarnata grandiflora is also very likely to be cut to pieces before the holidays are over. To have a good stock of this you must not stand the plants down by the path and expect to get good cuttings. There is no hurry in propagating them. It is strange, but they root more readily in May than they do in February, when we have a brisk bottom heat.

Harrisii Lilies.

It may pay to keep for summer planting the bulbs of Harrisii lilies of those you have cut at Easter, but it will never pay to bother with these early forced ones, so out with them as soon as you can to make room for other crops.

Maiden Hair Ferns.

Maiden hair ferns that have been cut down, and it pays best to pretty well clear them off, not pick fronds here and there, making all a shabby lot, can be moved to a cooler house. They should be kept rather on the dry side till the young crop of fronds are showing a good growth. This is also an excellent time to thoroughly clean them of their worst enemy, the slugs.

Smilax.

I have reminded you before to be careful about a smilax bed when denuded of its growth, especially when the strings are not well ripened. I have seen thousands of smilax killed by a deluge of water with no top to use it up, and the fleshy roots will have an odor like a rotten potato. If the roots of the smilax are showing on the surface, which they often do, it is just the time to put on a mulching. An inch or more of loam and cow manure in equal parts is good for the purpose.

Centaurea Gymnocarpa.

There are not many seeds to sow for the next month. If you grow Centaurea gymnocarpa (dusty miller), you can sow it soon after New Years, the slower and cooler it is grown the more satisfactory it is for any purpose. It wants to be in that condition when planted out which florists call "hard." It is seldom seen in flower gardens now-a-days, but for vases or veranda boxes, is very useful.

Lobelias.

You should propagate lobelias from a few plants lifted, but if you did not do that, then sow soon, for they are slow to make plants that are of a useful size.

Tulips.

The tulips that were brought in early in this month have proved but a very limited success and I hear of others in the same condition. Every week makes a difference and by New Year's you can bring in any of the early tulips and narcissus. For all the month of January you will want a heat of 70° to 80° and keep a shade over them. You can now bring in La Reine, Vermillion Brilliant, Proserpine, Yellow Prince, or Chrysolora tulips and Von Sion narcissus and be reasonably sure of a medium stem and good flower.

Azaleas.

I will remind you once more that about now and for two weeks to come you must keep the young growths that surround the flower buds on azaleas rubbed off or they will exhaust the buds, which will shrivel up and you will have a green bush instead of a flowering bush. Sorts like Madame Van der Kruyssen, which are rather early to flower, can be kept but a little above the freezing point, while late varieties like Emperor de Brazil will be about right in 50° at night.

Easter.

Some weeks ago I was asked what date Easter came on next year. Strange to say from several sources I was unable to find the information. A few days since I struck a man getting up calendars and he could tell me the date of Easter in 1999. Few of us are interested a century ahead but florists are much interested in Easter of '98. Easter Sunday is April 10, slightly earlier than the average of years.

Bermuda Lilies.

Last year for the first time in many years I reckoned wrongly on the earliness of a large lot of Bermuda lilies and had to do a lot of forcing the last few weeks and then with many too late. I hope I mislead none who are kind enough to read the hints, which are most sincerely meant. Be on the safe side. It is difficult to give advice on this subject, but I would say that a strong lily that is now nine inches to one foot above the pot should be in a night temperature of not less than 55°, with plenty of light. You would think that the average customer would prefer a lily with two open flowers and five buds to one with six open flowers and only one bud to open, but with the great majority it is not so. With most of our customers it is the eye that is appealed to with little exercise of brains.

W. Scott.

EUCHARIS AMAZONICA.

I am pleased to see in the initial number of the Florists' Review the interest Mr. Samuel Murray is taking in the cultivation of the beautiful Amazon lily.

I herewith outline briefly the somewhat novel method of culture adopted by Mr. Alfred Allum, Newburg, N. Y., for flowering the Eucharis amazonica in winter. The plants are grown on benches, as is done by Mr. Murray, but with this difference: In the spring, or about June, the bulbs are removed from the benches, the strongest selected, and planted in the

OUR GENERAL INTRODUCTION. No. 3.

open ground, enough space being given to allow for proper cultivation and care.

Early in the fall the bulbs are taken up, the largest again selected and replanted in the borders about six inches apart, the benches being well drained and filled with turfy loam. In a short time flower spikes will begin to appear in numbers. This precedent seems to be the reverse of all ideas in the culture of this charming flower. F. L. Atkins.

Short Hills, N. J.

HORN SHAVINGS.

"J. T. T." asks "what are the best uses for horse manure and horn shavings from a blacksmith shop?" By what is meant as horn shavings is the paring of the horses' hoofs at the forge. These horn shavings are considered, as a fertilizer, very valuable for almost any plant that is benefited by an organic manure. How much to use in a given quantity of soil it is difficult to say, unless we know how much of the horse manure is mixed with it. Supposing it was the shavings purely that you procured, I would say one part to ten of soil would be sufficient. It should, at least for our greenhouse plants, be mixed with the soil several months before using. None of its fertilizing properties will be lost, as they will be absorbed by the soil to be given out again to the plants.

Its value mixed with sweepings of the "village smithy" it is hard for me to determine. If you have two or three horses shod at the shop, a cigar occasionally ought to pay for the sweepings. Then again, if you can't get it on those terms, it would be cheap enough at one dollar per one horse load. But the price of manure all depends on locality. In the country you hear of men sending hundreds of miles to a big city for carloads, while a florist in a big city gets it dumped on his lot and fifty cents bonus for granting the privilege.

The following is an instance of what sort of a fertilizer these horn shavings are: Two years ago a neighboring blacksmith spread the sweepings of his shop on a piece of miserable clay. He spread it thickly, 'tis true, and planted sweet corn which grew fourteen feet high and the color of the plant was almost blue. In fact I have never seen such corn east of the Little Miami. W. S.

FORCING PAEONIES AND DIELYTRA (Dicentra.)

A subscriber of the Review asks "what is your method of forcing the above for Easter blooming." The tree pæonies can be forced for Easter in six weeks. I prefer to have them established in pots before forcing. The herbaceous pæonies, wanted for their flowers only, could be grown on a bench in six or seven inches of soil or in large pots. Give them seven or eight weeks in the house.

The dicentras are more easy to force and make a fine decorative plant. Allow six weeks to bloom them. As Easter time—their natural time of flowering—is drawing near, a night temperature of 60° will do very well. Be on the safe side and have a few days to spare. I have a neighbor who now has tree pæonies showing color and herbaceous pæonies that are showing bud on plants that were dug up in October, but they will scarcely be so satisfactory as those flowered at Easter time, this year April the 10th.

Wm. Scott.

SWEET PEAS.

From "Joliet" comes this question: "Can sweet peas be sown now and give blooms for Easter? If so, what kinds are best? An answer through the columns of the Review will greatly oblige." In my opinion it is too late to sow sweet peas for Easter bloom. They should be sown in September. It is true they make little progress in the dark weather and show no inclination to flower till we get bright weather. I have never tried them in a rose house and believe it too warm. A carnation house that is kept about 50° at night is all right. If sown at once they may flower at end of April and you can pick peas during May and June. There are seldom any sweet peas picked out of doors before July 1, at least in our latitude. If you devote a bench to sweet peas, don't give them more than four or five inches of soil. With too much rich soil they grow all to vine and won't flower before the Fourth of July.

White, pink and purple are about all you want for forcing: Emily Henderson, white; Blanche Ferry, pink; and Countess of Radnor, will fill the bill.

Easter Sunday is April 10.

Wm. Scott.

NEW YORK.

Among the Store Folk.

As usual a week or ten days before Christmas, the shoppers are out in full force, though very few orders have been given yet, and the retailer will not know "where he is at" until about the middle of the week. It seems to be getting habitual that the buying of flowers is put off until the last minute, so the retailer has scarcely any idea of his wants until that time, and it therefore comes like a football rush. All want waiting on the same time, and all want their goods delivered the same time, and it is a wonder to me how some come out of the maelstrom with their seven senses intact, but let the customers come. I'll guarantee they will get attention and good attention at that, and "system" which seems impracticable at other times, will reap its just reward. Gentlemen, success to you!

I took a mental "snap-shot" at Mr. George M. Stumpp's window yesterday and noted its simple and appropriate arrangement. The front was edged with selaginella, while the sides were grouped with handsome Otaheite oranges, in full fruit; in the center a mass of Solanum Capsicastrum; to the right was a fine piece of Dicksonia antarctica, stem about six feet, and to the left a handsome specimen of Cibotium princeps with its large spreading fronds reaching out, almost forming a canopy over the whole, while in the center of the window was a vase of Pyrus japonicus, its pretty apple-tinted flowers giving a light and effective appearance. [I might mention here that this beautiful shrub forces very easily, all that is necessary is to cut off some dormant branches, place them in jars of water and force them gradually.—Ed.]

In the rear of the window platform Mr. Stumpp has erected a movable "arm," a simple branch of oak, that stands on the floor and reaches out gracefully about sixteen feet. On this are attached staghorn ferns, orchids, and other epiphytal plants that at once give it a natural and unique appearance. This can be turned on its "axis" in any direction and can be made to reach out into the store or the window or form a background for the latter.

Hanft Bros. have opened an annex for their Christmas trade, chiefly for the handling of Christmas greens and holiday goods.

I noted in the front of several stores pyramidal hollies in fruit, which are handsome and appropriate at this season of festivity.

A Jaunt in the Street.

As was anticipated, the Creedon-McCoy fight over in Long Island City, did not have any material effect on the flower market. However, in a fifteen-round bout—prices versus stock—the latter won. Both are again in training for Christmas, and I hope to send a special report from the seat of war next week, covering all the important points; meantime the odds are a little in favor of prices, the growers are giving the "stock" a special "rub down" and "prices" are receiving the same attention from the wholesalers before rubbing them up; the retailers, usually interested spectators, will "weigh in" the two "principals," while the private customer will form a "flying wedge" in an attempt to break down all precedents, we hope, and "clean out" the whole stock.

Stock is fairly plentiful this, the early part of the week, but to give prices would only be misleading and there is no telling where they will be by Saturday next. All fine grades of Beauties are being spoken for and cattleyas have been gobbled up weeks ago. From appearances now there will be plenty of stock, though it is quite problematical at this date.

Later indications are that roses of all kinds will be very scarce this week.

Thomas Young, Jr., reports an unprecedented number of orders for shipping Christmas week. He expects the New Year trade to be equally good and is making preparations accordingly.

Seed and Bulb Trade.

In spite of the apparent shortage in the finer grade of tuberoses, several heavy shipments were made to Europe last week. The tuberose is still very popular there, the bulb being used chiefly for pot culture and funeral work, the short summer not permitting their being grown in the open, except in the more southern portions of the continent.

Mr. J. L. Schiller goes south on a mysterious visit to spend Christmas somewhere in Maryland. Is it a Baltimore

belle, friend Schiller, or is Mary-land simply a coincidence? Come, 'fess up!

A trip around the trade revealed the fact that preparations for the coming season are already being made and an air of activity pervades these stores. The last proofs of the catalogues are in the printers' hands, and "all we've got to do now," said one man, "is to sit down and just wait."

Peter Henderson & Co.'s new store is a marvel of "white and gold." (the old store has been thoroughly renovated), and the windows are specially attractive with Christmas gifts in the way of palms and prettily filled jardinieres. Mr. Forbes is specially proud of the innovations.

J. M. Thorburn & Co. have been making some heavy exportations of seed, etc., and as far distant as Australia.

Stumpp & Walter Co., the "youngest firm in the trade," are going after the "big fellows" and are making timely preparations for the spring. Their trade for "Christmas greens" was very satisfactory.

Mr. Arthur Boddington, who is the literary end of the firm of Clucas & Boddington Co., in answer to a question about the motto on their trade mark, said the translation was "We stand wherever thrown," which I suppose means, "You can't throw them down." The trade mark is a cartoon of the coat of arms of the Isle of Man, of which Mr. Clucas is (was) a native.

Mr. J. E. Killen, the well known representative of C. H. Joosten, has returned from a very extensive and profitable trip. Mr. Joosten is making a specialty of hardy roses and sales in this line are well up to the average.

Mr. W. C. Langbridge, who represents the well known firm of Jerome B. Rice & Co. Cambridge, N. Y., is a visitor this week.

In our notes in issue of December 9 the following error appeared in the seed and bulb paragraph: Chinese lilies "realize $30.00 per *100*," should read $30.00 per *1,000*.

Miscellaneous.

F. R. Pierson Co., of Tarrytown, were recently notified that they were awarded a silver medal for their extensive exhibit of cannas, etc., at the Nashville, Tenn., Exposition last summer.

J. P. Cleary & Co. have turned their spacious salesrooms into a holly and wreathing mart for the holidays and it seems to be a wise investment if the visitors are an indication of business.

Waldemar Bart, who is the present owner of the old Roenbeck Place at Bayonne, N. J., which was for years famous for its comprehensive collection of ferns, will open a retail store "up town" during the winter.

On Sunday last between three and four in the afternoon, a fire occurred in the house of Frederick H. Dressel, Hoboken, N. J.; damage to the amount of eight hundred dollars; fully covered by insurance.

Visitors, Benjamin Dorrance, Dorrancetown, Pa.; L. Bonnot, Flemington, N. J., Wm. Coe, representing D. M. Ferry. H. A. B.

Greeting! the FLORISTS' REVIEW wishes you all a happy and prosperous Christmas.

JOHN YOUNG.

Mr. John Young, who was unanimously re-elected to the secretaryship of the Greater New York Florists' Club Dec. 13th, is one of the best known wholesalers on "the street," and besides being an all

John Young.

round good fellow is a member of Columbian Commandery, a Knight Templar, thirty-second degree Scottish Rite Mason, member of Mecca Temple and a Mystic Shriner. We have pleasure in presenting his portrait herewith.

PHILADELPHIA.

The first Quakertown letter to the FLORISTS' REVIEW came from the bustling halls of the chrysanthemum show where victor and vanquished met in friendly greeting after the fray. The second letter evidently beguiled a dull half hour in a store in the center of the city. The scribe can almost be seen as he leans back in his chair, reaches for his telephone to find out the market quotations, and then thinks better of it and turns again to his accounts of the weather and Christmas greens. So in all fairness letter number three should be devoted to the grower who is now nearing his inning, we are told, provided, of course, he is smart enough to take it.

Among the Growers.

Come with me on the breezy turnpike road ten miles out of town, for an hour with one of our best Beauty growers. "Robber Barons' they have been called, either by a wag or some chap who did not know how much brains had to be mixed with hard work when this rose is well grown. Many of us are too busy at this season to see the results of the year's preparation in other places, so I will describe what I saw that morning.

House after house, freshly painted, neat and clean, filled with strong Beauties in perfect condition, full of bloom, every plant tied up in place with plenty of room to grow and doing its fair share of work.

There was no rushing on for the holidays with an excess of heat and moisture. The plants had been well timed to flower at this season and could be kept at their regular temperature, about 60° at night, without fear of their being too late. No one who has not been through the worry and anxiety of getting a crop of flowers at this season can understand how difficult it is; impossible without proper conditions and thorough knowledge. Brains are well paid in every walk of life when properly directed.

Beauty blooms have been in brisk demand in this market. Many have been shipped out of town by the commission men and the large growers, and the quantity consumed by the local dealers is still increasing. There seems less waste in this rose than in any other. Even the short stemmed blooms are eagerly sought, though not at very remunerative prices.

Stock promises to be fairly plentiful this Christmas. I think the demand will equal if it does not exceed the supply, unless the growers make the mistake of holding back their stock too long. The demand for foliage and flowering plants is most encouraging. The latter are likely to be in short supply.

Notes.

The dealers' enemy is the fakir. The growers' enemy is the private gardener who sells some of his stock. This was reversed last week when one of these semi-commercial growers from a nearby state came to this city and gave one of our storekeepers a dreadful tongue lashing because the latter had written in a trade paper that cypripedium "Edwin Lonsdale" was the first native American cypripedium to bloom. "Indeed," the visitor said, "you Philadelphians ought to go to school." This was rather rough as a neighbor of our bright visitor is said to have given the information which caused the rebuke. The storekeeper might have answered by informing his visitor that chrysanthemum Col. Wm. B. Smith is quite as well known and as much appreciated in Philadelphia as in England.

A merry Christmas to you all.

J. W. Y.

The Grower and Buyer Talk.

By the time this appears in print, the trade will be neck and shoulders in the grand annual Christmas maneuvers, and such a time as it is, everybody busy in the extreme, and all hands clamoring for more stuff. The condition of trade now is in this shape: the grower he struts "with that independent air" like the man that broke the bank at Monte Carlo, and quotes figures on his product with a satisfied feeling which truly calls forth a feeling of semi-respect from the buyer. The other side: "Well, Mr. Grower, can't you get prices up a bit higher? We can stand it, but on the dead level don't you

fool yourself, stuff is not so scarce; we are locating all the stuff we can use, and at prices which would surprise you, but we want to do what we can for you, so take this part of my order, and say, you won't go back on me, will you, as I will be in a hole if you disappoint me. See!" There appears a little surface bluff in the game.

Notes.

Our department stores are enjoying simply green decorations, which with the aid of electric lights, and mammoth Santa Claus, attract the public. The plant and flower features do not figure much at this time, later on we will hear from them.

The commission men here are generous in their calendars, which are acceptable to their customers. S. S. Pennock and Edward Reid have sent out very pretty reminders.

A New Wagon.

Messrs. Joseph Kift & Son have flashed upon us a brand new wagon, which is the beau ideal of our Bob. The accompaniment to this new one includes the pair of attendants in fresh livery. Of course there are large coach lamps attached, also rubber tires.

A Bowling Benefit.

The Florists' Bowling Club, of this city, managed a benefit at the Walnut Street Theater, on the 15th inst., which was a decided success financially. The proceeds are to be used by the bowlers.

Mr. John Shellem, Seventeenth and Tasker streets, has taken to the fashion and turned into bed, threatened with pneumonia. We hope he can avoid a serious turn.

Mr. B. F. Dorrance, of Dorranceton, Pa., is in town. Mr. D. thinks business might be worse.

Meeting of Hort. Society.

The regular monthly meeting of the Penna. Horticultural Society occurs on Tuesday evening, 21st inst. Among the other exhibits promised for this time is a number of cypripediums from the famous private establishment of Mr. Roebeling, Trenton, N. J. The devotees to orchids are not numerous, but it is pleasant to note that we have a few in and about this city who spare no expense when gathering together their pets, "the aristocracy of the floral kingdom." F.

CHICAGO.

Among the Wholsalers.

The dark, gloomy weather has cut the supply very short, and a lot of flowers are evidently being held back for Christmas, both factors creating a serious shortage the early part of the week. That there is a real shortage cannot be denied, but it looks very much as though the experience of previous years is going to be repeated, and a lot of held back stock dropped on the market at the last moment, to the loss of both grower and dealer. The bright sunshine that gladdened the growers' hearts Tuesday and Wednesday helped a little, though too late to do a great deal of good.

Sam Rubens, formerly with Kennicott Bros. Co. and A. G. Prince & Co., is still in the Alexian Bros.' Hospital. He has submitted to several operations, and is now reported improving.

Larry Kelly, of Kennicott's, has been placed on ice since the recent holdup, and it is thought he will now keep till after the holidays.

Vaughan, McKellar & Winterson are doing a rushing business in green and are finding it difficult to keep up with their orders. W. W. Winterson, father of Ed. Winterson, is now on a trip to the Pacific coast, and will incidentally look after the interests of the above firm while on the trip.

Bassett & Washburn report a serious shortage in roses, but a good supply of bulbous stock.

E. H. Hunt is doing a brisk business in green and holly, but finds flowers scarce.

E. C. Amling is now established in his new quarters at 51 Wabash avenue. They are much more roomy than at his old place, and he is having them fitted up in first-class shape.

Reinberg Bros. are still cutting those fine La France, and from the way they sell at high prices it would seem that the old La France has not lost its hold on popular favor. It is only the extra grade stock, however, that finds such ready sale. George Reinberg had a serious misfortune last Friday night. A fire destroyed one of his boiler houses, resulting in the burning of the ends of three houses of Meteors and chilling the plants so that the crop for Christmas is valueless, and the total destruction of a crop of smilax in another house. The total loss will run from $800 to $1,000.

W. E. Lynch is getting some good roses in spite of the shortage, but would like more.

Geo. Piepgras can't make up his mind which he dislikes most: An ice box full of flowers and no orders, or a big bundle of orders and an empty ice box. Mr. Winter, of Winter & Glover, says "both." Mr. Winter has met a grower who "is not holding back his flowers," and he trembles for the result.

The Rogers Park Floral Co. show some excellent Meteors, of good color in spite of the dull weather. They find that Beauties suffer in color from dark weather more than the Meteors. They have been trying some of the new carnations and are much impressed with Triumph. They believe it is the winning pink variety and will plant several houses with it another season. They have one flower which has been left on the plant for about a month, which has grown to an enormous size, fully four inches in diameter, losing but little of its color. They have a sport from Triumph, about the color of Tidal Wave.

They will remove their wholesale store to 51 Wabash avenue, room 210, in January. They also intend to build a range of twenty new houses, each 20x250, at Rogers Park next summer. The new glass will be devoted mainly to roses though several houses will be planted with carnations.

A. L. Randall looks for a larger supply of roses at Christmas than generally anticipated, but fears a shortage of carnations.

Next Club Meeting.

A very attractive program is being arranged for Ladies' Night at the Florist Club, Jan. 13. Every member should be present, and bring his wife, sister or sweetheart.

BUFFALO.

Bright Prospects for Christmas.

For once in quite a while we are going to have seasonable weather for Christmas. The ground is covered several inches deep with its white overcoat, sleigh bells are tinkling, everybody buying presents for everybody else, and all feeling good, including the florist, if the sun will only shine. As remarked last week, the demand for plants is going to be good, and now it looks as if everything in the way of a pretty plant in flower would be picked up. Rubbers, araucarias and palms are in good demand. Flower orders always come late, and the best are often the very latest.

Stock Likely to be Scarce.

It seems at this moment that the leading flowers are going to be quite scarce. We shall see, I trust, for those who have to buy, that the prices will not be such that customers will have a fit at the very quotations. Violets are sure to bring a good price for there are not many grown round here, and when they come from a distance they have lost the charm that makes a flower buyer value them. The leading churches are decorating about as usual, and every night for a week or two to come, our fashionable Twentieth Century Club rooms are engaged for our 400 to shake their light fantastic toe.

At Corfu.

We went to Corfu a few days ago and found T. A. Webb with a fine lot of carnations showing up, mostly Daybreak, Scott, his sport of White Daybreak and his Seedling Scarlet. He has almost a house of it and it improves on acquaintance. It began to snow heavy and I had to run for shelter but I did find that Oasis mentioned in a previous number and the spot of joy was covered with 5,000 or 6,000 fine Marie Louise violets of A 1 quality. They will rank with those that one of our local commission men calls in his Christmas list "Hudson Specials," $4.00 per hundred. The same list has "carnations fancy, $8.00 per hundred." This may do for Tremont street, Fifth avenue or Washington, D. C., but is too rich for rural New York. What's the retailer going to charge?

A Swindler Visits Our City.

A swindler has been round among the florists and victimized one of our leading retailers. His plan of campaign has not fully reached me. He asks for a loan of a dozen palms, averaging in value $4 to $6. As the boss of the store is very busy

he kindly says he will go on the wagon with the driver himself and gives the name of a reputable citizen. Off goes the wagon, driver, swindler and palms. He then tells the driver he will unload the palms *here* in front of a house having no connection with the name of the person used and to come for them in the morning. It is supposed that in a few moments another wagon drives along, loads up the palms and they are quickly peddled out at of course a sacrifice price to the peddler, yet the transaction pays him. A detective recovered almost all of them, but even if he did, it is very disagreeable. Florists are not often a victim to that kind of swindler, not because they are the least bit more astute than other merchants, but their goods are not so readily converted into ready cash. I am sorry I cannot give you a description of the man, but he is said to have had a Kentia Belmoreana attire, a Caryota urens expression, and a Brahea filamentosa beard, with the disposition of a Pandanus utilis. W. S.

BALTIMORE.

Christmas Indications.

One by one the floral establishments are donning their holiday regalia, and it is very interesting to note the many different and tasty arrangements which the same general class of stuff is made to undergo. It is quite remarkable that at this season of the year we should be having such spring-like weather. In fact, it seems as if we were having two holidays in one; and to augment this delusion one has only to look into the florists' windows, where Harrisii and longiflorum lilies, azaleas, ericas, and a great many more typical Easter flowers are sharing the honors with Japanese oranges, metrosideros, ardisias, cyclamens, orchids and every other seasonable novelty. The Christmas sign boards, such as holly, mistletoe, southern smilax, magnolia-foliage, red wreaths, stars, etc., are also with us in profusion.

Supply Short—Prices High.

The wholesale market is demoralized. The commission houses are very slimly stocked and the prospect for a good supply is no better now than last week. Prices on all available stuff have taken an upward jump and are steadily on the rise. Violets and carnations can only be had at the approximate Christmas rates. A few days more though will tell whether this seeming scarcity of stuff in general is real or whether the growers are only holding back to flood the market next week. As this has often been done before in our city, one cannot be censured for suspecting this fright to be only another false alarm. By the time these lines go to press, the craft of the U. S. will be reaping their first harvest of the season. Let us hope for a prosperous one.

Meeting of Gardeners' Club.

Monday evening, the 13th inst., proved an eventful and memorable one for those who were present at the meeting of the Club. At the roll call the boys made a good showing; for in honor of our Washington guests many were there who had not attended for months. President Pentland being late, vice-president Moss, the early part of the evening, filled the chair. Those who comprised the district delegation were: Messrs. Jos. R. Freeman, Robt. Bowdler, Chas. F. Hale, Jno. Boyle, Wm. H. King, Harry Lewis and J. M. Wood.

Discussion of Free Distribution of Cut Flowers.

After an impromptu introduction by Mr. E. A. Seidewitz, of our club, these gentlemen soon got down to the business of their mission, namely: to protest against the government's free distribution of cut flowers, plants, etc., to members of congress and other influential persons, which practice has now grown to such an extent as to cripple the legitimate trade. Mr. Freeman acted as chairman and expressed himself in a very lucid and concise manner. He said in part: "'God helps those who help themselves,' and as the people of Washington are only political units, with no voice in politics, they, who like ourselves, have a living to make, are obliged at the time of defense to seek foreign assistance. It is solely to enlist your sympathies and ask an extended hand of brotherhood towards our cause that brings us to your city this evening. The fact is those who have control of the public grounds in Washington, are always ready to oblige anyone to whom they may be under obligations or with whom they may desire to curry favor, by donating the flowers, palms, etc., grown in the Botanical Gardens, the Smithsonian, and White House grounds, to congressmen, senators, army officers, foreign diplomats and others. The practice is in direct violation of the law which was passed in the 45th Congress, second session, 1877-1879, volume 20, page 220, when the appropriation for the production of plants and flowers was first made.

"It said: 'For ordinary care of greenhouses and the nursery, $1,500, provided that hereafter only such trees, shrubs and plants shall be propagated at the greenhouses and nurseries as are suitable for planting in the public reservations, to which purpose, only the said productions of the greenhouses and nurseries shall be applied.'

"In those days, when the public reservations were nothing but barren lands, and there were only a few greenhouses, it did a great deal of good to have congress interested in their welfare, for from time to time this appropriation was increased, which gave more scope towards the city's general improvement. It has now, however, reached the enormous sum of $90,000 per annum which is more than enough to meet the general expense of keeping the parks, etc., in first-class order were it not for this objectionable cut flower department. At present nine-tenths of the two acres of glass which the government controls is devoted to smilax, asparagus, carnations, roses (of all kinds), azaleas, swainsona, valley, tulips, hyacinths, narcissus, decorative palms, etc. The cut flower portions of the above go to make up select boxes, 6,000 of which are monthly distributed among the wealthy and influential who could amply afford, and would buy from the trade, were it not for this evil. The balance go towards their decorations when needed.

"Col. Theodore Bingham, who is in charge of the public buildings and grounds, gave us no satisfaction when we called on him. He said that it was a custom of long standing, to give flowers away to certain persons and congressmen and that he could not change it. As a matter of fact, the public squares are a disgrace to the city and nation, while the major part of the liberal appropriation is really being given away, with the eventual result of the extinction of the florist trade both in the city and district."

After a general debate upon the subject, the following resolutions, drafted by Messrs. E. A. Seidewitz, F. G. Burger, and Wm. McRoberts, Jr., were unanimously adopted. "Resolved, that this organization reprobates and protests against the existing and further growing practice of the free distribution, to officials and private persons, of cut flowers, decorative and flowering plants, in the District of Columbia by the sub-departments of the U. S. Government as contrary to justice, to the correct principles of business and public polity, as well as the very letter of the law governing the production of plants, etc., adapted to the use in the public ground; and also as working great detriment to the florist trade of Washington and vicinity." Copies of the above are to be sent to Col. Bingham and the Maryland senators and congressmen.

Roses on Exhibition.

Two beautiful varieties of roses were exhibited at the meeting, winning general admiration; one, a sport from LaFrance, of a deep pink, grown by Mr. I. H. Moss, of Govanstown, and the other an unusually fine specimen of LaFrance grown by Madsen and Andersen.

C. F. F.

BOSTON.

Preparations for Christmas.

Business has been very dull this last week, and shipments have come to hand lacking in quality and color on account of the very rainy and dull weather we have been having throughout New England. Great preparations are being made by all the florist stores in decorations, some of which are of a very elaborate nature, with anticipation of a very busy week, and if the weather is favorable good results are sure to ensue.

Visitors.

Mr. E. F. Crumb, representing Charles H. Childs & Co., Utica. N. Y., was in Boston offering to the seed houses and other dealers a new "Electric" sprayer. He claimed it to be an improvement on other inventions as it had great force and threw a very fine spray, and said any insecticide could be used with his machine.

E. J. Harmon of Portland, Maine, was visiting Boston purchasing stock for Christmas. C. H. J.

ST. LOUIS.

Stock will be Scarce for the Holidays.

The first snow storm of the season visited us Thursday evening, some two inches of snow and sleet falling. The weather for the past few days has been quite cold and as a consequence all kinds of cut flowers are quite scarce with the demand very good, all the stores having about all they can do. Unless all present indications are misleading the supply of cut flowers for Christmas will be decidedly short, as almost every grower seems to be off crop.

Prices Have an Upward Tendency.

Roses have not been plentiful and the indications all point to full holiday figures on all varieties. American Beauties are very scarce and the few that are coming in are selling at top prices. Good Meteors are also scarce, nearly all that come in are bull heads and black in color. The Woottons are all off color and almost too pale to be sold for a red rose. The best Meteors are selling at $12, Wottons, $4 to $8. Good Brides and Maids are sold at from $8 to $12, and for the best Kaiserin the price is the same. Perles are selling at $5, and for the very best the price is $8.

Of carnations there is a fair crop for the present demand, with prospect of a short supply for the holidays. Scotts, Daybreaks, and all whites bring $3 per hundred. Jubilee and Eldorado, of which Henry Aue is our most successful grower, bring $4 and $5. Of course, all colored sorts will be more in demand than white for the holidays.

The supply of violets will probably not exceed the usual daily receipts, as the demand has been steady and there has been no chance for a quantity to accumulate. The best California violets that come to this market are grown by the South Park Floral Company, of New Castle, Ind., and by Frank Fillmore and A. Berdan, of this city.

Romans and paper whites will be in fairly good supply for Christmas. The present price is $3 for the best, and the chances are that by the end of the week they will go up to $4 and $5 per hundred. Harrisii and callas are selling at present from $12.50 to $18.00. Valley is very scarce at $5.

Stevia seems to have come in for the holidays just in the right time and is of good quality and fairly abundant. In mignonette the market is good. The fine stock of Andrew Meyer is now ready to be cut and will demand the top price for holiday week. Some very fine bouvardia is being sent to this market by E. W. Guy, of Belleville.

Retail Circles.

In retail circles it is reported that business is improving and all are hopeful of a satisfactory holiday trade. Business looks promising so far as Christmas greens are concerned, as some very large orders have been placed for both lycopodium and holly. Holly seems to be of good quality this year.

A great deal more could be said but at this time of the year time is valuable. I will close my letter for this week by wishing all the readers of THE WEEKLY FLORISTS' REVIEW a Merry Christmas and Happy New Year.

Personal Items.

Mr. Heller, of the South Park Floral Co., New Castle, Ind., will spend Christmas in St. Louis. There is some great attraction in the west end for Mr. Heller. The late flower show did all this.

Fred Ostertag has left Indianapolis and has located again in St. Louis. Fred has opened up a store at 717 Vandeventer avenue; glad to have you back, Fred.

The Bowling Club rolled its usual three games Monday night, but only a few were in attendance. Charles Kuehn, as usual, was high man with 577, his high single score was 245; C. C. Sanders was second with 508, high single score 195; J. W. Kunz, third, with 478 and a high single score of 191. Next Monday night we expect a full attendance as the busy time will then be over.

J. J. B.

PITTSFIELD, MASS.

Jno. White is one of the few who finds a spare corner for that old favorite, the camellia, about whose character there is something both majestic and chaste. At time of my visit Mrs. White was making up a handsome bunch of callas, using small branches of the camellia as green. The effect was far superior than if the foliage of the calla were used. The blooms are always acceptable for funeral designs. Mr. White has opened his uptown store for the season, placing in charge his niece, a lady of excellent taste and business ability.

F. I. Drake considered that a gleam of sunshine was the most welcome guest he could entertain just now. He has a capital stock for Christmas and reports a satisfactory Thanksgiving. W. M.

WASHINGTON.

Baltimore Joins In.

The committee appointed at the last meeting of the Commercial Florists' Association, of Washington, composed of J. R. Freeman, John Boyle, Chas. F. Hale, W. H. King, Robt. Bowdler and Messrs. Lewis and Woods, visited Baltimore last Monday evening to attend a meeting of the Gardeners' Club of that city. The trip was the result of a statement made by Col. Bingham, superintendent of Public Buildings and Grounds, that he did not believe the florists of other cities shared the views of their Washington brethren regarding the free distribution of flowers and plants raised in government gardens and conservatories.

The Baltimore Club invited the growers of this city to send a committee to personally ascertain their views. The Washington men were given a cordial reception and the subject of government distribution was discussed in all its phases. The following resolution was adopted unanimously:

"Resolved, That this organization reprobates and protests against the existing and still further growing practice of the free distribution to officials and private persons, of cut flowers, decorative and flowering plants in the District of Columbia by the sub-departments of the United States government as contrary to justice, to the correct principles of business and public polity, as well as the very letter of the law governing the production of plants, et cetera, adapted to use in the public grounds, and also as working great detriment to the florist trade of Washington and vicinity."

We think every florist in the United States should interest himself in this fight, and I feel sure were they made acquainted with the true situation they would, to a man, enter as vigorous a protest as have our Baltimore brethren. We of the District of Columbia are nonentities, without representation in Congress. Therefore we must look to our brother florists who have a vote, to assist us.

Growers' Notes.

To see neatness and well grown stock describes the greenhouses of genial Joe Freeman, at Silver Springs, his house of Bridesmaid being particularly fine, such blooms being unusually large for this section. A house of cyclamen in 8 and 10-inch pans were the finest I ever saw for size of plant and flower, a perfect sea of color.

John Boyle, who leased the late John Saul's place, did not get possession until late in the season. Yet John is rushing things, having nearly all the houses filled with tomatoes and cucumbers which promise good crops. John has a new violet. The flower is a trifle darker than Lady Campbell, bloom large and on long stems. The plants are vigorous and strong. There were plants of Marie Louise growing along side of it with a fine dose of spot yet the new one seemed proof against contagion.

Mr. Clark has a house of President Carnot roses planted in solid beds, which have been exceedingly profitable this fall. He has opened up the house to give them a touch of winter and expects good results from this treatment.

Gude Bros. seem to be the only growers who will be in full crop Christmas, with the exception of a house of Meteors.

Several growers added the new carnation White Scott to their stock this season, and with all it has been not only disappointing but worthless.

For a week preceding Christmas there is a calm in the florists' business. The great throngs are busy buying presents and shopping. The storm will break by the end of the week and the florists will be in a veritable cyclone. W. H. K.

ST. PAUL, MINN.

Calm Before a Storm.

Trade here has experienced a little of the dullness which precedes the holiday rush, but in general business for the past two weeks has been satisfactory. We have had some "dark" weather and a number of days of severe cold, but so far during the month December has had less cloudy days than the average, consequently blooming stock here is in good condition and the cut for Christmas will be good; larger than the average for several years. Of course some of the growers do not time their crops just right, and others fail through carelessness or "too much economy" in the use of coal.

Christmas Greens.

Advance orders for Christmas would indicate the usual volume of trade for that occasion. Greens have sold unusually well, the demand for holly and wreathing being larger than ever. Of lycopodium the supply seems inexhaustible and prices are lower than ever. Holly is in fair supply though a shortage is imminent for the end of the week trade. Southern stock is handled chiefly by the produce commission men, while the regular florist trade handles Delaware stock exclusively. Being near the pineries and spruce woods, immense numbers of Christmas trees are brought here. This trade is not handled at all by the florists, the most of it being done by small dealers throughout the city.

Retail Prices for Christmas Week.

Retail prices for Christmas week are quoted as follows: American Beauties, 75 cents to $1.50 each; other roses, $2.00 to $4.00 per dozen; carnations, Romans, paper whites and valley, 75 cents to $1.00 per dozen; violets, $3.00 to $4.00 per 100; Harrisii, 25 cents each.

Supply of Blooming Plants.

In the plant line there is a good supply of Harrisii (the finest ever seen in this market), azaleas, cyclamens, primroses, cinerarias, begonias, etc. There is also a good supply of palms. ferns, etc. In the larger florist stores, jardinieres, pedestals, fern dishes, artificial plants, immortelle designs, etc., etc., are seen, so that department store bargain tables are almost duplicated. And yet so many of our friends, especially in Illinois, bewail the evils of this so-called commercial Octopus, which is swallowing up all other lines of trade. The truth is that hardly any store, however small, in business today, but what is a department one in a greater or less degree.

Among the Growers.

R. C. Seeger, who commenced business in a small way several years since, now has 6,000 square feet of glass and is counted as one of our most successful growers. His house of roses, just coming in crop for the holidays, is one of the best we have seen. Varieties grown are Bride, Bridesmaid, Perle, Wootton, Testout and Siebrecht, most of his plants having been carried over from last year. The growth is something remarkable. His greenhouses are located on Gorman avenue on the West Side.

Another West Side grower, on whom we called, is C. F. Haupt. His specialty is violets, and he has a house of Marie Louise, which would be very hard to beat anywhere. Mr. Haupt is a living example of what industry, pluck and perseverance will accomplish under adverse circumstances.

A. H. Bunde is bringing in some fair sized mums and expects to cut them until New Years.

Jno. Nilsen has a good crop of violets for the Holidays. He never misses them for that occasion,

Dr. Schiffman, who has one of the finest collections of orchids in the country, intends to go to Central America next month on an orchid collecting tour.

Chris. Hansen, who has been in business here about nine years, is offering his entire range of houses for sale. Mr. Hansen has been very successful in business but wishes to retire owing to poor health. X. Y. Z.

SYRACUSE.

Club Election.

The Central New York Horticultural Society met in annual session at the St. Cloud Hotel. A. D. Perry, who has served as president of the society for a number of years, presided, and in his annual address asked that his successor be chosen on this occasion, as it would be impossible for him to longer fill the position. It was with reluctance that the society complied with Mr. Perry's request. On the first ballot Mr. Perry was re-elected, but as he positively refused to accept, it was found necessary to make another selection, and Samuel T. Betts was chosen as Mr. Perry's successor. The whole ticket as elected was as follows: President, Samuel T. Betts; vice-presidents, A. D. Perry, C. W. Snow, E. A. Powell, F. C. Brower, L. E. Marquisee, and W. Judson Smith; treasurer, F. H. Ebeling; secretary, D. Campbell; executive committee, George Ham, Robert Bard, C. Barson, W. Parsons, I. Heller, and J. L. Porter.

The retiring president stated in his address that better work had been accomplished during the past year than ever before, and the attendance at the flower show was one-third larger than on previ-

ous occasions. Mr. Ebeling, the treasurer, stated that after everything was paid there was a balance of $34.85 in the treasury.

Certificates of Merit Awarded at Late Show.

Certificates of merit were awarded to the following florists for exhibits at the flower show: F. C. Baker, Utica, for a red seedling carnation and pink seedling carnation; Nathan Smith & Son, Adrain, Mich , chrysanthemum Thornden; E. G. Hill & Co., Richmond, Ind., four certificates for four seedling chrysanthemums; Stollery Bros., Chicago, carnation Argyle; L. E. Marquisee, Syracuse, four certificates for carnation seedlings and one for yellow chrysanthemum not yet named. A large vase of chrysanthemums and two vases of roses decorated the assembly room, being the gift of Grove P. Rawson, of Elmira.

Entertainment.

At the close of the afternoon business session, the members adjourned to the dining room, where supper was served. The newly elected president, Mr. Betts, and Mr. Rawson occupied seats at the head of the table. Others at the table were Messrs. Rose, Brower, Morey, Brown, Marquisee, Hunn, Perry, Grant, Hitchings, Mills, Woodford, Barson, Strowbridge, Vrooman, Phillips, A. Bellamy, H. F. Bellamy, Bechstadt of Oswego, Campbell, R. Bard, Hullar, Ham, T. Hopson, J. L. Porter, D. L. LeRoy, Ebeling, Rev. W. M. Beauchamp.

At 8 o'clock the session was continued in the assembly room. Short addresses were made by Rev. W. M. Beauchamp, D. D., of Baldwinsville, whose subject was "Ferns;" Prof. S. A. Beach, of the Geneva Experimental Station, "Hydrocyanic Gas for Fumigating Greenhouses;" Prof. C. E. Hunn, of Cornell, "General Work of Horticultural Department at Cornell;" Grove P. Rawson, a short informal talk on topics of interest to florists. The remarks of all the speakers were instructive and interested all the horticulturists who were in attendance.

Condition of Stock.

The last four weeks we have had nothing but dull weather, so that roses are short, as are also carnations in most places. Henry Burt and L. E. Marquisee have a very good lot. Burt's Flora Hill and Alaska are fine, while Marquisee's Daybreak, Jubilee, Lizzie Gilbert, Meteor and Outcast are excellent, as well as a house full of seedling carnations full of good blooms. There are not many flowering plants, but palms and other decorative plants for Christmas are in fine shape. Holly is good this year and sells well. It looks as though the florists were going to have a good Christmas trade.

THE WANDERER.

ALBANY, N. Y.

The old saying that "'Tis an ill wind that blows no good to someone" was illustrated in H. G. Eyres case some time since, only this was a fire which destroyed the adjoining store and came very near putting our friend's place out of existence. At the same time on the burned site has been erected a handsome stone building, and Brother Eyres, not to be behindhand, beautified his store front to correspond, by tiling the ceiling and putting in incandescent lights, in addition to an arc light. The effect can be seen fully two blocks off, the window being kept well dressed with a choice assortment of stock, banked with palms, making a handsome effect. Speaking of effects, the richest attempt will be tried at Christmas when Mr. Eyres will decorate St. Peter's church in scarlet and green, using large numbers of poinsettias, both cut and in pots, combined with holly, green and palms. Receptions, entrees into and exits from this busy sphere has kept the whole force working early and late for some time past and warrants the prediction of a continuance right into Lent. Amen, say I, and let us all have a share of the rush.

Those fine Beauties from T. J. Totten of Saratoga are bringing the price such elegant stock should bring.

F. A. Danker has succeeded the Capital City Floral Co. in Maiden Lane. He has considerable experience in the business, is very enthusiastic and will in this case help the retail business rather than unfortunately as in some cases, hinder the good work.

Sam Goldring is a big Elk and on Sunday last decorated the smaller Elks and the Leland Opera House, in his inimitable manner, for the annual memorial service. The wreath composed of forget-me-nots was hard to get, but he got it and it showed up finely. The hornets' nest hanging conspicuously in his store window, and which has been the cause of much alarm to his lady patrons, will be presented to a Broadway fellowcraftsman.

I had almost omitted mentioning a happy conceit noticed at Henry Eyres', and which is, I understand, original. It is an address label, in shape a violet leaf, and of violet color for violet boxes.

W. M.

TORONTO.

A Twenty-Four Hour Snow Storm.

"Our Lady of the Snows" is making another attempt to bring the winter along. She has favored us now with a twenty-four hour snow storm and pushed the mercury in the thermometer down pretty near zero. She seems very much like other ladies, bound to have her own way sooner or later. Well, if she will let us have our own way on Christmas eve we will forgive her this time. A mild day before Christmas makes a great deal of difference to the amount of trade done, and there is, of course, not nearly the time spent in wrapping up and protecting.

Stock Scarce — Prices Correspondingly High.

As far as I can ascertain from observation and inquiry, it does not appear that the supply of cut flowers is going to be any too abundant this year. The dull weather we have been getting so much of lately has retarded the crops considerably. If the few days between now and Christmas day are sunny it would help a great deal, but it does not look like it at present.

Prices are advancing considerably and will probably take another jump before Christmas. Violets will be in good supply at from $1.50 to $2.00. Roses and carnations are an unknown quantity. I hear that the principal growers have figured their Christmas price lists pretty high. Roman hyacinths have been something of a drug so far; there will be plenty of them no doubt. There will be some chrysanthemums, too, not any large quantity, but two or three growers are holding some back. Paper white narcissus plentiful. Of lily of the valley there will be none too much.

Chinese primroses seem to be the principal small flowering plants grown for the season this year. Everybody very busy just now. No time to talk except to prospective customers. The design trade has been exceptionally good this fall. E.

OBITUARY.

A. R. Whitney.

A. R. Whitney, the well-known nurseryman, of Franklin Grove, Ill., died December 15, aged seventy-three years. He was widely known and very popular among nurserymen throughout the country, and was for many years treasurer of the American Association of Nurserymen. Mr. Whitney was born in New York state, but removed to Illinois with his father in 1838. He had one of the largest nurseries in the state.

William W. Ball.

We deeply regret to have to record the death on December 14th of William W. Ball, the oldest son of Charles D. Ball, Holmesburg, Philadelphia, at the age of 11 years. Brain fever, accompanied by an attack of grippe, was the cause of death. Mr. Ball will have the sincere sympathy of a host of friends in the trade.

PEABODY, MASS.

J. M. Ward & Co. raise McGowans, the superior or even equal to I have not yet seen. They attribute the wonderful growth, strength of stem and large bloom to the virtues in the soil, as it is always thus with them. It was unfortunate that a bunch was not on exhibition at Boston on Saturday. It would have delighted the many supporters of this favorite carnation.

W. M.

BROOKLINE, MASS.

Xmas will find F. E. Palmer well prepared to handle the rush expected at that season.

Jas. Quinn has an unusual supply of bulbous stock, for which orders have been coming in nicely. Sales of the Boston fern were just as good this year as previously.

Miss Harriett Vass is prepared for a good season. Ferneries are one of her leading lines.

COPYRIGHT 1897.

AMERICAN CARNATION SOCIETY.

We have received a copy of the programme and schedule of premiums for the seventh annual meeting of the American Carnation Society, to be held in Chicago, February 17th and 18th.

A very liberal amount of money is offered in premiums for carnations shown at the exhibition to be held in connection with the annual convention, in addition to the usual certificates for new varieties and there is, also, a liberal list of special premiums, which are well worth sharp competition. Every grower of carnations should be represented in the exhibition at Chicago, February 17th and 18th.

Copies of the premium list may be had on application to the secretary of the Carnation Society, Mr. Albert M. Herr, Lancaster, Pa.

WASHINGTON.

One of the most important social events of the season was the debut of the daughter of the Leiter family, at which were seen many beautiful floral conceits.

A very handsome group of Farleyense ferns and fine specimen cyclamen, under the full-size oil painting of Hon. Mr. Curzon, were very effective, the frame being handsomely festooned with asparagus and sprays of orchids in variety. A fine group of palms filled in with specimen poinsettias engaged the attention of all who entered the front door, giving it really the appearance of a Christmas festivity.

The bouquet carried by the young lady was a thing of beauty, being composed of about sixty cattleya flowers, twenty-five sprays of Dendrobium Phalænopsis, twelve Dendrobium formosum giganteum, and six fine sprays of Vanda cærulea, mostly grown by Messrs. Field Bros., of our city. The numerous ribbons pendant from the bouquet were adorned with Dendrobium Phalænopsis, small cattleya blooms and Lælia anceps, etc.

The bouquet was the work of Mr. J. R. Freeman, and a handsome basket, illustration and description of which are presented elsewhere in this issue, was the handiwork of A. Gude & Bro. and Mr. J. H. Troy, of New York. W. H. K.

Simplicity in Greenhouse Construction.

During our long experience we have not only made many improvements in greenhouses, but we have so simplified the construction that building a greenhouse is no longer a matter so full of complications as to tax the patience and the ingenuity of even the most intelligent mechanic. Our

Clear Cypress Building Material

is worked out in the best manner ready to be put up, and we furnish our customers such complete detail drawings that any workman of only ordinary capabilities can put it up correctly.

ROCHESTER, N. Y.

Final Report of Wallace S. Wing, Assignee

The final report of Wallace S. Wing, assignee of Fred. S. Young, nurseryman, who made an assignment last May, was filed in the county clerk's office, December 15, and shows a balance on hand amounting to $647.61, for distribution among his creditors.

Death of Mr. H. E. Boardman.

Henry E. Boardman died December 14, aged fifty-seven years. For many years he was connected with his father in the nursery business in this city, but since the old gentleman's death, streets were laid out through the old grounds and buildings were erected in fast succession. Quite an extensive business was done by the firm at one time and they were well known all over the country. In later years Mr. Boardman took a live interest in the importation and breeding of Holstein cattle, of which he had one of the largest and best known herds in this state. His wife and a son, E. S. Boardman, survive him, also one daughter.

Christmas Forecast.

Orders for Christmas are coming quite freely, indications for a rushing trade were never better; let us hope that our florists will not be disappointed in their expectations. A large number of plants have been disposed of every day during the week, but most of these are not to be delivered until December 24. Flowering plants seem to have the preference and as these are quite abundant, no one is sorry, but prices are not extravagantly high on any of them. Otherwise the week past brought nothing extraordinary. There were a few small dinner decorations and also the usual funeral work, but no special events worth notice occurred, though our storemen and everybody else have been rather busy with preparations for Christmas trade Cut flowers of every description seem to be short by present indications, and our commission man only smiles without saying a word when inquiry is made as to the probable supply; maybe he knows better.

K.

FIRE INSURANCE.

At the adjourned meeting of the Florists' Fire Association, the following persons were elected directors: E. H. Michel, St. Louis; J. C. Vaughan, Chicago; Elmer D. Smith, Adrian, Mich; Wm. Scott, Buffalo, N. Y.; John G. Esler, Saddle River, N. J.; M. A. Patton, Tewksbury, Mass.; E. A. Seidewitz, Annapolis, Md.; E. G. Hill, Richmond, Ind.; Adam Graham, Cleveland, O.; W. F. Gude, Washington, D. C.; L. L. May, St. Paul, Minn.; P. J. Berckmans, Augusta. Ga.; W. J. Vesey, Fort Wayne, Ind.

W. J. Vesey was elected secretary. The by-laws as printed were adopted with immaterial changes and with some formal additions, the principal of which are: First, requiring the directors to fill all vacancies occurring during the year. Second, permitting all directors to vote on questions submitted in writing by letter.

Two or three of the gentlemen named as directors have not yet completed their applications for vacancies, but have made informal application therefor. Unless they do so, it will be necessary to substitute others in their places. You will also notice that two places are left unfilled from lack of good names in other territory.

Any person in the business will be supplied with a blank application for insurance on request.

W. J. Vesey.

Ft. Wayne, Ind.

NEW CARNATION MRS. S. A. NORTHWAY.

Being at Geneva, O., on business last week, I visited W. P. Simmons & Co.'s establishment and had the pleasure of seeing the new carnation Mrs. S. A. Northway. Its habit of growth is very strong and vigorous, the flowers are large and extremely fragrant, the color is white with a lovely shade of pink. In my estimation it has all the qualifications necessary to make it a first class fancy carnation. It is the most productive carnation I have ever seen. No doubt this variety is fully equal to any of the older sorts that Simmons has originated.

TELEGRAPH CODE.

In telegraphing orders to any of the wholesale dealers in cut flowers use the following code:

Assume—Do not answer if cannot fill order.
Abrogate—In case you cannot fill order, telegraph at once.
Anticipate—Answer at once, stating whether you can or cannot fill order.
Ambition—If you can only partially fill order, do so, and reply, stating what.
Admiral—Order must be sent on train mentioned only.
Ambulance—Want all of order filled or none, and prompt answer back.
Adjacent—If cannot send on train mentioned, next one will do.
Affable—Send prepaid by baggage master, if no express messenger on train.
Decorate—If cannot send all on train mentioned, send all you can, and send balance on next train.
Admission—This order is a substitute for my regular order.
Dancing—If cannot fill order exactly as specified, you may substitute according to your best judgment.
Ancestor—This order is an addition to my regular order.
Durable—Colored flowers must not be substituted for white.
Affection—Fill if possible, even at extra expense.
Fabricate—Flowers ordered are to be re-shipped to a distance, therefore buds must be cut specially close.
Fortunate—Select extra stock and charge accordingly.
Devotion—For cheap work, and can use second-class flowers, if at reduced price.
Flattery—If price has advanced since last quotation, do not send goods, but telegraph.
Forgery—This order countermands all previous orders.
Formation—Add these items to the order which you already have, but in case first order is already shipped, cancel this addition.
Flamingo—We are in a bad pinch; send us something to help us out, even if of poor quality.
Flocking—Have sent mail order; if not yet received, send following at once, and cancel mail order when received.
Foraging—This order includes all items previously ordered and wanted for this date.
Superior—Can use something especially fine, and am willing to pay accordingly.
Skip—If you are out, buy the best you can; we accept risk of getting "pickled" stock.
Corporal—If cannot send on night train, morning train will do.

THE CODE BELOW WILL BE USED IN ANSWERING YOU, WHEN NECESSARY.

Elope—Cannot fill your order to-day. Stock is scarce. Have tried to buy at other houses for you.
Lecture—Our store was closed yesterday when your telegram came. Received it this morning. Will ship by first train to-day, unless countermanded at once.
Willing—Cannot ship on train mentioned. Will send on next train possible to-day.
Eclipse—Will send part of your order. Balance scarce. Cannot get it at any price to-day.
Artistic—Cannot fill order to-day, if you want order filled (same order) to-morrow, wire us at once.
Favorite—Stock very poor, none better to be had. Will ship unless countermanded by..... o'clock.
Fundament—Stock named in this telegram has been sent, and balance, unless countermanded by telegram, will be sent on..... ...

KEEP THE DEALERS POSTED.

Keep the dealer from whom you order flowers fully posted as to the sort of stock for which you have the largest sale. Write him as fully as possible when you have time to devote to the matter. Keep him fully advised as to the needs of your trade. He will then know much better how to fill your telegraphic orders. He will know whether to send you the best in the market at the top price or to send you a fair grade at a more moderate price. The dealer is anxious to please you but often his information is meagre. Make this information as full as possible by mail and your telegraphic orders will be filled more to your satisfaction.

SYRACUSE, N. Y.

In my notes in issue of the REVIEW for December 9, upon reference I find I got somewhat mixed on the order of carnations being grown by L. E. Marquisee, and wish to correct them to read thusly: Amongst the large number of seedlings are several which a few years since would be placed on the market but are now not considered worth disseminating, the standard being here set high.

There is one, however, in his collection that certainly possesses superior merit. If this variety on sufficient trial (this is its second year), proves to be as good as it promises, Mr. M. intends to place it upon the market. It is a rich, soft pink, an ideal shade, very large and full, of strong, robust habit, and, in the midst of others that are diseased, perfectly healthy. It is apparently very free and the flowers are borne on strong stems.

This, while deservedly considered the cream of the collection, has a strong rival in another pink named The Ideal, a variety which closely resembles that old favorite, Grace Wilder, and is highly prolific. W. M.

HARTFORD, CONN.

Jno. Coombs says he met quite recently someone who reported that the lilies they had supplied this season were free from disease. He regrets he purchased none from that party and has forgotten his name, and would like to communicate with him, as a large proportion of those he has are badly diseased.

This woeful cry unfortunately is generally heard, and the firm who can guarantee a bulb which will not develop disease should have a "cinch." Now, instead of our generous government supplying free seeds and thus sowing germs of discontent, well deserved, would make an exhaustive trial of bulb growing in the region of Southern California, if successful, what a source of joy it would be to the grower and dealer also. Turning from the diseased lilies I saw a pretty lot of violets, Meteors and Bridesmaids, healthy, vigorous stock, second crops of smilax and asparagus all in first-class shape.

D. A. Spear is receiving some fine azaleas and roses from A. N. Pierson, Cromwell, who reports the grafted method an entire success. W. M.

SIMMONS'

New Light Colored **CARNATION**

Mrs. S. A. Northway

We introduce this variety with even more confidence than we did Portia, Silver Spray, Tidal Wave, Daybreak, Rose Queen, or J. J. Harrison, knowing that it will become as great a cut flower variety as any of the above. Plant of strong, free growing habit, entirely free from disease or rust; large round high built flower with perfect calyx and extra strong and long stem. Color a beautiful soft shell pink becoming almost white when fully open.

Orders booked now and filled in rotation. We shall commence to ship soon after Jan'y 1st. Price, $10.00 per 100; $75.00 per 1000.

Geraniums. Md. Bruant, Md. Jaulen, Fleure Poitevine, J. Ricaud, and J. Sallier, 2¼-in. pot plants, $5.00 per 100. Rooted cuttings, $3.00 per 100; $25.00 per 1000. Our superb stock of all the finest sorts, 2¼-in. pot plants, named, $25.00; unnamed, $20.00 per 1000. Rooted cuttings, $12.50 per 1000.

Fuchsias. A grand lot of summered-over stock in small pots that will make early bloomers, $3.00 per 100.

All Rooted Cuttings Cash with Order.
Our Price List describes many other fine plants. Send for it.

W. P. SIMMONS & CO., - Geneva, Ohio.

Extra select stock at Kennicott Bros. Co., Chicago. All flowers in season at lowest market rates.

Carnations

New Carnations.

White Cloud. An excellent commercial white, strong, vigorous habit, large fragrant flower, long, strong stem, early and constant bloomer. A. C. S. certificate.

Gold Nugget. Conceded the best yellow ever grown, color clear and deep, only slightly marked with red. Large flower, strong stems and vigorous habit. Early and continuous bloomer. Missed A. C. S. certificate by one point for lack of fragrance.

New York (Ward). Bright cerise pink, strong vigorous habit, constant bloomer. Certificate.

Mrs. James Dean (Ward). Clear silvery pink, strong vigorous habit large flower, constant bloomer. Certificate.

John Young (Ward). White deeply fringed fragrant flowers, strong grower, free bloomer. A first class commercial variety.

Bon Ton (Ward). Bright warm scarlet, strong habit resembling Portia, large flower, stiff stem.

Prices for above varieties: $2.00 per doz.; $10.00 per 100; $75.00 per 1000.

We have all the principal 1897 Novelties and other standard varieties at lowest prices

New Chrysanthemums.

Mrs. C. H. Peirce. A soft deep yellow of greatest commercial value. Large flower of globular form, with straight petals slightly curved at tip. Full to center and of greatest substance, good stem and heavy foliage. Recommended for certificate by N. C. S., scoring commercial scale: Boston 91, Philadelphia 90, Cincinnati 87, Chicago 90.
35c each; $3.50 per doz.; $25.00 per 100.

Snow Queen. A commercial white. Large, nicely finished rounded flower, full to center, good substance, stem and foliage. N. C. S. certificate. 50c each; $5.00 per doz.; $35.00 per 100.

Merry Christmas. The best and latest of all whites. A well formed flower of style of Mutual Friend but of much greater substance, and full to center. Dec. 20th to Jan. 1st.
35c each; $3.50 per doz.; $25.00 per 100.

A pkt. of the new compact dwarf Alyssum added to every order.

JOHN F. RUPP, Shiremanstown, Pa.

Always mention the Florists' Review when writing advertisers and thereby oblige the Publishers.

KANSAS CITY.

The first issue of the REVIEW was a genuine surprise, and the one just to hand is even better than the first. The general introduction is all right. It makes us acquainted with men we read about but seldom see, especially we poor fellows in the West that are too poor to travel. It is truly gratifying to receive what you are giving us, something good and substantial—articles on orchids, hardy stuff, and a hundred and one good things that can be used in our business profitably.

Trade is very quiet, very little doing in society, and, worse still, no funeral work of any account. Roses are offered from 50 cents to $1.50 per dozen.

Arthur Newell has just issued his first cut flower list, and the towns in Missouri, Kansas, and Nebraska are flooded with them. Arthur says his stamp bill is awful, and when his orders come in will have to get him a shipping clerk.

The chrysanthemum is gone. Some report they were O. K., and many more say not like former years. The large blooms were most in demand. Things look like Christmas now with green and holly in all the stores. S.

DES MOINES, IA.

The annual meeting of the Des Moines Florists' Club was held Monday evening, Dec. 13th, when the following officers were elected: Peter Lambert, president; John Lorenz, vice-president; Julius Liedig, treasurer; J. T. D. Fulmer, secretary. The club will most likely attend the convention at Omaha in a body and from present talk there will be no lack of enthusiasm.

The State Horticultural Society met in our city Dec. 14th. J. T. D. F.

ADIANTUM FERNS.

Mr. Washburn, of Bassett & Washburn, Chicago, notes less call for cut fronds of adiantum ferns and expresses the opinion that the large use of the foliage of the plant upon which the flower grew is reducing the demand for other foliage. The call for asparagus is good, however, and this is probably also taking the place of ferns to some extent.

Carnations

Rooted cuttings of both standard varieties and novelties at popular prices

AN UNPARALLELED SUBSCRIPTION OFFER.

EVERY one to whom this issue of the FLORISTS' REVIEW is addressed, and who fills out, signs and returns the accompanying subscription blank, accompanied by $1.00, within 30 days from date, will receive not only the FLORISTS' REVIEW for one year but also a certificate entitling him to the earnings on one-tenth of a share of stock in the company formed to publish the paper. The shares will be of a par value of $10.00 each.

Why do we make such an unparalleled offer? It is very simple.

You will have an interest in the success of the paper.

You will see that you can buy everything that you want to just as good advantage from advertisers in the FLORISTS' REVIEW as elsewhere and at the same time benefit yourself by increasing the earning power of your certificate.

This mutual arrangement cannot fail to bring to the paper a heavy advertising patronage, and as a result the stock represented by your certificate will earn good dividends.

And the more you buy of advertisers in the FLORISTS' REVIEW (always mentioning the paper) the larger your dividends will be.

You will get a better paper than has yet been published in this field, and a share of its earnings. Please let us hear from you by early mail.

FLORISTS' PUBLISHING COMPANY,

530-535 Caxton Building, - - - CHICAGO, ILL.

WALLINGFORD, CONN.

Man's greatest friend yet bitterest foe —fire—wrought sad havoc with the greenhouses and stock of George H. Rowden, caused by a drunken hobo who gained entrance through a door which had been forgotten to be locked. The result has caused a peck of trouble, for whilst insured to a certain extent the loss of stock and consequent business will take time to recoup. Mr. Rowden surveys the wreck philosophically and is pitching in with might and main to get fixed up again as soon as possible.

He relates a humorous incident associated with the boilers, of which he has two, a Scollay and Hitchings, both of which were blowing off on his arrival in great shape. He does not know which made the most noise, but almost immediately afterward the chimney stack fell on the back of Hitchings (boiler), breaking it, but considering it had done steady service for seventeen years, this wasn't to be wondered at, so that a duplicate w. s at once ordered, and instead of being run separately, as was the old one, has been connected with the Scollay and both will have an equal show.

This is the opportunity for the drummer, especially he of a commiserating turn, barring a representative of a pot firm, who will not be able to get in his work for some time, owing to an abundance of pots, which were about the only things that survived the heat. W. M.

NEW HAVEN, CONN.

Smith T. Bradley admitted with the army of visitors at his opening a splendid black specimen of the feline race, and whilst he does not believe in charms neither will he in hoodoos, as business has been first-rate ever since. A handsome new sign across the front of the office contains much gilt, and whilst all that giltters is not gold, in this instance the gold (and bills) flow underneath it.

S. H. Moore was working upon a large sago wreath upon which Bridesmaid roses were being placed. He tells me this is a very popular thing just now, having made up several already this season. Perle or Meteor look exceedingly rich upon the dark green background.

R. Veitch & Son deplore the loss of their late worthy assistant, Mr. Rowan, the notice of whose death was recorded last week in this paper.

Jno. Champion & Co. have a fine lot of carnations, particularly Scott and McGowan, for Christmas. W. M.

.....For the New Year

NEW LONDON, CONN.

This trip I happened to find that G. O. F. (Grand Old Florist) Jno. Spalding in a reminiscent mood, and as a consequence a chat was in order. It is apparently an easy matter for this veteran of past fourscore to carry one back fifty years or more, surveying the history of our profession particularly, and kindred matters incidently and summarily, to express the opinion that we are yet but in infancy and will accomplish even greater feats than have yet been done. Marvelous to my mind is the fact of our friend's youth and vigor, keeping in touch with the leading topics of the day and putting to shame many of the "up-to-date" young men of the period. The house he has lived in for so many years (it was built in 1737) carries its burden of years as lightly as its venerable owner. W. M.

WANT ADVERTISEMENTS.

SITUATION WANTED—A thoroughly capable and experienced man wishes a position in charge of a private place. Address W. P. Kelley, 5546 Elisi avenue, Chicago.

SITUATION WANTED—By a reliable, industrious young man in park or private place. Single, 23 years of age; seven years' experience; good references. Address G, care Florists' Review.

ROSES

CRIMSON RAMBLER ROSE

EXTRA STRONG FIELDGROWN PLANTS FOR EASTER FORCING.

We offer an extra fine lot of strong fieldgrown plants of the Crimson Rambler Rose for Easter forcing.

We desire to call the attention of the trade to the great value of this rose as a pot plant for Easter sales. It is one of the showiest and most beautiful of all hardy plants, but also makes one of the most beautiful pot plants for florists' sales, and is particularly adapted for forcing for Easter, having proved one of the most valuable novelties grown for this purpose. A Boston grower realized ten dollars each for every plant he had.

We can supply an extra fine lot of extra fine plants for potting and growing on for this purpose—plants four to five feet high, three to four strong canes each—stock in the very best possible shape. These long canes will flower from every joint, and by proper training and winding the plants can be made of immense size, covered with a perfect mass of bloom. We know of no choicer plant for the Easter trade, and florists who do not supply themselves with a lot of this stock for this purpose will regret it.

Strong fieldgrown plants, three to four canes each, four to five feet long, $3.00 per doz.; $20.00 per hundred.

HYBRID PERPETUAL ROSES.

We also offer an unusually fine stock of the very choicest and most desirable varieties of **Hybrid Perpetual Roses** for growing for pot plants for florists' use for Easter and spring sales or for outdoor blooming. Our stock is unusually strong, and cannot fail to please. We can supply the following extra choice sorts, viz:

Mrs. John Laing,	Ulrich Brunner,	Paul Neyron,	Gen'l Jacqueminot,
Mme. Gabrielle Luizet,	Anna de Diesbach,	Margaret Dickson,	Magna Charta,
Baroness de Rothschild,	Clio,	Baron de Bonstetten,	Marshall P. Wilder,
Prince Camille de Rohan,	Alfred Colomb,	Etc., etc.	

Strong fieldgrown plants, extra heavy, $2.00 per doz.; $12.00 per hundred.

DREER'S SPECIAL HOLIDAY OFFER.

Our stock of Palms has never before been so complete at this season of the year as now, forty of our largest houses being filled with stock, from little seedlings up to specimens 10 ft. high. Our stock of Kentias, that best of all Palms, is especially fine. Of these we are carrying the largest stock and best assortment of sizes to be found in any one establishment in the world.

CIBOTIUM SCHIEDEI.

The most graceful and hardiest of all the Tree-Ferns. A variety that will stand the same treatment as a Palm and a most decorative plant in every way. We offer beautiful specimens, 6-inch pots, $1.50 each; 7-inch pots, $2.50 each; 8-inch pots $3.50 each.

DRACÆNA BRUANTI.

A variety that is but little known, dark green foliage, graceful and as tough as a Rubber-plant; just the thing for retailing at Xmas.

4-inch pots,	10	inches high	.....	30	cents	each	$3.00	per doz		
5	"	"	18	"	"	.....	50	"	"	5.00	"

For a full line Decorative Plants and General Florists' stock, see our QUARTERLY WHOLESALE LIST of September 1st. If you have no copy of this or of our SPECIAL DECEMBER LIST of NEW CROP FLOWER SEEDS, which have been mailed to every Florist in the country, a postal card will bring duplicates.

HENRY A. DREER, 714 Chestnut St., Philadelphia.

A FEW KIND WORDS.

I think the REVIEW is great, and cannot be beat.—Nathan E. Reist, Lime Rock, Pa.

I have no hesitation in saying it is the very best trade paper I ever read.—J. H. Bradbury, Brighton, Mich.

We congratulate you on its handsome appearance.—W. H. Gullett & Sons, Lincoln, Ill.

We are very much pleased with the new paper and wish the new enterprise big success.—J. Chas. McCullough, Cincinnati, O.

It starts at the top of the ladder.—F. A. Willard, Providence, R. I.

Your paper is a gem.—Kennicott Bros. Co., Chicago.

Allow me to compliment you upon its exceedingly neat and handsome appearance.—R. E. Shuphelt, Chatham, N. Y.

It is a grand number and we wish you success.—Vick & Hill Co., Rochester, N. Y.

Am much pleased with it.—A. N. Bartlett, Oshkosh, Wis.

Your paper is a "daisy."—H. Eichholz, Waynesboro, Pa.

It's a peach.—E. H. Hunt, Chicago.

I write to thank you for placing such a grand paper at the disposal of the trade.—Jesse Robbins, Carlisle, Pa.

There is room for such a paper and I heartily wish and predict for it great success.—Geo. E. Fancourt, Wilkesbarre, Pa.

Your first number is all right. I congratulate you.—A. W. Hoyle, Dorchester, Mass.

Your second number is just as good as the first. Keep up the good work.—Quaker City Machine Co., Richmond, Ind.

The REVIEW bids fair to be "all right."—W. P. Simmons, & Co., Geneva, O.

I congratulate you upon the good shape in which the first issue of the REVIEW was gotten up. I feel that it is a benefit to all concerned.—A. T. Boddington, New York.

It is a first-class paper in every respect and ought to be in the hands of every wide awake florist.—Fred W. Williams, Stillwater, N. Y.

It is deserving of praise from every florist.—Miss M. S. Newman, St. Louis.

I am very much pleased with it.—S. H. Powell, Hempstead, N. Y.

It is just the paper I have wished for.—J. Reeve, Chicago.

The FLORISTS' REVIEW is a beauty.—Geo. A. Rackham, Detroit, Mich.

FLORISTS' REVIEW

Vol. 1. CHICAGO AND NEW YORK, DECEMBER 30, 1897. No. 5.

Novelties in Christmas Wreaths, arranged by Mr. Geo. Stumpp, New York.

Novelty in Christmas Wreaths, arranged by Mr. Geo. Stumpp, New York.

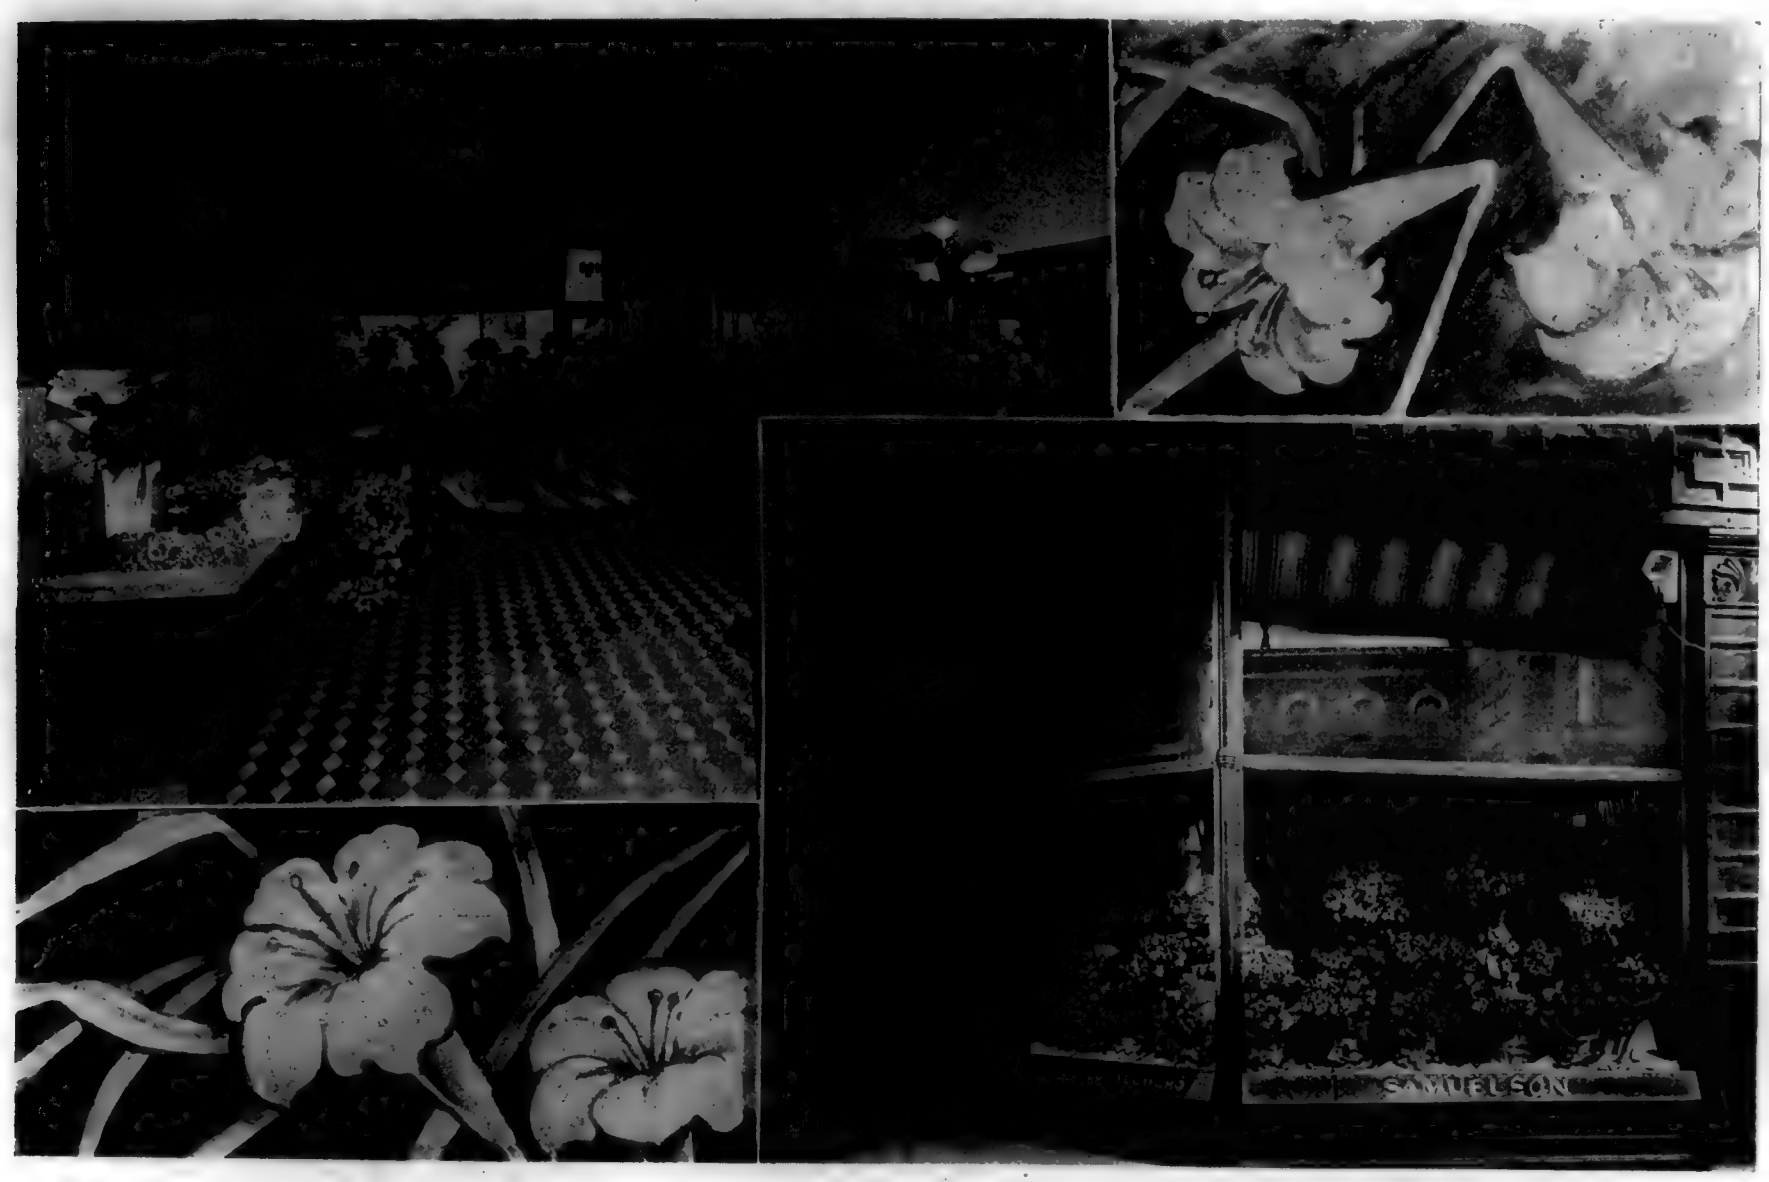
NOVELTIES IN CHRISTMAS WREATHS.

It is one of the most difficult problems every year to introduce something novel in the way of Christmas wreaths for decorative purposes. We have got tired of seeing the regulation stock of immortelles, etc. The credit must go to Mr. George Stumpp, of New York City, for introducing the novelties shown in our illustrations and seen this year for the first time.

Owing to the color plan of the whole being red, the photographs do not do them real justice. As a novelty, however, they are unique. The illustrations give an idea as to the arrangement, the groundwork being of red immortelles and the "fixins" are dried sumach flowers, bitter-sweet berries, Hartford fern, and broad crimson ribbon.

CHRISTMAS EVE WITH A RETAIL FLORIST.

This is the story of the night before Christmas, spent at the establishment of Mr. E. Wienhoeber, a leading retail florist of Chicago. At 10 p. m. last Thursday Mr. Wienhoeber and his force of twelve employes began the work of selecting and packing the cut flower orders that were to be delivered Christmas morning.



On Wednesday all plants, wreathing, holly, etc., had been delivered so as to leave the decks clear for action on the cut flowers at the latest possible moment. Thursday was devoted to waiting on customers and taking orders, though the clerical force was even then preparing for the work at night. But before we take up that, a word about the holly wreaths. These were made extra heavy, on both sides, and sold at an extra price, for Mr. Wienhoeber's trade is of the choicest in the city, and a very popular style of wreath was one in which holly and lycopodium was worked in together.

The bulk of the flowers handled by Mr. Wienhoeber come from Mr. E. Buettner's range of glass at Park Ridge. They were formerly joint owners of both store and greenhouses, but a few years ago dissolved partnership, Mr. Wienhoeber taking the store and Mr. Buettner the greenhouses. By 9 p. m. Mr. Earl, Mr. Buettner's foreman, had arrived with the choice Christmas stock of flowers and had laid out the array of boxes in the basement. The choice stock is held at the greenhouses till Christmas eve, being reserved for critical customers who have placed advance orders, while the rest is sent in for earlier sale over the counter. By 10 p. m. the boys were at work in the room on the first floor unnesting boxes and piling the various sizes together where they could be quickly reached, and soon after two were set to work wrapping tissue paper around the stems of bunches of violets and then dipping the papered stems in water. These were violets that were to be packed with other flowers, and without wet tissue on the stems they are apt to suffer, even when packed only over night.

Just as Mr. Wienhoeber appeared on the scene two "difficulties" were referred to him for action. Both were orders sent by messenger. One order inclosed one dollar and instructed that "three bunches of your finest violets" be sent to a certain address. As the price of violets was one dollar a bunch, the order was placed on file to be later returned to the sender. Next was "Two dozen choicest roses, cost not to exceed $3." "Hold it till we get through and see what we have left," were the instructions given. "Are these all right?" says Mr. Earl to the writer as he shows a bunch of two dozen magnificent Beauties, with stems 36 to 40 inches long. "We cut 150 like these to-day." In addition to these was a host of jars of Beauties of all degrees of length of stem and quality of flower, tray after tray of splendid Maids, Brides, Meteors, etc., and cases of fine carnations tied in graceful bunches of twenty-five. Trays of pink tulips and violets, jars of Romans, narcissus, valley, Harrisii, poinsettias and stevia were scattered around the basement in orderly array.

Soon Mr. Wienhoeber took his position at the center of a long bench with the order book and a long, open paper box containing a host of tags and cards. These had been prepared by the bookkeeper. In each case there was a tag already addressed, and attached to this by a rubber band was the card to be sent with the flowers if any had been left by the customer for this purpose. These were arranged in the box in the same order in which the orders were entered in the order book. One assistant took a wicker tray from a pile and placed it in front of Mr. W., who at once called out "One dozen extra Beauties, two dozen Scotts and one dozen mignonette." Three assistants placed the required stock on the tray, it was quickly glanced at by Mr. W. who placed on the tray the tag and card and a boy started with it for the floor above where two packers were ready for business. From that time on it was a repetition of the above, with occasional changes of quality or kind of flowers by Mr. W., whose eye passed on each bunch of flowers that went into the orders, and who sometimes asked as to quantity of certain flowers on hand when making up orders of mixed flowers where varieties were not specified.

Following the stream of wicker trays going up the stairs the packers were found busily engaged above. At a glance the proper size and shape of box was determined, quickly lined with tissue paper, the flowers placed to show to best

Interior and Exterior Views.

advantage when opened, a few adiantums added if necessary, the customer's card placed on top, the cover put on, tag placed on top of cover, and box pushed along to another man who did the tying, attaching the tag simply by running the twine through the tag before tying the knot. The box was then carried into the storeroom in front, where heat was turned off. There were five different piles, one for each of the five delivery wagons, each having its own section of the city to cover. Presently a box reached the packers that was treated differently from the others. The box was lined with cotton batting and waxed paper, and wrapped more securely. A glance at the tag showed it was addressed to another city.

"How does the bookkeeper keep track of the cards that customers leave to be sent with flowers?" we asked. "All orders are numbered and the card is placed in an envelope and the order number written on it. The cards are kept in a special drawer, and an entry in the order book tells that there is a card to go with the order," was the answer.

And so the work goes rapidly on, each one knowing his share and doing it with precision till shortly after midnight, when at a signal from Mr. W. all hands quit, the trays of flowers in the basement are covered with damp paper, and the party troops forth to a neighboring restaurant, where an excellent lunch is found already spread and awaiting the

VIEWS OF THE STORE OF MR. C. A. SAMUELSON, CHICAGO.

attack. It is the hour of relaxation and jokes and stories are in order. Mr. Earl asks that grace be said by the newest married man at the table, whereat a youth nearby blushes furiously. Mr. Smyth notes that some have not visited the barber of late and asks if the price of shaves has gone up. Suddenly one bright youth wishes everybody a merry Christmas, having just noted that it is now Christmas day. The lunch disposed of, all return to work, and it is 5 a. m. before the orders are all disposed of. Something over 500 different cut flower orders have been selected, packed, and placed ready for delivery.

A few hours later the force is at it again, some having had no opportunity to close their eyes in sleep. The stock that remained after filling the orders is sorted over, placed in suitable jars, and brought up and set on the counter for the morning sales, while the five wagons are busy making their deliveries. Sales are good, though prices on some lines of stock are not so stiff as the night before. The best has been selected out, and the salesmen are more generous with stock of which there seems to be a surplus. More stock could have been sold on orders earlier in the week, but the lookout for supply was not the best, and orders were taken cautiously. When the stock came there was more of it than anticipated. Quite a lot of violets are left, but they go fast in the morning. An arrangement that appeals to customers is a little hamper of violet colored wicker work, a piece of crepe paper with purple figures on it placed loosely in, and nestling in this three bunches of violets. These arrangements go at $3.75; $3 for the violets and 75 cents for the hamper.

The best Beauties, with stems thirty-six inches and over in length, are billed at $18 a dozen, the next best at $12 to $15 a dozen, the next at $9 and still shorter at $6. Extra Maids, Meteors and Brides go at $5 a dozen, good quality at $4, while some are sold at $3. Carnations are 75 cents to $1 a dozen, Harrisii, $4 a dozen, narcissus $1 a dozen, Roman hyacinths 75 cents a dozen, stevia, 50 cents a dozen sprays. But this stevia is fine. Grown as this is it is a beautiful and very graceful thing. It is not to be compared with the "hay" so often seen.

A few belated plants are being sent out. A popular thing was an 8-inch pan into which four primulas of different colors had been placed. These are grown in separate pots and placed in the pans as ordered.

It is toward noon and time for closing. Trade has been better than expected. There has been more stock to sell than was anticipated. The sales have been good and but little stock remains. But a few kicks come in to mar the happiness of the florist. A lady to whom Meteor roses were sent with the thought that a special favor had been done her, returns the roses with an indignant message. She preferred Brides. The Brides are now all gone. They were "worked off" in boxes of mixed flowers. The Meteors could have been placed to advantage a dozen times the night before, but it is now too late. A deliveryman returns with two boxes he cannot deliver. "No such parties live at those addresses," says he. Both had been ordered by one person, to be sent to another one, some friend to be remembered, and when ordering had given the wrong address. On consulting the directory the correct address of one was discovered and the deliveryman started off again, but the other could not be located and the flowers remained on hand with visions of a dissatisfied and disappointed customer in the mind of the florist.

And so closed the Christmas trade of 1897 for Mr. Wienhoeber.

NEW FRENCH CHRYSANTHEMUMS.

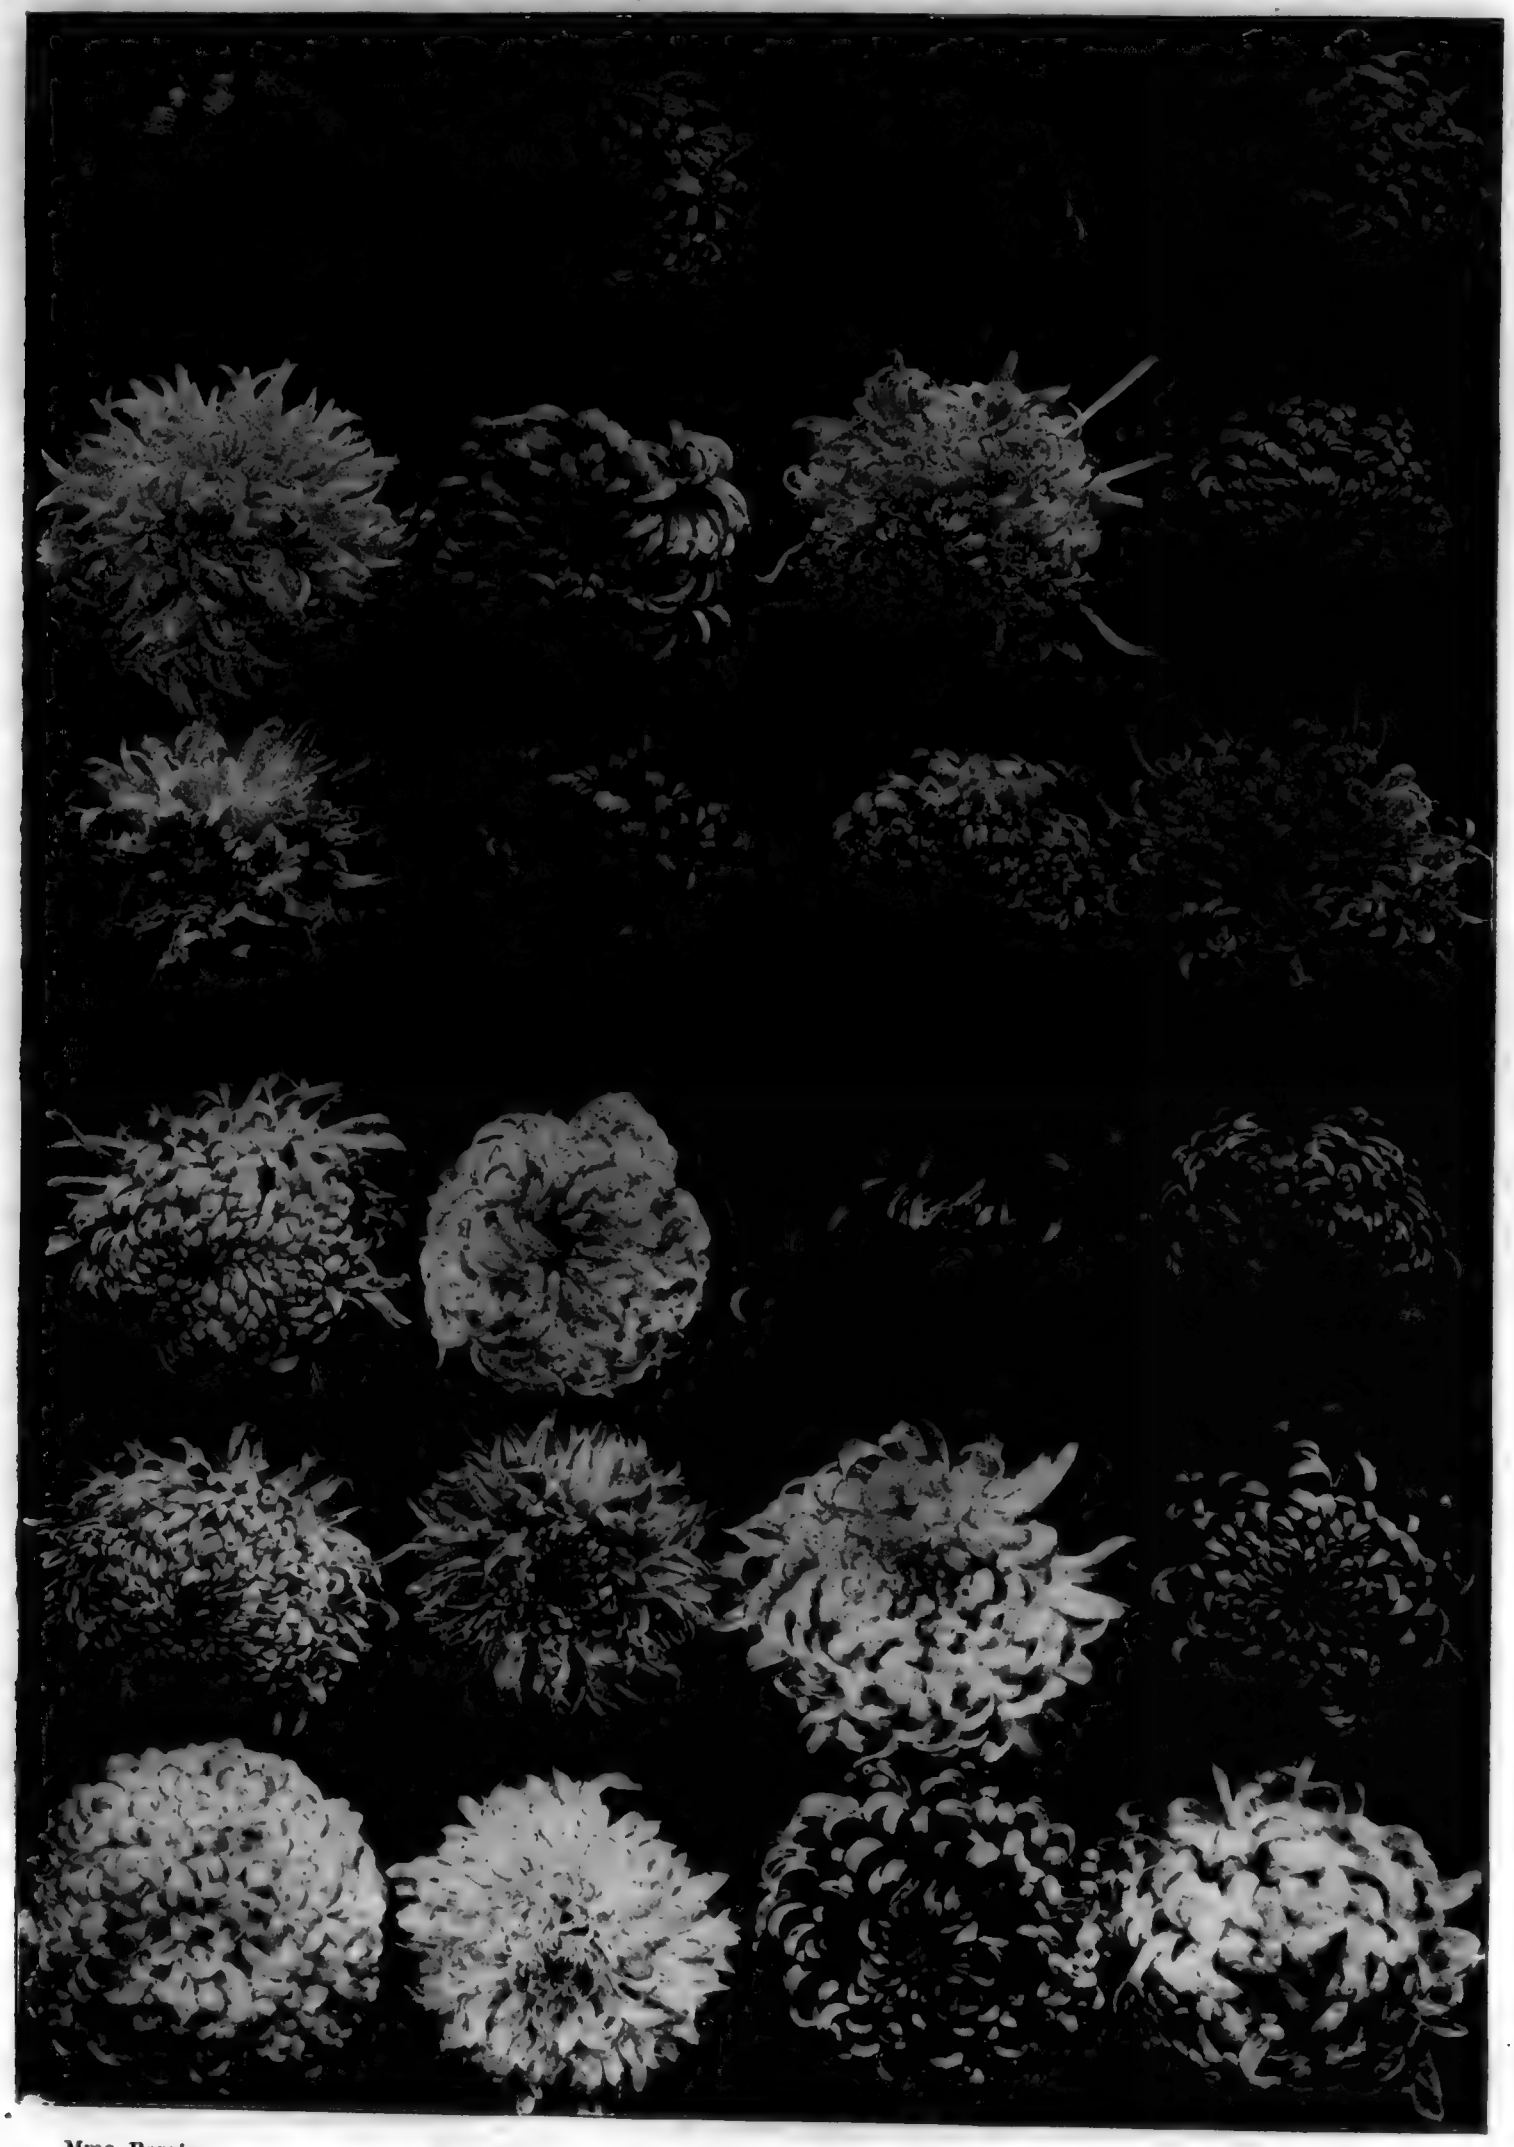
We are pleased to be able to present herewith a page group of M. Calvat's new chrysanthemums which have been so well received in England. But few American growers have yet had opportunity to test them, but those who have seem very much impressed by them and believe the collection contains a number that will be exceedingly valuable.

Mr. C. Harman Payne, secretary of the English National Chrysanthemum Society, writing to the English *Gardeners' Chronicle*, has this to say about them:

"The season of 1897 will be remarkable for the large number of very fine, large flowering, Japanese chrysanthemums of French origin and the absence of anything like serious competition from the other side of the Atlantic. The number is considerable and it seems scarcely likely that all the novelties can remain with us for long, but that we shall be compelled to make our selection of the best and leave the remainder to their fate.

"There are several new whites of promise, Mme. Deis, Fee de Champsaur, and Mme. J. Smeers, being of that color. Topaz Oriental is a fine pale yellow; M. W. H. Fowler, pale pearly, silvery pink. One of the finest and best is undoubtedly Mlle. Lucie Faure, a big, solid, incurving Japanese of great size and substance, color purest of whites faintly tinted in the center. Mme G. Bruant is a large white, tinted purple, Mme. Ed. Roger is a pale sea-green incurved Japanese, very distinct and curious; Princess de Galles is also a big white flower with long florets; Werther, Surpasse Amiral, Souv. de Molines, Congres de Bourges, Iserette and Mme. Rey Jouvin are several more that will be met next year. M. Massange de Souvrex is a pure yellow and a large bloom; Souv. de M. F. Rosette, deep plum colored amaranth. * * * * Another fine Japanese, globular incurved, is Mme. Ferlat, pure white.

"N. C. S. Jubilee is everywhere good and of a peculiarly soft lavender pink, with broad incurving florets, having a reverse of silvery pink; Directeur Lebert, large lilac-mauve; Mlle. L. Zede, a big solid violet with silvery pink reverse, was very fine on the continent last year and promises well here; Mme. A. Rousseau, rosy-mauve, reverse silvery; Mme. R. Grenier is pure white.



"From the above brief description it will be seen that good crimson and rich purples are not much in evidence this year, but otherwise there should be a very extensive selection for those desiring to increase their collections. * * *"

In the English *Gardeners' Magazine* appear the following descriptions of some of the varieties illustrated: "President Nonin is a grand flower of chamois yellow color and long curling petals; crisp and full. The plant dwarf and vigorous.

"Beaute Grenobloise may be compared to Lady Byron; the color is pure white on early buds but tinted blush on late ones.

"Secretary Fierens is a good variety and likely to become popular; the color is a gold-shaded crimson and the flower of a drooping habit, large and full. Souv. de Mme. F. Rosette is a very dwarf plant with good flowers of purple amaranth; for October blooming Mme. G. Bruant will be a first rate exhibition variety, it has broad, flat and drooping petals, color, a warm rosy shade and a white ground."

"This year, as before, the Calvat race seems to embody those massive propor-

tions and that heaviness of build that appeal to English exhibitors so much and of which his earlier gains gave so much promise. The best of M. Calvat's most recent gains are unquestionably Director Liebert, a fine globular bloom, having grooved and curly florets, large in size and deep lilac-mauve in color; N. C. S. Jubilee, a charming addition, solid, compact and finely incurved, color silver pink, reverse inside florets lavender pink; Mme. Ferlat, a noble new white, solid and massive with incurving florets; M. M. de Louvrex is a fine new yellow; Souv. Rosette, big solid, incurving, with pointed florets, plum colored; Mme. X. Rey Jouvin, very pretty incurving bloom with broad grooved florets, deep rosy pink and slightly hairy; Werther, rich purple amaranth; Souv. de Molines, crimson bronze, tipped and reversed in gold; Princesse de Galles, a fine large white with great length of floret; Mme. A. Rousseau, Mme. G. Bruant, Iserette, Mlle. Lucie Faure, large fine whites; Topaz Oriental, fine pale yellow; Mme. Deis, white; Fee de Champsaur, long white florets. All these are this year's novelties."

C. Harman Payne's Dec. 4th Report says: "It is never safe to prophesy, especially in chrysanthemums, but if I am not mistaken in my estimate of these novelties, Mlle. Lucie Faure, Mme. Ferlat and Mlle. L. Zede, will occupy the foremost position when the 1897 novelties are fully distributed. Mlle. Lucie Faure is a most superb novelty of Jap. incurved type. The florets are of great length, good substance and deeply grooved, color of the purest white; will probably rank as one of Calvat's best. * * * M. G. Chavanne is a closely built Jap. incurved, broad florets, color rich and golden yellow."

CHRYSANTHEMUM NOTES.

Retrospection.

This is the season of the year when the florist looks up his stray "mum" notes and settles on what varieties he will grow next year. It is not a bit of use keeping a lot of varieties that are of a delicate constitution. Many fine kinds are, I know, indifferent growers, but anything unsatisfactory and unremunerative should be dropped from the list. There will still be plenty of fine material left, and this yearly weeding out, this survival of the fittest, is a necessary operation in order to keep up with the times.

It may cost many a sigh of regret to have to drop an old favorite like the Queen, say, but the Queen must go. Many growers still hang on to it, but one sees very few in Jersey. That eye will not conform to the florist's ideal and must go. Such is greatness. Yellows seemed to have the call this year; good deep yellows that look yellow at all times and do not change to a sickly white when they come in contact with an electric light. Such had a ready sale, though we did well with Miss G. Bramhall. It is pale, but its form is superb, and it was a winner every time we exhibited it. To get it just to perfection for showing it should be put in a cool, almost dark, cellar for a few days before the show. The petals will close up tight in the center and the contour and finish of the bloom is unsurpassed. Many growers find that Bramhall has a weak neck, but there is nothing weak about it with us, and we can say the same of Mrs. Robinson, which fact causes the carping critic to remark that it is only because of our lime impregnated water that we are not troub'ed in this respect. Let him carp. He may be right, though it ought to be an easy matter for any grower to give his plants a dose of lime water now and then.

Mrs. Robinson is our early white sure. Some growers claim they cannot get a good percentage of fine flowers from it, but with us no variety was so uniform, and out of six times exhibited by us it was six times a winner. The fact of a weak neck is generally the result of planting too closely. While we cannot these days afford to waste any room, crowding is only a robbing Peter to pay Paul policy, the results of which are painfully apparent in every flower store during the flowering season. What use is a six-foot stem if it is literally dragged up? No wonder even the flower hangs its head with shame at such an unnatural policy. The "mum" is a mighty long-suffering plant or it would not flower at all, and when the worm does turn once in a while, at once a storm of protest arises and such and such a variety is no good, because after it had been kicked around all summer and abused in every way, it failed to do well.

I say, give your plants a chance, brothers, and get the sun and air through them. We would not like to have to guarantee flowers of exhibition finish in every detail of foliage and stem (and we would not like to grow any other kind) with less space than nine inches between the rows and eight between the single stemmed plants, with the exception, perhaps, of varieties of the Philadelphia type. We have planted Mrs. Robinson, Zulinda, Dean Hole, and Miss G. Pitcher a foot apart each way with splendid results and trusted to the higher price to pay us for our lack of quantity. We can get the top price while all around us small flowers are thick as "Autumn leaves in Vallambrosa," or any other old place. How many of you got $5 a dozen for Robinson? We did, and we had others, lots of them. Season of '97, fare thee well! C. Totty.

NEW CHRYSANTHEMUM "MERRY CHRISTMAS."

We have received from Messrs. Fred. Dorner & Sons Co., Lafayette, Ind., four blooms of this magnificent late white chrysanthemum. It certainly is a beauty and the blooms were remarkably fine for so late in the season, being equal in quality to some of the standard mid-season sorts, and we have never seen a purer white flower.

These flowers were cut on Christmas day and the plants were growing in the same house with the earlier varieties. When the earlier and mid-season varieties were already half open Merry Christm s was just showing the first sign of buds, showing that it is naturally very late. There is certainly a place for such a splendid flower that can be cut in quantity for Christmas sales.

PINK IVORY AND MRS. PERRIN.

Replying to your correspondent I will say that there is little to choose in the height of Pink Ivory and Mrs. Perrin. What little there is may be to the advantage of Pink Ivory, but complaints are rife all over the country that it came streaked this year, in some cases reverting back to the parent.

It has been a very unsatisfactory year for pinks of all shades; Helen Bloodgood has been away off, and it would seem that the ideal pink is still to come.

C. Totty.

ORCHIDS

DENDROBIUMS FOR MARKET.

The dendrobium is by no means difficult to grow, and will present much better returns for the trouble bestowed upon them than is generally supposed. The variety Wardianum is very floriferous and will throw from twenty to thirty large flowers from every good psuedo-bulb you may put upon the plant—and, of course, all smaller growths will flower proportionately. They are easily flowered at a season when such flowers are appreciated—that is Christmas to Easter—at which time you may expect from eight to ten cents per flower. Note the attention and space required for a hundred 6-inch pots of dendrobiums, capable of producing a hundred flowers to the pot, and that of the same number of American Beauty roses.

Nobile, already a great favorite in the market, and so easily handled, is, I believe, the cheapest dendrobium in com-

Dendrobium Wardianum.

merce. So buy this in quantity and fix up small bits in 4-inch baskets; the plant in flower would undoubtedly find a ready sale, and if successfully handled would prove a great source of revenue. To be successful with these two varieties you must endeavor to have all growth finished upon them not later than the end of July, which will enable you to strike the Christmas trade with a portion of your stock, the remainder you can retard or flower at pleasure.

To accomplish this, start your plants into growth early in January, and keep them growing; let the night temperature be as near 70° as you can keep it; give abundance of water at the root and overhead, as soon as you get good root action, and encourage the growths by frequent applications of liquid manure from fresh horse droppings. And be it understood that they require a decided period of rest after the growing process, when they should be removed to a cool, airy, dry atmosphere with full exposure to light and sunshine, to thoroughly ripen the psuedo bulbs, as upon this depends your crop of flowers; and during the resting period, water must be applied very cautiously as they are very easily excited into growth at this season. On no account allow the bulbs to shrivel, in fact, keep the foliage upon them if possible, which is not a difficult matter in the case of nobile, as this will enhance the value of them commercially.

Baskets or the ordinary orchid pans are preferable to pots, as much valuable space is economized by suspending them from the roof. Use hard, dry fern stems for growing on, crocks are not necessary in this case, and topdress with chopped sphagnum, after the roots have run a little.

For early fall trade grow Dendrobium formosum giganteum. Dendrobium Phalænopsis Schroderianum formosum is perhaps unequaled in the genus. It is pure white with an orange yellow throat, bears from three to six flowers from each bulb, four to six inches across, and is a most desirable variety for cut flowers. It seldom returns less than twenty cents per flower. Pot culture is advisable for this variety. Drain the pots well and use hard, dry pieces of fern stems for growing on, topdress eventually with sphagnum. To grow and when growing, treat as advised for Wardianum and nobile, but unlike these varieties, this requires a long rest after flowering when it should be placed close to the glass in a cool airy house exposed to the sun, with just enough water to keep it plump.

Phalænopsis, another grand acquisition to the trade, has graceful sprays and rich colored flowers, which are sufficient to attract the attention of anyone in quest of a rich decoration. This, like formosum, requires resting after it has flowered, and like that variety, the more exposed to the sun, the stronger they will break away when started growing again, but unlike those varieties mentioned, this one is very susceptible to water, especially over head. However, if grown in a genial, moist atmosphere, they will fare very well until the weather permits of free ventilation, when they may be sprayed once or twice a day. Guard particularly against a sudden fall in temperature. When fairly under way give ample water at the root and feed well, as it is a very good grower. This variety should be suspended from the rafters and does well when grown in small orchid pans. Curtail the size of pan to a minimum in comparison to to the plant. For potting material chopped fern stems will meet all their requirements, and topdress with sphagnum when you find it difficult to keep them moist.

J. ROBERTSON.

Madison, N. J.

EPIPHYTES.

Is it material, or a knowledge of their requirements, that is necessary to the successful culture of orchids? I read with a degree of interest, in the *American Florist*, of December 11, page 456, an article on the definition of peat, and the best natural fibre, for orchid culture, with a few interesting facts on how things are done in Europe, and how in England our fern roots were a complete failure, and the great difficulty experienced in re-basketing some cattleyas, as I take it, that had too many roots for the baskets they occupied. Now, to anyone in possession of cattleyas in baskets with abundance of root, I should say, do not kill them as described in the above mentioned paper, but let them remain right there, and do not worry should they eat the basket clean up. You cannot give a cattleya better material to grow in than a mass of its own roots, that is, if kept in a healthy condition. Composts are not absolutely essential, nor, should I say, much of a criterion to go by, as it is an understood fact that a great many orchids have been successfully grown and flowered in good loam and also in pure leaf soil.

M.

CYPRIPEDIUM NOTES.

The most satisfactory feature about a collection of cypripediums is that you always have some in flower, but now is practically the height of their season, and calling recently to see a superb collection, I was fortunate enough to find some of the very best in flower and not a few of them American raised varieties. Foremost among them is Pygmalion, a cross between villosum and ciliolare, and a flower of great distinction and magnificent proportions. The large dorsal sepal recurves gracefully, is lined with

brown over a suffusion of light green, the margins pure white. The long petals are deflexed in pretty curves and with the pouch have that highly polished color so characteristic of the first named parent.

Eurylocus is a striking cypripedium of strong and decided coloring. It has been raised on both sides of the water by Veitch in London, and Pitcher at Short Hills, being a cross between ciliolare and hirsutissimum. The dorsal sepal is lined in deep claret purple overlying a lighter purple hue, the margins slightly white. The petals are profusely spotted with black and edged with long dark hairs, while the prominent pouch is of a uniform deep vinous purple, intense and showy in effect.

Alcides is another fine hybrid from hirsutissimum and insigne, while insigne Chantini crossed with the same species gives a still finer type, called Alcides Clio. The dorsal sepal is deep green at its base, profusely spotted, the upper half pure white. The petals are long and extra broad, freely spotted, with their apices richly dyed in mauve purple. A long light brown pouch combines to make up a flower of unique distinctiveness, so prettily undulated or wavy in outline.

Bessie K. Pitcher, another American seedling, comes from villosum and Masareelianum, and has pretty features of its own, especially in the dorsal sepal, which has all around it a well defined margin of green, the body color being whitish green suffused and dotted with brown. The petals have reticulated markings in brown and the pouch is light brown with green suffusions externally, its inner surface covered with diminutive red spots.

C. Schlesengerianum, another American seedling, from Boxallii and insigne Maulei, has a conspicuous dark green dorsal sepal, profusely brown spotted, while the reticulated markings on the petals and pouch impart to it charms of its own. The different forms of C. Œnanthum are numerous, but one of the best was noted as Œnanthum giganteum, and it lives up to its name. The edges of the dorsal sepal recurve at about the center, folding back till they meet. It is light yellow, spotted with brown and tipped with pure white, the petals of more pronounced color in fawn yellow.

Lathamianum inversum, as the name implies, is the inverse cross of Spicerianum and villosum which gave the type. In this variety the dorsal sepal is almost pure white stained with green at its base. The light green petals are freely brown spotted, the pouch also shaded in green and brown.

C. Hurrellianum, from Argus and Curtisi, is a very fine variety that was raised at Short Hills. In the dorsal sepal, vertical lines of purple stand out conspicuously from a lighter ground color and the petals edged with long hairs are also spotted all over in purple.

C. Comus, an American seedling from insigne and Swanianum, shows evidences of both parents in its coloring and form, while C. Protus, also raised in America, has peculiarly distinctive features in its extra long and narrow sepals and petals, and thin pouch of semi-transparency.

C. Gravesiæ superbum has Argus and niveum for its parents and shows some exquisite spotting on its petals in contrast with a pretty greenish pouch.

C. modestum, as its name would imply, has modest pretensions to beauty, but there is a quaint and quiet charm in its neutral tints in green and brown. It is a hybrid between Harrisianum and tonsum, the latter parent's characteristics predominating.

C. Hebe was raised at Short Hills by crossing Spicerianum and Stonei. Though dwarf in growth and short in stem, it has a flower of great beauty and is a real gem, with a broad dorsal sepal, mainly white, wavy brown spotted petals and a light chocolate brown pouch. A variety I noted in this collection bore the name of purpureum and is truthfully named as all the colored parts of the typical form are in this greatly accentuated, the dorsal sepal being richly stained at its base with crimson purple, while the petals and pouch are correspondingly dark tinted.

C. Victoria Marie is a handsome, and as yet little known, species introduced by F. Sander & Co., and while possessed of marked distinction in itself, some very striking hybrids from it may result in the future. In the first place, it attracts notice by reason of its great length of stem, the flowers being borne on stems nearly two feet long. The dorsal sepal partakes after that of C. Mastersi, while the petals have the wavy outline and screw-like twist of C. Chamberlainianum. It is given specific rank, but there are characteristics of two other "cyps" so plainly manifest in it as almost to indicate hybrid origin, perhaps a chance hybrid in the distant country of its origin.

Leeanum was first raised by Sir Trevor Lawrence, between Spicerianum and insigne. There are now quite a number of varieties and among these again the very best of them all, that named Masareelianum, emanated from Short Hills. If, among the hundreds of "cyps" in cultivation, I had to make my choice of six I would unhesitatingly take this for one of them, as its great beauty is apparent to and can be appreciated by all who see it. Its dorsal sepal is very large, the main portion of it purest white; its curvatures are most elegant, the edges recurving till they meet and overlap. Looking at it from the back you have in most perfect form (minus the spadix) a lovely miniature of the Arum lily in spotless white. The front of the dorsal sepal at its base is marked with spots and faint lines of purple, the petals and pouch being brownish yellow. While the flowers are so fine they are likewise borne freely on strong stems, frequently coming twin-flowered, the second flower separated from the first by about two inches more growth of stem.

Another very fine form, named giganteum, is all the name would imply, having a dorsal sepal of great size and breadth and purity of coloring, extra width being apparent in the petals and a bold pouch combining to make up a truly magnificent flower.

Burfordense, superbum and pulchellum are also varieties of Leeanum, with sufficient distinction to justify their varietal names. The above are but a few of the many now blooming. "Cyps" are with us always in greater or lesser quantity, and one could make notes of them every month in the year without repetition of kinds.

A. Herrington.

Madison, N. J.

AZALEAS FOR CHRISTMAS.

As years go by the increased demand for azaleas at Christmas is evident and so I have compiled a list of a few of those most susceptible to forcing and that can be relied upon to "come evenly," and those usually forced by one of the largest growers in the vicinity of New York. Following is the list and though it contains one or two whose colors are not quite up to the mark, yet at Christmas "everything goes" and color is not such an object as a well flowered plant:

Mme. Van der Cruyssen, carmine; Simon Mardner, rich pink; Mme. Langenhoye, white, striped with red and pink; Mme. de Greve, dull pink, like Vervæneana, but single; Pauline Mardner, reddish pink; Vervæneana, pink and white striped; Apollo, bright brick red; Deutsche Perle, white.

"There are others," but these can be termed sure forcers. To secure for Christmas, house them from the 1st to 10th of November, temperature 65° with an increase of 10° during the day, syringe thoroughly three times if much sunshine, dull days damp down only. This is the rule for imported plants, old plants and American grown take about two weeks longer and require more syringing as the wood is riper and harder. When in full bloom place in a dry, airy house and leave a little air on at night to carry off superfluous moisture, or your flowers will damp off. Never let your plants suffer for want of water, however, at any time.

B.

AN EASY METHOD OF KEEPING GREENHOUSE PLANTS FREE OF APHIS AND RED SPIDER DURING THE WINTER SEASON.

Of the many methods now in vogue among florists for the prevention or destruction of the aphis and red spider, the writer believes that the one given below should have a place:

Tobacco is the agent most commonly employed to rid plants of the aphis. The various ways in which it may be used are too well known to florists to need repetition here. It is sufficient to say that they include preventive as well as remedial measures, which are all more or less effective. In the red spider we have a much more difficult foe with which to contend. Unlike the aphis this pest is little affected by tobacco as ordinarily used for the aphis. If allowed to become established in any numbers they are exceedingly difficult to dislodge. Frequent syringings of the affected plants with the hose, and a liberal use of sulphur on the heating pipes are the most effectual means which are commonly used. On the other hand, however, a careful attention to the condition of the atmosphere in the house and a liberal use of sulphur

Bed of Cannas bordered with Acalyphas.

on the pipes, when heavy firing is necessary, will in almost all cases be a sufficient safeguard against the ravages of this insect pest.

For the past two seasons the writer has kept the steam pipes of the Station greenhouses painted with a tobacco extract, known as the Rose Leaf Insecticide. During the same period, sulphur mixed with water to a thin paste has also been applied in the same manner.

In view of the fact that tobacco and sulphur are each effectual means, when judiciously used, to keep aphis and red spider in check, a combination of the two seemed to the writer to contain the essential requisites of a preventive and remedial agent for both. To accomplish this it was only necessary to dilute the tobacco extract with water, about one-fourth or one-third, and then add enough of the "flowers of sulphur" to make it of suitable consistency to apply to the pipes with an ordinary paint brush.

The results obtained from the application of this combination, which for the want of a better term I shall call "sulpho-tobacco liquid," have been so satisfactory as to justify their being brought to the notice of the readers of the FLORISTS' REVIEW. An application of sulpho-tobacco liquid will, under ordinary conditions of firing, be effective at least a week. The fumes of the two may be intensified by wetting the pipes occasionally with a fine spray of water. This should be done in the evening.

It is believed that if the method outlined above is rigorously followed, both the aphis and red spider may be kept down, even though they may have obtained a foothold previous to its use. The adhesive qualities of the tobacco liquid serve to retain the sulphur on the pipes much better than when the latter is mixed with water or even with lime.

WILLIAM STUART,
Assistant Botanist.
Experiment Station, Lafayette, Ind.

CANNAS BORDERED WITH ACALYPHAS.

Here is a bed of cannas with a young ailantus in the center. The central part of the bed is filled with Mme. Crozy, the outside row being Queen Charlotte. The border is of Acalypha Macafeeana and tricolor.

After frost the acalyphas are taken up, cut back, potted in same soil as for geraniums, and placed in a temperature of 70°, where in a short time they recover and start new growth. Cuttings are taken from the young shoots and inserted in sand on bottom heat of 70° with top temperature of 60°, watered sparingly and when rooted are potted in 2½-inch pots. The plants are kept in a temperature of 70° and as they grow are given larger pots as required. The plants can be grown more cheaply than geraniums but not so cheaply as coleuses. They should not be bedded out until it is safe for coleuses.

Acalypha tricolor has the finest coloring, but Macafeeana is easier to propagate and grows more quickly, and its coloring is very good.

A PRETTY DECORATION.

A pretty reception decoration recently arranged by Mr. J. Gormley, with Mr. E. Wienhoeber, the Chicago florist, included two screens, each six feet high and four feet wide, covered with wild smilax with a tall vase of pink roses between the two, the roses carried out over the surface of the screens as though a climbing rose had spread over the surface and covered it with a burst of bloom. The effect was very handsome. Two ladies attired in pink dresses received in front of this screen.

Another pretty thing arranged this fall by Mr. Gormley was a corner effect. A big piece of bamboo, about ten feet long and five inches in diameter, had three openings cut in it in Japanese style and in each of these openings was placed a bunch of nine big yellow chrysanthemums, while a bow of broad yellow ribbon was tied to the bamboo between the bunches of chrysanthemums. This was stood in the corner of the room and was much admired. It was for a "Japanese tea" and the furnishings of the room and other decorations were in harmony with the corner decoration noted.

MILDEW OF ORNAMENTAL PLANTS.

Several of the plants of the ornamental grounds and the conservatory are subject to the attacks of the powdery mildews. One is apt to think of the lilac as the shrub that of all others is subject to this disease. Fruit growers see the same group of enemies upon the grape and more particularly upon the gooseberry and the young twigs and leaves of the cherry and peach. The powdery mildews flourish upon the Virginia creeper and the honeysuckle so that vines are not exempt, neither are the herbs, for grasses are often troubled by them, and oxalis and geranium in the wild state are often attacked. In short these mildews are common upon plants generally.

The accompanying engraving shows

the appearance of a portion of a leaf of cultivated phlox that is badly blotched with the mildew. The picture as a whole looks strange, because owing to the considerable enlargement only a small part of the leaf is shown, the whole leaf would have reached across the entire page and taken up much unnecessary space. The lower and narrow part of the leaf is near the end that was attached to the stem and here the mildew covers the whole surface with a thick coat.

The leaves of the phlox generally begin to become mildewed at or near the base and later on the fungus appears in spots upon the broad blade of the leaf. The reason for this may be that a greater amount of moisture collects upon the base of the leaf where it joins the stem than elsewhere.

One of the important points shown by this enlarged view of the mildew is the radiating growth of the fungus. It is easy to suppose that there were as many points of inoculation as there are star-shaped patches of mildew upon the leaf. The original spore probably alighted somewhere near the center of each patch, and starting there developed threads that pushed out in all directions for new feeding ground.

It might be stated in passing that these mildews do not enter the leaf, but grow upon the surface only and suck out the substances from the leaf as needed by the mildew for its growth and multiplication. This multiplication is effected by upright filaments, that can scarcely be seen in the engraving, the tips of which form cells that fall away as spores. These spores are for the rapid propagation of the mildew, and more than likely each of the white blotches upon the leaf in the picture is from such a spore.

Later on in the development of the mildew there is a second form of spore formed inside of a dark spherical body. Near the base of the leaf some of these bodies may be seen as dark specks arranged in clusters and varying in size. These winter spores, as they are termed, do not germinate as soon as formed, but remain quiet over winter and start the mildew upon another season's work the next spring.

A knowledge of the life cycle of these mildews is of some value in suggesting the treatment. Thus it is seen that the fungus spreads by means of minute spores that may be carried by the winds or washed from plant to plant by the hose when the watering is done in a greenhouse, or by showers out of doors. These mildews need a moist surface of the plant in order that the spores may germinate. It is important, therefore, so far as mildews are concerned, that the foliage be kept as dry as practicable. Again, it is seen that the attack is at the surface. It is there that one must place any substance that may serve as a check to the fungus. If there is a thin layer of a substance called a fungicide, usually some compound of copper and generally the Bordeaux mixture, placed upon the surface, the spores as they arrive may be killed as they start to grow, and if they are already there the substance may destroy them even after they have spread to some extent.

Sometimes the substance is a powder that is dusted upon the foliage, and flowers of sulphur is the one most frequently used for this purpose. The grower must use that which is harmless to the plant and destructive to the fungus, a task that has proved difficult to those who have been working upon remedies for the fungous enemies of our plants.

Byron D. Halsted.

Rutger's College, Dec. 18, 1897.

SUGGESTIONS TO SMALL FLORISTS.

In nearly every town and smaller cities we find generally one or more greenhouse establishments where a mixed assortment of plants and flowers are grown for the local demand only. Here the proprietor is called upon to perform every

Mildew of Ornamental Plants.

imaginable kind of work, from laying out and planting a garden to the making up of brides' bouquets and funeral work. He is supposed to know everything pertaining to horticulture and floriculture and is consulted not only when a flower bed is to be laid out, but also when shrubs and ornamental stock or perhaps fruit trees are to be planted. It is surprising how great a percentage of these hard working men really can give the desired information, many of them having gained this knowledge in their long and varied experience; others are careful students and read the leading works on those branches of the trade in which they may feel themselves only weakly posted. It is not astonishing that mistakes, more or less serious, will occur frequently, for no one man can reasonably be expected to be infallible in all details of the many branches of horticulture.

Men who are established in such towns can gain a wealth of knowledge on all topics pertaining to their vocation by simply reading the Florists' Review; in its columns our most eminent and experienced men, whose authority can not be questioned, give their ideas freely, each one having his specialty in which he excels, and what he says is carefully weighed and considered before giving it to the public; therefore, in ninety-nine cases out of a hundred may be relied upon. Also the editor of this paper has a long and wide experience behind him. I know too, that he is exceedingly watchful not to allow any doubtful matter enter into the columns of the Review and this should be another weighty reason why our florists in the smaller towns, who seldom have a chance to exchange ideas with their brothers in the larger cities, will find it to their advantage to read the new weekly from first to the last page.

"No other florist paper can compare with the Review in style as well as in arrangement and substance of reading matter, while the illustrations are equal to the best I have ever seen." This was the remark made by one of our leading florists when he received the first issue. The reader may pardon me for saying these few words in favor of the paper and the men who write for it. I am an occasional contributor myself and perhaps you have an idea that I am vain enough to think that my name should be included among those of the "eminent and experienced men." No, I do not want to be misunderstood; what I have written in the past was dictated merely by every day practical experience and observation during the last forty years or more, and most of my writings were only plain descriptions of some hardy plants and the situation best adapted for their welfare. Any man familiar with a special class of plants is able to describe their habit, flowers and foliage and knows what soil and surroundings suit them best, and I do not claim to possess any superior knowledge than many of my brother florists, nor can I say that I know all of the hardy perennials, but during my life I had an opportunity to become familiar with a great many of these interesting and useful plants, and they always were my favorites, because they were hardy and could endure our cold winters.

My interest in perennials was awakened when I was a very small boy, less than ten years old. My father had allowed me a little corner in the garden where I could dig and sow seeds and plant whatever I took a fancy to. One day he bought a fine large plant of fancy pelargonium for me which I planted out into one of my beds, where it grew to extra large size, but, naturally enough, the following winter it died in the cold, and when spring came I waited in vain to see it sprout like the lilacs, deutzias and snowballs near by. From that time on I was always particular not to plant anything in my garden which was not perfectly hardy, and when at the age of fifteen, I entered the profession, I was quite proud of my knowledge of hardy plants, but very soon found out that I knew only very little about them.

But I must stop, this is not to be a

Bed of Cannas Bordered with Pennisetum.

biography; what I was going to say today is for the florist in small cities, who probably has a sash house without heating arrangement of any kind in which he grows his early chrysanthemums and which he utilizes in winter to store hydrangeas or half hardy roses and shrubs for forcing. He may not want all the room in it for that purpose and can spare a bench here for the old fashioned fringed pink. You can plant the clumps at any time in the winter whenever you can get a chance to dig them up; they will keep dormant and will not start into growth until the sun is higher, towards spring, and usually come in full bloom about Easter time without any fireheat. Of course, after the growth is fairly advanced they want a little attention as to watering, airing, etc., and as their habit and growth is very compact and close they should at no time be watered or syringed overhead, else the moisture may cause rot in the thick mass of branches and foliage. In a cold place like this there is no chance for red spider to take hold, and syringing can safely be dispensed with, but when the soil in which they are planted becomes too dry water can be administered by pushing the hose under the plants close to the ground, the force of the water being regulated by turning the faucet so as to avoid heavy splashing. Years ago, as many of the older florists will remember, these pinks were grown everywhere in large quantities, but since we have so many good carnations they have taken a back seat and are now only grown in very few places, exclusively for home consuming. None are sent to the markets, yet in many instances we miss them for making up designs, etc., when carnations are scarce.

It may happen after the holidays that there is unoccupied space in a moderately cool house for a time, which space could be utilized frequently for forcing on a few of these plants if they were potted up. Their highly scented flowers will come handy at any time and they are excellent keepers so long as we keep them in a cool house. Whoever has a stock of these plants should not neglect to take in a few at least for a trial. Cuttings may be taken any time in winter or spring from plants grown out doors. Anything in the shape of a cutting will root when treated the same as a carnation cutting. We have frequently chopped off a few old clumps while frozen stiff and covered with a foot or more of snow for the purpose of propagating therefrom, but plants which have flowered under glass will answer as well. When rooted they may either be potted off singly or boxed, and in spring should be planted in a sunny bed, where they will make good bushy plants in one season without any pinching in. Such one-year old stock is best for the purpose mentioned; when older, the center of the clumps gets loose and bare and the branchlets become more elongated and weak, causing the flower stems to fall over with the weight of the buds and flowers. Any of the various varieties will answer the purpose, Snow, or the ordinary fringed white, but I consider Her Majesty superior to the others, not only for its larger sized flowers, but also on account of its stouter stems and robust growth. When well grown and disbudded it is as large as an average white carnation. K.

CANNAS BORDERED WITH PENNISETUM.

The bed of cannas shown in the accompanying engraving, occupied a position immediately in front of the conservatory in Lincoln Park, Chicago, last summer. The cannas were Alphonse Bouvier and the border was of Pennisetum longistylum, a very pretty plumed grass.

The propagation of the pennisetum is very simple. Mr. Stromback takes up three or four clumps in the fall, trims off foliage, etc., places in a box and sets them under the bench in a house with a temperature of 40° or 45°. In March he shakes out the soil, tears the clumps to pieces and pots the pieces, placing two or three runners in a 3 or 4-inch pot. They are then placed in a house with a temperature of 60° and an even moisture maintained. They make plants in a short time and are bedded out the latter part of May or early in June.

The plants can also be grown from seed, but above method makes plants quicker. To start a stock seed could be used.

OUR GENERAL INTRODUCTION.

Group No. 4 of our general introduction will appear next week. Subscribers are invited to send in cabinet size photographs of themselves, to appear in these groups, but please do not send us photos that must be returned, as we are obliged to cut them in arranging them in the groups.

MR. DORNER'S Carnation Notes will be continued next week.

CHICAGO.

Among the Retailers.

All the retailers report a very satisfactory Christmas trade, many noting a considerable increase over last year. With quite a number there was a much larger call for blooming plants in preference to cut flowers, customers feeling that they were getting better value in a few plants that would remain attractive for several weeks, while the cut flowers would last only a few days. And plants attractively dressed with crepe paper and ribbon seemed to quickly catch and hold the attention of transient buyers. At the same time the sales of cut flowers were very large. The sales of greens were good but would have been much larger had the weather been less severe, enabling the retailers to display these goods in front of their stores and keep a salesman there. The supply of flowers was fortunately much larger than had been anticipated in view of the stretch of dark days that preceded Christmas, and the quality was better than the dealers had dared to hope for. The few days of sunshine just before Christmas, and which all feared would be too late to be of value, must have done some good after all. Many growers cut more flowers at the right time for Christmas sales than they had cut any week for a month. Of course there was some pickled stock, but there seemed to have been less pickling this year than for some seasons past. It was remarkable that the Beauties and Meteors held their color so well after having experienced so many weeks of dark, gloomy weather. In view of the indications the early part of the week of a short supply the large Christmas trade was peculiarly gratifying.

Mr. E. Wienhoeber did a big business in both plants and cut flowers. A full description of his Christmas trade will be found under the heading: "Christmas eve with a retail florist."

Chas. A. Samuelson noted a marked increase in the call for blooming plants, the largest demand being for azaleas, cyclamens, tulips in boxes, etc. He sold large numbers of inside window boxes planted with blooming cyclamens and tulips. Some planted with Begonia incarnata did not sell so well. Did not seem to be bright enough in color to catch the popular fancy. The pans for these window boxes are filled at the greenhouses, and when placed in an olive green wicker work cover, and tied with ribbon of the same shade, make very attractive Christmas gifts. Azaleas, also, sold well, none in good bloom being left over. These had their pots dressed with crepe paper and tied with ribbon of suitable shade. Cut flowers and greens sold as well as usual. It was noted though that customers seemed later than usual in placing their orders. The day before Christmas trade was lighter than for the same day last year, but on Christmas morning the trade came with a rush. In cut flowers Mr. Samuelson found the violet hampers described in the notes regarding Mr. Wienhoeber's business splendid sellers. He sold about seventy-five of these for Christmas. A few arranged and placed in the window attracted the attention of passersby and made many sales to transients.

W. J. Smyth found Christmas trade considerably better than last year, and believes that if the weather had been more moderate the total sales would have been still larger. He noted a decided increase in the call for all plants. Blooming plants, dressed with crepe paper and ribbon, sold especially well. Many of his customers selected plants in advance of Christmas and had them held until time for delivery. Of course, there were the usual large sales of cut flowers. Mr. Smyth don't like the "wall paper" covered boxes, but he has to have them. Many people like these rather glaringly decorated boxes and their taste must be pleased even if not in harmony with that of the florist. He also noted a good call for the violet hampers and could have sold many more had he had time to arrange them and place them where they could be seen But he has had all he could do as it was and is much gratified with the Christmas trade of 1897.

The Art Floral Co. report a very satisfactory Christmas trade in all lines. They grow many blooming plants for their store trade, and all sold well. Their crops of cut flowers were large and good and all found ready sale at satisfactory prices.

The Artistic Floral Co. opened a store last week at 3903 Cottage Grove avenue and report a good Christmas business.

George Wittbold did a big Christmas trade at both the North Clark street store and the greenhouses. He noted a largely increased demand for plants of all kinds and the usual call for cut flowers. In one of the windows of the store have recently appeared some novel window attractions. The latest is life-size and very life-like figures of a young man and a young lady, the latter holding a guitar. There was a naturalness about the poses not seen in ordinary figures, and it was amazing to find on close inspection that the figures were made of such material as corn husks, leaves, dried grasses, seeds, etc. The faces were all of corn husks, and were remarkably life-like. They are made by someone in Wisconsin. Mr. Wittbold has quite a number of the figures stored in a rear room. One of an old darkey playing a banjo is exceedingly natural and will surely attract crowds of spectators when it is placed in the window.

Mr. Wittbold has a new pteris, a chance seedling discovered two years ago, that promises to be very useful. He has named it Pteris tremula crispum. The fronds are short, rounded and full, and the plant is quite dwarf in habit. He reports heavy sales of palms at wholesale prior to the holidays and will have to sort up his stock before again pushing sales, though able to care for the usual run of orders.

P. J. Hauswirth is much pleased with his Christmas trade. He had a large quantity of pot plants of the white Scotch heather (Erica persoluta alba) shipped him from the east, and they sold like the proverbial "hot cakes" at good prices. He also noted a brisk demand for potted azaleas and could have sold many more had they been procurable. The supply of flowers was better than anticipated and all sold at good prices.

H. F. Halle reports his Christmas trade as fully one-third larger than last year, and he noted a marked increase in the call for plants. He is much pleased over the outlook. Sales of greens were not up to expectations, but this was probably due to the severity of the weather which prevented the usual display in front of the store.

Walter Kreitling is well pleased with his Christmas trade and the only fault he has to find is that a good deal of the cut flower stock had been pickled and was prone to go to pieces very soon.

John C. Schubert & Co.'s Christmas trade was very large. They noted a decided increase in the call for extra Beauties, showing that the Beauty is still growing in popular favor in spite of the high prices. They also found the violet hamper very popular, and sold an unusually large quantity of prettily arranged cape flower wreaths which caught the popular fancy where a change from the usual holly wreath was desired.

Among the Wholesalers.

The reports from the wholesalers about the Christmas trade are fully as gratifying as those from the retailers. All report trade as fully equal to that of last year and in many cases far in excess. Though stock was none too plenty and prices high the supply that turned up in time for Christmas was unexpectedly large, and of course everything of good quality sold readily. And the quality, too, was much better than had been anticipated in view of the dark weather that had preceded Christmas. The few bright days toward the middle of the week helped more than expected. The demand has held up remarkably well since Christmas, and, best of all, the bright weather has continued and there is stock with which to fill the host of orders received. All are feeling greatly encouraged over the outlook and feel that the present season will prove the best in many years. Prices are holding up well and New Year's prices will be but a trifle lower than the Christmas list.

Kennicott Bros. Co. report an increase of fully one-third over last year. Last Thursday they did the biggest day's business in the history of the firm, exceeding by $400 the previous largest day's business, which was an Easter, and they had less complaint from customers than formerly at holiday seasons. Stock seemed to average better and give better satisfaction; but it was not all lovely. A shipment of 8,500 valley from the east arrived frosted so that about 2,500 were lost. This was particularly aggravating as all could have been sold at a good price. This loss was due entirely to negligence on the part of the express company, as the packing of the flowers was beyond criticism. A still more aggravating case, because inexcusable, was the arrival of a lot of 2,000 violets frozen solid. These came from some nearby growers and the packing consisted of merely a single thickness of newspaper inside of the case. These flowers were already sold at $2.25 per 100 and the flowers were as

A Corner in the Establishment of Kennicott Bros. Co., Chicago.

good as the money had they arrived in good shape.

Bassett & Washburn's business was nearly double that of last year. Their increase of glass surface during the year enlarged their supply and the cut for Christmas was larger than expected the early part of the week. They cut a large quantity of bulbous stock in addition to their other flowers, and sold it all. This included 4,000 Harrisii and 8,000 valley. Romans did not go so well. And their trade since Christmas has held up remarkably well. Last Tuesday they received over 40 telegraphic orders in addition to their usual run of business.

E. H. Hunt reports a considerable increase over last year and is thoroughly well pleased with his Christmas trade. The supply exceeded expectations and has kept up well since Christmas, also the orders.

A. L. Randall is well satisfied with the Christmas business and has "no kick coming" in any way.

W. E. Lynch had a good trade. He was afflicted with some "pickled" stock early in the week, and humorously reports that he found no increase in the demand for this sort of stock. It was sold at very moderate prices to local buyers. All good shipping stock went at good figures.

Winter & Glover report a fair trade and not enough stock to meet the lively demand.

Vaughan, McKellar & Winterson did a much larger business than last year and are exceedingly well satisfied. With them orders seemed to have been placed earlier than usual. They did a big trade in greens and cleaned up well in that line. Trade has been remarkably brisk since Christmas and stock has been good.

E. C. Amling's Christmas trade was double that of last year. He had more consignors, a larger supply and good sales at excellent prices. He is very well pleased.

Reinberg Bros. report sales equal to last year at good figures. The recent fire cut them short on Meteors, but their supply was large anyway and all sold. They are now cutting some particularly fine Maids and La France.

Rogers Park Floral Co. had a good supply of excellent quality and all sold at good prices. They are well satisfied and anticipate continued good business.

A. G. Prince & Co. report a larger supply than expected and consequently large sales.

Mr. E. E. Peiser, of Kennicott Bros. Co., favors the formation of an organization of shippers of cut flowers, to enforce collection of damages from express companies when flowers are lost through the negligence of employes of the companies. He cites the case of a shipment of valley his firm received from Mr. E. Asmus, New York. This shipment was due on a train arriving here at 9:55 p. m. They telephoned the express company to look out for the cases and deliver at once. The train arrived on time, but despite the fact that they telephoned frequently during the evening and waited till 1:00 a. m. to receive the shipment, it was not delivered to them till 9:30 a. m. the next day, and was then damaged by frost. They find that a commission man cannot make claim for damages in such a case, as, according to law, flowers sent on commission are the property of the shipper and not of the commission man. He believes that an association of shippers with a paid attorney to follow up and push the claims of any member of the association would result in greater care on the part of the express companies.

Various Items.

Another bunch of their new pink carnation Irene was sent to Chicago last week by Crabb & Hunter, of Grand Rapids, Mich. It certainly is an excellent flower and will undoubtedly prove useful. There were other promising seedlings but Irene will probably prove most popular.

Richard Prescott, foreman for C. W. Northrop, La Grange, while arranging a

decoration at Riverside, was unfortunate enough to fall from a ladder and break his leg. He is now in the county hospital. His many friends will wish him a speedy recovery.

Among recent visitors was Mr. F. J. Foster, of the Krebs Floral Co., St. Louis.

Don't forget the next meeting of the Florists' Club January 13. This will be ladies' night, and from hints we have received of the program being prepared we can assure all of a very enjoyable evening.

Mr. H. P. Gerhardt, the "Limits Florist," reports an excellent trade at his stand, 1317 North Clark St. Last August he built a greenhouse 22 x 100 on his place in Waterloo Court, not far from his stand at the "Limits."

NEW YORK.

Around Town.

I do not know if it is a good omen or not, anyway it is a fact that every Christmas you see more and more flowering plants. It used to be that Easter was the time when plants in flower ruled, now they are playing an important part at this season of the year. A large retailer told me that he buys more every year, "as an act of self defense simply," said he. "My customers get more fractious every year. Of course I have to buy flowers to fill orders, but the great advance in prices precludes me laying in a large stock, and then having to fight and take chances with my customers."

"Another growing evil is the lavish use of ribbon in all made up work and even on plants," said one man. "Our bill for this luxury alone is near $1,000 since November the 1st."

Snap Shots.

At Thorley's I noted several pretty things in the way of novelties; shallow, square hampers of plants tied with brilliant plaited plaid ribbon, very showy; gilt hampers of pots of violets in full flower, with ribbon to match, and splendid heaths dressed with ribbon, also azaleas and other plants.

At Stumpp's there was a tremendous variety of basketed plants, some with handles upon which were tied bunches of orchids, violets, etc., with a wealth of ribbon, always harmonizing with the whole. One gilt basket on pedestal contained a large Otaheite orange, "dressed" with orange shaded ribbon. A large bunch of Cypripedium insigne and leucothoe sprays, were on the basket and on the tripod of the stand.

At Small's I saw large wreaths of "box" (Buxus ovalifolium) tied with masses of red "bird berries" and streamers of red ribbon, broad and narrow.

At David's there were many handsomely filled baskets of plants, Otaheite oranges, ericas and cyclamen trimmed with ribbon, all handsomely gotten up and very exquisite.

At McConnell's handsomely filled baskets were the specialty also, deep crimson ribbon on the handles; one specially fine, white celluloid basket, red handles, containing Erica fragrans, Dracæna terminais and Ardisia crenulata, all prettily arranged. Heathers, tied with different colored tartan ribbons, were very effective.

At Hodgson's I noted a novel altar decoration which consisted of a large Otaheite orange about four feet high, interspersed with Lilium Harrisii blooms, finished with smilax and tied with maroon ribbon.

At Siebrecht's "filled" baskets were again in evidence. Some were filled with heathers and ardisias, others Farleyense, cyclamens, oranges, azaleas, etc., tastefully trimmed and gotten up to sell. A basket of Farleyense, bunch of violets tied on handle, looked very rich.

At "The Rosary" I saw the only gardenias in town. There were some pretty baskets here also, and some flat, round and oval baskets of holly and bird-berry, Adiantum Farleyense and poinsettias for a dinner Christmas night—all very pretty.

At Fleishmann's there were shallow diamond shaped baskets trimmed with crepe paper and ribbon, filled with A. Farleyense and A. cuneatum and bunches of orchids or violets tied on the pyramidal shaped handles, with bows of mauve or violet ribbon.

At Bridgeman's a basket of azaleas and holly festooned and tied with light green "nun's veiling," was quite unique and attractive.

At Scallen's, baskets were prominent. Those with heather and holly were very pretty. I saw some ribbon with the ends hand painted with flowers; something new I believe.

Bulls and Bears.

Christmas has come and gone since I wrote you last week. Each succeeding year holds out the same expectations, has the same disappointment for grower, wholesaler and retailer. Each one is responsible to the other, each one blames the other. It is hard to tell how to make the balance of justice fall evenly on their respective shoulders. The question is, "is the game worth the candle?" is the paucity and slump in business before holidays and after made up at those times? On Thursday there was literally a famine in some stocks, held back by the grower for better prices next day, and in some cases "salted" so long, that as one wholesaler said of some stock I saw, he could not sell it to the "Greeks" at any price. Some consignments were actually shipped back. Is not this killing the goose with the golden eggs?

The week ending December 26, commonly called Christmas week, might be described briefly as follows:

Monday—Expectation.
Tuesday—Promulgation.
Wednesday—Emulation.
Thursday—Anticipation.
Friday—Realization.
Saturday—Computation.
Sunday—Adulation.

What the Wholesalers Say.

W. S. Allen: "So far as I can learn, business has surpassed anything approaching former years, even the palmiest days such success was not known. Very little pickling and all stuff sold well with few exceptions."

Walter F. Sheridan: "Business was good. All grades of flowers sold rapidly at good figures; all inferior goods took chances, but not at as low figures as a year ago. All stock arrived in good condition and there was less salted stock."

Thomas Young, Jr.: "Trade was much better than last year for fine flowers; the lower grades sold cheap. Taken as a whole it was a good Christmas. American Beauties, Maids and Meteors were the leaders; also fancy and red carnations."

John I. Raynor: "Trade very good. All first class flowers sold well, specially Beauties, Maids and Meteors. Brides went slow. There was a lot of stuff salted that might have realized good prices the days previous to Christmas."

John Young: "Business was better than for many years, and volume of trade much larger. Not so much salted stock as formerly and there were not enough Beauties, Maids, and Meteors. Fancy carnations sold extremely well; smilax was a drug."

J. B. Ezechel: "I could have handled twice the amount of flowers. Good stuff brought good prices, and poor stock about the same as ordinary days."

Traendly & Schenck: "Never cleaned out so well before and prices ruled a great deal better than formerly."

W. H. Gunther: "The general run of trade was good, a big improvement over former years. All good stock sold well. Romans hung a little. There was not so much poor and salted stock as heretofore."

E. C. Horan: "Business was a big rush. It was a "rose Christmas" from the word go. Hyacinths and narcissus went slowly. Carnations sold well. Cleaned out everything except violets."

H. A. Hoffman: "Trade was very passable. Beauties sold well, and carnations and other stock in proportion. Prices ruled higher than last year and it seemed as if we were getting back to the old prices again."

Millang & Co.: "Trade was tip top—everything sold out clean except smilax. Roses and carnations hardly enough to go round."

J. W. King: "Trade was A1. Cleaned out in good shape. Carnations realized phenomenal prices. I had a good deal of stuff frozen, however, but there was less salted stock than formerly."

MacDonald & McManus: "As this was our first Christmas we cannot compare. We sold out everything, however, except violets. One large consignment of orchids was frozen. We are well satisfied with our initial efforts."

Julius Lang: "Business in general good and good stuff sold well. Cleaned up everything except smilax. Violets went slow and Harrisii well."

Purdy & Blauvelt: "We had a ready sale for all the stuff we had. Roses were scarce, Beauties specially so. We had a lot of sweet peas, however, which we sold from $3 to $4 per dozen bunches. The variety was Blanche Ferry."

Ford Bros.: "Trade was very fair. All roses sold well and everything was cleaned out. Violets were a drug, however, by the end of the day. High grade stock of all kinds sold well and brought

top prices. Smilax we could not give away."

M. A. HART: "Business was O. K. All roses sold well; could get most any price for good Beauties. Bridesmaids also sold well, and there was less salted stock than usual."

FITZGERALD & HAMMOND: "We found trade very good. Cleaned out everything with the exception of violets. All roses sold well, in fact everything except violets and smilax."

N. Y. CUT FLOWER CO.: "Business was good all round and very satisfactory. Good stuff was scarce and realized good prices. Beauties, Maids and Meteors had the call and carnations were also a good thing. In fact all fancy stock sold readily and realized prices that reminded one of years ago. Cypripediums and smilax were the only things that went slow."

JAMES HART: "Trade fairly good for fancy stock and poor stuff sold poorly. Cleaned out well, however, at good average prices. The scarcity of some goods bulled the prices, but if there had been the quantities of former years, things would have been different."

FRANK MILLANG: "Am pleased to say trade was all that could be desired; only wish I had had more stuff. Carnations went better than I ever anticipated, and prices realized better than the usual average. Cleaned up everything in good shape."

But all this has been hashed, and rehashed in former years. The fault lies, it seems to me, pre-eminently with the grower. He has the chrysanthemum to fight every year. Beware, gentlemen, of the "Flowering Plant," it is going to be one of your greatest rivals. It is kicking at your doors and it is coming to stay. From questions asked the wholesalers, however, there seems to have been less salting this year than ever before. The general impression prevailing, however, is that Christmas trade was very satisfactory. The day before Christmas there was a perfect famine in flowers of nearly all kinds, and good prices might have been realized on some goods that had to be shipped that day. Friday morning business started only fair, towards night, however, trade was quite beyond all expectations and by midnight most everybody was sold right out clean.

It was essentially a "rose Christmas," the cold snap coming as it did helped things along very materially. Some growers made the mistake of shipping a lot of stuff Saturday, and as late as Saturday afternoon, violets suffering especially on this account. There were several cases of freezing. One grower lost nearly 5,000 carnations this way.

Roses and carnations had the call and fancy stock was at a premium. There was no special rush of high-priced Beauties, but they remained stiff at $1.50 a piece. Bridesmaids, extra fancy, sold for $30, while Meteors touched the top notch at $40, Brides, Testouts and Carnots $30. Carnations, extra fancy, brought from $6 to $10; Valley, fancy, $8; violets, extra selected, $3. Smilax was a drug, and nearly all white flowers went slowly, even Brides are not a "good thing" at Christmas. Cattleyas were very scarce at 50 cents to 60 cents, while cypripediums were plentiful and sold at 10 cents. Lilium Harrisii sold fairly well at $10 to $12.50. All good stuff sold well and poor stuff did not fetch more than ordinary prices. For prices on regular graded stock and goods not mentioned here, see New York market report.

The cold weather precluded the fakirs and Greeks from handling the lower grades of stock, and so poor and salted stock realized poor prices and in some instances was not sold at all.

Seed and Bulb Trade.

At midday the day before Christmas there was not a crate of holly in the market. It was an unknown quantity from the day the first car was unloaded, and, taken as a whole, was much inferior to former years. A storeman was heard to say that it was only fit to tie on "fol de rols and sponge cake." Shippers, please take note, and another year only ship the good kind. The demand for mistletoe is but moderate, and though the imported stock arrived in useless condition there was quite enough to go round.

Mr. L. C. Bobbink, of Rutherford, N. J., started for Holland yesterday (the 29th) per steamship St. Paul, and will return about the first of February.

Various Items.

Visitors: Samuel Goldring, Albany, N. Y., was a visitor during Christmas week, and as one of the wholesalers said: "Sam is just like Santa Claus; you are bound to see him every Xmas."

Thomas M. Ulam, of Elliott & Ulam, Pittsburg, Pa., was also a visitor, and carried a full supply of "stogies." Both bought heavily for their home trade.

W. A. Manda's storehouse which he recently erected for the storage of hardy shrubs, etc., was partially destroyed by fire last week.

There are rumors that the firm of Purdy & Blauvelt will dissolve, Mr. Blauvelt withdrawing from the florist trade, and Mr. James Purdy forming a partnership with Chas. Millang, of Millang & Co.

Mr. Patrick O'Mara has been seriously ill with rheumatism and grippe but hopes to be around in a few days. Please accept our sympathies.

All retailers report a very large volume of business, almost unprecedented. At six o'clock Friday, one retailer said he was three hours behind with his orders. This does not mean that the florist has made money. The high price of flowers precluded this and a great many persuaded their customers to take plants.

H. A. B.

CLEVELAND.

Unfavorable Weather.

There has not been breathing time to find out the particulars regarding the trade at Christmas, though I hope to before sending in this report. One thing of course we all know about and have had to contend against in common. The writer does not recall a more disadvantageous spell of weather in many years. Peaches are not common in December and ordinarily florists could not afford to partake at this season, but certainly in weather we have had a "peach" forced on us whether we would or no. Such "peaches" ought to be canned and served up in moderation in July and August. It is very seldom that we have such absolutely bad weather in Cleveland. It was not only cold, but the wind blew a hurricane on Thursday and in addition it snowed hard. The streets had previously been sleeted with ice by rain freezing as it fell so that getting about on foot or with rigs of any kind was not only difficult, but rather dangerous as well. Hauling wagons through the snow made it very slow work on the road. It was not enough to wrap all the plants, but wagons had to be well heated, otherwise many things of a more tender nature must surely have been frozen. Friday night the thermometer got down almost to zero, but Saturday morning was clear and very sunny, so that things were not so bad.

Good Demand for Pot Plants.

It seems that nobody could have failed to notice the increase in the demand for pot plants of every description. Nearly every firm in the city operating a store for the disposal of their product had a greater or less supply of desirable stock in this line and in every instance it sold without the slightest difficulty. Of course at this season flowering plants stood higher in popular favor than palms or other foliage plants, although the latter sold very well on the whole. In blooming stock azaleas were more generally offered than anything else and were taken readily at good prices. More of these could easily have been sold, were they to have been had. Of course the old white, Deutsche Perle was in greater supply than other sorts, but there was a sprinkling of light and rose pink with a very few red. Colored sorts sold most readily though none were left of any sort. Cyclamens, primulas, begonias and poinsettias comprised the bulk of other offerings in potted stock aside from palms and allied plants, with some oranges and ardisias on the side.

Holly and other green stuff with the inevitable immortelle truck sold fully as well with those who handled it, although few florists do anything with it except on orders for other goods more directly in their line. No reports have come in yet owing to the short time elapsed at this writing as to how stock stood the test of delivery, but there will probably be quite a crop of complaints in due season.

Trade in Cut Flowers.

In comparing cut flower sales with those of other years there would probably be a slight increase shown although the bulk of advance in this line of sales has probably come from an increased demand for plants. In cut flowers nearly everybody showed a predilection for the carnation and everything of the Dianthus tribe was sold out, most florists running short, some of them very early in the day, while only one or two had enough to last out to the bitter end. Roses sold variously. With some they went very well, with others kicks on the price

were long and loud, although in the end salable stock was pretty well used up. Unsalable stock was used up, too, but in quite a different sense. American Beauties, when they were good, sold well and were rather short owing to some lots being frozen in transit. Pickled stock off color or blue went very slowly or not at all. Bridesmaid and Meteor had the call in tea roses. Valley, Roman hyacinths and narcissus did about as well as ever, the two latter being mostly of value to eke out other flowers that were in shorter supply. Business, taken as a whole, was certainly up to other years, and probably would show an average total increase according to store proprietors' say.

A Christmas Decoration.

The most important event of the week from a social point of view was of course the Union League Club reception and ball given Monday evening after Christmas. The work had been placed in the hands of Smith & Fetters and the work done reflected credit on the firm. Holly and various Christmas greens formed a considerable portion of the overhead and wall decorations. In flowers Bridesmaid, Bride, Meteor and La France roses were used, with quantities of Lilium Harrisii. The room given over to dancing, white and gold in color, had the mantel beautifully decorated in Meteor roses, with a center of Lilium Harrisii, with palms banked at the sides. Overhead, a huge bell, from which radiated garlands of laurel reaching to the sides and corners. The corners were finished with smaller bells and holly wreaths, intermingled with colored electric lights. The room where the president received was done in La France and Bridesmaid roses, with a profusion of palms and wild smilax artistically arranged. White azaleas were also largely used advantageously in various places. Refreshments were served upstairs at dozens of tables variously decorated, some with plateaus mostly in carnations of different colors and others with tall vases of roses simply but artistically arranged. All the floral arrangements throughout were carried out beautifully and the *tout ensemble* was certainly charming.

A Resolution.

At the regular club meeting December 27, the resolutions given below were up for action. It does seem as though something ought to be done to stop the gratuitous distribution of seeds, usually for the advancement of the political ambitions and schemes of various would-be statesmen, who, so far as the real interests of their constituents are concerned, care very little and do still less.

For many years the national government has distributed seeds free of cost over the entire country. This practice is continued, much to the injury of seedsmen, florists, gardeners, and horticulturists generally. To explain in brief: The government, by its purchase and gratuitous distribution of seeds, becomes a direct and formidable competitor of the seedsman.

The amateur, inspired by his gift of seeds to enter the field of horticulture, becomes a rival of the legitimate florist. Horticulture in general suffers in common with the seedsmen and florists, who at all times have at heart its promotion and advancement.

Why these particular craftsmen should be singled out as the victims of governmental competition remains an unanswered question. It would be eminently more fitting and a great deal more practicable to distribute free groceries and clothing, and thereby achieve the same end, which it appears is the paternalism of a few politicians whose motive is the advancement of their selfish interests at the government's expense.

Whereas, In view of these facts, we consider that a great injustice is wrought the seedsmen and florists of the country; and

Whereas, The expenses of the government would be decreased by the discontinuance of the practice of free seed distribution to the extent of one hundred thousand dollars; therefore be it

Resolved, That we, the Cleveland Florists' Club, protest against a further appropriation of moneys by congress for this purpose; and be it also

Resolved, That a copy of these resolutions be submitted by the secretary of the club to each senator and representative from Ohio.

Unanimously adopted. NEMO.

ST. LOUIS.

Christmas Trade Satisfactory.

Christmas trade from all accounts can be classed as very satisfactory with both the retailer and wholesaler. The weather was glorious over head but the slush from the recent sleet storm made walking very unpleasant. The growers certainly have no reason to complain, that is, so far as prices went, and only those that indulged in pickling will learn a lesson when they get their returns from the commission man.

Supply—Prices.

Prices for good first-class stock were high. It was thought a few days before Christmas that stock would be very scarce, but it all came in at one time and at 4 o'clock Friday one wholesaler was telephoning all around offering roses at from $3 to $6.

In roses the stock was much more plentiful than was expected. This was owing to the fact that much of the stuff was held back until the last day. The pickled stock had little effect on really good stock and the latter was all disposed of in short order and at top prices. The best American Beauties, of which there was only a small supply, sold at $1.00 and $1.50 each. Bridesmaid, Bride, Meteor, La France and Kaiserin were greatest in demand and the supply was good on all except Meteors; prices ranged from $10 to $15 per hundred; Perles and Woottons brought $6 and $8; Carnots were very scarce; Brides appeared to be the most plentiful of the roses.

Carnations were in great demand and of excellent quality, though some very sleepy stock could be seen, the growers evidently leaving them on the plants too long expecting fancy prices for Christmas. The best of stock brought $8 and others $5 and $6. Scott, Daybreak, Jubilee, Eldorado, Emma Wocher, Flora Hill and Alaska were seen at their best. The carnations sent to this market by the South Park Floral Co., of New Castle, Ind., were equal to those that took all the firsts at our late show. Our local growers also had some very fine blooms and those grown by Messrs. Aue, Fillmore, Ude, Ammann and Emmans all brought good prices.

Bulbous stock could be had in quantity and was of good quality with the exception of some valley. For Romans the price was $3 and $4, paper white $4 and for good valley $4 and $5. Harrisii were in short supply and commanded from $25 to $35 per hundred; callas, $10, but not plentiful.

Violets were also more plentiful than was expected. The fine California were sold at $4 for the best and some went as low as $2; good double were $2 and single 75 cents. Bouvardia was to be had only in limited quantities and brought from $2.50 to $3.00 per hundred. Smilax and adiantum sold better this year. Price on smilax was $15 to $18 and adiantum sold for $1.

All kinds of Christmas greens sold well notwithstanding that the streets down town were lined with fakirs who were selling them very cheap. But most of the stores claim they sold out early and at good prices. Good mistletoe was scarce and the little that was in the market was not good. The demand for blooming plants such as azaleas, cyclamens, and poinsettias, also palms and other house plants and fern dishes was good. The dealer this year had very little trouble in delivering his plants and cut flowers as the weather was fine and they needed but little wrapping.

A Picnic at Christmas Time.

The down town retail florists had a regular picnic that they did not look for (but the wholesaler was not invited). The Cheap John establishment was selling carnations at forty cents per dozen on Friday. When the florists heard of this they sent their friends around and bought them up and sold them over their counter at $1 per dozen. They claim it was cheaper to buy from him than to pay the wholesaler from $5 to $8 per hundred. Some people will never learn until it's too late and they only have themselves to blame.

An Important Club Meeting.

The members of the St. Louis Florists' Club are requested to be present at the next regular meeting of the club, January 13, 1898, as business of great importance will come up at this meeting and President Halstedt requests that every member attend this meeting without fail.

A "Smoker" Soon.

The Florists of St. Louis will have their annual "smoker" some time during the latter part of January. An entertainment will also be given with it. The talent will be made up from among the craft.

Notes.

Mr. J. M. Jordan is reported as being very sick and unable to attend to business. Let us hope that Mr. Jordan will be able to be out soon again.

Mr. W. L. Hucke, of Belleville, Ill., will, on January, 1, 1898, open his retail floral establishment in St. Louis, at the corner of Grand avenue and Shenandoah street. Mr. Hucke reports that he will also later on move his greenhouses to this city.

Bowling Notes.

The Bowling Club rolled its regular three games on Monday with a full attendance and all were feeling good as all reported a good Christmas. Emil Schray was high man with 544, C. A. Kuehn, second, with 519 and C. Beyer, third, with 503. The high single score fell to E. Schray, also, with 214; Frank Fillmore, second, with 199, and Kuehn, third, with 189. Mr. Emil Schray, the only single member of our club, was given six months more time to find a bride. Don't forget next Monday as we are going to have a "hot old time."

J. J. B.

PHILADELPHIA.

Perfect Christmas Weather.

"If you live to be a hundred years old you will never see a more perfect Christmas than to-day," a railroad president said this morning. He merely voiced the general sentiment. The so-called people's indoor holiday was so attractive outdoors that the day quite lost its character. Everybody was out for a part of the day at least, which brought the happy Christmas feeling even into the air of the streets where kindliness and good fellowship prevailed.

General Impressions.

It is not possible, today, for me to give a thoroughly reliable account of the cut flower trade. I will give general impressions with a more exact account next week. The weather was exceedingly cold and stormy on the 23rd and 24th, which shortened the supply considerably and probably slightly reduced the demand on those days. The tendency of these weather conditions and the more hopeful feeling in general business this winter was toward higher prices. The market is however getting much more critical than it was a few years ago and high prices are not paid for anything that is not first class. Despite the dark cold weather some magnificent stock is seen, perfect in color and form. This class, especially in tea roses is not nearly so large as the next, a medium grade which is comprised of fair sized, fair stemmed blooms that were formerly counted in with the first. Then there is the third or cull class, probably the smallest of all, which is fortunate for it it is most unsatisfactory to everybody.

The store men were rather apprehensive on the 23rd and bought freely of both first and second stock, but there was none too much around until late in the day. The morning of the 24th found a change in the conditions. The stock which the growers had been holding back was on the markets and the store men as a rule were anxious for the first class, knowing they could get plenty of the second when they ran short. The fine weather of this morning was a great help to business and nearly everything fresh was eagerly bought. The weather which so helped the cut flower market was against plant trade. The store men had bought rather more freely than usual of both foliage and flowering plants and their labor was vastly increased by the cold spell. Careful wrapping is no joke at such a time.

The trade in all kinds of greens was very large. The most popular novelty noticed was the parlor box from the south, which included a general assortment; holly branches, wild smilax, magnolia foliage, palm leaves, etc., and sold readily at $20 a dozen boxes of fifteen pounds each.

Christmas Cut Flower Prices.

Beauties sold at $6, $9 and $12 with a few extras at $15 a dozen; Meteors, Brides and Maids $15 to $20 per 100; Perles, $10 to $15; carnations, $3 to $5, a few extra fine bringing $6; cypripediums $15; valley $4; Romans $4, double violets $2.

A happy and prosperous New Year to you all.

J. W. Y.

BOSTON.

Trade Unusually Active.

The Christmas trade here has been the best for the last three or four years, both wholesale and retail. In the wholesale markets everything in the shape of a flower was gobbled up almost before the employes could open the boxes from the growers, as they were brought in by the different express companies. It may be noted that there was a great scarcity of colored flowers, and the latter was in more demand and brought almost whatever prices were asked, but when the colored ones had gone then the white went, and it seemed to be a race of who should be first. Everything in the wholesale markets was cleared out by 6 p. m. on Friday evening.

Holly and other evergreens were also in good demand, and some houses who had doubled up on their orders were surprised to hear from their shipping clerks, "No more Holly." Laurel nearly all gone by last Thursday night. This great and increased demand over the last three or four years, let us hope, will be a leader to a continued successful increase of business, then we may, perhaps, hear a different cry from many of our flower-growing politicians who are always crying hard times.

Advice to Growers.

It may be well to note that it would be advisable to growers to divide more equally their stock of carnations for another year, and grow more variety of color, such as Scotts, Daybreak, Bon Ton, etc., as these colors were always in demand and realized top prices. The same remark applies to roses, all the colors were sold out long before the whites. The supply of Beauties, Bridesmaids, Meteors, Morgans, etc., was at no time sufficiently plentiful.

The Retail Trade.

The retail trade was also a great jump from moderate bus ness to an immensely overwhelming supply of orders, some firms, in fact never getting any rest being at their post night and day since Wednesday last, until the evening of Christmas Day, and then leaving a good order sheet to commence the ensuing week with. The following is about a correct list of prices for Christmas week:

American Beauties, per doz.,	from	$2.00 to $12.00
Bridesmaids.....per 100..		8.00 to 16.00
Brides..... " ..		8.00 to 16.00
Meteors..... " ..		6.00 to 25.00
Perle and other varieties " ..		6.00 to 17.00
Carnations..... " ..		2.00 to 4.00
Harrisii..... " ..		12.00 to 16.00
Narcissus, paper whites, etc..... " ..		2.00 to 4.00
Roman hyacinths..... " ..		2.00 to 4.00
Stevia.....per 100 bunches..		1.00 to 8.50

Violets met a very ready sale at good prices.

F. R. Pierson Co. Open a Store.

It is currently reported here this morning that F. R. & P. M. Pierson, of Tarrytown, N. Y., have taken the store at 18 Chapman Place, Boston, (lately occupied by Mr. Geo. Sutherland for the sale of Christmas evergreens) and will open a wholesale flower store for handling all their choice roses, etc., grown at Tarrytown.

C. H. J.

ROCHESTER, N. Y.

Satisfactory Holiday Trade.

Most all of our down-town florists can report very satisfactory Christmas sales. The trend of business was in the direction of plants, perhaps more so than ever, but cut flowers sold well, and good, fair prices were realized, no real oversupply being in the market, excepting in Bride roses and in white carnations. Cartledge and all kinds of scarlet carnations were in excellent demand, so were violets; both were rather scarce by Friday evening. Mignonette of fairly good quality was plentiful; very little of this was left over. Asparagus and smilax were sold out clean and apparently will hereafter be scarce in this city for a while. Roses of best quality were not overplenty; some buyers had to be contented with an inferior article.

Plant Sales.

Plant sales were far ahead of former years. Bright colored blooming plants had the preference. Cyclamens, azaleas and begonias took the lead, but any well grown and free flowering plant would find ready sale. A few early Dendrobium nobile in 6-inch pots with half dozen or more flowering canes were disposed of quickly at fancy prices and another year more of them will be brought forward for the holidays. Palms and ferns came next in order, while araucarias and dracænas moved slower than was expected. The inclement weather caused great anxiety. For the safe delivery of both plants and flowers much extra labor had to be performed in the wrapping up with sheet cotton between tissue paper and several thicknesses of manilla paper outside of this. One of the leading firms refused to guarantee safe delivery of plants on account of the severe cold; others were

worried but said nothing, and after all but few instances are known where plants have suffered from that source, showing that our florists know exactly how to protect their goods in zero weather; but of course they had to work for it. Delivery was slower for this reason, the packages more bulky and people who expected their goods to be delivered before 10 p. m. were lucky to get them by midnight or even later, but everybody seemed to have sense enough to excuse the delay under such extraordinary circumstances when it was explained to them in a few words.

Holly was decidedly scarce in the beginning of the week; the bulk of the shipments for this city had been delayed on the road for some reason. Owing to this unfortunate state of affairs there was no time to work up all of it when it finally did arrive, consequently quite a lot of good holly is left over, most of it in the hands of the commission man. Had it arrived on time none of it would have gone to waste.

Funeral Work.

The beginning of this week some large orders for funeral work helped to do away with the surplus of white carnations and white roses left over from Christmas, and as there are several large receptions yet ahead prospects for the remainder of the week are quite encouraging to our florists. K.

TORONTO.

The Christmas Trade.

The mean temperature here for the 24th of December was 5°, the lowest being 5° below zero, so it can be easily understood that the plant business was not so good as it might have been on that day. The cut flower trade, however, was everything that could be desired, except for the shortness of some lines of stock; had it not been for that serious drawback the volume of trade done would have been simply enormous. As it was the retail trade in the city probably beat the record, but the big rose growers were forced to refuse or cut down a great number of the outside orders, the greatest being on Bridesmaid. There was a good supply of Meteor, but they were soon all cleaned off.

To-day (Monday) I hear that the plant trade was fair, but in spite of every care being taken, complaints are coming in of frozen stock. There were some azaleas offered, more than usual at this season perhaps, but they were mostly all ordered beforehand. The quality of most of the stock was high class, and the prices were also of a high class pretty well all round. I heard that the down-town stores were asking $10 a dozen for Beauties, an unprecedented price for this city. It looks as if we were going to have some sunny weather now, so that supplies may be a little more plentiful for New Year's.

Meeting of Gardeners' and Florists' Association.

At the annual meeting of the Gardeners' and Florists' Association for the election of officers for the ensuing year last Tuesday the attendance was not quite so large as usual on such occasions. Everything passed off very pleasantly, there being very little opposition in any of the offices. The following is the list for 1898: President, Alonzo Watkins; first vice president, Charles Tidy; second vice president, Harry Dale; secretary, E. H. Carter; assistant secretary, E. G Collins; treasurer, A. H. Ewing; executive committee, Messrs. T. Manton, Chambers, Muston, Jay, Mills, Vair and Graham.

The treasurer paid seventy-five per cent of the prizes taken at the late chrysanthemum show and reported a small balance still left in the treasury. The secretary reported eighty-eight members in good standing, a slight falling off from last year. The annual banquet was brought up and a committee appointed for considering the necessary arrangements. The outgoing and incoming presidents made suitable speeches and various votes of thanks were unanimously carried.

A Question.

Why does not some florist take to growing poinsettias? I am confident they would be paying stock to offer at this season, especially now times are getting good and better prices can be obtained. I have been asked several times this Christmas where they could be obtained and have been compelled to say that nobody grew them. They are not difficult to grow. With a little more attention and a little more heat than is usually given to common stock, nice plants can be grown that would, I am sure, go off like hot cakes.

A happy and prosperous new year to the Florists' Review and all its readers and many of them. E.

WASHINGTON.

Trade for the Holiday Satisfactory.

My predictions as to trade in my last letter were more than realized as cyclonic in character. Without doubt this has been the best Christmas for trade in years, exceptionably good prices prevailing. The people seemed plant crazy and plants in bloom went first and fast, next ferns in pans were the favorite though palms, rubbers and araucarias were in demand.

The marketmen were heavy losers of plants owing to a sudden fall in temperature. A moderate blizzard slipped in Christmas eve unannounced and raised the mischief with the plants sent there for the Christmas trade.

Prices.

If the northern men realized the prices quoted on their price lists sent here I should think they might comfortably retire, their wholesale prices exceeding by far the retail prices here. The average retail prices were, Beauties $12 to $18 and all other roses from $3 to $9 per doz. Carnations $4 to $5 per hundred. Violets $2 to $2.50.

For ten days preceding Christmas the weather was heavy, dark and moist and the outlook for stuff was gloomy, so that when Christmas came there was not an abundance by any means. To send north with such quotations as they sent, was out of the question. The great demand for plants relieved the shortage on cut flowers.

Again the Swindler.

One of our local florists was the victim of a clever swindle a week ago by a man who introduced himself as a salesman for a firm in Memphis, Tenn. He had business cards of the firm with his name printed in the lower left hand corner as representing that firm. He chose Saturday afternoon to order a funeral piece of gates ajar, the price agreed upon being $12.50, which he ordered to be sent to a certain address, the name the same as his. He wanted the piece sent Sunday afternoon and presented a check for $27.50 on the State National Bank of Memphis, Tenn., payable to himself, C. D. Hart, which he claimed was his week's wages and being Saturday afternoon could not cash it. The local firm investigated the address given which was straight, also the name of person living there, and accepted the check paying the balance to him. The card accompanying the floral piece read: "From Uncle Charlie." The check came back N. G., and Mr. Hart, to whose house the design was sent, came down for an explanation. This fellow is evidently a clever swindler and perhaps is in conjunction with the one mentioned in Buffalo letter. Look out for him. W. H. K.

Discounts allowed only on consecutive insertions. Only strictly trade advertising accepted. Advertisements must reach us by Tuesday to assure insertion in the issue of the following Thursday.

Copyright 1897.

We are sorry to have to say that Mr. William Scott, of Buffalo, N. Y., has been confined to his bed since Saturday by a severe cold contracted during the rush of Christmas trade, and that he was therefore unable to supply Buffalo notes or Miscellaneous Seasonable Hints for this week's issue. A host of friends will join us in wishing him a speedy recovery of his usual good health.

Send us items of news about new greenhouses, new florists, business changes or anything you think may be of interest to others in the trade. We want all the news of all the trade.

WANT ADVERTISEMENTS.

SITUATION WANTED—By a reliable, industrious young man in park or private place. Single, 23 years of age; seven years' experience; good references. Address G, care Florists' Review.

Married; small family; English; work in greenhouse in winter; nice house to live in and one acre of garden; a steady place with set wages to right man. Address

THE MORRIS FLORAL CO., Morris, Ill.

--WANTED--

1000 rooted cuttings of Mrs. Fisher Carnation. October or November struck. Address, stating price, ALBERT BATLEY, Box 313, MAYNARD, MASS.

Butted Glass.

This is no longer an experiment, it has come to stay. There are various ways of making Butted Roofs, but the best way is with the

Clipper Bar.

With this bar you can make a roof that is absolutely free from drip, and glass cannot be torn out by the wind. Butted glass makes a tight roof, a warm house and saves fuel. It lasts longer, looks better and costs less than the old-fashioned roof. But do not think that this is the only bar we sell, for it is not; we furnish what people want and there is nothing in greenhouse material that you cannot get from us, and all of open-air-dried Cypress clear of bright sap, stained sap, knots and all other defects.

--VERBENAS--

The finest collection in America, 35 varieties, every one a gem—mammoth size, striking colors, green as grass and as clean as a whistle. Rooted cuttings, 60 cts. per hundred; $5.00 per thousand. Strong plants, full of cuttings, $1.50 per hundred. Strictly cash with order.

SOUTH SIDE FLORAL CO., - Springfield, Ill.

TELEGRAPH CODE.

In telegraphing orders to any of the wholesale dealers in cut flowers use the following code:

Assume—Do not answer if cannot fill order.
Abrogate—In case you cannot fill order, telegraph at once.
Anticipate—Answer at once, stating whether you can or cannot fill order.
Ambition—If you can only partially fill order, do so, and reply, stating what.
Admiral—Order must be sent on train mentioned only.
Ambulance—Want all of order filled or none, and prompt answer back.
Adjacent—If cannot send on train mentioned, next one will do.
Affable—Send prepaid by baggage master, if no express messenger on train.
Decorate—If cannot send all on train mentioned, send all you can, and send balance on next train.
Admission—This order is a substitute for my regular order.
Dancing—If cannot fill order exactly as specified, you may substitute according to your best judgment.
Ancestor—This order is an addition to my regular order.
Durable—Colored flowers must not be substituted for white.
Affection—Fill if possible, even at extra expense.
Fabricate—Flowers ordered are to be re-shipped to a distance, therefore buds must be cut specially close.
Fortunate—Select extra stock and charge accordingly.
Devotion—For cheap work, and can use second-class flowers, if at reduced price.
Flattery—If price has advanced since last quotation, do not send goods, but telegraph.
Forgery—This order countermands all previous orders.
Formation—Add these items to the order which you already have, but in case first order is already shipped, cancel this addition.
Flamingo—We are in a bad pinch; send us something to help us out, even if of poor quality.
Flocking—Have sent mail order; if not yet received, send following at once, and cancel mail order when received.
Foraging—This order includes all items previously ordered and wanted for this date.
Superior—Can use something especially fine, and am willing to pay accordingly.
Skip—If you are out, buy the best you can; we accept risk of getting "pickled" stock.
Corporal—If cannot send on night train, morning train will do.

THE CODE BELOW WILL BE USED IN ANSWERING YOU, WHEN NECESSARY.

Elope—Cannot fill your order to-day. Stock is scarce. Have tried to buy at other houses for you.
Lecture—Our store was closed yesterday when your telegram came. Received it this morning. Will ship by first train to-day, unless countermanded at once.
Willing—Cannot ship on train mentioned. Will send on next train possible to-day.
Eclipse—Will send part of your order. Balance scarce. Cannot get it at any price to-day.
Artistic—Cannot fill order to-day, if you want order filled (same order) to-morrow, wire us at once.
Favorite—Stock very poor, none better to be had. Will ship unless countermanded by..... o'clock.
Fundament—Stock named in this telegram has been sent, and balance, unless countermanded by telegram, will be sent on..... ...

KEEP THE DEALERS POSTED.

Keep the dealer from whom you order flowers fully posted as to the sort of stock for which you have the largest sale. Write him as fully as possible when you have time to devote to the matter. Keep him fully advised as to the needs of your trade. He will then know much better how to fill your telegraphic orders. He will know whether to send you the best in the market at the top price or to send you a fair grade at a more moderate price. The dealer is anxious to please you but often his information is meagre. Make this information as full as possible by mail and your telegraphic orders will be filled more to your satisfaction.

INDIANAPOLIS.

A Visit Among the Craft.

Before entering Wiegand & Son's store one is struck particularly by their artistic window. The back and side opening to the store are glass and were draped with laurel, the top and other side were completely covered with same. On the floor, hiding the vases and pots that held the cut flowers and plants, was lycopodium. In the center of window was a medium size, though excellent specimen, of Araucaria excelsa, on each side of which was a fine plant of stevia. In front of these were vases of carnations and Begonia incarnata, and the foreground of lycopodium. On the side, covered with laurel, was a lyre of bright scarlet immortelles, tied with broad ribbon of same shade.

Their store and greenhouses are in excellent condition. This firm grows a very large quantity of palms. Above the store they have a room with billiard table, punching bag and several other devices for amusement. This room is for the use of the members of the firm, the employes and visitors, and Mr. Wiegand assures us they have excellent times.

At Garfield Park, where Mr. Robert McKeand presides, everything is in excellent shape, bedding plants in perfect health and great quantities. They also grow some carnations, but sell nothing from these houses. Mr. McKeand has some excellent seedling cannas of the Crozy strain. One is a very dark red with immense truss that evidently has Bouvier for one parent. Another is a very pleasing yellow with minute specks of red. There are several others, but the most striking of all is a very dwarf one that has a broad band of clear yellow on margin, and red, underlaid with yellow, in center. It is remarkably attractive, very hard to describe, and must be seen to be appreciated. The individual flowers of all these cannas are very large.

Mr. Heidenreich has the finest lot of azaleas we have seen this year, which are in nearly full bloom and will be just right for Christmas.

Mr. Hartje grows mostly carnations, but has one house of good roses. In two of the carnation houses he has beds of mushrooms that are doing very well. A bench of Jubilee at this place struck me as particularly fine.

Mr. H. W. Rieman has the best Beauties around this city. He does a retail trade and reports business very good. Mr. Rieman will grow a number of palms next year.

When we called on Mr. John Rieman he was exceedingly busy with funeral work, and the designs he was making were certainly artistic and beautiful. His store is well located and is kept in perfect order.

The florists here think there will be ten or a dozen at the meeting of the Carnation Society. N. H. G.

PONTIAC, ILL.—The mother of Mr. W. J. Miller, the florist, died recently after nearly ten months' sickness, at his home. Mr. Miller will have the sympathy of his friends in the trade.

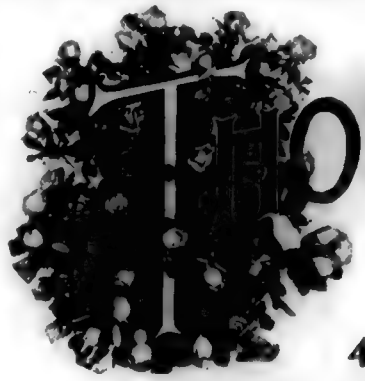
All high colored flowers sold well. American Beauties, Meteors, Bridesmaids, red and fancy carnations were in special demand, Romans, paper whites, smilax, the least. For special report on fancy stock, see New York letter.

SYRACUSE, N. Y.

Christmas come in clear and cold, making it hard work wrapping up plants and boxes of cut flowers. Palms from $1 to $5 sold well. Azaleas were in great demand, also Harrisii lilies, primulas and cinerarias. Roses went well at from $2 to $4 per dozen, Beauties from $1 to $1.50 each, Romans and paper white 75 cents, lily of the valley $1 per dozen. There was also a nice lot of Begonia incarnata and multiflora, but it did not take well. All the florist stores were prettily decorated.



L. E. Marquisee opened his new store last Friday. It is handsomely fitted up with large French plate mirrors all along one side with the ice box at the end of the counters. This has a large French plate glass mirror. The show windows were decorated with fancy crotons, palms, Pandanus Veitchii, cypripediums, ferns, small pans of Roman hyacinths, primulas, holly, etc.

All the florists report good trade.

THE WANDERER.

JOLIET, ILL.—Christmas trade compared very favorably with former years. Owing to the few bright days just previous to Christmas day there was some stock to spare.

RICHMOND, IND.—Florists here report an excellent Christmas trade with roses and carnations short in supply. With some holly sold remarkably well while others had considerable left over. Gause & Co. disposed of a lot of good palms. Beach & Co. had a lot of nicely filled fern pans that sold well.

DES MOINES.

Holiday Trade Not Up to Former Years.

Christmas trade in this locality was not so satisfactory as in former years, owing to a lack of home-grown stock. As a result much of the cut blooms that were disposed of were shipped goods and prices were high—tea roses, $2 to $3 per dozen; carnations, 75 cents to $1; Romans and paper whites, 60 cents to 75 cents. In fact, many regular customers would not invest in cut flowers, but purchased other articles, palms, ferns, and blooming plants being especially called for. Then our local papers assisted in frightening the people in this manner:

Don't Buy Your Best Girl Roses Unless You Have a Mint of Money and Have No Use for It.

It's very proper and all that to buy your best girl roses for Christmas, but don't do it unless you have money to burn but are shy on matches. Just at present it's easier to get rid of any surplus accumulations by buying flowers, especially roses, than in any other way. Just ordinary every-day roses that usually bring about $1 a dozen have attained the value of $2.50 per dozen, while real nice ones cannot be obtained for less than $3 to $4 and are mighty scarce at those figures. American Beauty roses, which are the favorites of most girls, come at $18 per dozen with fancy ones bringing $20 and $24. The wholesale price yesterday was $100 per hundred, and they could not be bought for that to-day. The florists report that there is an unusually heavy demand and they are utterly unable to fill their orders. Carnations, which the dealers are glad to dispose of at ordinary times at thirty-five cents a dozen, have gone up to the dollar mark and may be even higher before night. In fact most of the florists have sold out about all they have, so it doesn't make any difference, anyhow.

However, some report an increase in sales of twenty per cent.; others twenty-five per cent. advance in prices; still others twenty per cent. decrease in sales. The writer had twenty-five per cent. increase in sales with prices the same as last year. Holly and green were in poor demand as these could be purchased at notion stores, meat markets, coal offices and restaurants.

The growers are now laying plans for propagating their carnations and the question arises what kinds will be best for this special locality? J. T. D. F.

DREER'S SPECIAL OFFER
—Of—
PLANTS FOR FORCING

Burpee's Seeds Grow

CINCINNATI.

Stock Scarce for the Holiday.

Anxiety, rush and push of Christmas is now past, and the growers have time to balance their account book. So far as sales and prices are concerned, every one seemed to be well satisfied with the Christmas trade. Never was stock for several years past so scarce as this year, especially in roses and carnations. Out of town orders were refused as early as Wednesday at the wholesale houses. Carnations came in barely sufficient to fill orders. R. Witterstaetter, W. Murphy and Christ. Murphy had a large cut, 15,000 carnations being sent in by these West Price Hill growers alone.

Lily of the valley was not over plentiful and sold quickly at $5 per 100. George & Allen sent in the main supply of bulbous stuff. Violets were scarce all week at the wholesale houses, in fact, every violet around town was engaged by the retailers in advance at $2 per 100.

The Sixth street flower market the day before Christmas did not have the appearance of a rushing business day. It was cold and dreary and only here and there could be seen a vase of flowers and a few pot plants. Holly and lycopodium could be seen on every stand, which moved slowly. Good holly was none too plentiful, but there were quantities of poor stuff around town, only fit for the dump. At every corner a street vender could be heard crying out "Holly wreaths 10 cents each," while at the market house the price asked was 20 and 25 cents. Taking Christmas trade all in all, it is favorable compared with former years; some of the retailers at Fourth street report an increase of 25 per cent. NEGRUM.

WAYNESBORO, PA.

Xmas trade was the best ever experienced here. Pot plants had the preference to cut flowers. Henry Eichholz, of "Mars" fame, has had a Xmas present in the shape of a sport of a yellow Kaiserin rose, which opened fully on Xmas morning, and is just like the parent only yellow. He will take care of the babe and the trade may see it this fall at some of the shows. H.

GRAFTING EXTRAORDINARY.

A state editor having learned of a marvelous feat in horticulture by grafting tomatoes on potatoes, so that the hybrid plant grows potatoes under the soil and tomatoes above, now asks some genius to trot to the front with a plan for growing cranberries on turkeys.

WHEN YOU WANT THE **BEST**
SEND TO
BASSETT & WASHBURN,
CHICAGO

MILWAUKEE.

The '97 Christmas is a thing of the past. Comparing it with last year it was not so favorable as far as supply was concerned. Good stock was extremely scarce and commanded high prices. Much of the stock was weak stemmed and soft. Meteors and Beauties were mostly called for and all other colored stock moved rapidly. Prices on roses, select quality, ranged from $12 to $18 per 100; Beauties, $3 to $12 per doz.; carnations, $3 to $5 per 100; violets, $1 to $2 per 100; stevia, Romans, valley, paper whites sold fairly well with good supply. Shipping trade was brisk, but there was not enough good stock to go around. Some 'mums were still to be seen, but showed the effects of holding back and consequently found slow sales. Considerable holly was disposed of, both Southern and Delaware, but the latter was far superior to the southern holly this season.

Otto Sylvester shipped in a large quantity of violets to Ellis & Pollworth of exceptionally fine quality.

The retailers report good sales of palms, ferneries and all blooming pot plants.

J. E. Mathewson, of Sheboygan, was a recent visitor, looking up Xmas supplies.

GEO. WASHINGTON.

CAMBRIDGE, MASS.

F. C. Becker has a fine lot of azaleas in for the holidays. This stock is much sought after by Boston retailers, owing to easy transportation. Another who handles one of, if not the largest stock of flowering plants in New England, as a wholesaler, is W. W. Edgar, Waverly, who is on hand this year as usual with a splendid selection.

W. E. Doyle has several houses filled with well grown stock, especially azaleas and oranges, in anticipation of a big demand which he is capable of taking care of.

In passing, I would note the decease of the mother of Dan Murphy, the genial foreman to Mr. Doyle. This worthy lady was a great lover of plants and was constantly in touch with them during her ninety years of active life. At her funeral, which took place at Woburn on the 9th inst., the floral tokens were both profuse and chaste.

P. O'Brien & Son are much pleased at the outlook for Christmas. W. A. Bock reports big sales this fall. W. M.

New Light Colored **CARNATION**

Mrs. S. A. Northway

We introduce this variety with even more confidence than we did Portia, Silver Spray, Tidal Wave, Daybreak, Rose Queen, or J. J. Harrison, knowing that it will become as great a cut flower variety as any of the above. Plant of strong, free growing habit, entirely free from disease or rust; large round high built flower with perfect calyx and extra strong and long stem. Color a beautiful soft shell pink becoming almost white when fully open.

Orders booked now and filled in rotation. We shall commence to ship soon after Jan'y 1st. Price, $10.00 per 100; $75.00 per 1000.

Geraniums. Md. Bruant, Md. Jaulen, Fleure Poitevine, J. Ricaud, and J. Sallier, 2¼-in. pot plants, $5.00 per 100. Rooted cuttings, $3.00 per 100; $25.00 per 1000. Our superb stock of all the finest sorts, 2¼-in. pot plants, named, $25.00; unnamed, $20.00 per 1000. Rooted cuttings, $12.50 per 1000.

Fuchsias. A grand lot of summered-over stock in small pots that will make early bloomers, $3.00 per 100.

All Rooted Cuttings Cash with Order.
Our Price List describes many other fine plants. Send for it.

DETROIT.

Christmas trade was good all round, notwithstanding the cold weather, the retailers not being able to procure stock enough to go round and one having to buy stock from one of the department stores. Roses were very poor, weak in the stem and off color, but brought good prices. Carnations went at wholesale at from $4 for common to $6 for Pingree and fancy. Plants moved off rapidly; many more azaleas could have been disposed of if they had been in bloom. The retailers all seem very much pleased with trade in general, but complain of the shortage of cash sales, a large percentage being booked for future collection.

RAG.

NEW JERSEY NOTES.

Mr. L. Bonnot, Flemington, N. J., will open a retail store at Easton, Pa., in the course of a few days.

Mr. Ernest Asmus, recently with Pitcher & Manda, has taken a position as manager with the Denver Floral Co., Denver, Colorado.

The firm of Bonn & Dressell, Hoboken, is now carried on entirely by Mr. Fredrick H. Dressell and under his name.

WILMINGTON, DEL.

Competition among the florists in this quiet old town must be causing more fun than profit. One of the leading florists here is selling carnations, retail at ten cents per dozen.

Charles Sparks, Jr., has built a new house 16x72 and will have a good supply of mums for Christmas from cuttings struck in October and planted in the most open places on the carnation benches.

ERNEST ASHLEY.

"ONE DOLLAR ENCLOSED."

Ring out the old, ring in the new,
Let printers' ink new thoughts unfold,
Nor heed the owlish Tuwhit! Tuwhoo!
Of "fogies" who may rail and scold;
Write *what you think*, not what you'r told.
Ring out the old, ring in the new.

Ring in the new, ring out the old
And bring us ideas up to date,
Strike hard and fast, fearless and bold
And established notions dissipate.
Where error lies t'will compensate.
Ring in the new, ring out the old

Ring out the old, ring in the new
I drink your health in this my toast,
To Grant and Scott and the others, too,
(Your paper's staff, a valiant host):
"One dollar enclosed" for FLORISTS' REVIEW.
Ring out the old, ring in the new.

HUNT'S MARKET REPORT.

During the interval between last report and the opening of the Christmas season, little developed save a strongly marked scarcity of carnations and a slight decrease in receipts of roses.

This, however, did not affect the market much, as the cold, cloudy spell then passing had produced many periods of even greater scarcity and all were accustomed to it.

Christmas trade opened early in the week. Shipping beginning Sunday evening and reaching its heaviest points Monday and Thursday nights with a reactive breathing spell beginning Tuesday and lasting well into Wednesday between.

Wednesday afternoon saw local trade, which up to then had been afraid to take hold, begin to nibble in an endeavor to protect their orders. Their speculative buying was, however, mainly left for Friday. This with supplemental rush orders from outsiders together with short distance shipping made Friday notable.

The entire week was full of features, each day having its share of excitement ranging from a famine to a threatened rush to sell. The immense reserve stocks (accumulated the Lord only knows how) of generally first rate quality, came dangerously near breaking the market at times. This was averted and no season yet so far as we know will show a more even range than the one just past.

Bulbous stuff was abundant and sold well. In small stuff alyssum, mignonette, marguerites and other similar stock while in fair supply fell far short of the demand. Violets, real good honest violets, were snapped up as soon as seen, but many bleached-out, inodorous, calamity-stricken ones were in evidence during the entire time that never were sold.

Carnations were always in demand, and while on the whole more plentiful than expected never were in in quantities too large to place at full rates. Reds were the hardest to get and at times they couldn't be had. The other varieties held their own, and supply may on the whole be said to have equaled the demand.

Roses of all sorts of the standard leaders were plentiful from Tuesday on, not at any time too many, save in the poorer grades. While each day saw a deluge of roses not a night came but found the market well cleaned out. In quality receipts probably averaged better than at any corresponding period in years. Beauties were the exception—they were scarce at all times and inclined to be anything but high grade. The very best were the long-stemmed, for which, while in brisk demand, there was not near the call that there was for medium and short stems.

Taken all in all the trade was highly satisfactory to dealers generally, prices realized being good and stock generally of a grade satisfactory to both buyer and seller. The volume of trade was heavier than last year and closing of the season leaves trade seemingly in a healthier condition than is customary.

OMAHA, NEB.

Stock Scarce—Satisfactory Trade.

The Christmas trade has been good but stock very scarce on account of the dark and gloomy weather. Carnations and violets were very scarce and commanded most any price. Roses sold at $1.50 to $3 per dozen, American Beauties 35 cents to $1 each, carnations at 75 cents, narcissus 75 cents to $1 per dozen, hyacinths 75 cents, stevia $1 to $1.50 per dozen sprays, poinsettias 25 cents to 50 cents each, Chrysanthemums were numerous, but their favored days are past and nobody seems to care for them at any price.

Seen in the Florists' Windows.

The florists all made a nice display in their windows. S. B. Stewart had a pretty display of holly and cut flowers; Peterson Bros. had their windows stocked with nice azaleas; A. Donaghue made a fine display of azaleas and palms; L. Henderson showed his rare cacti and cut flowers; Hess & Swoboda showed some nice azaleas and poinsettias. The Nebraska Seed Co. made a nice display of Southern Sabal palms and greens. Pot plants sold as well as cut flowers and brought good prices. Nebraska has not experienced such continual cold weather for many years past. J. J. H.

COLUMBUS.

Trade has been very good during the holidays and what is better still less charging and more cash business. Some florists did not know prosperity was here and kept the prices lower than was necessary. Plant trade was fully 60 per cent. more this year than last.

Franklin Park did a very fine Christmas trade. Livingston's Sons did more than ever before. Their new fixtures in the cut flower department are paying good interest and verify their genial manager's, Mr. Danzer, progressive ideas. JUSTICE.

WE EXTEND thanks to the *Florists' Exchange* for its courteous greeting and assure it that we are here to benefit the whole trade and to injure no one. Had we not been thoroughly assured that there was room for all, the REVIEW would not have been born. And it has proven a much more vigorous infant than we anticipated.

ADVERTISEMENTS of help wanted and situations wanted, not exceeding five lines (seven words to the line) will be inserted free until further notice. Additional lines 10 cents each, per insertion.

AN UNPARALLELED SUBSCRIPTION OFFER.

EVERY one to whom this issue of the FLORISTS' REVIEW is addressed, and who fills out, signs and returns the accompanying subscription blank, accompanied by $1.00, within 30 days from date, will receive not only the FLORISTS' REVIEW for one year but also a certificate entitling him to the earnings on one-tenth of a share of stock in the company formed to publish the paper. The shares will be of a par value of $10.00 each.

Why do we make such an unparalleled offer? It is very simple.

You will have an interest in the success of the paper.

You will see that you can buy everything that you want to just as good advantage from advertisers in the FLORISTS' REVIEW as elsewhere and at the same time benefit yourself by increasing the earning power of your certificate.

This mutual arrangement cannot fail to bring to the paper a heavy advertising patronage, and as a result the stock represented by your certificate will earn good dividends.

And the more you buy of advertisers in the FLORISTS' REVIEW (always mentioning the paper) the larger your dividends will be.

You will get a better paper than has yet been published in this field, and a share of its earnings. Please let us hear from you by early mail.

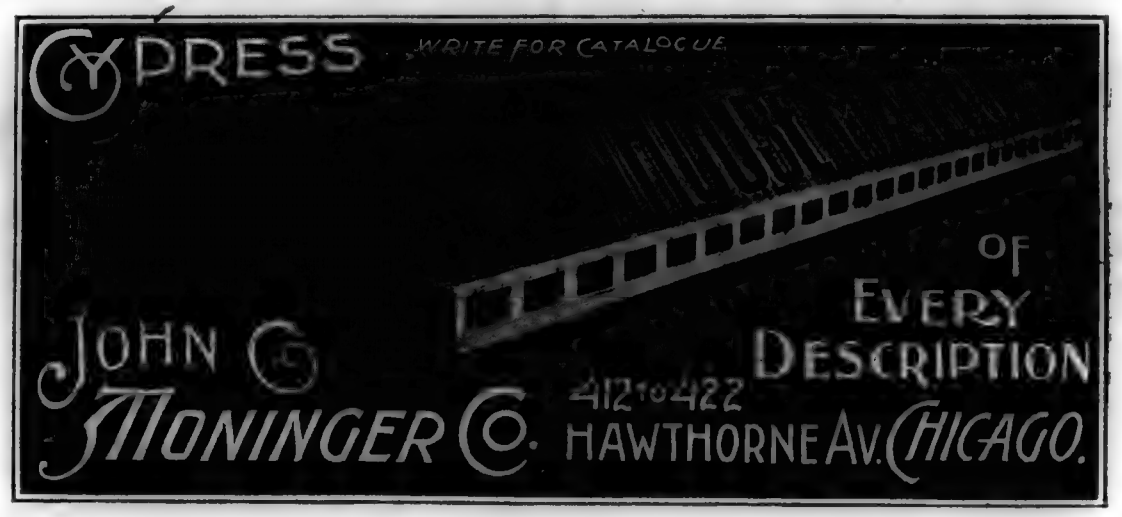
SALEM, MASS.

McGee, Geary & Co., are experiencing the usual lull before a storm but have the sails set to catch all that comes their way in the next few days. I am pleased to report Mr. Geary again on the active list after a long siege. W. M.

PLATTSMOUTH, Neb.—Mr. W. J. Hesser is recovering from a long illness and hopes to soon be about again.



ANDERSON, IND.—M. E. Longfellow is building a house 20x63 to be devoted to lettuce. But he intends to soon be growing flowers.

RICHMOND, IND.—Fulle Bros. have built a new three-quarter span house 22x80, for carnations.

CARTHAGE, O.—The Longview Asylum has built a new greenhouse 20x100, using the Evans Challange ventilating apparatus.

RICHMOND, IND.—Mr. E. G. Hill has been confined to the house by an attack of lumbago. It is hoped that he may soon be able to be about again.

WE HAVE RECEIVED from Mr. L. E. Marquisee, Syracuse, N. Y., flowers of his new pink seedling carnation. The flowers are of good size, borne on good strong stems. There certainly seems a place for it in view of the fact that Mr. Marquisee states that it is entirely free from any tendency to disease and is a very strong grower and free bloomer.

Standard Ventilating Machine....

None Equal it in Strength and Durability.
Nothing Flimsy or Complicated about it.

THE WEEKLY
FLORISTS' REVIEW

FLORISTS' PUBLISHING CO., 530-535 Caxton Building, CHICAGO.

Vol. 1. CHICAGO AND NEW YORK, JANUARY 6, 1898. No. 6.

SOME NEW YORK STORES AT CHRISTMAS.

In this issue we take our readers for a Christmas jaunt among the stores of prominent New York florists. Not the least interesting of the things we see are the blooming plants decorated for Christmas gifts and which are seen in all the leading stores. They are seen in larger numbers than ever before and this trade shows a tendency to develop still further. We also admire the decorated exteriors of the various stores and take a peep at the displays in the various windows. Our view of the latter is, however, somewhat confused by the fact that the plate glass windows reflect objects on the other side of the street. Still we get a fair idea of the style of decoration and display. The plants illustrated were decorated by Dards.

NOTES FROM TRENTON AND PHILADELPHIA.

Mr. Roebling's Orchids.

A business trip to Philadelphia recently furnished an opportunity to break the journey by a stop off at Trenton, the objective point being Mr. C. G. Roebling's unique collection of orchids, whose fame is world-wide, and I quickly found that its merit and fame were justified by the richness, variety, and in many instances extreme rarity of a number of the plants; added to which the collection represents the acme of good cultivation. This is as it should be, and Mr. Roebling's generous expenditures in purchasing have met with responsive efforts in cultural skill on the part of his clever grower, H. Clinkaberry, the result being a collection rich and beautiful in every way. The visitor is not asked to admire a lot of microscopical mites, but sees on all sides green, growing, healthy, vigorous plants, some of them specimens of great size; as for example Cypripedium Stonei, in a 15-inch pot, and the pot scarcely visible, hidden in luxuriant leafage and bearing fifteen spikes of flowers.

Azalea dressed with Crepe Paper and Lace Ribbon.

CHRISTMAS PLANTS IN THE NEW YORK STORES.

The present being the height of the cypripedium season these naturally were the predominating flowers, and with such a range of choice it was no easy matter to single those out for special mention here.

Some Rare Cypripediums.

C. Leeanum Clinkaberryanum, which was recently awarded a silver medal at Boston, I was fortunate to see two plants of, one of them, the plant that went to Boston, still with its flower intact and fresh, apparently none the worse for its travels. We have read about quite lately and I noted not long since the fine Leeanum giganteum, but from henceforth this name will be misleading, for in this silver medalist we have a larger and finer variety still. It has a dorsal sepal of immense size, nearly uniform in width and depth, measuring nearly three inches each way. There is a large area of the purest white; the base is light green, slightly brown spotted, the spotting continued into the white portion and becoming a mauve purple. The base of the dorsal sepal extending below the petals and showing little disposition to recurve, gives a concentration and distinctive massiveness to the flower, a feature peculiar to itself. The petals are fully half an inch broad, gracefully undulated on their upper edges; in color light greenish-yellow with faint brown shading and prettily spotted. The pouch is prominent, of a polished brown in front, its two lobes projecting inward towards the petals and measuring about one and one-half inches across. It is only making a statement of fact to declare this undoubtedly the finest form of Leeanum that has yet appeared, and of American origin, too.

Next to attract notice was the fine plant of C. insigne Sanderæ, the same as was exhibited at the Astoria show in New York in November and bearing three flowers. Detailed description is superfluous for this practically spotless gem and to see it is to covet it, but it will not be a market "cyp" just yet. Hardly less beautiful was C. insigne Ernesti, a plant of which bore six fresh flowers. This has more of the incidental spotting but the color spots are subdued in tint, plainly manifest yet appearing almost faded out. Another noble form is insigne Wellsiana, having one of the largest flowers of any of the insigne type, with a large area of the purest white in its dorsal sepal, the petals and pouch yellow, suffused with brown in light reticulations free from spots; in short a giant flower of great beauty, borne loftily on an immense stem eighteen inches in length.

C. Germanyanum represents a lovely cross between villosum and hirsutissimum with the characteristics of its hirsute parent strongly marked. The dorsal sepal is a polished brown and black spotted and has a well defined light green margin. The petals are prettily spotted and distinctly colored, their upper or superior portion being a pale reddish tint, a prominent midrib dividing the inferior portion which is yellowish green, but at their apices they are of a clear, distinct unspotted, mauve purple hue. The pouch is peculiarly hairy about its aperture, while a prominent green boss in the center of the staminode catches the eye quaintly.

C. Haynoldianum was represented by a grand plant bearing several flower spikes, one having four flowers upon it and another three, with sufficient stem growth between each for the flowers to display themselves individually. This is a true species, coming from the Philippine islands. The flowers are large and showy, having graceful deflexed petals three inches or more in length, broadening towards their tips and marked with large brown blotches on a greenish yellow ground. The dorsal sepal is similarly blotched at its base, but is white with pink shading in its upper part.

In C. Thayerianum we have another grand hybrid from Boxalli atratum and Lawrenceanum, strongly colored in deep rich tones, heavy spotting characterizing sepals and petals, while its handsome pouch is stained in light violet purple. C. picturatum, a cross from Spicerianum and superbiens, shows a trait of its first named parent in the white dorsal sepal which, however, is marked with vertical lines of light purple. The petals droop prettily, are greenish yellow flushed with a faint purple tinge and minutely dotted, the pouch dull reddish brown.

C. radiosum, also from Spicerianum with Lawrenceanum as its second parent, shows us a dorsal sepal of most beautiful coloring, and graceful curvature. In its rich green base there are conspicuous lines of darker green which radiate vertically and as they pass into the white ground color, become rich mauve purple forming bright veins about a dozen in number disposed as parallel lines, running from top to bottom. The petals and pouch are a harmony of neutral tints in soft green and light brown.

C. callosum, a Siamese species, was noted in a fine form, with dorsal sepal projected forward in a half hooded man-

Large flowered Cyclamen in gilt Basket, dressed with red Ribbon.

CHRISTMAS PLANTS IN THE NEW YORK STORES.

Otaheite Orange in gilt Basket, tied with orange watered Ribbon.

CHRISTMAS PLANTS IN THE NEW YORK STORES.

ner. In color mainly white, varied with strong vertical lines of deep crimson purple extending from base to apex. The deflexed petals are shaded with rosy purple overlying green, the purple tint accentuated toward their apices, while along their upper surfaces are disposed several wart-like spots in black.

C. Niobe Shorthillsense, with fine flowers on stems of more than ordinary length; C. Spicerianum having sixteen expanded flowers upon it; C. Henry Graves, Jr., so refined and pretty in quiet neutral tints; C. Victoria Marie, C. regale purpureum, and a great pan of C. pavoninum inversum just coming into flower, were also noted, but one-half is not told and space prohibits prolonging the cypripedium part of the story.

Before dismissing them, however, I would remark that it is only in such collections as this that one realizes what grand additions have been made to the "cyp" family through garden hybrids. Some botanist of repute, I forget for the moment who, deplored this mixing up of the species. Our collections would be meager indeed, minus the hybrids. Why, Mr. Clinkaberry told me that in that display he made at the Astoria show before mentioned, out of fifty-seven varieties of "cyps" staged on that occasion, no less than fifty of them were of garden origin. Certainly Mr. Clinkaberry has been a great offender in this matter, if offence it is, for he has seedlings by the hundreds and before many more seasons pass some of his

Seedling Cattleyas

are bound to create something of a sensation. In the first place, the cattleyas growing in this collection represent a selection of the best in existence, add to this the fact that these have been crossed, and even the most vivid imagination cannot picture the rich beauties that ere long will here unfold. They are mites at present, but there are hundreds of them each in its own little cradle, with its parentage and birth recorded.

Here is one, for example, a cross between Cattleya intermedia Emelie and Lælio-cattleya Phoebe. The plant is now in sheath, yet will not be three years old until next April, by which time it will probably be in flower. This may bring assurance to the fainting heart of some who fear cattleya extermination in the tropics, and the hope that home raised seedlings may yet become a staple market commodity. Try it! and report progress three years hence.

At the present time the florist is looking for the cattleya that will bridge the gap that comes between labiata and Trianæ. There are two that will do this, and both were noted here, C. Percivaliana in several varieties of exquisite color richness and C. maxima, which belies its name, for since it was discovered, now more than fifty years ago, so many larger ones have been found, yet what it lacks in size it gives in numbers, ranging from five up to ten flowers on a spike. Accept the dictum that merit is not measured by size and then you have here two valuable commercial cattleyas.

Various Orchids.

Lælia anceps in variety filled one side stage, and just coming into flower showed wide range of coloring and rich selection from pure white to crimson. I specially noted L. anceps Percivaliana having immense flowers, sepals, and petals, white slightly flushed with pink, and delicately penciled lines of mauve-blue at the base of the lips; also L. anceps Gouldiana of an opposite extreme in deep dark crimson.

The showy and quaint angræcums, too, were well flowered. A number of A. sesquipedale being open, while a plant of A. eburneum carried six fine spikes each with eight or more flowers.

Zygopetalum rostratum is the orchid everyone is looking for. Mr. Clinkaberry only has two, but he says they are always growing and flowering. It has a creeping or trailing habit of growth and flowers disposed in spikes of two, three, or more. The most conspicuous part of them is a broad flat lip quite white except at its base where it has a frill-like attachment lined with purple. The sepals and petals are long, narrow, taper to a point, stand and depend quite perpendicularly behind the showy lip, are whitish at their base, green tinted in the center and flushed with brown towards their tips. But, though orchids are supreme in this establishment they do not have undisputed sway for there are

Palms

to be seen also, and these some of the newest, now established and growing luxuriantly in a comparatively new

house. First as to the house itself. It was built by Mr. Roebling, and built to stand as may be gathered from the fact that it is of iron, has over twenty tons of iron in its roof alone, yet does not look unduly heavy. It is glazed with a special ground glass that obviates the need of artificial shading and the appearance of the plants testifies to the fullest extent that they feel at home there. There are no benches whatever in the house but a central rockery with path around and rockwork again along the sides and ends. Some 500 tons of rock were used, though one would not realize this so admirable is the disposition of it and so completely is it all clothed with suitable vegetation. It was a fine opportunity for skillful display and Mr. Clinkaberry embraced it thoroughly. Throughout the house fine specimens adorn all the salient points, have the desired isolation sufficient to bring out their individuality, yet at the same time they form but parts of and blend into a most artistic arrangement of plants stamped with originality and manifesting a complete break away from conventional lines or methods.

Phœnix Roeblini though comparatively new is represented by a beautiful piece, and could this palm only be offered in quantity it would soon take a place on the market. So light and graceful it would make a formidable rival to Cocos Weddeliana, which is saying a great deal, and in the larger sizes it would surpass the cocos as it suckers freely at the base, therefore shows no naked stem growth.

Guilielma speciosa, another uncommon palm from tropical America, was noted in fine size and condition, tall and graceful, the leaves pinnate, the terminal pair of leaflets much wider than the rest, and having long spines on the under sides of the leaves.

In kentias, besides the ordinary commercial kinds, I noted K. Lindeni a grand piece with four leaves, the last unfolding leaf shining brown with a coppery lustre, the mature leaves having about thirteen pairs of leaflets eighteen inches long and four to five inches broad in their centers, but constricted at their point of attachment to the midrib and tapering gradually to a point at their tips. Quite opposite in character was Kentia McArthuri, which has broad leaflets terminating abruptly and almost or quite as wide at their tips as in any portion; tall in growth with a handsome main stem, but disposed to sucker freely from the base.

Calamus Lewisianus is another noble palm, the plant here having a dark spiny stem and elegant arching leaves of great length. The leaflets are one foot in length, about two-thirds of an inch wide, somewhat toothed along their edges, and I counted 100 pairs upon one matured leaf, while the plant had several such magnificent leaves.

Yet another palm and one quite unique in its peculiar distinctive leaf growth is Areca Madagascarensis. The plant here had four fine leaves, each leaf nearly six feet in length. The leaflets are distributed in groups of from three to five, and most irregularly disposed, some standing up erect, others spreading horizontally, and others quite deflexed. The leaflets are about fifteen inches long, one inch broad, tapering to a point, of a soft gray-green color, and their disposition gives to the plant a light plumy appearance quite unlike that of any other palm.

Erica Fragrans in celluloid Basket, dressed with red Ribbon.

CHRISTMAS PLANTS IN THE NEW YORK STORES.

A splendid plant of Thrinax argentea stands at one corner of the center bed, having a clear stem of eight feet, surmounted by a head of fourteen broad, graceful fan-like leaves, and all this growth has been made within the past year.

On the opposite corner is one of the best pieces of Rhapis flabelliformis I ever saw, a marvel of excellent cultivation. The plant grows on a rocky mound of about two feet in elevation, is just one dense mass of luxuriant leafage from top to bottom, and measures about five feet in diameter.

Dion edule in fruit was noted, its coriaceous leaves steel-like in texture and sharpness, as those know only too well who have had to handle it much. Cycas revoluta was in fruit and C. circinalis was seen equally well grown. An immense plant of Caladium violaceum is a prominent feature in this house. It stands upon a ledge of the side rockwork, its leaves towering well above one's head. It has leaf stems of great thickness, several feet in length and colored dark violet. The leaves are three feet long, two feet wide, of an intense deep green, the midrib and transverse leaf veins especially prominent, while the smaller veins are visible throughout the body of the leaf, and altogether the leaf affords a wonderful study in venation.

So much for the major features, but I am a long way from exhausting the treasures of the house. Beneath the umbrageous spread of the already mentioned plants are hosts of lovely things of lowly growth as dieffenbachias, marantas, the best to date including a good piece of M. Sanderiana. Heliconias, in which special mention must be made of

Araucaria Excelsa Glauca dressed with red Ribbon.

CHRISTMAS PLANTS IN THE NEW YORK STORES.

H. illustris rubricaulis, a variety whose beauty and color richness can never be adequately described in words, these with ferns, grasses and lycopods combine to give the finish to a picture truly tropical in its luxuriance and naturalness, and surpassing nature in one respect, for nowhere in nature's richest fields could so many species and varieties be found in such graceful association upon so limited an area. I have often visited gardens spread over broad acres and found them quite devoid of interest, but here, right in the heart of Trenton, on a town lot, is a collection of plants that one needs to spend days examining before realizing to the full the vast store of beauty.

A Visit to Chestnut Hill.

I gathered these notes in the space of two hours and filled out the day with a visit to E. Lonsdale's and J. Burton's, two establishments of whose products I had often read, nor is that a matter for wonder when one has seen the places in question; for example, those American Beauties in solid beds, you need to see them before you can appreciate the "fishing rod" story told in connection therewith. Even the "Rose City" itself can show no "Beauties" like these from beds of the second and third year. Meteors and Carnots, too, were just about as fine as it is possible to have them. Our near-by growers of Farleyense, too, will have to defend their well won laurels for Mr. Lonsdale has a grand batch and was shipping therefrom to the New York market. A front bench of crotons led to an exchange of views as to their adaptability for outside use in summer, the chief point elicited being one must not expect much growth to be made outside, therefcre, at the start plant close'y, then when the leaves take on their best color a grand bed will result. I noted here Rothschildianum, very large leaf, veined in bright crimson on a darker ground; Andreanum, reddish yellow veins on a lighter ground; Fasciatus, Queen Victoria, a good old variety, and Dayspring, this last most distinct, the central portion of the leaf being red, broadly margined with dark green. The "cyps" seen were mostly insigne forms, as the public at present only wants the "green orchid," but Mr. Lonsdale is striving after something else, at least I assume that much from seeing a lot of seedlings of Charlesworthi crossed with numerous other fine kinds.

The "shades of night were falling fast" before I had seen all that was to be seen over the way at Burton's, but in addition to the usual line of roses, I noted some good houses of hybrids coming on with one house of Brunners from which cutting had commenced. A front bench of C. insigne here should be mentioned. One could see nothing but a solid sheet of flowers.

At Chestnut Hill the object of my visit was an inspection of the stock in W. Warner Harper's Andorra Nurseries, and the planter will be hard to please if he does not find something here to meet his needs in deciduous or evergreen trees and shrubs. To review the stock in detail is not my intention here, but of things one is sometimes looking for in these latter days and cannot always readily get; I would mention the oak-leaved Hydrangea quercifolia, a handsome shrub not enough planted, Berberis Thunbergi, Spiræa Anthony Waterer, and the new sweet briers, all plentiful, while the rhododendron stock is a feature of the place and one that is going to grow.

As is well known, there are hardy rhododendrons that can withstand the rigors of winter in this latitude, and the same varieties have perished too often because they have been imported plants grafted on the tender ponticum stock which, be it understood, is a South European plant and ill-fitted to endure the climatic vicissitudes of North America. Mr. Harper has a very large stock of own root rhododendrons of present planting size, although one of our contemporaries says "if one wants to buy a few hundred plants there is not an establishment in all America that can furnish them," and I saw abundant evidence of future development, in the right direction, for thousands of shoots had been layered. From layers or from seed it should be, and in fact is, just as easy to raise own root rhododendrons here as over the water, and once they are well under way they will grow to salable size with greater rapidity by a gain of one year in three. It only awaits to be done and until it is done the rhododendron business will still be transacted in comfortable city offices and the plants dispatched from shipping wharves with the ever attendant uncertainty as to their becoming acclimated in the gardens of their too often unfortunate purchaser.

From the Andorra nurseries I came back to Philadelphia

Along the Wissahickon Drive

and what a precious heritage this drive should be considered by Philadelphians, preserving to futurity one of nature's real beauty spots, too many of which have vanished, sacrificed to the supposed needs of commercial enterprises. Along this drive in truth "Nature unadorned is adorned the most" and man's efforts at park mak-

ing and park planting appear insignificant in comparison therewith. Here the hemlock, the noblest evergreen of the eastern states, is indeed at home, clothing the rocky escarpments and carrying its spiny pinnacles skyward and casting heavy shadows on the earth, its huge columnar stems supporting a dense canopy overhead, through which the light rays come subdued and suggestive of restfulness and peace. Thus it is on either side, whilst away a little below the road, but always in view, at times peaceful, at others tempestuous, the waters of the creek pursue their tortuous course over the rocky bed.

I say again this drive is a boon to city residents, and is likewise a lasting monument to the wisdom and foresight of those who projected it, and thus may it remain is the sentiment of the majority. The park board, or whatever authority controls it, appear to think otherwise for already I note improvements (?) are under way. Along the drive, between it and the creek, is a strip, of varying width, clothed thinly with natural trees as the tulip, willow, oak, red birch and others, and undergrowth of viburnum and witch hazel, with here and there, probably all gone now, delightful tangles of wild vine which has raised itself to the tops of the tallest trees and the stems hang loosely like ropes. A little force of "vandals" were busy clearing out this undergrowth, tearing down the vines, and a trail of ashes marked the great extent of their operations in this direction. Why? These erstwhile creeper-clad trees were not extraordinary specimens of their kind, in fact, not a few of them look very mean when shorn of their drapery, and the average mind wonders wherein the necessity for thus clearing up a pretty bit of nature. Possibly some developments are planned, some ornamental (?) planting, and I am led to infer this, for as I neared Fairmount Park, I observed that the van of the ornamental planters' army was within the gates, so to speak; some California privets, Chinese forsythias and Siberian dogwoods, aye, and even the Norway spruce. These have their merits, but why obtrude them here. It was better far to let the Wissahickon drive retain its own distinctive charm and preserve it as showing a little bit of nature's Pennsylvania, easily accessible and recreative to the toiling millions nearby.

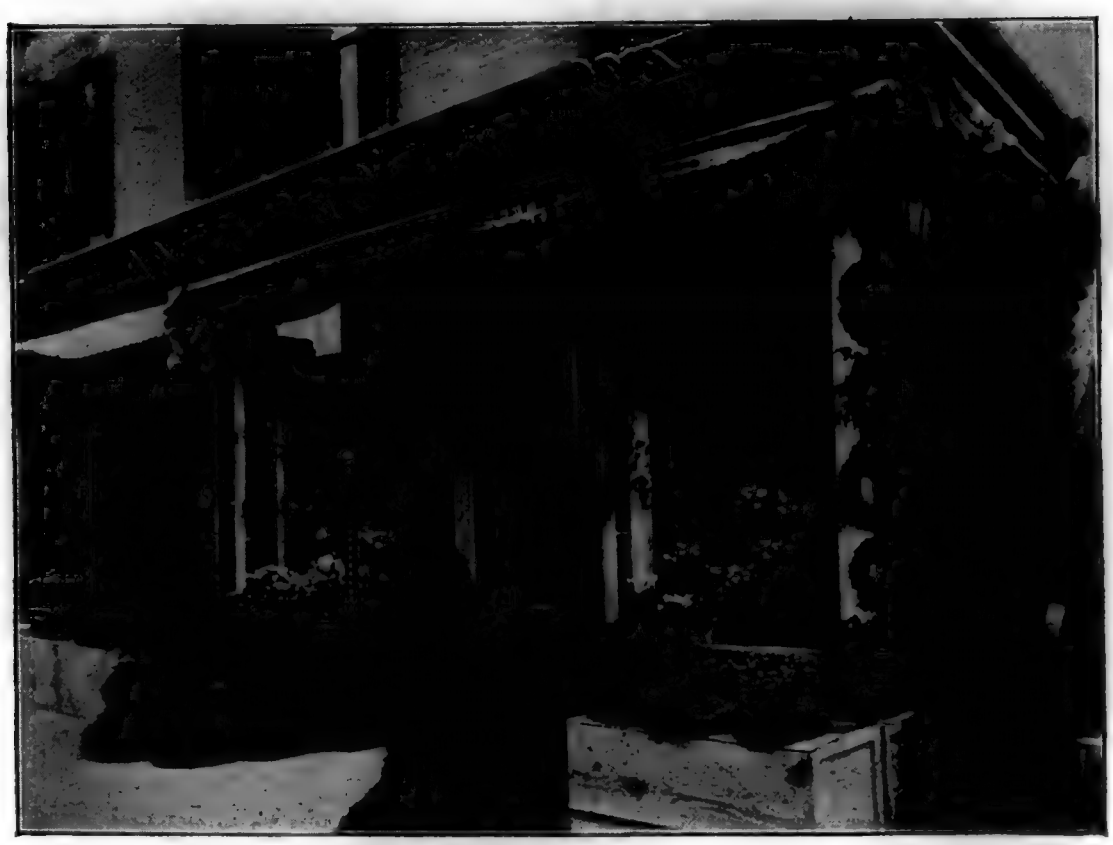
NEW YORK STORES AT CHRISTMAS.

A Visit to W. K. Harris.



To W. K. Harris' I made my way on the following day and found an establishment that in its simplicity of arrangement, both for heating and working might well be called a model in every respect, while if you would question its efficiency you find a ready answer and evidence incontrovertible in the quality of the stock. Plants, as doubtless most readers know, are the chief production here and they will lose nothing by comparison with the best anywhere else, which is equivalent to saying they are as good as they can be. The stock of pandanus here in all sizes is enormous, numbering many thousands and for all this the market is waiting just as soon as the stock is fit. Pandanus Veitchii in excellent color fills whole houses, another house contains P. utilis in a variety of sizes, whilst P. Forsteriana and P. Kerchoviana I noted in good specimens, both distinct and handsome species that will doubtless become prominent in commercial business later on when obtainable in quantity.

The variegated pineapple is largely grown and brought to a fine degree of color richness beneath those plate glass roofs; and speaking of the plate glass recalls the azaleas flowering beneath it. Whether attributable to the glass or not I never saw before such magnificent Christmas azaleas, the flowers so large and full as though opened in their natural season. There was a grand house of them, the varieties Deutsche Perle, Simon Mardner and Vervaeneana. Mr. Harris is evidently convinced that there is a commercial future for the new Dracæna Sanderiana, at least that appears the only logical conclusion to be drawn from the appearance of several thousands here in healthy growing condition. Dracæna fragrans, too, is quite a specialty, while the sight of rubbers by the thousand leads one to reflect what becomes of them all, and yet they all go as fast as ready.

Otaheite oranges are well done here; a house of them in profuse fruit was being rapidly emptied for filling Christmas orders, and there were others, too; one large house of plants to fruit for next Christmas, a front bench of another house filled entirely with young stock for the Christmas after that. When the "Psalmist" of old wrote "Take no thought for

Hodgson's.

Hanft Bros.

NEW YORK STORES AT CHRISTMAS.

the morrow," etc., the nineteenth century florist was not within the range of his prophetic vision.

Among palms in general special mention must be made of the fine stock of Areca lutescens here in various sizes and the house of Cocos Weddeliana would be hard to beat, the plants so clean and thrifty in appearance. In foliage combinations Mr. Harris is creating some little specialties quite his own and it would be hardly fair to give them away. This refers to the planting together in the same pot two palms of different leaf form or planting little jardinieres with varied foliage, Dracæna Sanderiana showing up prominently for this work, with something taller as a center.

The house of genistas here will certainly render a good account of itself later, while in the cycas house one named siamensis was noted, a beautiful variety deserving of greater popularity. Lilium Harrisii may be mentioned as one of the futures, promising well at present. The system of starting in small pots and shifting on later being practiced with these, but more for economy of space than for any other reason.

Certainly the florist who would take a "course" at Philadelphia, cannot complete it without including a visit to and a close inspection of this establishment, and he may rest assured that a cordial welcome awaits him and all that there is to see is open freely to view. Such at any rate was the pleasant experience of

A. HERRINGTON.

Madison, N. J.

MISCELLANEOUS SEASONABLE HINTS.

The next few weeks will find us very busy, for many things have been cramped for want of space, but now you have it. All lilies should now be in their flowering pots without delay and better if they had been there several weeks sooner.

Metrosideros.

I reminded you some time ago, that metrosideros, the bottle brush plant, should not be kept so cool as azaleas that you are holding back for Easter. Last year I learned this from the best of teachers (experience). I kept a batch of a few dozen very cool till about four weeks before Easter, and then seeing that they showed little inclination to flower, rushed them with a high temperature. It did not do. The flower came out imperfect, irregular and quickly dropped. Keep them now at 50° to 55° at night and they will come along gradually. What matter if a few were too early. It is such a distinct and attractive plant that it will always sell, as the supply is not yet overdone.

Lilacs.

Lilacs for Christmas have never been a success with me, but those brought in now and after this date are always very satisfactory. The earliest want a temperature of 70°, each succeeding lot less as the season advances. We find them useful and profitable if not overdone. A few plants, according to your wants, should be brought in every week.

Geraniums.

One of the greatest jobs we have just now on hand is shifting our geraniums from 2 to 3-inch pots, to remain in those pots until middle of April, and then into their selling pot. I fancy I hear some haughty magnate of the trade say, "How absurd, there is no money in the geranium when all that trouble is taken." That all depends upon what you get for them and what your trade demands. We get at retail $12 per hundred and our customers want and deserve a good plant for that price. We could not sell the stock that is called geraniums which we see in some cities and which unfortunately we sometimes receive from outside firms, the tops of which are useful to make a cutting, the plant being only good to throw away. Always pot geraniums firmly. You can stand them pretty close, as about the first of February you can take the top of the plant off for a cutting and they make a very acceptable plant to sell for bedding purposes when the larger stock is cleared out and this second crop can be sold at a much lower figure, for you have not been half the time growing them.

Thorley's.

Fuchsias.

Fuchsias should be shifted on as fast as ever their roots begin to fill the pots they are in and propagated this month as fast as possible. Those struck after February 1, do not amount to much. Fuchsias like a rich soil; real rotten leaf mould or well decomposed spent hops helps them greatly. With most varieties the only pinching they need is the leading shoot stopped once, and that should be done when they are three or four inches high. Don't keep fuchsias down to 40° or 45° at night, which would be excellent to winter geraniums, but give them 55° with plenty of light and room and water.

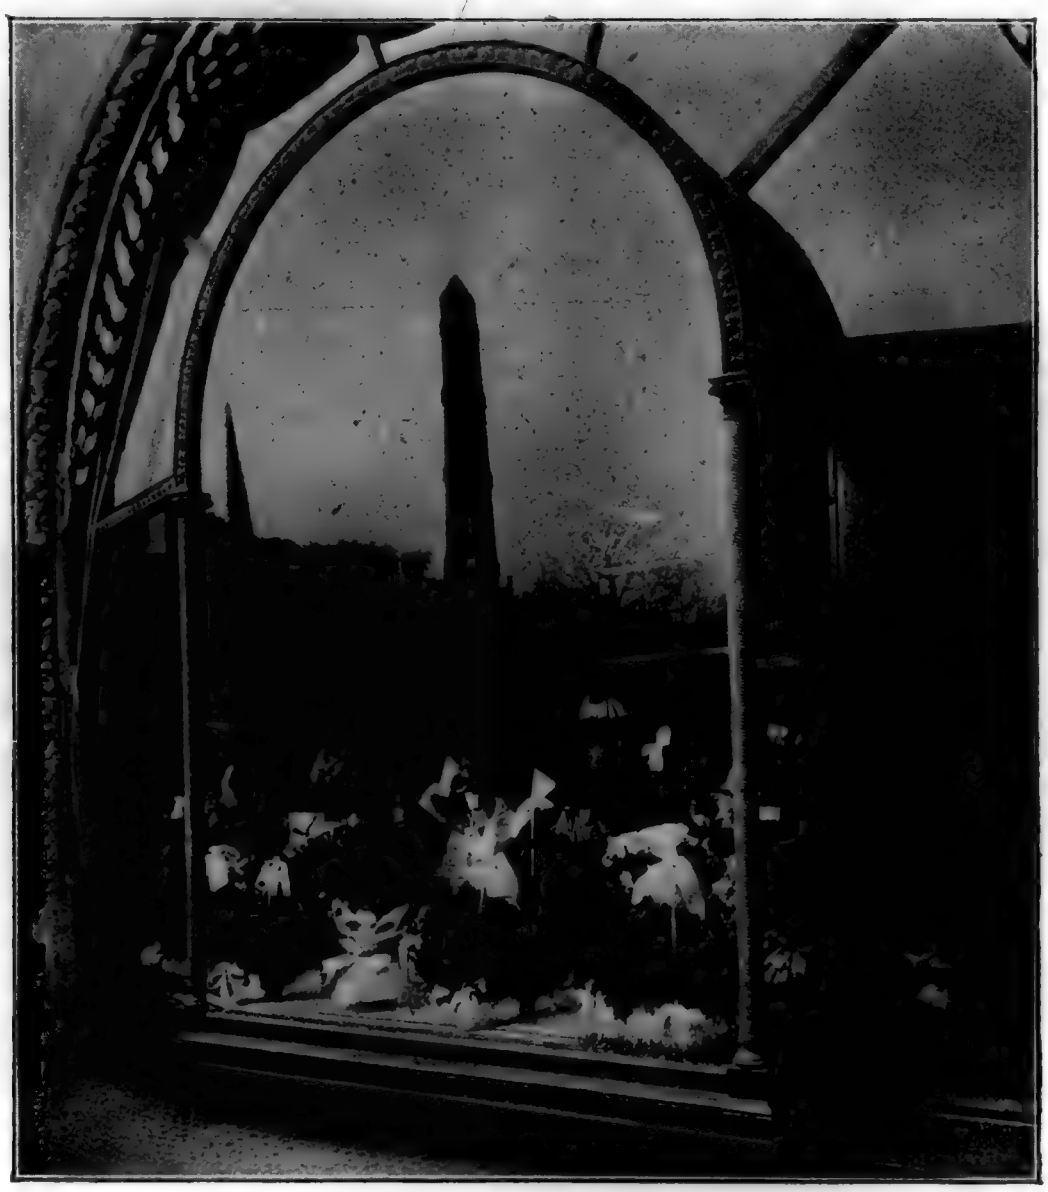
Poinsettias.

This season has proved again the great popularity of the poinsettia as a decorative plant. There is no abatement in the demand. You can't call it a good house plant for the parlor or any other room as it soon drops its leaves, but on making that remark to a lady, a few days since, she replied: "Yes, I know, but it's the ideal color for Christmas, don't you know." I would ask you simply at this time what have you done with the plant after the flowers have been cut? Lay them down under a bench, the drier the better, or in a warm shed if you have room. Let them hibernate and remain dust dry until April.

Spiraeas.

If you have no bench room to spare where you can keep up a temperature of 60° you had better bring in the spiræas at once. Sometimes they come slow and it is well to be on the safe side. They are far better when not over forced.

Propagating.



Every inch of your cutting bed should now be occupied. Coleus, heliotrope, feverfew and all that sort of stuff should go in fast now. All these root like weeds, but still it's now when the atmosphere of the house is cool and the sand warm that propagation can be most rapidly and certainly done. Carnations we no longer put into sand warmer than the air of the house. They would root several days sooner if we did, but for the future welfare of the carnation it is not considered best. Nearly all other greenhouse soft wooded stock is most decidedly benefited by the sand being 10° to 15° warmer than the house.

Cutting Bed Fungus.

I am asked occasionally how to prevent the fungus on the surface of sand. One trouble with that is all over, for before every fresh batch of cuttings is put in, the sand is watered with the ammoniacal mixture. I have watered the cuttings with it and noticed not the slightest harm done. The more close, damp and warm your house, the more likely will you be troubled with this minute fungus. It is so minute that if you are not looking for it you will first see a square foot of plant gone off in one night. The growth of this primitive plant must be almost as prodigious as that of the yeast.

A Troublesome Insect.

A troublesome insect pest, which I have been many times going to ask my brother

Fleischman's Window.

NEW YORK STORES AT CHRISTMAS.

McConnell's.

Interior View at McConnell's.

NEW YORK STORES AT CHRISTMAS.

florists if they were afflicted with, is a small green worm which develops from an egg too small to see with the naked eye. When about half an inch long it goes into the chrysalis state and in a few days is flying round in the shape of a small dun colored moth. The moth does no harm, only one unforgivable harm; he reproduces his species. His or her mission is one of fun and idleness, but finds time to deposit that invisible egg and so the cycle of his existence begins again. I have never seen this little brute outside of our unfortunate city, but perhaps it is a scourge elsewhere. The moth comes in through the ventilators in summer time. It is omniverous in its diet and strange to say dearly delights on quite a variety of plants; chrysanthemums, pelargoniums, cinerarias, calceolarias, feverfew, in fact most anything will do. If fodder was short he would eat a cactus, and what is strange they absolutely devour anything but sweet ageratum. They are a pest and a serious one to us. Fumigating and tobacco water have no effect on them. Dusting the under sides of the leaf with hellebore powder will fix them. In putting in a batch of ageratum and mums lately I had the cuttings dipped in a pail of water, about two and one-half gallons, in which two teaspoonfuls of Paris Green had been stirred. It fixed Mr. Worm and his egg, as it will anything that feeds on the surface of the leaf. The worm is the thing to destroy. We have caught thousands of the moths by an ingenious invention composed of a board, fly paper, kerosene oil and a wax candle. But perhaps before this little moth was lured to his death his dire offense had been committed and an egg deposited on the broad surface of a cineraria leaf.

Verbenas.

It will soon be time to sow verbena seed. The demand for this once universally popular plant is with us almost extinct, still we want a thousand or two. If sown early you can stop them once and get them in flower by selling time. Very fine colors can be had from seed purchased from reputable seedsmen.

Cannas.

If you are short of canna roots sow at once. They will make sturdy plants by June 1. They are slow to germinate. Warm, moist sand, will bring them up. Years ago most of the canna seed was imported. Now there is any amount saved here. Cannas come largely true from seed; that is, if Mme. Crozy was not hybridized the seed would produce flowers, ninety per cent. of which would be as good as the parent and similar in every way. Get them started at once.

A Few Words of Advice.

In conclusion, make not only a mental note but make a written memorandum of where you could improve on your Christmas supply of attractive plants. This is what I found: that primroses for Christmas should be sown as soon as you can get the seed ripe in April; that we did not have half enough good azaleas, and that they want to be put into a good brisk heat soon after they arrive in the country, especially Simon Mardner and Vervæneana; that the demand for poinsettias is good and you can find a sale for a lot of them; that the cyclamen is one of the very best selling plants; that good violets in pots would sell well; that the Boston nephrolepis sells well and you need a good supply, another year, that you can sell at from $1 to $3; that palms are yearly growing in favor, and that although you sell a few occasionally at $6 to $10, the great bulk of your stock should be salable at $1.50 to $3. And be sure to make a note of the firm's name who supplied you with a lot of rubbish under the name of *well-berried holly*. My experience with these gentry is, that they will serve you well on the first deal and then when they have you on the string you are imposed upon. Is this human nature? It is of a certain kind; so is housebreaking or telling a dialect story when you can't—both sadly depraved. WM. SCOTT.

CLIANTHUS DAMPIERI.

Clianthus Dampieri appears to be comparatively little known by the florists. I take this means to lay its name before them as it is one of the plants that will gracefully adorn our business in the near future. I remember seeing it but once in this country grown with a degree of success, and this was on a private place of some prominence in Newport, R. I. There I learned it was cultivated for the special purpose of boutonnieres, by the proprietor who had brought the idea

from London. So the prospects are that these flowers will be extensively used in the "city by the sea" amon, the swell set for their personal adornment.

Its brilliant scarlet black-bossed flowers will certainly attract the attention of everyone in town, if put to this use, as it is one of the brightest of leguminous plants and probably the most striking when grown to perfection. It is decidedly a matter of regret that a plant possessing such distinct beauty should be so rarely seen, and then in the majority of cases in poor condition. I attribute this to the delicate and extremely sensitive roots. The slightest check they may get from draughts or non-attendance to their necessary requirements, is sometimes alone sufficient to cause their premature demise.

The plan to follow is to sow the seed where you anticipate the plant should have permanent quarters, either in pots or benches. Sow the seed in soil composed of two parts fibrous loam, the other one comprising leaf mould, manure and sand, drain thoroughly with broken brick, charcoal or any porous material at hand. One of the most satisfactory ways of growing it, is to graft it on its less fastidious congener Clianthus puniceus. This is a simple operation and when grown under these conditions it is enabled to resist the attacks of mildew and insects to which it is subject.

For grafting select a vigorous young plant on which the bark is still fresh, cut off the top to within five inches of the soil and employ the regular wedge method. For the scion take the top of a healthy young plant, or the healthiest you have at the time, and make it the shape of a wedge, then split the stock and insert the graft, paying attention that bark of both scion and stock unites, tie it securely and place it in a close warm house for about fifteen days, then it can be hardened by degrees and put in the temperature of an ordinary greenhouse, where it can be given light and sun. When perfectly united they can be potted or planted in a bench or which ever the occasion may require, as the roots of C. puniceus are not so susceptible to being disturbed as those of its more delicate relative.

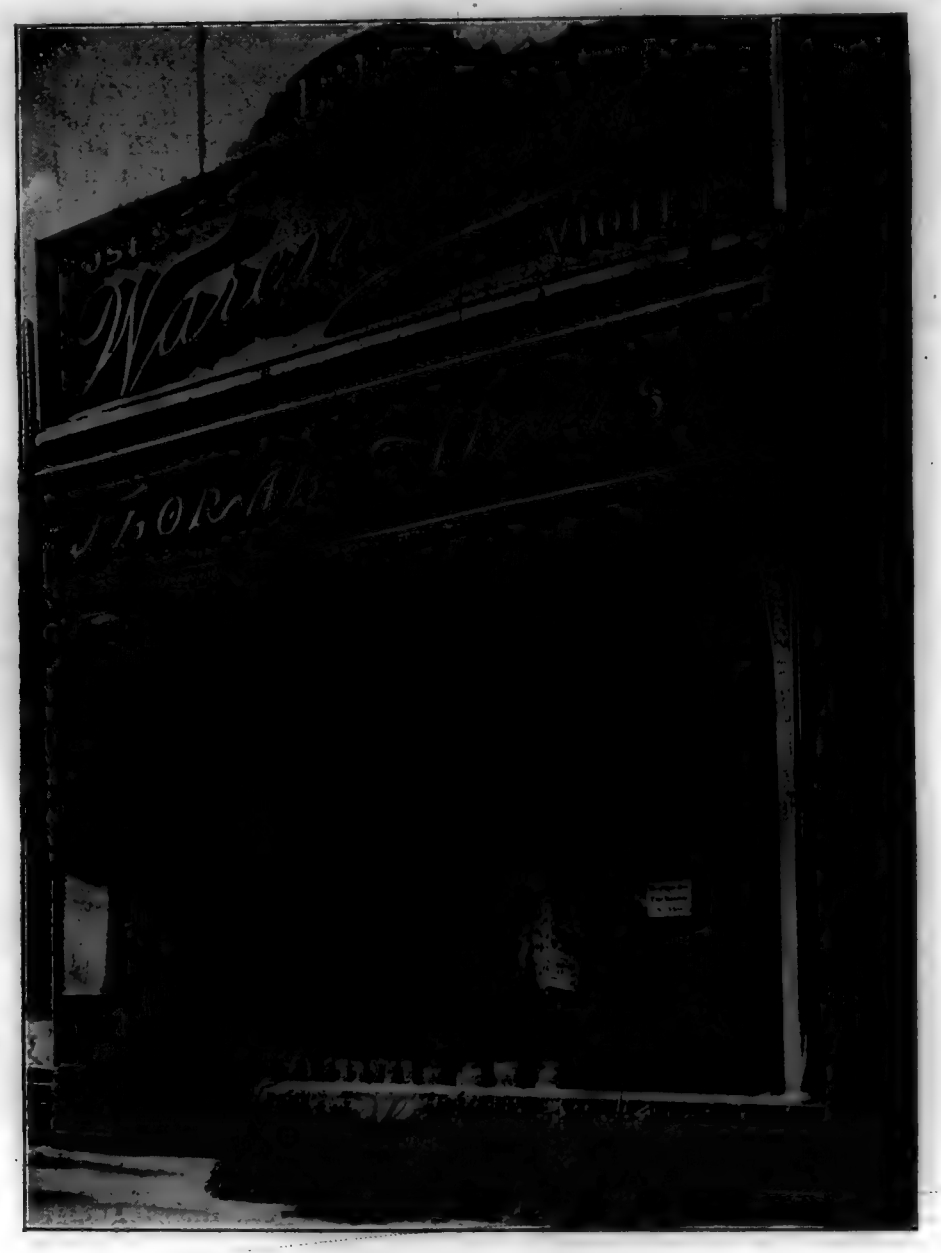
NEW YORK STORES AT CHRISTMAS.

CARNATIONS

CARNATION NOTES.



Feeding.

Plants can only grow and make their cultivation remunerative, when they are supplied with sufficient and proper nourishment. Now what is the right kind of nourishment? Here we encounter a very important matter, in which the majority of carnation growers are most deficient in practical knowledge, and this is agricultural chemistry. I am no more a chemist than the next one, all my knowledge being based upon personal experience, and what I hear and read from men that are chemists; and there we meet often with conflicting opinions. A plant should receive nourishment just "what" and "when" it requires it. An over abundance at one time, and starvation at another surely cannot be conducive to health; and again, when the food given is raw and indigestible, or when the compound of the required ingredients is not of proportionate qualities. We know altogether too little in regard to how plants grow, what they need in order to build up their structure, to what extent these elements are present in the soil we use; we work in the dark; all is experiment.

As a natural consequence of our ignorance and the desire to make as few mistakes as possible, we hold on to the stable manure, which is often a very unreliable article, but we have the assurance that though it is not of the expected quality it will do no harm. At any rate we do best to make the stable manure the basis in the preparation of a compound food and add whatever we think the manure may be deficient in. I speak now of feeding as required at the present stage of cultivation, and not of preparing the soil, and this can only be done in two ways: in applying a mulch of nutritious material, which at this time when the plants about cover all the space allotted them is rather a tedious job, and also feeding with liquid manure.

A mulch should consist of well rotted stable manure to which some hen manure may be added, and a liberal sprinkling of bone meal, horn shavings, and wood ashes. Mix this with about one-fourth of soil and lay it on about one and one-half inches deep. Feeding with liquid manure is more easily applied, and can be given whenever the plants are in need of nourishment. In fact, we should not wait for any signs in the appearance of the plants, showing a want of nourishment, but should give it in regular rations, say once a week. And if it could be so arranged that the quantity of liquid given weekly could be mixed with the water that is given in the same period, the best results would be obtained. In giving weekly rations one must be well informed as to the strength of the liquid, and if the plants are in a condition to assimilate that quantity. It would hardly be satisfactory to give an insufficient quantity when with more the results would be better. But there is a limit, and overfeeding may prove disastrous. So to be on the safe side it is best to give liquid manure in a rather weakened, diluted condition, but give it often.

The three principal elements we should aim to give, or rather of what the food should consist in its principal parts are: nitrogen, phosphoric acid and potash. There are other ingredients that the plants will take up from the soil in minor quantity, but these are secondary and are mostly supplied in sufficient quantity with the material that furnishes the principal

Warendorff's Window.

NEW YORK STORES AT CHRISTMAS.

elements. As I have said before, I am no chemist, and will only speak of material that we generally have on hand, and in which we are less liable to make mistakes, as is sometimes the case with the chemical compounds, and the highly concentrated commercial fertilizers.

Nitrogen is supplied in all animal excrements, in horn shavings, night soil and the offals from the slaughter houses, of the latter principally in the form of blood. Phosphoric acid is plentifully supplied in bone black and bone meal. All the other materials mentioned contain phosphates but in smaller quantities than nitrogen; they also contain nitrogen, but in much less quantity. This element is best supplied in wood ashes.

I have already mentioned of what a good mulch should consist. I will only say again that the stable manures should be well decomposed, as the carnation does not like raw food. In regard to liquid it is quite different. There we best use the fresh manures, free from any litter or straw, for when properly handled decomposition is effected so much quicker, and thus we derive all the benefit of the nutritious elements they contain.

To make a good liquid manure, fresh cow droppings should furnish the bulk. It has, in my opinion, always a neutralizing effect upon other stronger manures, when used with it. Of these stronger ones sheep and hen manure are the most desirable, but should be added in small quantities, as should also bone meal and horn shavings. Soot from wood or coal is another material highly recommended to use in the liquid form, as is also dried blood, both being rich in nitrogenous matter. All these ingredients can be used together in the preparation of liquid manure.

I have always used some wood ashes to supply the potash, but in a recent conversation I had with Professor Huston, State Chemist of Indiana and Professor of Agricultural Chemistry at the Experimental Station at Lafayette, in relation to the preparation of liquid manure he cautioned me about using wood ashes. He said that wood ashes will set free ammonia, which would be a direct loss, and, further, it may bring free ammonia in contact with the roots, which might cause injury. In place of wood ashes, to supply the potash, he recommended sulphate of potassium, which furthermore has the property to bind the ammonia. In place of using one-fourth of a bushel of wood ashes he recommended using one-fortieth of the sulphate of potassium. So far I have not found any bad effects, but if that theory is correct, which it undoubtedly is, I have weakened my liquid manure in nitrogen considerably. I will heed the warning and supply my wood ashes in another way; I have much faith in it, for in my experience it strengthens the stem and gives the flowers a brighter and more brilliant color.

At our place liquid manure is the main fertilizer. We have two good sized tanks in which we prepare it and have the houses piped to supply them, by a force pump at the tanks. We apply it on the benches in the same manner as we do water, and use about the same quantity as water; it always answers for a watering. The first material used should stand for about two weeks before being used; it should be thinned with water and stirred up frequently. When ready, fill up the tank, let it settle, and use the clear liquid from the top. After that, new material in small quantities can be added from time to time as the liquid is wanted, to keep it up to the same consistency; and some of the old removed so the mass will not become too cumbersome to handle. The stuff we take out is thrown over the ground pile and made use of in this way. It is essential that the tank should be in a warm place, or fixed in any way so the contents can be kept quite warm, in order to hasten the decomposition. Nitrate of soda is often mentioned as a good fertilizer for carnations. I have never made much use of it so far, but suppose it could be well mixed in with the liquid. From time to time I use some common salt in the clear liquid, as in small quantities it is considered beneficial, in large quantities is injurious.

This is our mode of operation and the materials which we employ for feeding. The selection of food is yet a very much undeveloped part of our work, for lack of practical knowledge in agricultural chemistry. I may be wrong in some of my views, and if so, will thankfully stand correction. FRED DORNER.

THE NEWER CARNATIONS.

By Albert M. Herr, Secretary American Carnation Society, Lancaster, Pa.

[Read before the Florists' Club, Philadelphia, January 4, 1898.]

There are so many of the newer carnations that it is hard to talk about them without making a descriptive catalogue out of your talk. So if there are too many names and too much descriptive matter blame it on the originators.

In the first place, from a cut flower grower's point of view, there are too many new carnations. If the number could be reduced to say four each season, there would be more in it for everyone concerned. As it now stands the general grower simply cannot afford to try them all, and the consequence is, very often he does not try any. This is a loss both to the originator and to the grower. It limits the sales for the respective originators and causes them an extra expense in the matter of advertising, etc., to get their carnations before the growers. The grower frequently misses a very good

thing, and only takes hold after the variety has become common and the bottom dropped out of the profit, so to speak. But like the poor we will have them with us always, and the best thing we can do is to *try all* we can, and *gather* from the experience of others *what* we can; then put the two together and make up our list for growing next season.

Among the newer whites, we have Flora Hill, Harrison's White, and Nivea. Flora Hill has had its praises sounded everywhere and needs none of mine. Nivea is doing all right around Boston. It is a weak grower in the field, but comes all right when planted in the house. Harrison's White was unfortunate in coming out with Flora Hill, the latter so far eclipsing it in all commercial respects. Nevertheless it has some good points. With me it is a fine, upright grower, producing fairly good flowers on long stiff stems, but it has not made from 1,000 plants $10 worth of flowers to date, and this is certainly a serious drawback. I have it in the cool end of a house. Possibly it may do better in some places, but I have received out of numerous inquiries sent out only two answers from men who will give it a second trial.

In fancy, we have Lily Dean, a variety that is very easily grown and produces a fine large flower. Mrs. Bradt, almost everyone knows, has an immense fine bloom on a very weak stem which has improved greatly this season, grown in a stiff clay soil. In a moderately cool house, I am inclined to think, it will make a standard sort. Maud Dean might be called a fancy, but I am afraid it will not become popular on account of its being hard to handle just right; but if handled right it is a fine sort. It should be planted as early in August as possible, and being a decided cropper you should have two or three lots and keep them topped so as to follow each other. By this method a continuous crop can be obtained. In scarlets, there are a number, Robin Hood, Jahn's Scarlet and Morello. Robin Hood is a seedling of Hill's and has made a good showing although it has to be grown carefully to produce strong stems. Jahn's Scarlet is called the "Poor Man's Scarlet." It was raised and introduced by P. Fisher. It is a free bloomer of fairly good size on a fine strong stem. It is an excellent keeper, and slightly fragrant.

Morello makes very large flowers in heavy soil, and slightly smaller ones, but more of them in a lighter soil. It has made many friends in the west. Mrs. McBurney, one of Hill's, is somewhat of a disappointment as to color, otherwise it is a good variety, being free and healthy. Mayor Pingree is, perhaps, one of the best of last season's introductions. To get the best results, the cuttings should be taken early and grown right along so as to produce good, large plants. It does not want much pinching if you want early and continuous flowers. It likes a heavy soil and a few more degrees of heat than Daybreak, but will produce almost equally well in light soils. C. A. Dana, sent out by Cottage Gardens, I have not been able to see growing, but I understand it is a good variety.

Possibly there are others worthy of mention, but I have been a bit pushed with work and have not had time to look up the back trade papers for their names. The same applies to the new ones for this season. We are promised two good scarlets, one Bon Ton, to be sent out by the Cottage Gardens, and F. A. Blake. It is of Portia habit, with larger flower and stronger stem; this would indicate a good variety. Firefly, by Hancock, is promised as a perfectly rust proof and otherwise good variety. This will be a welcome addition to those who are so afraid of the rust in Jubilee.

In whites there are four clamoring far popular favor. White Cloud, called a white Daybreak because of its resemblance to that variety in foliage and strength of stem; John Young, called a white Scott for the same reasons; Jack Frost is claimed by its originator to be an ideal white. Photographs of these three varieties, or rather houses of them, are here and can be seen at the secretary's desk. Evelina, the winner of the Cottage Garden cup at the last meeting of the American Carnation society held in Cincinnati, and seen by a number of us then, was certainly a fine variety. I am told it is even better this season, and that would indicate that it was a good one to try.

Mrs. James Dean, a very light pink of good commercial qualities, and New York, a cerise pink that has captured the popular taste in the New York market, are photographed and here for your inspection. The Messrs. Breitmeyers', Simmons' and others are pushing forward pink varieties. They will no doubt all be in evidence at our Chicago meeting and reviewed by the trade papers, so as I have not seen them, will have that for later on. One that I have seen plant and flower of is Empress, a crimson, and as we are badly in need of a good one in this color, it will no doubt hit the popular fancy all right. Gold Nugget promises to be one of the gems of the season from all indications, and there is certainly room for a few "Gold Nuggets" among carnation growers.

There are a host clamoring for favor with the growers and a lot of originators reaching for their money. We hope both the growers and the originators will come out ahead for 1898, for it is not questioned that the majority need a little good luck, good times, or whatever vou may choose to call success. Taken all in all, the new carnations are fascinating, both to the introducers and to the general public, and certainly to the grower. The buying public are beginning to look for something new each year, and we can do no better than cater to their tastes, but let us be sure first that they are an improvement over existing varieties, and then try and test them thoroughly before sending them out. In this way there would be fewer disappointments and more successes, and the extra care would redound to the introducers' credit and consequent success and to the growers' finances. But even as it now is the few successes are so distinctly such that they overbalance the failures, and so the merry war goes on.

OUR GENERAL INTRODUCTION.
No. 4.

Every subscriber is requested to send his photograph for use in our general introduction, but please do not send us photos that must be returned, as we have to cut them in arranging in the groups.

We have received from W. P. Simmons & Co., Geneva, O., a copy of their plant list, in which appears a full description of their new pink carnation, Mrs. S. A. Northway, and a host of new geraniums, in addition to fuchsias and miscellaneous plants. The carnation offered is certainly entitled to full consideration, coming as it does from the originators of such sorts as Daybreak, Rose Queen, Tidal Wave, Silver Spray, etc.

Messrs. Crabb & Hunter, Grand Rapids, Mich., have named their pink seedling carnation "Irene." This is the one we recently noted at one of the Chicago wholesale cut flower houses. The originators advise us that the variety is rust proof and a free bloomer with only ordinary care, every shoot producing a flower.

OUR GENERAL INTRODUCTION. No. 4.

TO SUCCEED THE RATS.

W. H. I. sends the following: "Rats having undermined my smilax bed so my whole crop was destroyed before I knew the cause, intend throwing it out; what would be the most profitable thing to plant in seed or bulb, shrub or vine, to bring blooms for Easter? The bed is solid, pipes running on each side and end of bed, and as flowers are much more in demand at Easter than green stuff, I would like to know which or what will be most profitable to force for Easter?"

What you could make a profitable crop for Easter in place of your smilax, would depend quite a little on how much space you want to fill up and your market. It is too late to buy lily bulbs and expect them to flower at Easter. You could still get dormant lilac and bring them in flower, but they would need only four or five weeks of your house and there is not always a market for a large quantity of same. Spiræa roots can be bought, potted and started going and would be just right. If you know where to get some real good dormant roses of the leading hybrid perpetual sorts, pot them and keep them quite cool till early in February, then give them the smilax house. You would expect and get a good many roses. But it is late for that and to be satisfactory roses should be well rooted in their pots before now. If it were my predicament and I did not have stock of plants to spread out, I should buy a lot of 2-inch geraniums, or a month later a lot of canna roots (dormant). *At once* I would buy as many thousand Boston Market lettuce plants as would fill the bed, six inches apart. They would be cut and sold at Easter, and then you could give a fine place to your plants. But as soon as I had written for the lettuce I should catch the rats. WM. SCOTT.

MOSS ON SURFACE OF THE SOIL.

During the late fall and early winter months we have a great deal of trouble with a kind of green, scum-like moss that gathers on the top of the soil in the pots to such an extent as to sometimes entirely choke out the plant. What causes this moss to grow so plenteously and what can we do to prevent it? Do not think it can be from over-watering for we have been particularly careful about that. Of course the moss can be kept down by handling over every plant and taking it off with a stick but that is quite expensive when there are several hundred thousand plants to go over. We have been recommended to use a small amount of ammonia in the water when watering the plants. Did anyone ever try that and what proportion of ammonia can be used without injuring the plant? Roses and clematis, 2½-inch stock, are what we have especially in mind. Are there any other remedies that could be used to advantage? G. C. P.

There are many species of these so-called mosses or small cryptoganic plants which are often seen to take possession of the whole surface of the soil. Unlike most of the fungi, which delight in a warm temperature, they are often most troublesome in a cool house. If the roots of a plant are inactive, such as the clematis and H. P. roses would be with a rather low temperature, would be just where you would find them most troublesome. Many a day has been spent by the writer in stirring up the soil to get rid of these mosses, yet I have seen many healthy plants exist, such as camellias, with the surface of the soil green with these primitive plants. I have never seen any method used to get rid of them but stirring up the surface and removing it. It is probable that what would destroy the moss and their spores would be injurious to the roots of your plants; what would kill the moss would most assuredly hurt the plants, but I should not be afraid to try a watering of the ammoniacal mixture. After all the visible parts of the moss were removed it might destroy the spores, and one watering will certainly not hurt the roses, etc., if not used too strong. Formula: two quarts liquid ammonia into which dissolve one lb. sulphate of copper; use one pint of this in thirty gallons of water.

WM. SCOTT.

TEMPERATURE FOR LILIES.

We have some longiflorums, 6 to 8-inch bulbs which were planted in 4-inch pots, and now full of roots, and some 7 to 9-inch which were planted in 4½-inch pots, now showing a growth of from four to five inches. It is our intention to repot them into 5 and 6-inch pots and we would like to know about what temperature to keep them in in order to bring them into bloom for Easter. ST. PAUL.

I should advise inquirer to have the lilies shifted into their flowering pots as soon as possible. There may be no need of shifting till the roots have pretty well filled up the small pot, but I am sure they should be shifted before any of the roots perish through crowding or want of sustenance. This starting lilies in 4-inch and later shifting into 6 or 7-inch pots is new with some of us, but I have tried it on a couple of thousand seven to nine-inch Bermudas this winter and the result is fine. Those shifted six weeks ago show not the slightest effect of the change, only an increase of vigor in every way. Easter is April 10. By the time you read these lines it will be little more than twelve weeks. If they were a foot high it would be better. You should keep them in at least 55° at night, with 15° to 20° higher in day time, with all the light you can give them. I say light, because they will certainly stand more forcing with plenty of light than if in a shaded house. Be on the safe side; rush them along, you have no days to spare.

WM. SCOTT.

LILIES NOT STARTING.

Seven or eight years ago it was usual to see a batch of lilies start and come away all about even, but that day is past. If "E. B. B." has two hundred and sixty out of three hundred that are growing well and free of disease he is doing well and will lose a smaller percentage than many growers. The bulbs that have not started are not necessarily diseased. They will start later. Why they don't, if they are sound, is a mystery, but these mysteries are occurring in the vegetable and animal kingdom all around us. Have patience. The humble lily bulb has an individuality as well as a whale. It will get a move on it some day soon.

WM. SCOTT.

BALTIMORE.

Trade During the Holidays.

With the fury of a cyclone the Christmas rush struck the florists the early part of the week, and until late Saturday afternoon they were in a continual whirl, the season proving for them a busier one than has been experienced in our city for years. If work were the sign of financial prosperity there would be lots of our craft at this moment on the retired list. Unfortunately for us though, the word work more often implies worry than it does remuneration, and such is the case this time, for we are still all in active service with this happy day of retirement yet in the far distance.

The week opened with a complete change of temperature and continued cold throughout, the mercury dropping from the fifties to ten degrees. A light fall of snow also came at an opportune time to make things look seasonable and put life into trade. The frost, however, played havoc with stuff that was any way carelessly packed. Box after box arrived from the express companies' charge in a frozen state, either from being poorly packed or remaining too long en route. The wrapping of local deliveries was another important detail which consumed much valuable time and made extra labor for all parties concerned.

Scarcity of Stock.

Good stuff in general proved locally to be very scarce and judging from the quality of stock shipped from other cities it was not confined to our locality alone. Beauties were more than scarce for the supply was by no means equal to the demand. Roses of a more reasonable class were procurable. Several days before Christmas prices went up to the top notch, but on Christmas eve the stored stuff arrived as usual, causing a slight drop on violets and carnations only. Most of the growers disposed of their prospective crops a week or so before Christmas at best prices; consequently the retailers were compelled to sell also at top notch in order to get even.

As our wholesale rates ranged about the same as our neighbors of Washington and Philadelphia it is useless to repeat quotations. As stated above, the Christmas trade was exceptionally good in spite of the public's protest against paying $4 and $5 per dozen for roses and $3 and $4 per hundred for violets.

Meeting of Gardeners' Club.

Very little of importance occurred at the Gardeners' Club meeting, Monday, Dec. 27th. The attendance was very slim, as the majority of the boys hadn't

gotten over the Christmas fatigue. The executive committee reported a scheme for holding a show next November, which was received and laid over until next meeting night, when a final vote upon the subject will be taken. The committee recommended that the Fifth Regiment Armory Hall or the Cyclorama Building be secured, and to tax each member in order to guarantee all expenses, and if the show be a financial success the said tax to be refunded. Also to interest all prominent officials; such as governor, mayor, senators and their wives, etc., at the same time making liberal friendships with the press.

After the Christmas "rush" the New Year's trade seems too insignificant to mention. Will say, however, the holiday week proved an exceptionally good one and there is no cause to complain.

C. F. F.

WASHINGTON.

New Year's Trade Quiet.

A few years ago the trade on New Year's day was considered a close rival to Christmas. It has been dropping off each year until now very little is done out of the ordinary. That delightful old custom of calling on friends the first of the new year and claiming a continuance of the existing friendship for the coming year is fast dying out in Washington and the demand for flowers for the occasion passes with it.

The death in the President's family may have had something to do with the present year, there being few receptions, the high officials not receiving out of respect to the President. It certainly has not kept pace with that of the last one. Three or four new stores have opened during the holidays. We wish them all success.

Prices remain firm, quality fairly good, but quantity—short, especially carnations and violets. Bulbous stuff is making its appearance in limited quantities. The growers are no longer seen with long and anxious faces. That long looked for and indispensable sunlight is with us again, and trust this time he will tarry as long as he can.

A large and enthusiastic meeting was held by the Commercial Florists' Association of the District of Columbia, last week, to take action in regard to the recent letter of the Secretary of War declining to discontinue the free distribution of cut flowers. The florists are determined to stop the distribution by the government even though it becomes necessary to go to Congress.

A number of committees made reports as to the status of the work of preparing and sending out petitions and of the plan of interesting the business men of the city in the movement. We claim that if the immense amount of money which is annually appropriated by Congress for the care and adornment of the parks and reservations was put to its proper use, there would be no necessity for the beds ever being without flowers or evergreens of some sort, even during the winter months. We claim that owing to the space consumed by the flowers which are now being grown by the government, they do not devote the time or attention to the propagation of plants suitable for out door decoration, and that instead of having only one growth in the parks, they should be kept green at all times.

Before the Board of Trade.

According to advices received by the florists the Board of Trade committee on public parks and reservations will take the matter up and it is believed will recommend that the present method of having the beds bare during three or four months of the year be done away with and hardy specimens be grown for the winter use. Owing to the offer of the florists of the city to raise the wages of their employes from ten to twenty-five per cent., if the free distribution was stopped, it is probable that a committee will be sent to lay the case before the various labor organizations of the city for action.

The Appropriation Committee of the House and Senate as well as the District of Columbia Committee will have the matter brought to its attention, and the florists are confident that when once the matter is properly presented the sense of fair play will result in legislation which will cause a discontinuance of the practice.

Our answer to the allegations of the government officials that the flowers are mostly distributed among the various hospitals that we will furnish flowers for them free of charge. We are now doing this and daily send more than the government. We have received definite information that the hospitals receive a small proportion of the flowers, and of one hospital it was stated that the government supplied with flowers, has not received any in months, but has depended upon the bounty of the florists almost entirely.

Letter to Secretary Alger.

Believing that the Secretary of War did not give as careful consideration to the last letter as it demanded, the following was sent to Secretary Alger at the last meeting:

"At the regular meeting of the Commercial Florists' Association of the District of Columbia a committee was appointed to answer your letter addressed to N. Studer and other florists, complaining of the free distribution of flowers and other products of the nurseries and greenhouses of the government. We beg to express our regret that you should deem it inadvisable to give the subject under consideration your personal attention, or at least refer the matter to a disinterested party for consideration and report.

"It could hardly be expected that either the Chief of Engineers, lately Superintendent of Public Buildings and Grounds, or the present Superintendent of Public Buildings and Grounds would condemn their own actions, and therefore we are not surprised to receive a practical copy of a letter written first by Gen. John A. Wilson, Lieut. Sewall and Col. Bingham, respectively, several months ago, all of which seemed to have been inspired from the same source, and which in no wise answers the criticisms offered by the florists of Washington.

"We insist that very large sums of money are being diverted from their legitimate purposes, viz., the decoration of parks and public reservations, and are being used for the production of flowers which, under no circumstances, can be used for the adornment of public reservations, but instead are distributed to a favored class greatly to the detriment of the said reservations, which are shamefully neglected, considering the enormous sum appropriated, this greatly to our detriment as citizens and business men.

"We insist that if the money be legitimately expended the various parks and reservations can be kept in a very much higher state of beauty and that such being the case all citizens of the District of Columbia and of the United States visiting here would share equally in the enjoyment of such improvement and adornment. Believing that this subject deserves more respectful and considerate treatment than has thus far been accorded it, we again ask you to give the matter the earnest consideration it so richly deserves.

"If it is your pleasure we should be glad to appoint a committee to personally present our side of the case to you, believing that we can throw new light on the subject and enable you to see the matter from a different point of view. In conjunction with our protest we respectfully call your attention to the following law which stands unrepealed:"

"Provided that hereafter only such trees, shrubs, and plants shall be propagated at the greenhouses and nurseries as are suitable for planting in the public reservations, to which purpose only the products of said nurseries and greenhouses shall be applied."

The letter was signed by the president of the association.

Correction.

In the last issue of the *Florists' Exchange* mention was made by the Washington correspondent of a contract for supplying part of the plants for the Agricultural department, which had been awarded to a local grower, to be paid for out of the appropriation for seeds, cuttings, plants and bulbs.

I would like to say that there is no appropriation for the purchase of plants for free distribution, but they were paid for out of the appropriation for "Purchase and distribution of valuable seeds," and that the grower was successful in honest competition with six others and is one of the men now fighting against the free distribution of flowers and plants.

W. H. K.

SIGOURNEY, IA.—Mr. Henry Schroeder, of this city, is chairman of the ways and means committee of the Southeastern Iowa Horticultural Society, which recently had a meeting at Ottumwa. Mr. Schroeder is one of the best informed men in the State in nursery matters.

BUFFALO.

Christmas and New Year's Trade.

I am somewhat behind "the push" with our report of that great event, the Christmas trade, but I have the advantage that there has been time to digest the several reports both local and outside. The writer was laid low with overexertion wrapping up plants, the continual waving of heavy sheets of paper causing a draught, hence the trouble. Like all northern cities, we had it decidedly cold. It was seasonable, but too much so for our health or temper, yet it was expected and prepared for, and such was the precaution taken that I have yet to hear of a complaint about frozen plants or flowers. A box of flowers is a simple thing to deliver and little excuse for not being delivered in good shape, but how different with a lily, an azalea, or a poinsettia. Is there any other kind of merchandise so hard and difficult to reach its destination in good order? A new bonnet, a box of candy, a turkey, or a "celebration" carried round won't be injured in zero weather, but not so with our more than tender products. However, it is far better for all concerned that we should have the cold now and fine weather at Easter.

It is certain that the bulk of the business done was in excess of any previous year. If there are a few who can say, "I did not do quite so well as last year," it must be because they did not have the facilities or the supply to do the business. A factor which helped to make the volume of business large was a revival of large parties, many more of these than there has been in a number of years, which is some evidence that a certain class at least are "feeling better" and more able to be luxurious and extravagant, which is an excellent way of dispensing charity.

Stock.

Our prices were about the same as other cities of our size. Very few Beauties were handled, but the staple varieties of roses were of excellent quality and brought $4 per dozen. Carnations were good and people did not kick at $1. Those that did kick went without, as a poor florist's wife (especially a provincial one) has to go without a sealskin sack. The price of violets had scared off prospective buyers and at the last moment plenty were to be had. Romans and narcissus filled their respective places and so did the graceful stevia. Tulips were conspicuous by their absence. All the cut Bermuda lilies and poinsettias were eagerly picked up. They were in demand for churches and parties and there was not enough to go around.

Large Demand for Plants.

There was here, as I notice in the eastern metropolis, (there must now be a western) a still greater increase in the demand for plants. It is, I am sure, now the heaviest and most important part of the holiday trade. One firm may say no to this assertion, but others will say yes. It was not an isolated case for a swell matron to walk in and leave from fifteen to twenty cards each to be accompanied with a nice plant for as many different friends. Our selection (of plants not friends), that makes it particularly agreeable.

I am sorry to say we had no novelties which seem so much desired in some quarters. Our patrons had to be satisfied with the same old things and there was not near enough of them to go around. I would rank the azalea of first importance as a plant for a gift, then a high class cyclamen, then come poinsettias, lilies, begonias, pans of narcissus and primroses. Ferns sold well, especially pans or pots of Nephrolepis Bostoniensis and the still more handsome N. d. furcans.

More and still more do the people get aware of the fact that a palm is a most satisfactory present for your wife or somebody else's wife, and at present it is ninety-nine out of every hundred sold that is K. Belmoreana or Forsteriana; the other one can be whatever you choose. People will get a little tired of this. Great as is the adaptability of the kentias for the dry air of the sitting room there is another genus of palms still "tougher." The beautiful Phoenix rupicola and leonensis will distance them as a plant, putting up with all kinds of unfavorable conditions. There was marked evidence that the great majority of the buyers want a palm or dracæna for $2 to $2.50. When you mention $5, there is a cool feeling arises across the counter.

Christmas Greens.

There was little or no peddling of holly and greens on our streets and not as much sent in to commission men, so it was well cleaned up. There was some good holly and some wretchedly bad. One man who sent us fifty cases should be made to repose on a bed of his holly for the next thirty days with nothing between the epidermis and his holly. The wild smilax has been largely used for extensive decorations. In its place it makes wreathing of ground pine, holly or laurel look very homely. I might add that few or no chrysanthemums were seen nor wanted. They have had their season. They may do for small democratic cities, but they won't do for the former home of "Grove" Cleveland.

Politics Help the Florist.

In the interval between Christmas and New Years you always seem dull, like the reaction that takes place when the curtain goes down at the end of an intensely exciting act. Even if you have a large sized decoration or two during the interim, it is only the orchestra playing and you want to go out and see a man and return in time to see the curtain rise for the conclusion of the play, which in this floral drama is New Years. All know what a quiet time is New Years now-a-days compared to what it once was, and this one was no exception in a general way. What helped out wonderfully with some of us was the initiation and installation into political office of several successful candidates. A republican mayor stepped down and out and a democratic mayor marched in and when he had done shaking hands with those who had helped elect him, and those who expect a job, he had time to notice beautiful baskets and bunches of flowers, handsome palms, scattered here and there but all eclipsed by a magnificent floral horseshoe. Lesser lights than the mayor were not forgotten and at the organization of the board of aldermen many of them had their countenances set off with radiance from the reflection of pink and red roses. Never mind if the radiance was mostly confined to their nose, it is all good and proper. The purity of the flowers may remind them of the purity of their campaign promises to their constituents.

We are now starting a new year. To many of us it must cause reflection, for we are a mile stone nearer that not far distant end. Let us be optimistic in our vision. We have lived and mostly lived well, and if we really love our business, especially the growing, we must and cannot but improve our body and soul.

Visitors.

The writer has been unable to visit his brother florists, and brother florists are mostly too busy to be making calls just yet, but during one of the days just before New Years a message was received that Mr. Dailledouze was below. I slid down stairs and there was Paul Dailledouze and Mr. D. T. Mellis, both of Flatbush. They had taken a thirty-six hour vacation to inspect Niagara with ice attachment. Paul looked as fresh and plump as a Flora Hill Carnation and D. Y. M. was as well dressed and beaming as Chauncey M. Depew. "How was the business with you?" They both raised their eyes to the ceiling and exclaimed "wonderful," and pronounced it with a solemn heartfelt expression; so no doubt it was, and their manner and appearance indicated that they were at peace with all men, including themselves.

A Story.

If you have room, Mr. Mellis told me a short story of Niagara which shows how different some men view this wonderful work of nature. Mr. Mellis was standing at the foot of the American falls, gazing at the stupendous sheet of water 170 feet in height, when a corpulent, red-faced man, at his side, also gazing up, remarked "What a pity to see so much going to waste." Mr. Mellis politely said "Excuse me, sir, I presume you are an hydraulic engineer." "No, sir," replied the man, "I am a Philadelphia milkman."

W. S.

INDIANAPOLIS.

Scarcity of Stock.

Another Christmas holiday has passed and with it the usual troubles to the retail florist. This time good stock was very scarce, not one-third enough to go around. American Beauties and violets were flowers mostly called for but very short was the supply. Consequently, the first rush took them all away, what was left of those saved to fill the principal orders, which were more than usual for these two items. The quality of other roses shipped to this market was in some instances beyond recall, weak stems, off

color and malformed buds were the principal faults with roses. However, some good stock was cut around this city. Long stemmed Beauties were of excellent color, but supply short.

Carnations were in great demand and good long stemmed flowers were taken up in a hurry. The supply of these flowers was also very short. It seemed like all crops were off. It was the weather, however, which did the mischief all around. Carnations seem to be a general favorite these holidays. The flowers were good and color excellent; prices obtained were a shade higher than formerly. It seems customers are taking more kindly to good carnations than to inferior roses at unreasonable prices.

Some chrysanthemums of the late varieties commanded a fair price but only the best flowers could be sold. Choice boxes of flowers were ordered extensively.

Flowering Plants in Evidence.

Combination baskets of plants, blooming and foliage, some studded with cut blooms, sold well, also combination flat pots of bulbous flowers, primroses, etc. Azaleas, cyclamens and other blooming plants, sold better than ever. The weather for a few days was rather severe and probably kept intending purchasers away in the beginning of the week, but fortunately the weather turned warmer Friday, however, cold enough yet to compel wrapping plants and packages very carefully. Blooming plants had the lead over foliage plants so far this season.

Christmas Greens.

The Christmas green business is now out of the hands of the florists and nearly exclusively in the hands of the seed houses, who have in many instances sold their goods cheaper at retail than to their wholesale customers. Lycopodium wreathing and laurel were used lavishly through the business section of the city. Much holly was disposed of and Christmas trees were hauled away by the wagon loads after Christmas, showing an overstock in that line. Altogether, from careful inquiries made, the Christmas season of 1897 was satisfactory, and if good stock had been more plentiful would have surpassed any former holiday season.

Meeting of Florist Club—Election.

The December meeting of the Indianapolis florists was held at Huntington's seed store, December 6. It was very well attended, it being election night and also the annual chrysanthemum show question was expected to come up for discussion.

The annual election resulted as follows: Robert McKeand, president; John Heidenreich, vice-president; Fred. Huckreide, secretary and treasurer. Two new members were enrolled.

Discussion.

The chrysanthemum show discussion brought to surface some curious ideas, as to how the annual show could be made a success. The whole matter was placed in the hands of a committee, this committee to call on the Commercial Club and the principal merchants regarding the assistance that they could give our cause. After the consultation they will report to the state meeting which will be held in the State House some time in January.

Mr. E. G. Hill, of Richmond, and Mr. J. S. Stuart, of Anderson, were visitors in the city to consult the local florists as to the business of next year's exhibition.

After the meeting, the usual refreshments were served by the courtesy of Messrs. Huntington & Page. The club can be congratulated on its growing and lively existence.

Various Changes.

Mr. John Thornton, formerly with Stuart & Haugh, Anderson, Ind., is now with the Poole Bros. (formerly Bernie Pohl). He has taken an interest in the business and we are sure he will bring the place to a paying condition. It shows already great improvement.

Mrs. S. F. Detray, Pendleton, Ind., is a new addition to the florist business.

Mr. Fred. Ostertag, of St. Louis, for a short time running a flower counter in Huder's drug store, corner Washington and Pennsylvania streets, moved away from the city before we got well acquainted with him. Very likely the low prices ruling in this city did not compare favorably with the good St. Louis prices.

Kelley & Cornelli, the partnership formed some time ago, are parted, Mr. Ed. Cornelli continuing the business. Mr. Cornelli reports holiday business satisfactory. He is now near his old location of the eighties, and very likely his old customers will hunt him up.

W. B.

NEW YORK.

Retail Trade.

Borough of Manhattan, Greater New York, is now our address though you can still address us to the Knickerbocker city. It was heralded in with considerable ceremony and the florists are reaping a little harvest from the tokens of affection sent from the admiring politicians to the mayor down to the porter at the door. Over one hundred pieces have been sent including horseshoes galore, Brooklyn bridges, baskets, stars, hearts and even the territory of Greater New York mapped out in flowers; a Tammany tiger "worked out" in black and yellow immortelles was also one of the "pieces de resistance." Truly it is an ill wind that blows nobody good. The advent of Tammany is heralded by the florists without exception, as all say that "reform" has not been a "means of grace"

The usual reaction has set in after the Christmas and New Year's business. New Years was quite an improvement over last year. However, in spite of the elements, dinners and social affairs, "debutantes" and a few weddings are helping out considerably and prospects are brightening perceptibly.

The Wholesale Trade.

One of the worst days this winter arrived the day before New Years and knocked all calculations out entirely. In spite of the weather stock was cleaned up fairly well; prices ruled only about half as much for rose stock as they were at Christmas. A few Von Sions are making their appearance in the market and realize $6 per 100, also a few red Duc Van Thuyll tulips that sell for $5.

C. W. Ward is sending in some fine fancy carnations these days.

Seed and Bulb Trade.

I called on several in the trade with regard to the outlook for the seed business the coming season.

WILLIAM ELLIOTT & SONS said: "It is hard to tell about the future of the seed trade at this time, although we think the prospects are brighter than this time last year. Prices will rule a trifle lower, however, owing to competition."

J. M. THORBURN & Co.: "Business is problematic at this date. There has been no advance in prices so far, and there is a full supply of most crops."

WEEBER & DON: "Outlook for seed trade is good but prices in general stock do not improve, but will later, as stock gets used up. Farmers got good prices for their stock last year, which ought to help trade materially."

STUMPP AND WALTER CO.: "This being our first year in business we cannot make any prophecies or comparisons. The outlook, however, seems very roseate from present indications."

H. H. BERGER & Co.: "We find that the demand for California seeds has increased quite 100 per cent., especially for asters, nasturtiums, verbenas, mignonette, cosmos, cannas, and sweet peas; the latter, though, are undoubtedly getting quite scarce, as the crop was short."

AUGUST ROLKER & SONS: "It is somewhat early to predict what the outlook for the seed trade will be, though it seems to be fairly good, and florist seed trade is commencing to pick up considerably."

PETER HENDERSON & Co.: "It is entirely too early to make any prediction."

Meeting of Market Florists' Association.

There were about twenty growers present at the meeting of the New York Market Florists' Association, Tuesday evening, F. Lehnig, president, in the chair. The following committee, H. C. Steinhoff, A. Schultheis and A. D. Rose, was appointed to call on the city authorities and were empowered to hire about thirty stands in the Clinton market, costing $140, to be relet to members. The following new members were admitted: J. P. Cleary, J. L. Schiller, C. H. Joosten. A motion was carried to send circulars to all growers in the vicinity, inviting them to join the association. Intending members should send their applications to the secretary, A. D. Rose, Jersey City. Motion was made to assess all members five dollars, payable on or before the next meeting, February 1. Money to be refunded if the scheme fell through. The following committee was appointed to draw up constitution and by-laws: J. P. Cleary, H. C. Steinhoff, J. Birnie, W. Boenecke, C. H. Joosten, J. L. Schiller, C. Deitz.

Club Meeting Next Monday Night.

The next meeting of the New York Florist Club takes place Monday the 10th, when the new officers will be initiated and the first competition for the club's gold medal will be held. A good attendance is hoped for and exhibitors are invited to come out in force. The question of the annual dinner will also be voted on. All those unable to attend should notify the secretary if they desire to vote in the affirmative.

Notes.

Mayor Van Wyck, of Greater New York, has appointed the following park commissioners: President, Geo. C. Clausen, Borough of Manhattan; August J. Moebus, Borough of Queens; Geo. L. Brower, Borough of Queens, who will act in unity on all park ordinances, individually with regard to internal management.

Mr. John Palmer, Scranton, Pa., was a recent visitor.

Mr. J. Barclay, representing William Elliott & Sons, has returned from an extensive trip. Mr. Barclay reports a fairly successful trip for the time of year.

H. A. B.

PHILADELPHIA.

Satisfaction All Around.

The Christmas holidays of 1897 have come and gone and all things considered have proved fairly satisfactory to both dealer and producer. I think the consignors may be included, too, as they received better value for their money than of yore.

Nearly all the growers of cut flowers sold out clean by nine o'clock Christmas morning and by noon most of the stores had filled all their orders with little or nothing left over. The commission houses were not all so fortunate. The growers who ship their flowers to town are not so keenly alive to the danger of offering salted or poor stock as their brethren who have to meet the just indignation of the retailers who handle and rely on their stock. The result is that commission houses have some unsalable stock left, even at this season.

The plant trade was excellent. A little better than last season is the general verdict. Some difficulty was experienced in delivering this class of stock owing to the extreme cold; with milder weather more orders could have been taken for plants. Monday, Dec. 27th, found a fairly brisk demand for cut flowers, but for the next few days business was dull and the market irregular. The continued cold weather undoubtedly prevented a more serious break in prices.

New Year's brought better business without any material change in prices, which are, roughly speaking, as follows: Beauties, $6 to $9 per dozen; Brides and Maids, $8 to $15 per hundred; carnations, $2 to $4, and a few fancies $5; mignonette, $2 to $4, some extras $1 a dozen; violets, double, $1.50, single, 50 cents to $1.

Bowling and Shooting Notes.

The Florists' Club kept open house on New Year's Day, a bowling tournament was the chief attraction. Shuffleboards has gained tremendously in popularity here, the recent tournament proving a great success.

The ninth monthly shoot of the Philadelphia Trap Shooters' League was held on the grounds of the Florists' Gun Club at Wissinoming on New Year's Day. Eleven teams of six men each, competed. The Southward Club, with a score of 162 targets, handicap 61, were first. The florists' team, consisting of Messrs. Anderson, Burton, Bell, Hallowell, Park, and Smith, made 134, their handicap being 16. The Florists' Club led in the total score for the nine shoots by four targets.

Notes.

H. H. Battles is receiving orchids—which are rather scarce here at present—from A. Herrington, of Madison, N. J.

The business in Christmas greens was so large as to make one wonder how long the holly, for instance, can last. Holly was exceptionally fine, the branches being literally covered with very large berries.

Pennock Bros. have had a new rose in their window this week. It was sent by Strauss & Co., of Washington, D. C., and is said to resemble La France. The name is, I think, Mdme. Chatenay.

Death of President Jonathan Jones.

The Germantown Horticultural Society has sustained a severe loss by the death of their president, Jonathan Jones. Mr. Jones was a dry goods merchant, who took a deep interest in horticulture, devoting much time to his gardens, of which he was justly proud.

A new store in the summer, struggling along; bills accumulating; lack of moral courage; the store closed the Monday after Christmas; the owner has gone; a sad story.

J. W. Y.

Additional Items.

The January meeting of the Florists' Club of this city, will be of decided interest to the carnationists as our Mr. Albert M. Herr, of Lancaster and Philadelphia, will be the essayist on that occasion. Mr. Herr will read and talk carnations, so it is unnessary to say that all who are interested in the divine flower will be well repaid for the time spent at this meeting. A cordial invitation is extended to all to be present on Tuesday, January 4, 8 p. m.

The florists' supply people are well pleased with the holiday trade. M. Rice & Co. report business as fine as could be wished for. Mr. Rice says dollar wheat is the cause.

F.

ST. LOUIS.

Cut Flower Market.

The past week business has been very quiet, still prices have held up. Receipts of flowers of all kinds have not been heavy, yet there was enough stock on hand to go around and the prices at the commission house were somewhat lower than for Christmas. New Year's brought a little extra demand, but this holiday has ceased to be much of a factor in the flower market. The commission men report lots of kicking from shipping trade in regards to exorbitant prices. The complaint seems to be in line with former years.

Stock—Prices.

The rose market has been a little short the last week, as to first-class stock. Perles are a little scarce just now and bring from $4 to $5 per 100. Brides and Bridesmaids are selling from $4 to $10, extra fine stock alone bring $10. Meteors are very scarce and sell at top prices, $8 and $12. Beauties, extra long ones, bring $35 to $75, others from $10 to $25. Carnots are also very scarce at $8 and $10. Woottons and La France sell from $2 to $6.

Carnations have been in good demand. Good Scott, Daybreak, Jubilee, Eldorado and Flora Hill bring from $4 to $6 per hundred. Bulbous stock is plentiful. Romans bring from $2 to $4; paper whites, same. Harrisii stand at $12.50 and callas at $10. No Von Sion or freesia are seen in this market yet.

Violets have been picked very closely last week and consequently the supply is short and those that come in bring good fair prices; Californias $1.50 and $2; single home grown 75 cents; southern 40 cents; double $1. Bouvardia is very fine and not plentiful; the price is $2 per hundred. Mignonette, large spikes, bring $4 and $6. Smilax is selling poorly this and last week.

The Question Box.

It has been the custom at each meeting of the Florist Club for each member to ask a question and the president to call upon some one in the room to answer it. Sometimes they are not prepared to answer the question at once, so President Halstedt will hereafter send out questions a week or so ahead and assign some member to answer same at the next regular meeting. The following questions have been prepared by the president for the meeting of Jan. 13, at 3 p. m., who requests through the Review that the name of whoever is to answer same be found below each question, and for him not to fail to be present and on time at the next meeting. The first question will be:

No. 1. When will we give carnation exhibits a certificate? Answered by Robert F. Tesson.

No. 2. Name one pink, one white and one red carnation as being the best up-to-date commercial variety, three bread winners, and state why you think them the best. Answered by John Steidle.

No. 3. What variety of roses would you grow to supply the St. Louis market? Answered by J. F. Ammann, Edwardsville, Ill.

No. 4. Which is the most profitable to sell, the fern fronds or the entire plant? Answered by Andrew Meyer, Sr.

No. 5. Does it pay to advertise a flower show and how should it be done? Answered by J. J. Beneke.

No. 6. Economical carnation supports. Answered by Wm. Trillow, Belleville, Ill.

No. 7. When and how shall we begin preparations for our next chrysanthemum

show? Answered by William C. Young.

No. 8. Shall we have another chrysanthemum show? Answered by Frank J. Fillmore.

Notes.

Gustave E. Meissner, a partner of Isadore Bush, of St. Louis, and manager of the Bush Vineryards at Bushberg, Mo. died at that place Sunday, January 2. Mr. Meissner was in his fifty-fourth year and leaves a widow and ten children. He was well known among the nurserymen and florists in Missouri.

Chas. Young, the genial correspondent of the *Florists' Exchange*, just returned from a week's hunting trip. Charlie is one of the best shots among the florists, and his five brothers and two sisters will have game enough to eat for at least a week.

Ed. Buechel, of the Riessen Floral Co., did himself proud in decorating the Union Club House for their yearly Christmas party. Ed. also reports that their business at Christmas and New Years was ahead of last year. Mr. B. is thinking of taking a party to Klondike this spring.

Of Interest to Bowlers.

Monday night a meeting was held at the bowling club alleys and it was decided to roll Cocked Hat during the January series. As January has five Mondays the last four will be devoted to the new game just for a little change. In the three games rolled C. Kuehn was our high man with 587, high score 228; J. W. Kunz second with 530, high score 218; C. C. Sanders third with 528, high score 200. All members are requested to attend next Monday and try their hand at the new game of three pins.

J. J. B.

CHICAGO.

Among the Retailers.

New Year's trade averaged about the same as last year. There was possibly a slight increase but nothing worthy of special note. All seemed satisfied and encouraged over the outlook. Quite a number of good decorations have been booked for the next few weeks.

P. J. Hauswirth had the decoration for the Seipp-Madlener wedding last Tuesday, which was quite a large one. Each room of the large residence was freely decorated with Bridesmaid roses, asparagus and plants. The wedding supper was served on tables, of which there was a large number, each freely decorated with Bridesmaid roses and asparagus.

Joseph Curran has taken a position with Friedman. He still keeps the west side store, Mrs. Curran caring for same.

Among the Wholesalers.

All report a very satisfactory New Year's business. Kennicott Bros. Co. report trade much better than last year, and no surplus of stock between the two holidays, as has so frequently happened in past years. E. H. Hunt found trade satisfactory, and feels that a prosperous season has been favorably opened. Bassett & Washburn did an extra good trade and it is holding up well. A. L. Randall reports trade fully as good as last year, and that prices hold up well on high grade stock, though there was a little slump at the last moment on the lower grades, especially in Brides and other white flowers. Vaughan, McKellar & Winterson did an excellent business, and it held up well during the week. E. C. Amling could have sold more had he had the stock. Rogers Park Floral Co. did rather better than last year, and this was also the experience of Reinberg Bros. W. E. Lynch, Winter & Glover, and A. G. Prince & Co. all report satisfactory trade.

Various Notes.

Mr. Ed. Heim, of Blue Island, had a New Year's caller who will make a long stay. It is a bouncing boy, and all are doing nicely.

In response to a request for white violets a grower replied that he could not supply the genuine article but could supply some bleached Lady Campbell, that would answer the purpose. Can the lady be turned into a "bleached blonde"?

The program for ladies' night at the Florist Club next Thursday evening grows apace. It will include some musical numbers, both instrumental and vocal, of a high order. A special feature will be a trio for two violins and piano, rendering Handel's Largo. The program will also include a violin solo (Raff's Cavatina) by Miss Mary Belle Smith, the violiniste; a piano solo (The Awakening of the Lion, by Kontski) by Miss Amanda Blumenthal; tenor solo, by Geo. Mason; violin solo (Traum der Sennerin, Labitsky), by Miss Alda Grant; piano solo (The Last Greeting, Keck), by Miss Maud Grant; selections by the club quartette, (including McKellar, Kissel and Winterson) and other numbers.

BOSTON.

A New Wholesale Store.

A new wholesale flower market has been opened here by F. R. Pierson Co., (of Tarrytown and Scarborough, N. Y.), at 18 Chapman Place, under the management of Victor H. Pilat, for the sale of their fine roses, among which their Beauties and Meteors cannot be excelled. Their manager reports a very ready sale for all grades. They are now ready for extensive business having had telephone connection put in this week, and say they have come to stay.

Club Meeting.

The first monthly meeting for 1898 was held on Tuesday evening. The principal business of the meeting was installing the officers for the ensuing year. Mr. George M. Anderson, of Milton, who succeeds Thos. J. Grey, is a well known and successful grower, a man of great tact and energy, and he took the chair under a tremendous and continuous applause.

After the several official positions had been taken, Mr. John Farquhar, of the firm of Farquhar Bros., seed merchants, proceeded to deliver a very able address on Jamaica and its fruit supply, with a description of the island, with stereopticon views, which was very interesting and instructive.

Trade Conditions.

The flower trade of Boston showed a marked falling off from the previous week. The growers tried to keep up their prices all they could, but had to succumb to the inevitable. However, after the middle of the week, and as the new year approached, the demand was considerably better and prices improved. The retailers are now preparing for a good and regular course of business without any marked fluctuations until Easter time.

Welch Bros. are receiving from Carl Jurgens, of Newport, some remarkably fine Beauties, Brides and Bridesmaids, together with exceedingly well grown valley.

A Pure White Cypripedium.

A new and very rare cypripede was exhibited at Horticultural Hall, January 1st, by W. W. Lunt, of Hingham. Mass. It was Cypripedium bellatulum album, and he was justly honored by the society's silver medal. There are only a few plants, I understand, in cultivation in this country, and it being only a shy grower, demands great care and attention to bring it to perfection. The following are a few notes by the owner of this white gem and who has spent some little time in tracing it.

"An albino of the beautiful Cypripedium bellatulum is undoubtedly a surprise, but a form has flowered in the collection of Sir Frederick Wigan, East Sheen, and was awarded a first class certificate, June 11, 1895, at the exhibition of the Horticultural Society, at London, England. It is the only pure white cypripedium in the genus, for C. niveum has a few purple spots, while C. bellatulum has but a small pale yellow stain on the staminode; scape, bracts and ovary are entirely green. It was discovered by R. Moore, also by C. Charlesworth, and distributed by Charlesworth & Co., of Bradford, England. Measurement of flower: 2⅜ inches across, pouch 1⅝ inches long, dorsal sepal 1⅝ inches across and 1½ inches high, petals 1½ inches broad and 2 inches long."

C. H. J.

KANSAS CITY, MO.

Stock and Prices.

Christmas trade was fully up to that of last year, the weather being all that could be desired, and were it not for an article in one of our leading papers giving the Christmas prices of flowers, especially American Beauties, at $2 apiece and advising young men to give their friends a *farm* instead of American Beauties and their sweethearts a sealskin sacque, we would have done more business, as there is no doubt the high prices given, which did not exist, did us lots of damage. However, all report a good fair trade. Some sold American Beauties at $10 per dozen and others got $15 and $18; Brides, Maids and Gontiers at $3; carnations $1 per dozen; Romans $1; narcissus $1; violets, bunch of twenty-five, $1; valley $1.50.

Stock was very high but of excellent quality, and there was no trouble in getting $3 for good roses, but great trouble with violets at $1 per bunch. Narcissus and Romans went slowly. A few orchids in pots were sold. Palms, ferns and araucarias sold very well. All of the plants in bloom went very readily at good prices, but from the dull weather were none to plentiful. Azaleas, cyclamens, primroses and a few orchids have been seen and sold at a good price and bring more profit than Beauties. If your correspondent is alive and here next year, will have lots of Cattleya Trianæ, in bloom, and if possible eucharis. Every year plants in bloom sell better. Holly and green were soon sold out, and over town mistletoe was scarce and so poor as not worth picking up.

New Year's trade was fair. Plenty of good stock to be seen all over town, but the cry—prices were too high, was heard over the counter. But for some good wedding and funeral work, business would have been short.

Gas Damages Stock.

R. S. Brown & Son report the loss of two rose houses from gas. Also considerable damage to other stock, such as begonias, etc. It was really distressing to see their propagating house; many thousands of cuttings destroyed. The Gas company has repaired their leaks, but poor Mr. Brown's stock will take many months to look as before. And were it not for the splendid new range of houses put up last year, they would be in shape to shut up shop on cut flowers. But their new houses are looking very fine, especially their roses, so that if the gas does not again invade their other houses, all will be well yet for a good spring trade. Their roses destroyed by the gas reminded the writer of the Dingley plant on the front page of the last Harper's weekly. They report having a good many small decorations.

There have been but very few large parties given by private people, excepting those given at the Coates House, that of the Commercial club banquet being the finest ever held in Kansas City. J. L. Coates, president and manager, gave the Coates House conservatory people a banquet and the result was O. K. But the bill for it was not small, but J. L. Coates says good things are worth money and paid it freely. Would to the Lord all were like him, wanting the best and willing to pay a just price for it.

Fire at John Schneider's.

The greenhouses of John Schneider were burned Christmas eve, destroying a new plant that had cost from $8,000 to $10,000. Mr. Schneider reports that he will rebuild at once. Nothing ruffles nor scares John. S.

CORRECTION.

In the article "Dendrobiums for Market," in issue of December 30, there is a slight error in punctuation. The fourth paragraph should read: "For early fall trade grow Dendrobium Formosum var. giganteum and Dendrobium Phalænopsis var. Schroderianum. Formosum is perhaps unequaled in the genus," etc.

SITUATION WANTED—By competent man, in florist's store. Competent to take charge. Address Robert A. Betz, 10 Van Buren Street, Chicago.

WANTED—
WANTED—
FLORIST'S ASSISTANT.
FLORIST'S ASSISTANT.

Married man (no children), to work under foreman; one who has had some years' experience in greenhouse work and fruit growing, and one who is willing to work on farm if required. Steady work, cottage, wood, vegetables and milk furnished. Country place. State wages wanted; references required.
J. J. Van LEUVEN,
Brighton, Livingstone Co., Mich.

The Right Cypress for Greenhouse Material.

Have you heard of Cypress Greenhouse Material that has not been satisfactory? If you have it does not follow that Cypress is not the best lumber to use. There is White Cypress, Yellow Cypress and Red Cypress; there is Cypress that grows on the high lands and Cypress that grows in the swamps.

All of these different kinds are not suitable for greenhouse purposes. Do you know which kind is best and do you know that kind when you see it? If not you would better buy from those that do know and will deliver exactly what they sell. We introduced Cypress for greenhouse construction and pushed it to the front. We know all about it. For fifteen years we have made a specialty of furnishing it, and during this time we have built up a reputation that we can not afford to jeopardize. We send out the best only.

Write for Circulars or Estimates.

CINCINNATI.

Weather Conditions.

The new year started in cold and clear with six inches of snow and the thermometer hovering around 10° above zero, therefore making double work in wrapping plants and cut flowers for delivery. Owing to the cold weather very few plants were sold, but everything in the line of cut flowers sold well. Roses went at from $2 to $3 per dozen, with the exception of some choice Meteors and Kaiserin which brought $5; Beauties from $6 to $12 per dozen; narcissus and Romans 75 cents per dozen; valley $1; violets 50 cents; carnations 75 cents to $1.

Notes.

Several large funeral orders came in at the beginning of this week, which will exhaust the surplus stock of white carnations and hyacinths.

I notice that poinsettias, at one time very popular, but of late years somewhat discarded, are growing more in favor again for table decorations. Sunderbruch's Sons used 1,200 during the holidays and they intend to grow two houses next year.

Mr. Fred. Walz, of Cumminsville, who has been confined to his room the past two weeks, is about able to be around again.

The regular monthly meeting of the Cincinnati Florist Society will be held Jan. 8. Election of officers will take place and a full attendance is expected.

NEGRUM.

RIVERTON, N. J.

Mr. Walter Mott celebrated his tenth anniversary of joining the "Benedicts" on the 29th of December, and many of his friends were present. Mr. J. Austin Shaw sent an original poem congratulating him and Mrs. Mott, which brought tears of joy and sadness to the eyes of the visitors. Being a tin wedding he sent it in a watering can, because it could "spout" for itself, he said. Walter received many appropriate presents of other baser and higher metals also.

SUMMIT, N. J.

Lager & Hurrell, of Summit N. J., have purchased the famous collection of orchids from J. E. Brown, Belport, L. I. They have also received a very fine importation of Cattleya labiata in excellent condition.

Mr. J. N. May, receiver for Pitcher & Manda, has declared another 30 per cent. dividend and creditors are receiving checks for same.

HARLAN P. KELSEY,
1150 Tremont Building, - - BOSTON, MASS.

--VERBENAS--
The finest collection in America, 35 varieties, every one a gem—mammoth size, striking colors, green as grass and as clean as a whistle. Rooted cuttings, 60 cts. per hundred: $5.00 per thousand. Strong plants, full of cuttings, $1.50 per hundred. Strictly cash with order.
SOUTH SIDE FLORAL CO., - Springfield, Ill.

TELEGRAPH CODE.

In telegraphing orders to any of the wholesale dealers in cut flowers use the following code:

Assume—Do not answer if cannot fill order.
Abrogate—In case you cannot fill order, telegraph at once.
Anticipate—Answer at once, stating whether you can or cannot fill order.
Ambition—If you can only partially fill order, do so, and reply, stating what.
Admiral—Order must be sent on train mentioned only.
Ambulance—Want all of order filled or none, and prompt answer back.
Adjacent—If cannot send on train mentioned, next one will do.
Affable—Send prepaid by baggage master, if no express messenger on train.
Decorate—If cannot send all on train mentioned, send all you can, and send balance on next train.
Admission—This order is a substitute for my regular order.
Dancing—If cannot fill order exactly as specified, you may substitute according to your best judgment.
Ancestor—This order is an addition to my regular order.
Durable—Colored flowers must not be substituted for white.
Affection—Fill if possible, even at extra expense.
Fabricate—Flowers ordered are to be re-shipped to a distance, therefore buds must be cut specially close.
Fortunate—Select extra stock and charge accordingly.
Devotion—For cheap work, and can use second-class flowers, if at reduced price.
Flattery—If price has advanced since last quotation, do not send goods, but telegraph.
Forgery—This order countermands all previous orders.
Formation—Add these items to the order which you already have, but in case first order is already shipped, cancel this addition.
Flamingo—We are in a bad pinch; send us something to help us out, even if of poor quality.
Flocking—Have sent mail order; if not yet received, send following at once, and cancel mail order when received.
Foraging—This order includes all items previously ordered and wanted for this date.
Superior—Can use something especially fine, and am willing to pay accordingly.
Skip—If you are out, buy the best you can; we accept risk of getting "pickled" stock.
Corporal—If cannot send on night train, morning train will do.

THE CODE BELOW WILL BE USED IN ANSWERING YOU, WHEN NECESSARY.

Elope—Cannot fill your order to-day. Stock is scarce. Have tried to buy at other houses for you.
Lecture—Our store was closed yesterday when your telegram came. Received it this morning. Will ship by first train to-day, unless countermanded at once.
Willing—Cannot ship on train mentioned. Will send on next train possible to-day.
Eclipse—Will send part of your order. Balance scarce. Cannot get it at any price to-day.
Artistic—Cannot fill order to-day, if you want order filled (same order) to-morrow, wire us at once.
Favorite—Stock very poor, none better to be had. Will ship unless countermanded by..... o'clock.
Fundament—Stock named in this telegram has been sent, and balance, unless countermanded by telegram, will be sent on..... ...

KEEP THE DEALERS POSTED.

Keep the dealer from whom you order flowers fully posted as to the sort of stock for which you have the largest sale. Write him as fully as possible when you have time to devote to the matter. Keep him fully advised as to the needs of your trade. He will then know much better how to fill your telegraphic orders. He will know whether to send you the best in the market at the top price or to send you a fair grade at a more moderate price. The dealer is anxious to please you but often his information is meagre. Make this information as full as possible by mail and your telegraphic orders will be filled more to your satisfaction.

TORONTO.

The holiday season being over, florists are now busy comparing notes, and the experience of those I have spoken with appears to have been eminently satisfactory, all the grumbling that has been done has been directed at the weather. It certainly has not been very propitious; before Christmas it was so dull that the flowers could not open quickly enough and at Christmas, and New Years too, it was so cold that it kept many people at home and made the shipping of plants a difficult and risky business. However in spite of drawbacks a fine trade was done, as I said before.

Victorian Era Ball Calls for a Large Number of Flowers.

The Victorian Era fancy dress ball given to the citizens by Lord and Lady Aberdeen on the 28th ult. held in the Armories was a great event and will be long remembered by those who attended. A large quantity of flowers and evergreens were used both in the decoration of the hall and supper tables and by the guests. A lot of money was spent one way and another on this the finishing touch to the Jubilee year in Canada.

As a result of my question concerning poinsettias in your last issue at least one florist is going to grow them for next Christmas. Mr. George Mills, of Ossington avenue, thinks there is money in them, too.

Club Meetings.

The annual meeting of the Horticultural Society will be held on the second Wednesday in January (12th), according to the act of Parliament. Everyone should make an effort to have a rousing meeting.

The Electoral District Agricultural Society, which used to hold summer flower shows but now gives its money in prizes at other horticultural shows, holds its meeting on the third Wednesday in January (19th). It is reported that some important changes are to be proposed by the directors, and it would be well for as many of the boys to attend as possible, to see that what is to be spent should be spent to good advantage. E.

C. A. HARRIS & CO., Delanson, N. Y.

Please mention the Florists' Review when writing advertisers.

NEWS NOTES.

Buffalo, N. Y.—New bids will be asked for the building of the new conservatory at South Park.

Lake Geneva, Wis.—Longland & Holmes now have 10,000 feet of glass, and do a wholesale and retail trade.

St. John, N. B.—The St. John Florists' Club is prospering. Mr. W. McIntosh, 118 Orange street, is secretary.

Kansas City, Mo.—Mr. W. L. Rock, formerly with J. M. Gasser, Cleveland, O., is now in business for himself in this city at 1024 Main street.

Springfield, Ill.—The annual meeting of the Illinois State Horticultural Society was held here Dec. 28 to 30. The program was unusually valuable and interesting.

Yankton, S. D.—The South Dakota Horticultural Society was to have held its annual meeting here Dec. 15, but has postponed the meeting till January. E. D. Coles of Vermillion is secretary.

Muncie, Ind.—Christmas trade was the best of the past four years. Cut flowers sold out early. Palms sold well. More holly and green was sold. Merchants did more decorating than heretofore.

Washington, Iowa.—Mr. E. C. Keck is building a new greenhouse, to contain 3,000 feet of glass, and which is located near the center of the town. He will abandon his present location, a rented one, half a mile from town, in the spring.

Cleveland, O.—Mr. John Smith, at corner of Wade avenue and Crawford Road, has admitted his son to partnership and the business will be continued under the title, Smith & Son. The young man has been active in the business with his father for the past five years.

Mittineague, Mass.—Mr. H. Wilson Smith has removed from Springfield, Mass., to this place and has located at 7 Ashley street. He has built a new house this year and now has a total of 4,000 feet of glass. Pansies are to be a specialty with him, though he will also grow carnations, and his place will be known as Pansy Dell.

Kansas City, Mo.—The Western Association of Wholesale Nurserymen held their semi-annual meeting here December 21 and elected officers for the ensuing year as follows: President, A. L. Brooke, Topeka, Kan.; vice-president, R. H. Blair, Kansas City, Mo.; secretary and treasurer, U. B. Pearsall, Fort Scott, Kan.; executive committee, A. Willis, Ottawa, Kan., chairman; Peter Youngers, Jr., Geneva, Neb.; E. S. Welch, Shenandoah. Ia.; J. L. Bagby, New Haven, Mo.; W. F. Heikes, Huntsville, Ala. The next meeting will be held June 21, 1898, at the Omaha exposition.

DREER'S SPECIAL OFFER

A TENTH ANNIVERSARY.

Riverton, N. J., has been the scene of festivities of late. Genial Walter Mott, of H. A. Dreer's, and Mrs. Mott celebrated the tenth anniversary of their wedding Dec. 29, and a florist friend of Walter's sent him the following congratulatory lines:

(To Walter and Mrs. Mott on the 10th anniversary of their wedding, Dec. 29, 1897.)

I'll tell you a story that never grows old,
And it is not a story of silver and gold,
'Tis a story as pure as the heaven's above,
The fadeless, the beautiful story of love.

Was it 'neath an old oak, by a rippling stream
That he told his dear lassie h.s love's young dream?
Or far, far away, on old England's green hills,
Where the nightingale sings and the mocking-bird trills?

Full well do I know that this cavalier bold
There told her that story—the sweetest ere told,
Laid siege to her heart, and its citadel carried;
And so, ten short years ago, Walter was married!

Look around and behold what ten years can achieve:
'Tis a fairy tale—surely—you'll almost believe—
And yet, when to energy, virtue and thrift,
Is added the noblest, the very best gift

That a man can desire to well round out his life,
The gift of a loving and beautiful wife!
What reason, or cause, do you know! Can you tell!
Why this child of good fortune shouldn't do well?

And the babies! the babies! those crowns of affection,
With their dear mama's eyes, and their father's complexion,
Who'd have thought ten short years could have yielded such fruit,
And yet all his friends now declare that "they knew it."

Well! 'tis well! and the darlings are welcome, each one,
And no lovelier babies ere blinked at the sun,
Or absorbed their big toes, or of milk, howled for more—
Or kept their "pop" all night long walking the floor!

Bright be the sunlight and gentle the flow
Of the river of life, as they onward go.
May they sail together years, five times ten,
May the storms and tempests ne'er gather, and when

All the voyage o'er and the harbor at hand,
They cross, one by one, to "the summer land,"
May they all clasp hands, and together be
Through the endless years of eternity.

YORK, PA.—The State Horticultural Society will hold its annual meeting in this city January 18 and 19.

Facts more eloquent than words.
C. S. A. awards highest of the year.
New York 95 points,
Boston 94 points,

All well rooted. Satisfaction guaranteed or money refunded.

WHEN YOU WANT THE **BEST**
SEND TO
BASSETT & WASHBURN,
CHICAGO

BALTIMORE.

One house of the red La France rose blooming freely and in excellent condition was seen last week at Isaac Moss' Nursery, Baltimore, Md., a sport from La France in similarity of growth and habit, having all the qualities of the parent plant, but blooms much darker in color; in fact, being almost a dark red. Carnots and Kaiserins were also looking in excellent condition. In the carnation houses Cartledge and Silver Spray were giving a good account of themselves. The whole stock seemed to be in a condition to swell out the owner's bank account after the Christmas sales.

A short visit to E. A. Seidewitz found him wearing that pleasant look which he always assumes to visitors. Everybody seems busy cleaning up after the Christmas rush. Ernest Ashley.

CLINTON, IA.

The Christmas trade here was much better than last year, about everything in the flower line selling well. Holly wreaths seemed to be in greater demand than previous years. The retail prices for Maids, Brides and Perles were $2 to $2.50 per dozen. Meteors brought $3 and some Beauties were sold at $12 per dozen. Carnations retailed at from 60 cents to 75 cents per dozen. Scott and Rose Queen are doing fine. Jubilee is a favorite red.

J. R. Bather will build a violet house 15x90 feet next spring. D.

A NEW ONE.

Send "a dozen pink or yellow Chryasumphj."

I think the botanical name of the "Queen of Autumn" is the most difficult one the general public has to struggle with; and as you have often published queer orders, I wish to contribute the one above, which is *bona fide*, and came in the course of business from one of our so-called best families.

In response to it we sent a dozen chrysanthemums. W. T. B.

Greenfield, Mass.—Mr. E. B. Beals reports the best Christmas trade in ten years and that he is exceedingly well pleased.

SIMMONS'

New Light Colored **CARNATION**

Mrs. S. A. Northway

We introduce this variety with even more confidence than we did Portia, Silver Spray, Tidal Wave, Daybreak, Rose Queen, or J. J. Harrison, knowing that it will become as great a cut flower variety as any of the above. Plant of strong, free growing habit, entirely free from disease or rust; large round high built flower with perfect calyx and extra strong and long stem. Color a beautiful soft shell pink becoming almost white when fully open.

Orders booked now and filled in rotation. We shall commence to ship soon after Jan'y 1st. Price, $10.00 per 100; $75.00 per 1000.

Geraniums. Md. Bruant, Md. Jaulen, Fleure Poitevine, J. Ricaud, and J. Sallier, 2¼-in. pot plants, $5.00 per 100. Rooted cuttings, $3.00 per 100; $25.00 per 1000. Our superb stock of all the finest sorts, 2¼-in. pot plants, named, $25.00; unnamed, $20.00 per 1000. Rooted cuttings, $12.50 per 1000.

Fuchsias. A grand lot of summered-over stock in small pots that will make early bloomers, $3.00 per 100.

All Rooted Cuttings Cash with Order.
Our Price List describes many other fine plants. Send for it.

Make the work of ventilating easy if you want it done properly and attended to as frequently as it should be. The Evans' Challenge Ventilating Apparatus meets this requirement to the fullest degree. Quaker City Machine Co., Richmond, Ind.

LONDON, ONT.

Christmas trade was an unprecedented rush. It was ideal weather speaking from a seasonable point of view, but it was hard for the poor florists to deliver plants with the mercury 4° below zero on the 24th.

Year by year we have been able to report an increase of from twenty-five per cent. to forty per cent. and this year is no exception; again we report an increase of twenty-five per cent. over last year, and it would easily have been 100 per cent. had we been able to supply the demand for cut flowers. The supply of roses was larger than last year, but carnations were short, other flowers about equal to last year.

The demand for flowering plants is gradually increasing; a large number of people would rather pay $1 or $2 for a good little azalea, cyclamen or begonia, than the same amount for a dozen roses—for a present, and they are certainly a more acceptable gift in most cases.

W. G.

WHEELING, W. VA.

Christmas trade here has been the best in many years, there being more flowers handled than ever before on Christmas. Prices ran high both in cut flowers and pot plants.

The demand for large palms was limited while for smaller palms, araucarias, dracænas, etc., it was excellent. If there had been twice the amount of primulas and azaleas they could have been disposed of at a high price. Fern dishes sold well.

The demand for holly was sixty per cent. better than former years. Mistletoe was not in demand as the stock was very poor. Greens and wreathing could not be had at any price the day before Xmas as all stores were cleaned out. Several of the florists have a number of orders booked for New Year's. H.

A FLORIST PHOTOGRAPHER WINS A PRIZE.

Last season the Pope Manufacturing Co. offered five prizes for photographs of bicycle subjects of a character suitable to use in illustrating their catalogue. The *L. A. W. Bulletin* for last week contains reproductions of the first and second prize pictures. The first prize, a Columbia Tandem, valued by them at $150, was awarded to W. T. Bell, of Franklin, Pa., one of our contributors. The paper says: "Hundreds of pictures were offered in competition, and it was with the greatest difficulty that the judges were able to select the prize winners."

TO SECRETARIES.

Secretaries of horticultural associations, clubs and societies in the vicinity of Greater New York will confer a favor by mailing to us dates of their meetings and any useful information for the benefit of the craft. Harry A. Bunyard, 56 Pierce Bldg., 105 Hudson street, New York City.

MILWAUKEE.

Resume of Business for '97.

A happy and prosperous New Year is extended from Milwaukee to the readers of the FLORISTS' REVIEW. To sum up business for the year in the florist line it is needless to say that it has gone considerably ahead of last year. The depression of trade which prevailed the past few years seemed to have vanished, so 1898 should be welcomed in and pushed for all it is worth. The most notable feature of the trade is that fine stock is wanted in preference to inferior grades without consideration of price. There was very little done in the way of building, so the local supply has been about the same as former years. Let it be hoped that the coming year will also show an improvement in this line to keep up with the increase of business.

However, great changes are noticed in the retail stores. Messrs. Currie Bros., Whitnall Floral Co., Miss McKenney and Wm. Edlefsen all have remodeled their stores, making them up-to-date florist establishments. The plant trade shows a remarkable increase. Decorative stock and fine flowering plants are in constant demand. New Year's trade was largely confined to violets and choice colored stock.

The advent of '98 is also the third anniversary of the firm of Ellis & Pollworth. This firm, although comparatively young in the trade, is old in experience, having served over five years' apprenticeship in the Wisconsin Flower Exchange, which later sold out to Hunkel & Holton. They now control, in addition to their large down-town quarters, a range of glass which is exclusively devoted to the growing of decorative stock in variety, which is unexcelled in the west.

Among the Growers.

F. P. Dilger and Nic. Zweifel are carnation hobbyists, and their success is attained by giving them their exclusive attention. Herman Schwelka grows chiefly roses, but his violets and carnations are also doing well. Archie Middlemas grows a large variety of both cut flowers and bedding stock. Jacob Freytag's place, under the supervision of William Freytag, is also well stocked with fine plants and decorative stock. William Edlefsen looks after his two places, one for growing cut flowers, the other for plants, and keeps his down-town store supplied with fine stock, which is presided over by Misses Maggie Edlefsen and Rose Semler. Binzell & Kellner, the latest new firm, are doing well, and report their first holiday trade beyond expectations.

Notes.

The effort to organize a bowling club fell through. There are a few enthusiastic bowlers among the craft, but not enough to keep up continued interest in the game. William Currie and Ben Gregory are enthusiastic curlers and devote some of their spare time to this sport.

Nic. Zweifel, who has been quite sick, is again able to be out.

Start in the New Year right. Bury the hatchet, help your neighbor, be on friendly terms with your competitor, which is a mutual benefit to you all.

GEO. WASHINGTON.

HUNT'S REVIEW OF THE CHICAGO MARKET.

New Years brought considerable business but of course no such rush of stock or trade as Christmas. Stock was better, being all fresh, better color being especially marked. Carnations were more plenty and demand fully up to supply. All stock sold freely though at much lower prices than prevailed the week previous.

No especial shortage and but one surplus line viz., violets. Friday, the 31st, the market was fairly flooded with first class violets, and demand seemed lighter than at any time this season. There were probably more in town that day than there had been up to that time in any whole week previous.

Since New Years little has happened out of the ordinary run. Daily receipts average medium in quantity and high in grade. Supply while not particularly active is sufficient to clean the market up fairly well each day and prices realized, considering the time—the reactive period—are good.

Bulbous stock moves slowly, but as the supply is light the loss, if any, is very slight. Roses, except Beauties, are few, Perles being in shortest supply. Beauties seem to be off—all indications are that they have reached a low point and from now on will steadily improve.

Carnations good and daily getting more plentiful. Violets coming in good but irregular—a surplus one day and a shortage the next. The greatest need is for more small stuff—marguerites, stevia, alyssum, forget-me-nots, etc. These sell readily at most times and particularly so at present.

AN UNPARALLELED SUBSCRIPTION OFFER.

EVERY one to whom this issue of the FLORISTS' REVIEW is addressed, and who fills out, signs and returns the accompanying subscription blank, accompanied by $1.00, within 30 days from date, will receive not only the FLORISTS' REVIEW for one year but also a certificate entitling him to the earnings on one-tenth of a share of stock in the company formed to publish the paper. The shares will be of a par value of $10.00 each.

Why do we make such an unparalleled offer? It is very simple.

You will have an interest in the success of the paper.

You will see that you can buy everything that you want to just as good advantage from advertisers in the FLORISTS' REVIEW as elsewhere and at the same time benefit yourself by increasing the earning power of your certificate.

This mutual arrangement cannot fail to bring to the paper a heavy advertising patronage, and as a result the stock represented by your certificate will earn good dividends.

And the more you buy of advertisers in the FLORISTS' REVIEW (always mentioning the paper) the larger your dividends will be.

You will get a better paper than has yet been published in this field, and a share of its earnings. Please let us hear from you by early mail.

IN NEXT ISSUE will appear an account of Jaggs' experience with pirates.

THE "Story of an Emigrant Florist" will be continued next week.

WE ARE PLEASED to be able to say that Mr. Scott is much improved and the Buffalo notes and "Miscellaneous Seasonable Hints" in this issue show that his pen is not idle.

THE FLORISTS' REVIEW aims to tell you what you want to know and not what somebody else wants to tell you. If you want information that has not appeared in our columns please write us about it. We will get the information for you if it is obtainable.

WE HAVE not yet fully caught up on the mailing of certificates to subscribers, but are now only four or five hundred behind. The work of making the various entries in our books, in addition to the filling out of the blanks, is very considerable, but we are gaining rapidly now and hope to soon fully catch up with our list. Please be patient if there is some delay in mailing your certificate.

WHEN you send an order to an advertiser please say that you saw his adv. in the FLORISTS' REVIEW.

Palmer's Hotbed Mats

FROST PROOF

MADE expressly for winter covering of hotbeds, cold frames, plants and seeds of all kinds.

INDESTRUCTIBLE, CHEAP AND WARM,

Will not harbor mice or vermin. Easily handled. Dry out quickly after rain. Have now been in practical use three years. Cost less than old-fashioned straw mats and entirely take their place. **MADE IN FOLLOWING GRADES:**

No. 1. **Burlap Cloth,** filled with combination wool and quilted, seams 3 inches apart and edges firmly bound. Size 40x76 inches, 50c each. Size 76x76 inches, 75 cents each. Made any length 76 inches wide, at 12 cents per running foot.

No. 2. **Duck Cloth** outside, filled and quilted same as No. 1. Size 40x76 inches, 75 cents each. Size 76x76 inches, $1.00 each. Made any length, 76 inches wide, at 16 cents per running foot.

No. 3. **Waterproof,** made of oil duck, filled and quilted the same as Nos. 1 and 2. Size 40x76 inches, $1.00 each. Size 76x76 inches, $1 25 each. Made any length, 76 inches wide, at 20 cents per running foot.

That these mats are a **much needed improvement** over anything heretofore used for the same purpose, is demonstrated by the large demand and many testimonials from prominent men in the trade. Everyone using Hotbed Mats should give them a trial. We also make

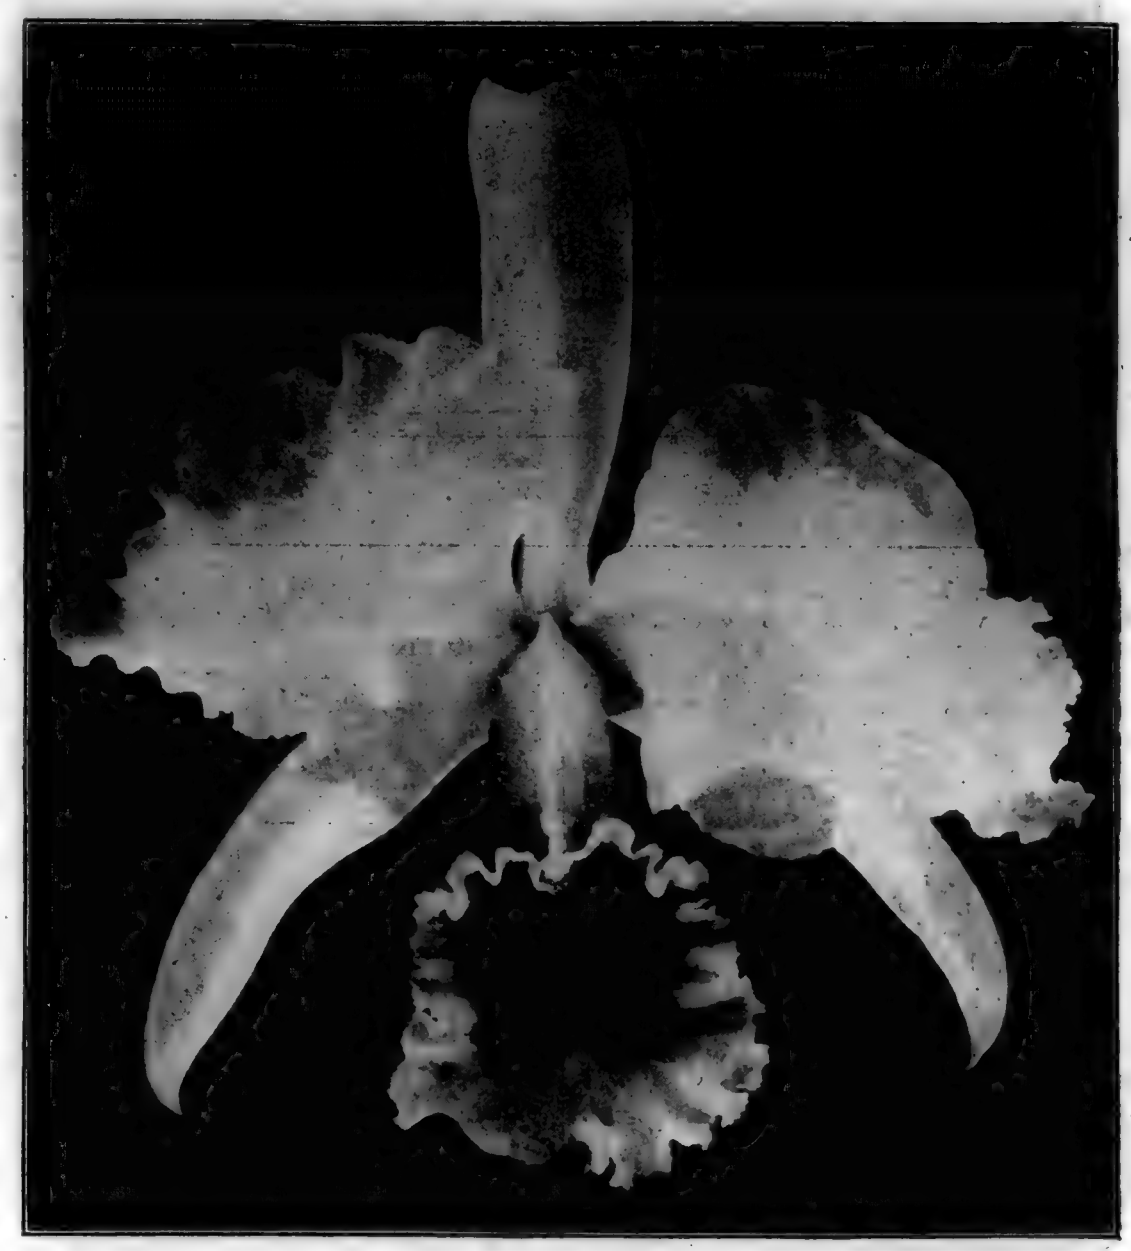
FLORISTS' REVIEW

FLORISTS' PUBLISHING CO., 530-535 Caxton Building, CHICAGO.



Vol. 1. CHICAGO AND NEW YORK, JANUARY 13, 1898. No. 7.

CATTLEYA NOTES.

During the past month, or I should say, since the supply of C. labiata flowers have somewhat fallen off, and before C. Trianæ got fairly under way, the demand for cattleya flowers was quite in excess of the supply, and I have no hesitation in predicting that another year the scarcity will be more apparent, unless the producer endeavors to fill up the gap by the addition to his stock of some varieties that will flower during the interval. Of course you hesitate because no one but the select few can indulge in such exuberance, but the scarcity occurs just at a time when those few are in a mood to entertain, and of course they want, in fact will have, something to adorn their boudoirs and dinner tables, that cannot be procured at street corners or sidewalk floral establishments; be assured the cattleya will be called upon, even to the verge of extravagance.

My intention here at present is to call the attention of the growers to somthing that will put them in a position to meet those demands. Before you proceed, it would be well to consult some old cattleya grower on the merits of Cattleya chocoensis. He may look a little wise and say, "That's no good, it doesn't open its flowers, etc." However, I would advise you to acquiesce with the usual smile or nod, as cattleya growers are all cranks, you know, and have no use for a flower unless it's "just so." But the consumer will have use for this one, and Mr. J. E. Lager, of Lager & Hurrell, must have had an eye to this fact, for when out collecting a year or so ago, in direct opposition to the accepted ideas of his firm, he shipped a quantity of this beautiful cattleya home. This variety is somewhat companulate in the formation of its flowers; by which I mean, they appear only half open, the petals not spreading out as those of other species, but I do not consider this detrimental to its commercial value.

When calling recently at Lager & Hurrell's, I noted two plants in flower, and

Cattleya Percivaliana.

though showing a little of the characteristic mentioned, were certainly flowers that no florist would decry or refuse to handle. The typical color of this cattleya is pure white in sepals and petals, with crimson of varying degrees of intensity in the lips The pureness of the white parts of the flower alone, gives it

Cattleya Maxima.

particular value for decorative work. And pure white forms of it occur, too. Of the two plants I saw in flower, one was pure white with not the slightest suspicion of any other shade except the usual yellow rays in the throat, which occur in all white cattleyas. One more point in its favor is its fragrance, which is very rich and strong, yet not oppressive. There is yet another form, C. Percivaliana, but alas, the cattleya grower objects again. "It is not big enough," he says. True, it may not be so large as Hardyana, but the color is superb, the sepals and petals a deep blush, the lips intense magenta crimson, and the pencilling in the throat something marvelous; and is, I consider, a most desirable variety.

There is still another variety worth noting, C. maxima. The old man may again chime in and say that the variety belies its name, but if it does, you have *multum in parvo*, as it generally throws from five to ten flowers to the spike, which you must admit is quite as conspicuous as two or three larger flowers. The color and markings in this form are all that could be desired by the most perk connoisseur. The sepals and petals of this variety are a bright rose, and the lips are richly variegated, after the style of C. Mossiæ, with dark crimson veins through the center ground color.

With these three varieties in stock, you will not be obliged to hurry forward your Trianæs or retard your labiatas to strike any desired date with flowers.

J. ROBERTSON.

Madison, N. J.

DENDROBIUM FORMOSUM GIGANTEUM.

Dendrobium formosum giganteum is the dream of all orchidists who are at this time evoluting the lists of orchids for cut flowers. Its broad sepals and petals and their pure marble-like whiteness with a delicate suffusion of orange color down the center of the labellum, are its charming qualities; added to these is the size of the flower, it being equally as large as an ordinary cattleya bloom. Such a beautiful flower as this should captivate the most inardent lover of flowers, not forgetting the all important question, "does it pay?" Yes, I can candidly say it does. The blooms are now bringing thirty-five cents to fifty cents in New York, and should not sell for less elsewhere. It has come into prominence as a cut flower within the past few years. This can be attributed to the large importations having been sent here from its native clime by enterprising European firms. It's the old story so often told, "put a good thing on the market and it will soon find a place for itself."

The great question occupying the attention of every one is how to get it there in sufficient quantities to make it profitable. Each plant with one flowering growth will help you solve the difficulty. It is problematical how many flowers each growth will give. This depends entirely upon how well you succeed in their culture. I have seen them produce from one to seven flowers. One need not be a mathematician to arrive at the exact profit to be derived from a few thousand plants.

The space that each individual plant occupies is another matter for thought. The pieces now being sold do not occupy more than six square inches, suspended or standing on the benches. It can be readily seen how many plants can be established in a small house without being overcrowded.

Then again the profitable part of the investment depends upon the original purchase price and the much discussed problem, "Cost of production." In these "cut rate" times they can be purchased at a ridiculously low figure; that is if you have the cash to put down; otherwise it is a hard matter to expect to secure stock of this character, costing as it does large sums of money to send expert orchid collectors to the far East, oftentimes with indifferent results and great financial loss attending the venture, and the frequent physical collapse of the men who are so overwhelmed with enthusiasm to risk their lives for the sole purpose of pacifying our ardent love for those floral jewels of the forests. The cost of growing in my opinion would not be more than a house of roses of similar dimensions, after the stock is established in the house.

The first and most important point to consider, is to get sound, healthy, imported plants to begin with. Half of your imaginary battles are then fought and won. This has been demonstrated by every grower of this nigro-hirsute variety for several years. I think the method adopted by J. M. W. Kitchen, East Orange, N. J., is an admirable one (he has applied for patent). It is a box an inch deep and six inches square; in the center is a beveled block; through this is a wire by which it can be suspended, and at the same time used as a support and to tie them firmly, which is a necessary adjunct to their successful cultivation; a small quantity of fern roots or fibre wired in the box to serve the double purpose of holding moisture and allowing material in which the plants can establish themselves.

It is not necessary to confine yourself to this idea, as blocking or basketing will answer the same purpose. Independent of these conditions while growing, moisture and light are the foremost factors in producing strong pseudo-bulbs which will give profitable quantities of large flowers. Last, but not least, the temperature will make or mar the destiny of the plants and the "almighty dollar" invested in them. I would suggest close

Bed of Mrs. E. G. Hill Geraniums.

attention be given to these facts to cultivate this most beautiful species and to make it financially interesting.

Short Hills, N. J. F. L. ATKINS.

BED OF MRS. E. G. HILL GERANIUMS.

The accompanying engraving shows in the foreground a bed of the semi-double salmon pink geranium Mrs. E. G. Hill as it appeared at Lincoln Park, Chicago, last summer. Mr. Stromback considers this geranium one of the best of the pink varieties. The habit is nearly as strong as that of Bruantii and it not only blooms with great freedom but carries the flowers well above the foliage and stands the hot weather well.

The bed is bordered with Alternanthera latifolia, whose foliage is chocolate colored, with rosy tips. It grows about eight inches high and makes a good border. Method of propagation is the same as that of A. latifolia aurea. The bed of Caladium esculentum in the background is bordered with Coleus Verschaffelti.

COMMERCIAL AMARYLLISES.

A request has been received for a few notes on commercial amaryllises such as "Johnsoni", vallota purpurea, etc., but the mere suggestion to bring these forward to public notice prompts me to ask whether having regard for all that has been done by hybridists on the other side in raising improved and very fine types, we should not avail ourselves of these and by growing them, more rapidly achieve the desired end. Someone may question the desirability, but he who would do so can hardly be cognizant of the vast strides that have been made along the path of improvement, the magnificent varieties that now exist by the hundred.

These of course are high priced and outside the pale of profitable commercial spheres, but they represent the selections from the strain as it exists to-day and amaryllises can be raised by the thousand from seed only slightly inferior in point of merit and of such great beauty that they would assuredly sell on sight, being choice to a degree and showy beyond measure. Why, the hybrid amaryllis of to-day embrace so wide a range of color that you can have them in all the gradations of shades from a crimson, that will vie with that of the Meteor rose, down to almost white, the flowers produced in clusters of from two to five at the top of a stout stem, varying up to two feet in height. One could neither imagine nor desire a more gorgeous flower for cutting and in this respect it meets the requirements of the cut flower trade here, with its fine stem which makes it amenable for decorative use in a bold and striking manner, added to which the flowers are enduring when cut.

For the benefit of some readers who may not know the amaryllis, I may remark that it is a bulbous plant and has an enormous root, as large or even larger than a man's fist when fully grown. The wild species, some of which will be enumerated later, are mostly natives of tropical America, growing chiefly in Brazil. Some of these wild species have been in cultivation in European gardens 200 years or more, and are so mixed up in the latter-day hybrids that no one would venture a decided opinion as to their exact parentage. That is a matter of the past and of incidental interest only, but I am convinced that very much might be done with these flowers as we can have them in the present day. Further, their season of flowering is the season when flowers are in great demand, from Christmas to Easter, so here again is afforded a grand opportunity to grow something that will be a break-away from the conventional lines.

Seedlings.

To work up a stock from seed may at the outset appear a slow and tedious process, with a long and weary waiting for results. I admit this is so to some extent, and not a few good things are of slow growth. There is this assurance, that when you have raised your bulbs and brought them to the flowering stage, you can keep them afterwards with proper attention. They have not to be discarded as you would a tulip. Once you have a stock of flowering bulbs, the raising of a batch of seedlings gives a zest to the cultivation and by a process of weeding out one could work up a strain to a high degree of perfection.

The best time to sow the seed is immediately it ripens, which is during July, but as the beginner must of necessity purchase the seed, the early months of the year may be chosen. Although the seeds appear of fair size, the actual germ is small, being protected by a silky integument, and when sowing them let it be in pots or pans of fine sandy soil. Place each one individually a little apart, and if the seeds are slightly pressed in the soil, edgewise, and kept in this position, it will conduce to securing a larger percentage of growth, as when lying flat the seeds are apt to absorb too much moisture and rot in consequence. A pane of glass over the seed pot helps to check evaporation, and when sowing operations are complete, if the pots can have the assistance of bottom heat to the extent of 80°, the seeds will soon germinate. The overhead temperature should not exceed 60° by night, with a proportionate rise by day, and as soon as the seedlings appear they should be inured to full light and airy conditions.

If the seeds have been sown as advised, a little apart from each other, there will be no need of disturbing the seedlings til

they have made three or four leaves and the bulbs have commenced to form as well. Just as soon as they reach this stage, pot them off singly in well drained 2½-inch pots, being careful to press the soil good and firm about the miniature bulb, which should be at a depth so that its neck is about on a level with the surface soil. From now onwards they must be kept growing briskly and as soon as they have filled their pots with roots, be shifted on into a larger size, 4½-inch being usual, but the careful grower may expedite progress by saving an intermediate shift and put the plants into 6-inch pots direct.

Plants from seed raised as here advised should be kept growing summer and winter until they reach the flowering stage. Ordinarily the amaryllis rests completely several months of the year, but the young ones must not be subjected to any resting conditions before the second summer of their growth. As autumn approaches, the treatment should be with a view to ripening the bulbs by admitting air freely, and gradually withholding water throughout the winter after the leaves have ripened and fallen, and keeping the plants at a temperature of from 45° to 50°. This treatment is for strong bulbs, capable of throwing a flower spike. If there are weaklings in the batch they had better be withdrawn and kept growing on for yet another year.

When once flowering bulbs are secured the annual treatment is a matter of routine. After the usual rest the bulbs must be started again, January being the usual month. The bulbs should be turned out from the pots, all or nearly all the soil shaken off, and the bulbs repotted in a good compost of three parts loam and one part thoroughly rotted manure, size of pot being governed by size of bulb, 6-inch and 8-inch being the best sizes. Very little water will be required at the start, and the flower spike or spikes will soon appear pushing upwards from the base of the bulb, and in advance of the leaves. In a general way a batch of plants may be brought into full flower in eight weeks from starting them. Bearing this in mind when one has a large stock it is possible to have success on all batches to a limited extent, starting some as early as December and deferring others until March.

As before remarked, the flowers come first, the leaf growth afterwards, and there must be no abatement of interest or lack of attention when the flowers are cut or faded, as the grower from then onwards has to lay the foundation, as it were, for the next season's blooming; so active growth must be maintained on into the month of August, from then to September conditions favorable to ripening must prevail, and then comes rest in a slightly lower temperature.

To sum up in brief, there are six months of active growth and two months of preparatory treatment for the four months' total rest. These seedlings will of course show the fullest range of variety in color, somewhat also in form and more or less likewise as to flowering propensities. While all should give a spike of several large flowers, some bulbs may give two, and a few will develop three, as one I once saw exhibited having sixteen large flowers.

So far these details of treatment apply to raising stock from the seed strains at present obtainable in the seed trade, but there are some really good species that have been more or less popular in cultivation, as Amaryllis aulica, from Rio Janeiro, at one time greatly prized for its beauty before hybrids became numerous. It has very large flowers of a rich crimson color with green base. A. reticulata, from Brazil, is prettily colored in pink and white. A. Ackermanni, rich crimson, and A. vitatta, white, striped with red, are two parents that have contributed largely to the hybrid race. I must not forget A. Johnsoni, granted specific rank, but in reality one of the earliest hybrids and a fine variety still, to be recommended for its robust growth and free blooming, its flowers deep red with a white band down the center of each petal or segment of the flower.

South Africa has given us a fine member of the amaryllis family in Vallota purpurea, and surely it is worth while working up a stock of this for commercial purposes. Although belonging to the same family it is evergreen in character, therefore demands some modification of the treatment before indicated. In its culture it must never be subjected to complete resting conditions, nor does it need annual repotting. It increases freely by offsets, can be grown on into magnificent specimens and flowers most abundantly when large, old and pot-bound.

There is beside me as I write a picture of a large specimen that had been photographed, fifty-three spikes of blooms each having from five to seven flowers. They are fully three inches across and their color is bright red. The vallota has been in cultivation over one hundred years, so that a quantity of it should be easily procurable, and I believe bulbs can be imported from its native haunts. Ordinary greenhouse temperature suits it at all times, with abundance of water during the spring and summer months. It flowers late in the fall and at this period might be made of considerable service to the florist. During winter it may be partially rested with a diminished water supply, but at no time should it ever suffer for want thereof.

Sprekelia formosissima, another handsome member of the family, is now more often called Amaryllis formosissima but the first is an old garden name and is likely to linger longer yet. It is a native of Mexico, from where it was introduced to Spain in 1593, while Parkinson wrote of it as the "Indian daffodil with a red flower." The Dutch grow this in large quantities and it is easily procurable at a cheap rate, while the bulbs planted out in spring flower shortly after. It can be grown in pots, however, and might be found a useful flower for the latter part of spring, when some novelty is welcome. Under pot culture its treatment would be much the same as that for the hybrid amaryllises, resting it completely in winter, while after flowering in spring the plants might be removed to some frame or simple outside structure wherein to complete and ripen their growth. The flowers are of a uniform rich dark crimson hue, about five inches long, but rather less in width, the two lower segments of the flower having their bases enfolded, imparting to the flower an unique form both quaint and pretty. The flowers usually come singly on a stout stem a foot in length.

A. Herrington.

Madison, N. J.

ROSES

THE AMERICAN BEAUTY.

No better Beauties come to the Chicago market than those grown by Mr. E. Buettner, Park Ridge, Ill. Mr. Buettner is now propagating his plants for next year. He uses cuttings with from two to three eyes. He prefers these to one-eye cuttings because they carry the foliage higher above the sand, and because there is apt to surely be some foliage left to support the cutting in case some should drop. And he finds that the longer cuttings root more freely and make better plants. Beauty cuttings drop their leaves easily and a cutting without at least one leaf remaining is considered worthless by Mr. Buettner. He knows that some growers pot up the bare poles if they have roots, but he doesn't want any such plants in his. He is not particular as to what part of the plant the cutting comes from so long as the wood is ripe but not too hard.

He pots the rooted cuttings into 2½-inch pots and these are later shifted to 3-inch; and probably the earliest propagated are shifted to 4-inch before planting out time, which is about the middle of June. Thrips are the greatest pest the Beauty grower has to contend with. They can be kept down only by frequent fumigation, which must be thorough and not less often than

Livistona Rotundifolia.

twice a week. The insects attack the flower bud when very young and tender and the injury results in malformed flowers or "bullheads." If the attack comes when the flower is partly developed the outside petals are blistered. The American Beauty seems to be especially attractive to thrips and Mr. Buettner fumigates his Beauties more frequently than other roses on that account. Of late years he has vaporized tobacco extract instead of smoking, and has found this as effective and better than smoking, and just recently he has vaporized Nikoteen with good results. He is now experimenting with the Nikoteen paper. He thinks this may be useful in summer time when it is less convenient to heat irons for vaporizing. He uses the hot iron method of vaporizing. Pans of the tobacco extract or Nikoteen are placed in the house and then a hot iron dropped in the liquid.

He finds that thrips are most troublesome in hot, dry weather. He has had houses apparently quite free from thrips, which after a few days of hot south wind in May would be suddenly alive with them. Such a condition must be met by thorough fumigation or vaporization not less than three times a week until the pest is subdued.

He notes that the plants in the coolest end of a house of Beauties set buds first, and finds that a house of blind Beauties can be forced into bloom by keeping cool and on the dry side. A grower who had kept his Beauties too warm and whose plants were all blind, acted upon his advice as to keeping cool, but gave too much water, and failure was the result, but later when both conditions were observed there was a fine crop of flowers.

Mr. Buettner also prefers two or three eye cuttings of Brides and Bridesmaids, for the reason that the long cuttings have more foliage and there will be enough leaves left in case some should drop while the cuttings are in the bench. He always uses blind wood for cuttings. The wood must be ripe, but not too hard.

LIVISTONA ROTUNDIFOLIA.

Though not actually a new species, it is only in the last few years that the dwarf Fan Palm, as Livistona rotundifolia is frequently termed, has become available as a regular trade species, this condition depending in a great measure on the supply of seed and the readiness with which it may be germinated, other necessary qualifications being assured.

In the species here illustrated the necessary good qualities of beautiful form and color, combined with moderately rapid growth are all present, and while the supplies of seed offered have been by no means excessive, yet enough has been received to bring this palm into deserved prominence before the plant-buying public.

The fan-like leaves of L. rotundifolia are nearly circular in outline, but divided into a large number of narrow segments, the latter being split or bifid at the tips, a characteristic common to the leaflets of livistona. The leafstems are stiff and armed with strong, recurved teeth, that are usually brownish in color, and the base of the stems is more or less surrounded with brown fibre, this being more noticeable as the plant attains age.

In habit this plant is compact, and for trade purposes is most useful in 4 to 6-inch pots, though it also seems probable that a market would be found for well grown specimens of somewhat larger size, were they to be had. In its native habitat, the Malay Islands, L. rotundifolia grows to a height of fifty to sixty feet, and produces leaves five feet in diameter, the leafstalks also becoming six or seven feet long, from which it will be seen that the dwarf habit of its juvenile form may be altogether missing in the mature palm.

The seeds of this palm are about the size of large peas, and nearly round in form, and when fresh seem to germinate about as freely as those of its relative, Livistona chinensis, (Latania Borbonica) providing they are sown in light soil, kept moist and given moderate bottom heat.

The young plants of L. rotundifolia are somewhat susceptible to over-watering, especially during the winter, but should be syringed thoroughly to discourage red spider, the latter being a likely pest in a greenhouse kept at 65° to 70° at night, which seems to be about the right temperature for this plant when small.

W. H. TAPLIN.

WORK FOR FLORISTS' CLUBS.

The following was read before a recent meeting of the Morris County Florists' Club by Mr. John Jones:

MR. PRESIDENT AND GENTLEMEN:—I wish in a brief way to make a few remarks on the past and future of our club, and to make a few suggestions for its benefit.

First. I propose a vote of thanks to the officers who have worked hard from the first to make our club a success, and also to the many friends who have backed us up so liberally with their gifts and encouragement.

Second. I propose that the members bring any grievances they may have before the club at its monthly meeting to settle any disputes, and so understand one another and let good fellowship prevail.

Third. The club should be made as helpful as possible to all. I think the club should be made a medium between those needing help and those needing employment. A question box and one for information.

Fourth. Members in the trade could present samples and price lists, and should be patronized as far as possible instead of non-members.

Fifth. The club should be a purchasing bureau, furnishing its members with supplies at wholesale rates.

And now, gentlemen, all we need to make us successful in the future is unity; with this we need not fear millionaire florists or anybody else, for we are strong. Without unity no club ever did or ever will stand. We must be prepared to meet with differences of opinion and to give in sometimes for the general good of our club.

THE TRAIL OF THE PIRATE.

The night fireman sat on the edge of the potting bench, studying a back number of *Reynolds' Newspaper*. After a week of incessant fog, during which the "old man's" opinion of the weather and its effect upon the Christmas rose crop, as expressed around the houses had been sufficient to keep the entire establishment warm, a sudden blizzard had lowered the temperature, and night firing meant hard work. The door opened with a crash, and the men, fresh from supper, streamed in, stamping the snow off their boots. Marmaduke, the parrot, retreated upon a pile of flower pots, keeping one watchful eye upon Tommy Atkins, who had threatened his life since catching the disreputable bird in the act of burying his favorite pipe in the sulphur barrel. The men settled down in easy attitudes on the assortment of boxes and barrels that formed their usual seats, and Tommy reached out towards the fireman, remarking: "Give us 'old o' that there paper, and let's see if some 'un aint died and left me a fortune or somethink. Blessed if 'ere isn't a yarn about some chap as dug up a box o' gold, down along shore. Pirates, I s'pose, or that there Spanish Harmady, or somethink."

"I once made somethink out of a pirate myself," observed Jaggs, who had possessed himself of the fireman's pipe, which he was now filling with the Scotch propagator's tobacco. "Can't none o' you chaps offer me a light for my pipe?"

"I reckon as the pirate business would be right in your line," observed Tommy Atkins, who was softly whistling "Mrs. 'Enry 'Awkins," while he dissected a brown jean apron for the purpose of making some needed repairs to a suit of blue jean overalls.

"Confound you, that's my apron," wrathfully interjected the horticultural graduate.

"Never mind, old chap," was the soothing response. "There's 'eaps o' sackin' lyin' around, as 'll be lots more perfessional than this 'ere nussmaid's apron as you've been wearin'. What was you sayin' about pirates, Jaggs?"

The horticultural graduate retreated to the sphagnum barrel, where he sat studying an experiment station report with an air of ostentatious culture. He glowered angrily at Jaggs, who, after advising him in a tone of paternal affection to "drop that there Laura Jean Libbey truck and read somethink as 'll elevate yer mind a bit," began to discourse upon the subject of pirates.

"I reckon some o' you chaps may remember the old Bloomfield place down in Jersey? Old man Seden sent me there when I first come to this bloomin' country. They wanted a chap as could show 'em how to grow orchids. They say as it was a fine chance for a chap as wanted to get along, and wages wasn't no object. They wasn't neither, because there wasn't nothink a chap could spend 'em on within ten miles. Any o' you chaps know that country?"

There was a momentary pause, broken only by Marmaduke, who appeared to be talking in his sleep, and Jaggs continued:

"The greenhouses wasn't more than half a mile from the bay, and somewheres down that bay they say as one o' them bloomin' pirates as used to go picknickin' around doin' a salt water holdup has buried his whole lay-out. The folks say as the old chap buries one o' the men along of the stuff to look after it, not takin' any stock in savin's banks, and as he gets it in the neck from a man-o'-war the very next time he tries one o' his little excursions, he don't get a chance to dig it up."

"And I suppose you believed that yarn and tried your luck at digging," observed the horticultural graduate with an air of friendly pity.

Jaggs filled up his pipe again, and continued, ignoring the last speaker with wellbred composure.

"There was lots o' chaps rockin' around the shore as tries diggin', but mostly they gets scared off, thinkin' as some o' they pirates doesn't stay buried, and goes prowlin' around nights. Then the yellow journals has a shy at it, tellin' about casks of gold as the piners along shore is diggin' up, and a lot o' chaps from the city comes sneakin' around nights, exercisin' with shovels down on the sand. One night I was on duty, I see a light down by the creek, and I says to myself 'There's another o' they amerter pirates,' and I thinks as I might give 'em a little song-and-dance on my own hook. So I picks up a few things as I think may come in handy, and then me and Rags, the boss's bull terrier, strolls down to the shore. Pretty soon I hears the pick and shovel goin', and then I just drift into a clump o' scrub cedars, feelin' as I hadn't better break into the chorus till I gets my cue. There was three chaps diggin', and one as was bossin' the job, with a little terrier sittin' by, lookin' as though he hadn't much opinion o' the outfit. I didn't mean to make my deboo for a while, but bein' cramped a bit from standin' I drops a piece o' chain as I was carryin'. You see, the old pirate was hanged in chains, they say. The chaps as was diggin' say, 'What's that?' but no one says a word, and they go right on, when Rags took a notion to go on and take in the show himself. You see when I start out, I thinks as a brindle bull terrier don't show up agen the landscape after dark, so I hunts up the old man's phosphorous bottle—what he uses to kill rats with—and touches up Rags's complexion. Lor', you never see such an Aurory Borealis o' a dog! The chaps as was diggin' gives one look at Rags, and I reckon as phosphorescent dogs wasn't much in their line; then I jollied 'em a bit by clankin' my chain and givin' a few groans and the whole outfit makes a beeline for their boat. I never see such sprintin.' Before they know where they was at, they was pullin' down stream, and me and Rags was gatherin' in a few souvinirs. Their overcoats was pretty good and so was their shovels, but their lunch wasn't what I expected—mostly cheese sandwiches—and a flask as was in one o' the overcoat pockets hadn't nothink in it but raspberry vinegar—a regular con game. I drink about half of it afore I find out what it was. Rags eat most o' the sandwiches, but then he was that proud of his make-up that he'd eat clinkers or experiment station reports. I reckon as the chaps as was diggin' was some o' they yellow journalists; they say in some o' they Sunday papers how the pirate's grave was guarded by a fiery lion fourteen feet tall, and I reckon that was Rags."

"I wonder how much of that yarn Jaggs expects us to believe," observed the horticultural graduate, pleasantly.

"Well, old chap," observed Jaggs

Bunch of well grown Stevia.

with surpassing affability, "if yer mind ain't equal to believin' it all at once, you might try believin' it in sections. I hate to strain a buddin' intelleck."

There was a general chuckle, when attention was diverted by the greenhouse cat, who was discovered sneaking over the flower pots, apparently stalking Marmaduke, who, with his head bent over upon one shoulder, appeared to be sleeping the sleep of the unjust. The cat was just crouching for a spring, when Marmaduke made a sudden rush at her, ejaculating "Scat!" in a hoarse falsetto. Pussy rushed for the boiler pit with a highly electrified tail, and the last sound heard as the party broke up was Marmaduke attempting to whistle "The Streets of Cairo" very much off the key, and with a surprising number of omitted notes.

WELL GROWN STEVIA.

We present herewith an engraving from a photograph of a bunch of stevia grown by Mr. E. Buettner, Park Ridge, Ill. Such a bunch makes a very attractive addition to a box of cut flowers and is quite different from the bundle of lanky stems bearing a few flowers at the ends only, and which is so often seen. It pays to grow good stevia just as it pays to grow good roses or good carnations, and many florists are obliged to depend at the holidays upon their stevia to give the appearance of quantity to a box of flowers.

Mr. Buettner carries over about two dozen plants for stock and they are planted in a box to economize room, but they are given a light, airy place in a cool house, and are never placed under a bench or in a similar unsuitable position. There they are kept till April or May, when cuttings are taken for propagation. The cuttings formed in the cool house will be small and rather hard and these make the best plants. When rooted the cuttings are potted into 2½-inch pots and then kept in the same house as the young chrysanthemums. Later they are transferred to 3-inch pots and about July they are shifted into 4-inch pots.

Soon after this they are placed outside in an open frame, and if freshly repotted it will be wise to have sash ready to place over them in case of heavy rains, to prevent over watering. The plants remain in their pots till the latter part of September when they are planted out in a bench of poor soil in a cool greenhouse, but where they will have plenty of light. Heat and shade result in rank growth and few flowers. At each repotting the plants are cut back, merely pinching out the tip of each shoot. Don't shear off the tops if you want shapely sprays and keep the plants outside as long as safe to do so. If there is much warm weather after the plants have been benched there is apt to be too much growth and fewer flowers.

The last pinching is given about the middle of September, or shortly before the plants are taken inside. Using poor soil will help materially to avoid growth after the plants are housed. Place the plants about twelve inches apart on the bench. You must allow light between the plants to secure flowers on the side shoots. A night temperature of 50° is about right and the plants must be kept on the dry side. Everything that tends to rank growth is to be avoided. The dwarf form (Stevia serratifolia nana) is grown, and this will grow too tall and lanky unless prevented by the treatment noted.

In bunching for market the long and short stems are bunched together, the shorter ones on the outside, as seen in the engraving, so as to make an attractive bunch. And a bunch so arranged is a graceful bouquet in itself.

STORY OF AN EMIGRANT FLORIST.

III.

At the end of the walk with its trellis roof of aristolochia, we enter the old-fashioned conservatory. If it still exists it would look very antiquated with its ridge and furrow roof, and numerous broad leaden gutters. I do believe that we could now build a first-class rose or carnation house, 20x100, all complete, for what that quantity of lead cost. There were many plants in this old conservatory that will never be forgotten, and when I see them again or inhale their perfume it carries memory back forty years, as the notes of the blue bird or the piping of the frogs every spring when first heard, will carry you back to the days when you first heard them, and the scenes with which they were associated. Besides camellias, not by the hundred, but by the bushel, were oranges in quantity, sufficient to make marmalade, an old white heliotrope and near it a Gloire de Dijon rose, trained to the south side of the house, but hidden by large camellias planted in the borders. The mingling of the odor of orange blossoms (for there were always some), heliotrope, a sweet little magnolia, with the ripe fruit of the citron and orange, and many other contributions, made up a chaste sweetness that I have never realized since.

It was here that I first knew what a chrysanthemum was. They were humble flowers compared with our monsters of today, but that was a day when with the majority they were not in fashion. Another plant, now so common with us, but little grown forty years ago, was the spiræa or Astilbe japonica, and pots of our American Trillium grandiflorum, grown just as we grow spiræas and very pretty and attractive it was. In the center of one of the broad borders grew a large citrus, round, green and bitter. Perhaps it was the shaddock. Whatever it was, we boys innocently and in good faith told thousands of visitors was the forbidden fruit, the same which Adam was tempted to taste. Now and again I can remember a sly look of skepticism in response to our innocent narrative, but the great majority swallowed it. I can only say that whoever has tasted this great, round, bitter fruit, can believe that there was a good deal of coaxing as well as tempting. It must have been either sugar-coated or a reward offered, as our dear mothers used to give us a spoonful of jam after swallowing a pill to please them and incidentally for our health.

This old-fashioned conservatory was attached to the mansion, the summer residence of the proprietor, a very modest pile of brick and stone that has many years passed away. A new owner pulled it down and in a more commanding part of the grounds has built an imposing pile, a modern castle. This estate is now owned

by Sir Frederick Fitzwigram, for whom that early white chrysanthemum bears the name of his wife, "Lady Fitzwigram." But it is not of the modern place I wish to write or think of; for when I saw it last it looked to me as if torn to pieces by vandals. Old-fashioned as this modest mansion was, it has given hospitality to many illustrious lights of the nineteenth century. I remember one evening looking from the darkness of the exterior into the brilliant light of the dining room and there seeing the well pleased host, surrounded with seven of England's episcopal bishops. How rich would be a phonographic reproduction of all that was said that night over a dinner that took three hours to discuss. I will wager that theology was not the only subject introduced that evening.

Stepping out of the south door you were on the colonnade, at the west end of which were broad stone steps leading down to more pleasant walks and grounds near which stood two trees which all old countrymen know, but which are strangers to many readers of the REVIEW. They were a grand specimen of Cedrus Deodara and the Cedar of Lebanon, neither hardy in our latitude. Looking south you saw the park extending perhaps three-quarters of a mile, but before the park was reached, a beautiful lawn, studded here and there with clumps of evergreens and masses of rhododendrons, but never hiding the view of the park, the distant copse and beyond all the English channel.

In the lower left hand corner of this part of the garden was what was called the American garden, but looking back I cannot remember much that was American excepting a lot of the heather-like cranberry, which sometimes bore a crop of berries and then again as often they did not. Speaking of cranberries, we knew they made nice tarts; we also knew from early infancy that a Norfolk turkey was superior to any other gobbler from any other region in flavor and general makeup; but we had not then learned that a mixture of the two is a delicious epicurean taste. Our education was sadly lacking in things of that kind, but the acquired knowledge has not become such a fixed habit that we refuse turkey where forethought has neglected to provide cranberry sauce.

We will retrace our steps, not that we have to, for I could lead you by many interesting paths, but this is the most direct to the other glass structures. A few steps north of the ancient conservatory we enter a walled garden. No such gardens will ever be built in this country. They were most likely constructed there for two reasons. First, on account of the excellent place the brick walls offer for the training of the peach, nectarine, apricot, cherry, and other fruits. (The first of these three delicious fruits will not ripen without the shelter and warmth given by the wall.) And perhaps secondly to entirely exclude what was once called ground game, now called vermin, hares and rabbits, which are a terrible scourge to the gardener, where fruits and vegetables are grown. These fruit trees are trained against these nine or ten foot walls with the greatest of skill. Many a florist, now in business here, will remember how many a frosty morning he had to leave his bothy and march off with his bag of nails and strips of cloth to train a peach tree and he had to know how to do it. As well set Harry Bunyard to play a match of billiards with a Sexton as set a greenhorn pruning and nailing an apricot.

I said these walled gardens would never be built here, the reason simply being a geographical one. What that northern climate in summer needs we have in abundance. Sometimes a peach tree nailed hard and fast to a brick wall here would, in July and August, blister and burn; besides that it is not necessary that fruits ripen as standards. Remember, young reader, you are in the land of fruit. If you were in the tropics you could not be more so. You might there get some fruits that are scarce here, but for a large variety, the most wholesome kinds, and the cheapest cost you are in Pomona Paradisia. When you don't have the wholesome fruits of our northern temperate zone, you have the products of our southern states, the fruits of the Pacific slope and the exotic offerings of the West Indies at your door. There are millions and millions of little boys and girls, and big ones, too, in the British Isles, who never in their lives tasted a peach, a melon, or a grape, and to whom even an apple, pear or plum would be a luxury never to be forgotten. Money will produce and buy anything, and so in these islands that I am writing about, the favored few have at their command the most exquisite and luscious pineapples, grapes, peaches, plums, etc., that the world produces, for unstinted wealth and science are brought to bear in their production; but to the million they are as much a rarity as the eye tooth of an Egyptian mummy. The two fruits pre-eminently good and largely distributed among the cottage gardens of England, Scotland and Ireland, are the strawberry and gooseberry (climate again cool and moist). However, there are not enough of these humble fruits or anything else to go round among the masses, so large groups of the people are satisfied with oatmeal boiled, and for a variation, and sometimes to save time, not boiled; while another large section feast for seven days of the week on potatoes and salt, and for a change potatoes without salt. And they are mostly a hardy, industrious people, who never having tasted luxury, don't miss it. Where any people can bask in the sun and sustain life on a bunch of grapes or dress in a fig leaf and live on a banana, a feeble race will be found, but where the land must be ploughed deep to produce a crop, mountains must be climbed to the sterile hill farm, a race of people will be the result that when opportunity is given them, they are leaders of men.

But I must return to the garden. Before I leave these peach trees let me say that besides the very wealthy, the small boy who has the right to prowl round these gardens comes in for his share. A peach or nectarine that has fallen is bruised and would not be fit to send "to table," so if the small boy should find a few fallen he is not committing grand larceny by stepping lightly on the border and off with his prey; and if none have fallen through perfect ripeness, a gentle jar on the stem of the tree will accentuate the fall. That was wicked but such is a boy's appetite for fruit. What beauties these were! A "Royal George" or "Grosse Mignonne," much larger than a base ball, with rosy cheeks from which was ready to burst forth a glass of unfermented wine. It must have been at sight of fruit like this that the lamented Charles II, when handing one from the walls of Hampton Court gave utterance to that immortal classic "She's a peach"

On entering the iron gate of this walled garden before you was a gravel walk perhaps 200 feet long, bordered with little box edging, and back of that on each side a flower border of some twelve feet, then an evergreen hedge and behind that on right and left were garden squares devoted to Dr. Johnson's favorite flower, the cauliflower, the celery, artichoke and other useful things, but you, the visitor, were not aware of these plebeian plants and herbs. You were conducted up this broad walk on each side of which was the first attempt at what we called the ribbon border. I am not sure it was called anything for fear of being conventional, for nothing in name or deed was liked of that kind. It is so many years ago that I forget the different combinations. There was the blue lobelia and of course the Calceolaria aurea floribunda, a scarlet geranium, Salvia patens, Cerastium tomentosum. The echeveria and sempervivum were not yet in use and the gay little weeds, the alternantheras, if known were not in use. But a very different plant was, and one you seldom see here, Crassula coccinea. Back of these rows of plants came dahlias (grown properly, as Granger Bros., of Toronto, do them) and then hollyhocks, in the days before the disease was known.

At the end of the walk you entered the house built especially to accommodate the Victoria Regia. This house was an octagon with a basin of water thirty feet in diameter. It was built about 1850, perhaps before. This giant nymphæa of the equatorial waters of America was discovered in 1838. All of you have seen it growing, but only a few of you have seen it well grown. From the first attempt in this octagon it was an unqualified success, leaves attaining in diameter the width of more than seven feet. Many a little boy and girl have I seen standing on one of the broad leaves, but always a tea tray between their little feet and the leaf. This plant was a much greater novelty in those days than now. In the pool at the side were specimens of the Nelumbium speciosum. In this country this majestic water plant grows or would grow in almost any pond, and I am told has spread out and taken possession of many acres on the margins of lakes in Indiana. There was a clump of the papyrus (Cyperus papyrus) which we called the Egyptian bullrush, and which we informed the visiting pork butcher and his family were the rushes that Moses was hidden in. If we had told them that the ancient Egyptian and the modern St. Louis bowlers used it as a writing material to record their scores on, they would also have believed it.

Nephrolepis Rufescens Tripinnatifida.

In this basin of water, which was always warm, for several hot water pipes heated the water every day in summer, and which was never stagnant, for there was a continuous flow in and a corresponding overflow, there were thousands of gold fish. Beginning with a few they, as some of the races of men, increased and multiplied. Now can fishes hear, or have they only sight? When the door was opened, or perhaps more the vibration of the shutting, the shoals of little fish would sail up to where they were usually fed. If they cannot hear then there was a good deal of wind expended for nothing, for to whistle while feeding them was as natural as for a boy to whistle when he feeds his pigeons, or an old country stable man to hiss and blow as an accompaniment to the curry comb. "Keeps the bloomin dust hout o' yer mouth ye know." Every child knows that the sense of hearing is the waves of sound vibrating on the sensitive ear, sharp or soft, loud or long, as may be the vibrations which is nothing but disturbance of the atmosphere. We have heard this subject argued: "Can fishes hear." We suspect they can. A vibration of the water falling on their heads or perhaps tails is to them their sense of hearing, and with this solution of this knotty question I will say good night. BIBBER.

[To be continued.]

NEPHROLEPIS RUFESCENS TRIPINNATIFIDA.

This form of N. rufescens is a decided acquisition to any collection of ferns, and when well cared for soon becomes a beautiful specimen. It is one of the most distinct of the sword ferns, a strong grower and comparatively erect in habit, as will be noted from the illustration.

The fronds of N. rufescens tripinnatifida are quite broad, dark green on the upper side, and rather lighter below; the stems and crown of the plant, and to some extent the under side of the fronds being covered with a brownish tomentum. The pinnæ are deeply cut into narrow segments, and are so closely set on the stems as to overlap each other.

This variety grows more rapidly in a warm house and will not stand quite so much exposure as the various forms of N. exaltata and N. davallioides, and in common with those varieties soon suffers from lack of moisture at the root, such treatment resulting in the gradual dropping off of these things from what they used to be.

W. H. TAPLIN.

MISCELLANEOUS SEASONABLE HINTS.

Fern Pans.

There has been an equal, if not greater demand for the little pans of ferns in more or less costly receptacles, for the table this winter, and it is one of those modest but chaste decorations which is likely for a long time to be in favor with our best customers. Ferns that are suitable, that have the finely cut fronds and are in any degree durable under the conditions, are very limited and are not yet raised in quantity equal to the demand. There is a good field yet for several people to make a specialty of this business. It has occurred to me that one of the very best plants for this purpose is small specimens of 2 or 2½-inch pots of Asparagus plumosus nanus. When fairly well ripened the fronds, as they may be called, will outlast any fern that is available. Seed is now advertised at $10 per thousand, less expensive in larger quantities. If fresh home grown seed, it will nearly all germinate. Sow within a few weeks and by next October you will have a fine little plant that will be superior in appearance and far more durable than any fern you can put into the "dish." I sowed a thousand seeds as late as August of last year, and have used many of the little plants lately for the purpose I am now advocating. They have occupied a shelf since potting off from the seed box and being in 2-inch pots, have cost very little for space or care. Of course I am not recommending the asparagus to displace any of the useful ferns, but as a most valuable addition and a plant you can raise yourself at less cost than you can buy small ferns by the thousand. A temperature of 55° at night will suit asparagus at all times, and those to be used as recommended, should have the full light. I have used the word durable several times, and remember unless the fernery lasts fairly respectably for four weeks your customers will get tired of having them refilled. When a palm or any plant does well it encourages our patrons to purchase more; continual failure is the parent of discouragement and disgust.

Bougainvillea Sanderiana.

A plant that will sell at sight the coming Easter is Bougainvillea Sanderiana. It adapts itself to any form you wish to train it. If they have been treated as they should, that is kept quite cool and on the dry side, they should now be put into a heat of 60° at night and kept syringed till showing color. If they were plants lifted from the ground they would need no more shifting at present. If plants carried over in pots during summer, they may need now a larger pot.

Lemon Verbena—Lantana.

There is always a demand for that sweet scented plant, the lemon verbena. Everyone who has a mixed border wants a plant or two, and they are more often very difficult to procure in satisfactory shape. Plants that were kept in pots last summer and laid under the bench to rest at approach of frost should now be started growing, as they are dormant. You can shake off the old soil, repot them, shorten back the weak growth, and start them growing. They will soon push out lots of young growths, which always succeed in rooting in the sand as easily almost as the common verbena, but they nor any other cuttings should ever be allowed to wilt from want of sufficient moisture in the sand or too strong rays of the sun. Lantana needs about the same treatment and it is a good time now to start it growing to give you cuttings.

Violets.

I have grown violets this year from plants propagated last winter, and they have flowered well since October and are still at it. Another lot propagated differently have not been nearly so successful, but it is only fair to say they were not in the same house, nor had they just the same treatment; but, with all that, I am convinced that the right way to prepetuate your stock of violets is by cuttings, and by cuttings I mean runners that have made no roots in the soil. Some tear up their old plants and call each division a new plant. Others take the runners that have rooted and have formed a crown. These with roots are considered good enough to plant into flats or perhaps plant in the field. Neither the rooted runner or worse the division of the old plant is nearly as good as the runners without any roots inserted in the sand now or later, just as you would any other cutting. If you don't have room enough in the cutting bed, such as you would root carnations in, then flats will do equally as well. Flats two inches deep, with one inch of soil and one inch of sand, are to be preferred, for when rooted you can move the flats where you choose. When well rooted they can be potted off singly in 2½-inch pots, or, what it just as good, planted in three inches of soil in flats far enough apart to allow them to grow and make good plants by planting out time early in June. By planting out I don't mean planting out in the field, for I would never plant a violet but in one place, and that is on the solid bed where it was to grow and flower next winter. I hear some friends, and good ones, say: "Oh, nonsense!" Thousands of violets have been lifted from the field with great success, but there is a risk. On the solid bed, with the glass off during summer, there is no risk. If you don't get violets it will be from some other visitation.

W. Scott.

CARNATIONS

CARNATION NOTES.

Preparation of the Soil.

In my last notes in mentioning the material that supply the three principal elements of nourishment an error crept in. I will repeat the same again corrected: "Nitrogen is supplied in all animal excrements, in horn shavings, night soil and the offals from slaughter houses, of the later principally in the form of blood. Phosphoric acid is plentifully supplied in bone black and bone meal. All the other materials mentioned also contain phosphoric acid but in much smaller quantities than nitrogen. Potash is also found in the materials before mentioned, but in very small and insufficient quantities and is best and plentifully supplied in wood ashes."

This brings to my mind one other element, and this is lime. It has been often said of late, that lime helps to build up the so-much desired strong stem, and for the very same reason I have used wood ashes, as they contain much lime. Soils that are deficient in lime, should undoubtedly be supplied with that element, this is best done in the preparation of the soil.

In the Dictionary of Gardening we find among other recommendations regarding lime the following. "In applying lime to any land some caution is necessary as it possesses the important property of expelling or setting free ammonia, one of the indispensable constituents of plant food. When farm yard manure has long been used, a light application of lime may be of great advantage in hastening decomposition; while, on the other hand, soils which contain but a small amount of organic or vegetable matter might, by similar dressings, become exhausted."

Wood ashes and lime should be kept separate, and applied separately from nitrogenous matter (ammonia) if the latter shall not be largely diminished or entirely lost. Therefore, in the preparation of liquid manure it is out of place. Quite different is the result in the soil, or even in a mulch, where the manure is not fully decomposed. There it hastens the decomposition of the manure or all other organic matter.

Of late the proprietors of a slaughterhouse, located here in Lafayette, manufacture a manure to which my attention has been called. It consists of the offals, principally blood and bones. These offals are cooked by steam to extract all the fat. After this they are thrown in a heated iron reservoir, where they are dried and pulverized by a rotating wheel. The bones are easily pulverized as they can be nearly crumpled in the hand. There is absolutely nothing else used with it. Professor Huston pronounces it a powerful manure as it contains more ammonia than pure bone meal. The analysis made by Professor Huston shows the following:

Soluble Phos. Acid	—— per cent
Reverted " "	3.08 per cent
Insoluble " "	5.04 per cent
Ammonia (H_3N)	10.40 per cent
Potassa (K_2O)	0.56 per cent

We have made free use of it in our liquid manure and found it excellent. Its decomposition causes a strong smell, and would make it hardly desirable to use in a mulch, but in the liquid a little sulphate of iron will alleviate the smell considerably, and at the same time bind and conserve the ammonia. I think it will prove a valuable manure to mix with the soil in the preparation of same. It comes in sacks of 200 pounds and is cheaper than bone meal.

Fumigation.

Other work that may be classed as routine, is fumigation. We use entirely the Rose Leaf Tobacco Extract manufactured at Louisville. It is applied in various ways, but with the same object, to vaporize the nicotine it contains. Painting it on a heating pipe has been of late strongly recommended and is a very convenient way, but it often needs a sprinkling with water, to renew and increase the extract of the nicotine. This tobacco extract is very effective and is never injurious, as tobacco smoke often is, and besides does not leave any tobacco odor on the flowers as does the smoke.

Another essential work that never should be neglected is the fumigation with sulphur, by mixing flowers of sulphur with lime, and painting it on the heating pipes. Besides being death to fungus, it rather shows a beneficial effect on the growth of the plants when used mildly. Too much will spoil the opening buds and discolor the flowers.

Newer Carnations.

Mr. A. M. Herr in his essay on Newer Carnations is a little too severe on the variety Mrs. Bradt, by saying it has an immense fine bloom on a "very" weak stem. Everybody who grows it will admit that the stem is hardly strong enough to carry the very large flower. This is especially so early in the season, when most varieties show weak stems, but improves greatly as the season advances; and since it is better known how to grow it, the stem is much stronger. I admit that the stem is not in proportion to the flower, but to my judgment this "very" weak stem as it generally grows would be amply strong to carry a Flora Hill or any other large variety. and of many of the smaller varieties two blooms. The allegation, "very weak" is a little too severe.

Fred. Dorner.

CARNATION EMPRESS.

We have received from Mr. Wm. Swayne, Kennett Square, Pa., blooms of this new crimson carnation. The color is remarkably rich, the blooms measure from two and one-half to three inches in diameter, are very fragrant, the petals deeply fringed, and are borne on stems that are as strong as one could wish. It is certainly a grand crimson variety.

We present herewith a view of a house of this variety as seen at Mr. Swayne's.

We have received from Mr. Albert M. Herr, Lancaster, Pa., a copy of his printed notes on new carnations. In them he reviews the leading novelties, giving his experience with the various sorts and the result of his experiments. They certainly are very interesting and anyone who wishes may receive a copy by simply addressing a postal card request to Mr. Albert M. Herr, Lancaster, Pa.

Bench of the new Crimson Carnation Empress at Wm. Swayne's, Kennett Square, Pa.

ST. LOUIS, MO.

Trade Falling Off.

Trade in this city was dull the past week, nothing of any importance going on except a few large funeral orders reported by some of the west end florists. Some of the stores down town are beginning to cut the prices already and are selling carnations at 25 cents per dozen and roses at 50 cents per dozen. The few days of bright weather we have had made flowers of all kinds plentiful and all signs of holiday prices have vanished. If the stock keeps on coming in as it has been there is a good chance of there being a glut in almost every line.

Prices—Stock.

The best stock in roses can be bought at $6 and seconds go at from $2 to $4. Good Meteors are very scarce, also first class Beauties. Brides and Bridesmaids are the most plentiful. Carnations are also more plentiful now than they have been for some time. The best Scott, Flora Hill, Alaska, Jubilee and Daybreak are selling at $5 and $6; others go at from $1 to $3.

In bulbous stuff there is plenty to choose from and at low prices. Harrisii lilies are a little more plentiful and the same can be said of callas, a great many of which were used last week owing to some very large funeral orders. Romans and paper whites are selling as low as $2, though some of the very choice flowers bring $4. Valley is not so good as it has been and sells at $3 and $4. In Violets the supply was equal to the demand, Californias having the call, and again selling at $1.50; double ones, that is the best, bring $1; single home grown go at 40 cents, while the southern sell at 25 cents. Smilax is also selling slow at $12.50 and $15.

Among the West End Trade.

The Ayers Floral Co. report lots of funeral work since the New Year. Holiday business was very satifactory in cut flowers, plants, and all kinds of greens. Mrs. Ayers told me they had a very large wedding for January 20, which will be one of the swellest of the season, and for January 12 they will decorate for a tea party. In decorating the blue room they will use 800 Daybreak carnations; for the red room 300 Meteors and for the pink room 300 Bridesmaid roses.

Ostertag Bros. say they have been very busy every day since the holidays with wedding and funeral decorations. Business during the holidays was never better.

The Oughton Floral Co. report business a little quiet since the holidays, but had a good trade during the holidays in all lines.

Chas. Schonele was not in when I called, but his able assistant, Miss Rosie, reports that a few days before Christmas they thought business would be quiet but it all came in a rush and all the work had to be done at once. Greens sold better than expected and they sold out clean.

Geo. Waldbart says that he had a great rush all through the holiday season. Mr. Waldbart handles only the best stock, asks top prices for everything, and has the best trade in the West End. "How do you like our new trade paper, THE REVIEW," was asked. "Why, it's the best of the three."

At Fred. Weber's things looked busy. Fred. says he is glad the holiday season is over, as the rush is too great and everything comes at one time. Business since has been good with wedding and party orders. Mr. Weber was just reading THE REVIEW as I came in, and I asked him how he liked it, and he said: "It's just the paper for the retailer, wholesaler, and grower, as in every issue you learn something new."

Miss Newman, at Armstrong's, reports business very satisfactory during the holiday season. "Prices were a little high on cut flowers, but our customers paid them for good stock. The sales on plants and all kinds of green were better than last year. Trade since the new year is a little quiet." "How do you like our new paper, THE REVIEW?" "I think it's the only paper, and I don't see how any live florist can be without it."

Mr. J. M. Jordan Retires from Business.

The directors of the Jordan Floral Co. held a meeting at the office of the company, 822 Olive street, January 4, and elected the following officers: Harry B. Jordan, Omaha, Neb., president; Mrs. H. B. Jordan, vice-president; Willie E. Jordan, secretary and treasurer; John W. Kunz, manager. Mr. J. M. Jordan will retire from active service in the business. Mr. Jordan is now nearly seventy years of age, and is one of the best-known florists in the country. He is president of the Hail Association, and at one time president of the S. A. F. The retirement of Mr. Jordan will no doubt be a great surprise to his many friends all over the country, but owing to his late illness, and by the advice of his physician, will give the business cares over to his sons and live in retirement the rest of his days.

Personal Items.

Mr. Carew Sanders left for Florida last week to spend the winter months. Mr. Sanders reports that he will not be back until the flowers bloom in the spring.

Arthur Ellison has returned to the city from the east, after being gone about a year, and has taken charge of the down town establishment of Ellison & Tesson.

William Lingenbrink will leave for the Klondike the latter part of January with a party of friends, including Alex. Wilson, brother of J. S. Wilson, of Chicago. Billy expects to return late in the fall with lots of gold and open one of the finest floral establishments in St. Louis.

I am glad to note that our friend, William Scott, is out and well again, as his notes in THE REVIEW are always read with interest by all the florists and are very beneficial especially to the grower.

Club Meeting.

The club meeting on Thursday this week will be a large one. The "Shaw medal" has been finished and will be presented to the winner, Mr. Luther Armstrong, of this city. J. J. B.

WASHINGTON.

The springlike weather of the past week has been the cause of an enormous quantity of stuff coming in, and the quality the very best, carnations being especially fine. The past week has been unusually quiet, with very little demand for flowers of any kind.

One or two stores down town have commenced the bargain days and a placard in the show window announces for that day roses will be 50 cents per dozen, carnations 25 cents per dozen. We all know how people will rush for bargains, but this scheme once drew well, not now. "Why," said a lady to me, "do you know the roses fell to pieces before I reached home with them. I would rather

pay the regular price and get them fresh." Of course they would.

Despite the glut prices remain firm. Beauties, $1 to $6; La France, $1 to $5; Brides, $1 to $3; Kaiserin, $1 to $3; Meteors, $1 to $2; Bridesmaid, $1 to $3 per dozen; carnations, 50 cents per dozen; violets, $1.50 to $2.00 per hundred. Although all bulbous stuff and plants imported should bring better prices on account of the new duty imposed by the Dingley Bill it has been found impossible to realize other than the old prices. Violets are showing up fine and in quantity the past week, but must still be scarce since the fakir has not as yet put in his appearance on the street with them.

W. H. K.

TORONTO.

Business Conditions.

As might be expected, since New Years trade has not been quite so brisk, although a fair amount is being done, especially in designs, there having been several funerals to which a great number were sent. Parties and receptions are also still in vogue, though to a lesser extent. The stores are making some very pretty shows in their windows. I noticed a bunch of Dunlop's new rose "Lady Dorythea", in his window the other day looking very distinct and fetching.

Directors of Hort. Society Meet.

The directors for 1897 of the Horticultural Society held their last meeting on Saturday evening last, to prepare their report for presentation at the annual meeting to be held on the 12th inst. The discussion was lively and lengthy and did not conclude until nearly 11 o'clock. The society has made excellent progress during the past year, and from all appearances will gather impetus as it grows, and as the directors gain more experience in the workings of it. There is a big uncultivated field to exercise their faculties on, and though it may take years before our present ideals are realized, strict and earnest attention to the business in hand, with eyes on the goal ahead will work wonders.

Mr. Dunlop Entertains.

A most enjoyable evening was spent at Mr. J. H. Dunlop's residence last Thursday, the occasion being his annual dinner to his employes. The bountiful dinner provided was put "out of sight" in a truly marvelous fashion, after which various little speeches, songs by Mr. W. Lawrence, the foreman, (who by the by is as much of an expert at singing as he is at growing roses), and music from a graphophone were indulged in. It was morning before the jolly party broke up; with the exception of one, the party was the same as last year.

A New Market Association.

Great efforts are being made now to improve the old St. Lawrence market, and an influential, and go-ahead market association has been formed for the purpose of pushing the matter and bringing it before the City Council and Provincial Government. Improvement is badly needed in this line. The market florists have been able to do very little since the fall on account of bad weather, their stalls being virtually out doors. E.

INDIANAPOLIS.

A Quiet Business New Years.

New Years business was comparatively quiet, a few receptions among the clubs and some private houses. Outside of these no activity was shown, whatever. The weather was fine. Since the holidays trade has been very dull, very few receptions and entertainments taking place. Carnations and roses consequently are getting more plentiful and lower in price.

Indianapolis Florist Club.

The January meeting of the Indianapolis Florists' Club was held at "Fairbanks" by the invitation of Mr. Bert Stanley, the florist of the resort. A good many members were present to see the new officers installed in their respective offices. A vase of Evelina carnations attracted everyone's attention. They were sent by Mr. R. Witterstaetter, of Cincinnati. It was given the club's certificate of merit by a unanimous vote. The flowers came in perfect condition.

A discussion was started regarding the duties on bulbs, etc. Mr. Langstaff, of Deaf and Dumb Institution, wanted a petition to be sent to Washington that the duty on all bulbs, nursery stock, etc., be taken off, but he hardly had finished when some of our old commercial men as Wiegand, Cornelli, Bertermann, and others gave him to understand that the duty was all right and some wanted to see it 50 per cent. instead of 25 per cent.

Resolutions were requested to be sent to the Board of Public Works for the appointment of a city forester to have general supervision of all trees planted and also the preservation of old landmarks and other details, the Superintendent of Parks to be his superior and to work in conjunction with the park officers. By the way, the park commission appointed about two years ago, is put out by the Supreme Court of the state and all the work done by the commission will have to be gone over again by the Board of Public Works. This is progress with a big P. What valuable time is being lost by the process of law. Not law, but politics, I am afraid is at the bottom of the whole business.

The committee on securing a permanent club room reported, but it was continued for a further lookout for a suitable location.

The State Board of Agriculture sent in a request for a committee to revise the premium list for the coming fair, but this being business for the State Association, a committee was appointed to work in conjunction with and make recommendations to the state meeting later in the month.

The question came up regarding the entertainment of the state society, the general opinion was that a good substantial banquet or other first class entertainment should be given. Proper arrangements were ordered made. The report of the secretary and treasurer for the year showed a good sized balance in the treasury.

After the meeting, a well set table decorated in fine shape with plants and flowers, was prepared for the members by Mr. Stanley. The compliment was very much appreciated by everyone present.

Meeting of State Association.

The secretary of the State Association is sending out invitations to the state meeting, which will be held in the State Horticultural Rooms, State House, Thursday, Jan. 20th, 2 p. m. and 7 p. m., a banquet following late in the evening. An exhibition, free to the public, will be held from 3 to 5 p. m. Plants and flowers for exhibition are solicited. Certificates will be awarded to all deserving exhibits.

Notes.

The seed stores report the best business they ever had in greens, with prices ranging lower than usual.

Huntington & Page, seedsmen, have leased an additional storeroom, putting in a new plate glass front, twenty-six feet wide, making the most elegant front in the square. They are getting ready to do a great spring business, their old room not being nearly large enough for lively trade.

A good sized delegation is being formed to attend the American Carnation Society meeting in Chicago. W. B.

CHICAGO.

Annual Meeting of Horticultural Society.

The annual meeting of the Horticultural Society of Chicago was held at the Sherman House last Saturday afternoon.

President Chadwick's annual report was an interesting resume of the work of the year, showing the progress that has been made and outlining work for the future that will still further enhance the usefulness of the society. Among the possibilities noted was that of securing space in the proposed exposition building on the lake front for the annual exhibitions of the society. The report of Treasurer Rudd was very gratifying, showing a balance in the treasury of $1,878.93.

There were no less than forty-eight applications for membership in the society. All were acted upon favorably and the membership list was materially lengthened.

The sum of $50 was appropriated as a contribution to the fund to entertain the visitors to the convention of the American Carnation Society next month. An invitation from the Carnation Society to the members of the Horticultural Society to view the display of carnations at the time of the convention was accepted.

Officers for 1898 were elected as follows: Wm. H. Chadwick, president; E. G. Uihlein, first vice-president; H. G. Selfridge, second vice-president; E. Wienhoeber, third vice-president; W.

C. Egan, secretary; W. N. Rudd, assistant secretary and treasurer. The three vacancies in the executive committee were filled by the election of Messrs. P. J. Hauswirth, W. N. Rudd, and Edgar Sanders.

Steps were taken looking to the presentation to Mr. Rudd of a suitable testimonial in recognition of his invaluable services as manager of the annual exhibitions.

The society starts the new year under very favorable auspices, and there is every indication that the report for 1898 will be even better than that for 1897.

Florists' Club.

This Thursday evening is ladies' night at the Florists' Club and the following program will be rendered:

1. Song—Only a Rose Bud.

CLUB QUARTETTE:

Chas. W. McKellar, First Tenor; E. F. Winterson, Second Tenor; E. H. Kissell, Baritone; Chas. H. Balluff, Bass.

2. Piano Solo—The Last Greeting. *Keck.*
   Miss Maud Grant.
3. Soprano Solo—The Bird and the Rose.
   Miss Inez C. Stromback. *Horrocks.*
4. Violin Solo—Traum der Sennerin. *Labitsky.*
   Miss Alda Grant.
5. Piano Solo—Awakening of the Lion.
   Miss Amanda Blumenthal. *de Kontski.*
6. Tenor Solo—Queen of the Earth. *Pinsuti.*
   Mr. George Mason.
7. Violin Solo—Cavatina. *Raff.*
   Miss Mary Belle Smith.
8. Recitation—Selected.
   Miss Honore Wolf.
9. Trio (Two Violins and Piano)—Largo. *Handel.*
   Misses Alda Grant, Mary Belle Smith, Maud Grant.
10. Recitation—Selected.
    Mr. J. T. Anthony.
11. Song—Mamie Reilly.
    Club Quartette.

The Market.

There is the usual reaction after the holidays though some find trade better than usual at this season. The demand from local buyers is especially light, but there is no surplus of good stock. Prices are easier, especially on the lower grades. The dark, rainy weather has, of course, not improved the quality.

Various Items.

The Rogers Park Floral Co. have moved to 51 Wabash avenue, room 210, and are busy fitting up their new quarters.

Mr. Flint Kennicott was threatened with pneumonia last week and was confined to the house for several days. He is now attending to business again.

Mr. W. Kirkham, of Maywood, has also been on the sick list.

ROCHESTER.

Society Helps the Florist.

In the last days of the old year, parties and receptions were of frequent occurrence; several every day. Large orders for funeral work also happened to pour in, so that all of our retailers were extremely busy, especially on Friday and Saturday, when New Years orders had to be ready for delivery. Owing to the fact that an additional demand was created by these party decorations and the unusual heavy call for funeral designs, New Years week proved to be a very profitable one for the storemen; otherwise some of them might have felt inclined to grumble because the regular New Years trade really does not now amount to very much, compared with the sales of years gone by, although quite a large number of flower boxes and made-up baskets had to be delivered and the plant trade for that day was much better in some quarters than last year. Again it must be said here that flowering plants were preferred and it is lucky for those growers who are prepared to meet this increasing demand. A fine lot of cinerarias in 6-inch pots were exposed in one of the stores; Begonia incarnata apparently were not all disposed of at Christmas; fine cyclamen in all sizes, are quite plentiful; pans of hyacinths and valley sold readily and the limited number of azaleas was quickly disposed of wherever offered. The general scarcity of cut flowers may possibly have helped the sale of flowering plants, to some extent, for in many instances the storemen suggested and recommended them to would-be flower buyers, but withal we cannot deny the evidently increasing taste for blooming plants, provided they are good, well flowered specimens; poor or indifferent stock does not sell at all.

Favorable Condition for the New Year.

Compared with Christmas we surely had more favorable weather for delivering goods on New Years, although it was not warm. The extreme precautions in packing were not needed this time, the thermometer registering about 20°, and we are quite used to delivering even the softest plants in such ordinary freezing weather, so there was no complaint whatever from recipients of goods, to my knowledge. Severe cold was upon us again by noon Jan. 1st, but Monday was moderate in turn. Just after this date more debutantes' parties have been on the program. Other social events are booked for the middle and end of the week, so it is likely that every florist in town will begin the new year with plenty of work; may these favorable conditions prevail throughout the year. A prosperous New Year to all.

Scarcity of Stock.

The scarcity of flowers in general continued throughout the week and no great supply is in view for the near future as yet. The demand has been very good, everything was used up clean daily. The weather is quite mild, we had several sunny days, which greatly assisted in bringing along some of the roses, carnations and violets, but withal, there is not near enough to go around. Consignments from near-by towns are bought up quickly on arrival and prices have not come down, excepting a slight decrease in carnations, of which the supply is fairly good.

The first lilacs of the season were seen here this week, both in a cut state and as pot plants. They are several weeks behind last year's, but are superior to them in size of bunches and are also hardened off better. For the past two seasons lilacs were a fairly well paying article in this city. This winter the quantity of plants bought for forcing has been doubled with several of our local growers and it is more than likely that there will be some disappointments in these quarters before spring.

A Pretty Novelty.

Nice bushy little plants of Agathæa cœlestis, the blue daisy, in 5-inch pots and full of flowers were considered a novelty for the holidays; the public seems to take kindly to it. Though a very old plant, we seldom meet them in late years, but as the list of flowering plants in midwinter is not very extensive, I mention it here; perhaps in other cities, where someone is constantly on the lookout for suitable Christmas plants, the agathæa will also be appreciated. They are not expensive or hard to handle, and there is profit in growing them at 50 cents or even less. Only a small quantity was grown this year, merely enough for a trial, but preparations are now under way to have a better supply and larger specimens for next winter. K.

CLEVELAND.

Trade Continues Satisfactory.

Business has been very good since the holidays, nearly all the stores having had a good share of work of one kind or another, sufficient to use up pretty much all the stock of good flowers offered. Of course prices, both wholesale and retail, have dropped from their lofty Christmas altitude, so that ordinary people can reach them without the aid of balloons.

Stock—Prices.

Carnations average about $1.00 to $1.50 per hundred. Roses have been running at from $4 and $5 to about $8 for first grade teas. Harrisiis have been quoted at $1 per dozen. Outside of these, it is rather between hay and grass, as the last chrysanthemums are now gone, and Dutch bulbs (at least of good quality) are not yet in. At retail carnations sell at from 35 cents to 60 cents and roses at from $1 to $2 per dozen, according to quality.

The weather has been greatly improved since the holidays and flowers should improve very shortly in quality as well as show an increase in quantity with the improvement in weather conditions.

An Extensive Decoration.

A very extensive decoration was one recently done by A. Graham & Son, at the Roadside Club, upon the occasion of the "coming out" of a debutante. Great quantities of Christmas greens of various kinds were used, in addition to a profusion of palms. Lilies and roses were the principal cut flowers used, besides a lot of azaleas in bloom. NEMO.

RICHMOND, IND.—Beach & Co. have moved their cut flower store from the Wescott Hotel to Main street, between 9th and 10th streets.

"The fungous foes of the farmer" is the title of a pamphlet by Prof. Byron D. Halsted, of New Brunswick, N. J., and issued by the Department of Agriculture of the state of Pennsylvania. It treats of the fungous foes of root crops, of large and small fruits, of vegetable fruits and vegetables. There are illustrations of young cabbage plants affected by club-root, of scabby potatoes, of beet leaf showing the leaf-spot, of wax beans attacked by anthracnose, of tomato leaf affected by spot, and of a cucumber destroyed by anthracnose. Any resident of Pennsylvania can probably obtain the pamphlet free on application to Thos. J. Edge, Secretary Department of Agriculture, Harrisburg, Pa.

The Floral Calendars published by Daniel B. Long, Buffalo, N. Y., are certainly very pleasing. The decorative effects are obtained by arranging flowers and foliage in the positions desired and then photographing same. A half-tone engraving from the photograph gives the necessary plate to print from. A design that particularly pleases us is one showing a graceful tracery of vines all over the calendar, with a feathery palm leaf in one corner. And the arrangement of long-stemmed chrysanthemums between the days of the week is a very pretty conceit. Judging from the samples submitted Mr. Long purposes to sell these calendars to florists who wish to issue a pretty advertisement to their customers. For this purpose they are much superior to the usual lithographed calendar, as they are true to nature and original in conception.

We have received from Harlan P. Kelsey, Boston, Mass., samples of galax leaves in various sizes and colors and a quantity of the Partridge Vine (Mitchella repens). The Partridge Vine is certainly very pretty with its bright red berries, and could be made a very effective decorative material. We think it was not more than five or six years ago that Mr. Kelsey sent us a small quantity of the galax leaves with the inquiry as to whether they could not be made use of by florists. We replied that we thought they could, but we had no idea that the demand for them would develop to the wonderful proportion that it has. The trade in galax leaves now runs into the millions annually and we question whether any similar decorative material has so quickly attained such widespread popularity as the galax leaves. Uses for these leaves have been discovered of which the introducer did not dream and the indications seem to be that the use of this material will be still further extended.

We learn that the park commissioners of Buffalo, N. Y., were so short-sighted and narrow-minded as to dismiss from the service of the commission, without giving any reasons whatever, Mr. William McMillan, who was superintendent of the Buffalo parks for twenty-six years. The reason for this abrupt dismissal is, undoubtedly, Mr. McMillan's frankness in discussing the various projects advanced by the park commissioners who, of course, were men totally unfamiliar with the requirements of the case and who were, undoubtedly, largely influenced by political considerations. Mr. McMillan had attained a national reputation as one of the ablest park superintendents in the country, and it certainly was not for lack of ability that he was thus treated by the Buffalo commissioners. It is pleasing to note that the Buffalo papers are very out-spoken in the matter, upholding Mr. McMillan and deprecating the action of the commissioners. This case emphasizes our frequent former statements to the effect that it is the duty of everyone interested in horticulture in any of the larger cities to use whatever influence he may possess to counteract the tendency towards the abuse of political power in our park systems. If our organized bodies of horticulturists in our large cities would fully exercise the power that their organization gives them, they could largely neutralize the work of the politician.

The uniformly favorable reports on the Christmas trade of 1897 are certainly very cheering and indicate that the present season may develop into something as good as the best of past years. The call for blooming plants at the holidays seems to be growing in all sections of the country, and it would seemingly be wise for the florist to study more closely this department of the business. While the plants are more difficult to deliver than a box of cut flowers the stock is not so immediately perishable and can be carried a week or more by the dealer. The development of the plant trade at Christmas will undoubtedly assist materially in adding to the returns to the florist at that season. For those who wish cut flowers will buy them anyway as a rule, while the presentation to the general public of something less perishable, but even more attractive to many, cannot fail to increase the total sales, and this is, of course, desired by all. Another pleasing feature of the holiday trade is the apparent tendency of the public to use flowers freely during the whole week, which if continued will hold prices at a comfortable figure for some little time after Christmas. In spite of the very high prices, extra fine Beauties seem to hold first place in roses and to continually grow in favor. Many buyers seem to prefer a half dozen fine Beauties to a dozen other high grade roses of the tea type. Evidently the Beauty has not yet been overdone as to quantity and the capricious character of this rose as to producing good blooms will probably always prevent any very great surplus of high grade flowers. The rose grower who can thoroughly master the growing of this rose, and be sure of a cut of good flowers at the right season, and enough of them from a given space, will have something better and more reliable than a Klondike claim.

We question whether any other business has experienced a greater proportionate expansion during the last ten years than that of the florist. And that there will be an equal, or greater, expansions during the next ten there can be no doubt. But the methods of ten years ago will not avail now. The trade is so different from what it was then that it may be called practically a new business. Conditions have changed, and are still changing, and those who would keep to the front must change with them. Modern methods both in growing and selling the products of the greenhouse must be fully made use of. Well directed and judicious expense is an investment that will return good earnings. Not so many years ago new boxes were considered too expensive to use in putting up flowers for customers. Now, the only florist who does not have new boxes for the purpose, is one whose retail trade amounts to but little. Not so long ago flimsily constructed greenhouses were considered cheap because the investment was small, and now no grower will attempt to make such houses profitable. He builds well, not because he has the money to spend, but because he finds good construction is the cheapest in the end, and that with first-class houses he can make the larger investment pay a vast sight more than he can the smaller investment in the cheaper (?) houses. Not so many years ago few greenhouses were fitted with the labor-saving ventilating apparatus now considered absolutely essential in a modern house. And this apparatus is more than labor-saving. It makes possible a control over temperature and atmospheric conditions that could not be had without it, no matter how much hand labor was devoted to it. No florist can now afford to be without it. Note the big ranges of houses now cared for, and well cared for, by small forces of men. Under old methods it would take double or treble the number. That is where the saving comes in. That is where old methods are expensive as compared with new ones, even though the modern methods compel a larger original investment. It pays to have good houses, good tools and good help. Have half the quantity and have it good, rather than double the quantity and half the quality. It will prove a more profitable investment under present conditions.

Send in your advertisements of help wanted and situations wanted. Where they do not exceed five lines in length, (seven words to a line) we will insert them free.

NEW YORK.

Florists' Club Meeting.

Monday, January 10, may be marked the epoch of a great revival in the club's interest; the exhibition, the attendance and the general feeling was one of new life and earnest work for the future, not that the past has slumbered, but rather that the spring time had come and that new leafage, new buds, new flowers, were awakening. Truly the new year has opened auspiciously, the Plumb has ripened and taken on bloom.

Mr. Henshaw in a felicitous speech introduced the incoming officers, and the officers made their initial bow and thanked the members for the honor conferred upon them and promised to live up to their obligations. By some misunderstanding, Messrs. Weathered and Young both expected the other to make the twin speech; the former gentleman, who is as full of warmth as his boilers and as responsive, escaped from the dilemma with an usual witty speech. Mr. May moved a hearty vote of thanks to the outgoing officers, which was unanimously accorded.

Mr. William Plumb, the incoming president, then assumed his duties. At the sound of the gavel, however, Mr. Morris, (of aldermanic fame), rose to a point of order, and in a very eloquent speech, presented him with a very handsome gavel made from a tree cut from Washington's historic home at Mt. Vernon and presented to the club in the "rough" by Mr. Franklin A. Whealan, gardener at the above place, which the members of the club had mounted in silver and the following engraved upon same.

MOUNT VERNON, 1898.
Presented by
The New York Florist Club,
From Members.

Mr. Morris added that as it was made from American hickory, he hoped it would graft itself upon the English Plumb. Mr. Plumb in his reply said that the co-operation of members was needed to anneal the compact and perfect the union.

Mr. Weathered made a motion that a silver and bronze medal be added to the club's awards. Mr. May made an amendment that certificates be awarded to all novelties and meritorious exhibits. Mr. Taylor made an amendment that the club's former rules govern the awards. Carried.

Treasurer's report revealed the fact that there were 167 members and that the treasury had a credit of $409.28. There were 12 new members proposed, to be acted upon the next meeting. It was decided to have the usual annual dinner to cost $5 per member. All wishing to be present should notify the secretary, Mr. John Young, and enclose check for ticket. To facilitate matters for the committee the following gentlemen generously consented to act: Chas. Weathered, chairman, John Taylor, Ernst Asmus.

After the meeting President Plumb invited the members to partake of a collation to commemorate the event for which he was the happy recipient. After a hearty vote of thanks and the singing of "he's a jolly good fellow" a movement to adjourn was reluctantly carried.

Exhibition.

There were four entries for the club's gold medal and all of them were very meritorious. Mr. C. W. Ward, as usual, came forward with an excellent collection of carnations of the following varieties shown in vases of fifty each: Gen. Maceo, dark maroon; Mrs. James Dean, pure silver pink; John Young, pure fringed white; White Cloud, white, shell-petalled; Mrs. G. M. Bradt, white, striped red; Blush, white slightly tinted pink; New York, cerise, very free bearer; Bon Ton, scarlet, very distinct; Flame, scarlet.

W. A. Manda exhibited the following pot plants, Abutilon Savitrii, a green and white variegated variety, like Souv. de Bonn, but much more distinct and likely to prove an excellent bedder; Cypripedium Media superbum, a hybrid between C. Spicerianum and C. hirsutissimum, very pretty and distinct; Salvia Golden Gem, a dwarf golden foliage variety; Saxifraga sarmentosa tri-color a very pretty rock-work plant.

Mr. William Plumb showed an excellent collection of fancy carnations which were much admired. H. C. Steinhoff, of Hoboken, exhibited a collection of well flowered and grown azaleas in the following varieties: Deutsche Perle, Vervænenana, Van der Cruyssen and Simon Mardner.

R. Witterstaetter, Sedamsville, Ohio, showed his white carnation, Evelina. It appeared in grand condition, showing its good shipping qualities, and received high commendation. Frank Miquet, Patchogue, L. I., showed an unnamed seedling, a cross between Scott and Daybreak, a sensation as a carnation; stem two feet long, erect and carrying a flower nearly three inches across; a beautiful cerise red, lighting up beautifully in the artificial light.

Points were awarded to the competitors for the gold medal and the following were the committee on award: J. N. May, chairman; Alex. Burns. J. M. Keller, Julius Roehrs, P. O'Mara, Laurence Hafner.

American Institute.

What will prove a very interesting program has been arranged for the coming sessions of the Horticultural section of the American Institute, and practice and theory will go hand in hand. Last Wednesday the first exhibition was held and the program a "Display of Novelties in Roses" brought out some extremely good exhibits. In the evening Dr. N. L. Britton delivered his lecture on "Roots and Stems," which was much enhanced by the stereopticon illustrations.

The program for the future will be as follows, the exhibitions to take place at 2 o'clock in the afternoon and the lecture at 7:30 p. m:

February 9, orchid exhibition. Lecture on "Mimicry and Fertilization of Orchids;" illustrated by over 400 colored charts by Mr. C. H. Atkins. March 9, carnation exhibition. Lecture on "Leaves and Flowers," by Dr. N. L. Britton; illustrated by stereopticon. April 13, display of forced vegetables. Lecture by Cornelius Van Brunt. May 11, exhibition of flowering shrubs. Lecture by Dr. N. L. Britton, "Flowers, Fruits and Seeds;" illustrated by stereopticon. June 8, exhibition of fruits and flowers, general discussion, Messrs. Siebrecht and Henshaw taking part.

Among the Retailers.

If the store men are not making money these days, no one is, in the florist business, and for why you ask. Well, sir, " 'tis pity, 'tis, 'tis true," and the reason is that flowers are plentiful and cheap, and if trade is only fair they ought to be coining money, but don't you go and ask them, because they will tell you I wrote this after I went home from the Forists' Club meeting, which I didn't. Anyway, trade ought to be on the mend by this time, the reaction after the holidays ought to be nearly over, so cheer up, there is a good time coming. There is Easter, and there is Christmas, too. It will soon be round again, so don't put on a martyr expression, because it won't deceive the wary wholesaler, for, in the parlance of Chuck Connors "he's on to you."

One of the events of the week was a ball given by Mrs. H. P. Whitney at their home. The decorations were of a very elaborate style, bordering on the magnificent, and Mr. J. H. Troy, manager for the Rosary Co., had the contract for the work, which was fully up to their usual standard of excellence.

W. H. Brower & Sons won't mind if you call their store the "old curiosity shop", because there you will find all the knick-knacks of the Goddess Flora, besides the regular line of stock flowers and anything hard to get. Among other things, I noted there the new roses, Mad. Chatenay and Mrs. Watson, both of which will be heard of later. Some bunches of the sweet Daphne Indica, jessamine, California violets, sweet peas, rare orchids, pansies, bouvardias, double and single, and some of the old favorite roses Bon Silene and Papa Gontier. "Yes, we have quite a call for all these things," I was told in answer to my enquiry, "and we find it pays to carry this miscellaneous stock. Some of our old patrons look forward to these odd and seasonable flowers and there is a certain affinity between our old friends and some of these old fashioned flowers."

On the Rialto.

Oh, Lordy! Oh, Lordy! how long is the cry of the wholesaler. "Job wasn't in the wholesale business, I'll bet a long stemmed American Beauty to a frosted cull," said one man to-day, but that was just after a retailer had "called him up" on the 'phone and then "called him down," so that's excusable.

It is a fact though that trade is unusually dull, even duller than ordinarily after the holidays. Though stuff gets cleaned up pretty well, for all that there is no snap or vim to the trade, however, and roses have sold as low as $20 per 1,000.

The best fancy Beauties realize 75

cents and the finest stock of Brides and Maids, 15 cents, Meteors, Testouts ranging slightly higher. Violets are selling exceptionally low at 50 cents per 100; seems ridiculous at this time of the year. Cattleya Trianæ are coming on a little more freely and range all the way from 25 cents to 50 cents apiece, according to quality. A few hybrids are putting in appearance, but they seem to have been warned about the low prices and are laying back. The best Brunners realize 40 cents. White lilac sells fairly well at $1 to $1.25 per bunch.

Bulb stuff is fairly plentiful and sold well to the end of the week. Romans, paper whites and Harrisii realize only moderate prices, while tulips have dropped to $3 and $5 per 100; Von Sions to $4 per 100. Quite a lot of the pretty Oncidium tigrinum is to be seen, while other varieties of orchids are "scattering." Fancy carnations are realizing good prices, though not so high recently. They are one of the things that never seem to be overdone.

Seed and Bulb Trade.

The balance of trade is being sustained in this line at present. Tuberoses are being shipped and flower and cocos seed is being received. If my notes arrive late this week you will know it is the congestion at the postoffice from the big editions of catalogues being mailed from nearly all the large houses.

Various Notes.

There was a fair attendance at the meeting of the New York Gardeners' Society last Saturday evening in the Mott Memorial hall. Mr. William Scott, of Tarrytown, President, occupied the chair. After the regular routine of business, Mr. F. R. Pier (you thought I was going to say Pierson), but its Pierkovsky read an interesting and practical paper on the tuberous rooted begonia and received a hearty vote of thanks for same.

Mr. H. E. Blauvelt, with the New York Cut Flower Company, has been on the sick list, the result of overwork during the holidays. He also had a long-stemmed American Beauty fall on his foot. I am glad to say he is able to get around again, however.

J. C. Vaughan, Chicago; E. Kauffman, Walden, N. Y.; Frank Miquet, Patchogue, L. I., were recent visitors.

Mr. James M. Logan sails for Europe on a pleasure trip next Saturday per S. S. Furnessia. Mr. James A. Penman will act as grand marshal of the escort corps on the occasion. Good luck to you, Mr. Logan.

Mr. L. C. Bobbink has been obliged to postpone his intended trip abroad for the present, and was unable to sail on December 29th as expected.

BOSTON.

Exhibition of Mass. Hort. Society.

The Massachusetts Horticultural Society held their regular weekly exhibition to-day. Among the exhibits Mr. John Mutch, gardener to J. E. Rothwell, Esq., Longwood, showed an Odontogblossum Vuylstekeanum for which rarity he was awarded the society's silver medal. Mr. Rothwell says it is the only plant of this variety in this country. A fine display of Chinese primulas was set up by Mr. Barr, gardener to Mrs. Cheney, Wellesley, exceedingly well grown and developed plants for which he took first and third prizes. Mr. James Wheeler, Brookline, showed some very fine primulas and obtained second prize, and first prize for single blooms placed on moss in a flat dish. These flowers were from Sutton's strain of seed and all named varieties which he says come very true from seed. The flowers are very large and of extraordinary substance. He also exhibited three plants of Begonia incarnata type, improved by Mr. Chas. Sanders, gardener to Prof. Sargent, and a very decided improvement on the old variety. The plant is of more robust habit, and the flowers, which are very much larger and brighter in color, are produced in dense profusion.

D. F. Roy, gardener to E. S. Converse, Malden, also showed some very nicely grown primulas. Mr. Thatcher, gardener to John L. Gardner, Brookline, exhibited some finely grown plants of Primula stellata. W. N. Craig, of Taunton, exhibited a very fine vase of Freesia refracta alba exceedingly well grown. Mrs. E. M. Gill, of Medford, staged Lycaste Skinneri and some fine Scott carnations. Mr. Henry Wilde, superintendent for the Blake Estate, Brookline, exhibited a collection of vegetables including turnips, carrots, leeks, celery, etc., all of which were finely grown. Mr. Geo. D. Moore, of Arlington, showed some fine Tennisball lettuce for which he was awarded first and second prizes. Mr. H. R. Kinney, Worcester, showed lettuce and celery on which he came third for each exhibit. Warren Eustis & Son, Belmont, exhibited some exceedingly fine celery for which they were awarded first and second prizes.

W. C. Winter, Mansfield, showed some exceedingly good tomatoes (varieties, Chemin, May's Favorite and Stone) which were awarded first, second and third in the order named, also a gratuity for a collection of vegetables. Arthur F. Coolidge, of Cambridge, exhibited some fine turnip radishes which took first prize. W. N. Craig, of Taunton, took first and second prizes for two dishes of very fine parsley.

Lecture on Fruit Culture.

A lecture was also delivered by Mr. J. H. Hale, of South Glastonbury, Conn., on Fruit Culture, which was well attended. His audience seemed to be very much interested and at the close showed their appreciation with a vote of thanks amid tremendous applause.

A New Store.

Philip L. Carbone, of Boylston street, Boston, has opened a branch store at Cambridge, corner of Boylston street and Harvard square. The store inside is very handsomely finished in hardwood and contains a good substantial refrigerator. This store is a great acquisition to this part of the town, and let us hope Mr. Carbone may find it a good financial investment.

W. E. Doyle Loses his Pets.

Escaping gas in his store last Thursday night was the cause of a serious loss to Mr. W. E. Doyle. When a clerk opened the store in the morning before him lay dead the four large, handsome cats that have been an attraction for years in Mr. Doyle's store and were known and talked about all over the United States. They had been occupants of the store for about fourteen years. It is currently stated that Mr. Doyle has been offered fabulous prices for his large yellow pets, but always refused to part with them. Mr. Doyle has received many letters of condolence over his loss.

The gas does not seem to have injured the plants much at present, but in so short a time it is impossible to tell whether they have received much damage or not.

Visitors to the Hub.

Mr. Paul M. Pierson, of Scarborough on the Hudson, came to look after the business of his new store. It was only a flying visit of a few hours.

Mr. Henry B. Black, representing Cordley & Hayes, New York, was looking up the florists in the interests of their fibre ware in buckets and vases for cut flowers.

The Wholesale Market.

The wholesale market is plentifully supplied with nearly all sorts of flowers, which has a tendency to keep the prices down, but the quality is improving with the rather better weather. Business is quiet and likely to be for a week or two longer. Bulbous plants, such as hyacinths, Dutch tulips, narcissus, etc., are beginning to show themselves and meet with ready sale. C. H. J.

BUFFALO.

Funeral Work Helps Out.

There has been a decided drop or stop in the social whirl, and if there is an occasional flutter it is only one of the last dying kicks. But this does not prevent florists from doing business. There has been of late more than the usual number of people passing away, and it has called for many flowers; not so much the old fashioned designs which with a certain class are almost obsolete, but violets, orchids, Romans and valley have been in great demand. A week ago carnations were very scarce; it was dark and dull; now they are coming in far more plentifully, and of a quality that can't be beat.

The Supply.

Roses that are imported, as well as home grown, are of first quality. From George Fancourt, (Bag him, my boy), comes some excellent Maids, Brides, and Meteors of quality that will make even our Canuck friends look to their laurels. W. J. Palmer & Son are producing immense quantities of the leading roses, as well as their usual cut of carnations. The cut flower exchange (Sebastian Pickleman, President) are certainly headquarters for orchids, exhibiting daily large quantities of Cypripedium insigne,

Cattleya Percivalianum and Trianæ. So if business is good, we have plenty of flowers to fill our orders.

Harmon & Burr, the old reliable violet men of Darien, have at last caught up with the rather limited procession, and are now picking fine violets, a little late, but we are glad to see them still in the ring.

Notes.

The charity ball held this year in our West Side Armory was a great success, socially and financially, but called for no florist's work of any kind. Too big a place to begin decorating. The only accident that was recorded was that in which S. A. Anderson was the victim. In the left turn during a 7-step he got tangled up in his partner's dry goods and fell, fracturing the upper three inches of his shirt collar.

After a long delay the contract to erect the conservatory and other houses which will constitute the big range of glass at the South Park is awarded to Messrs. Hitchings & Co., of New York. The contract in round figures is $100,000. The name of Hitchings is sufficient to assure us that Buffalo will have its money's worth. Mr. Cowell has gained eleven pounds in three days. This contract does not quite complete the design originally intended, but what is not included will be easily obtained a little later on.

It is seldom that any ex-official receives much attention from the press, but Mr. William McMillan is an exception, showing that he is no ordinary man. What with guessing what the park commissioners are going to do and the future of Mr. McMillan, our papers daily serve us up a dish of stuff as unreliable as most newspaper trash. The latest was that Mr. McMillan had taken the position of superintendent of the Pittsburg parks. This was quite a surprise to us and we believe utterly without foundation. I think Mr. Mac will first visit the

"Land of brown heath and shaggy wood,
Land of the mountain and the flood,"

which he has not seen for more than a third of a century. The commissioners have put their auditor of the board, Mr. Brothers, in charge of the parks as general superintendent for a trial of three months "to see how it works." The subordinate staff remain "as you were."

W. S.

BALTIMORE.

Business at a Standstill.

After a busy and somewhat prosperous holiday trade, the reaction has come with appalling results. Everything is at a standstill, excepting perhaps the growers who are now turning their attention towards Easter stuff. When compared with the gale of prosperity only a short while ago the dealers are practically doing nothing, this after-lull proving much worse for them than the one experienced before the holidays.

The weather, however, has been all one could desire and flowers of every description are plentiful and of first quality, yet there is little sale for them. Old stand-bys, such as violets, carnations, etc., are even dragging.

What has happened that at this season of the year we should be so cruelly treated? Have the people become satiated on the flower question, or is it their pocket books, that are suffering with this indisposition? That may be the case of some but what is wrong with those whose credit is still good? They surely are not dead yet they also say "no flowers." The above only voices the general experience and sentiment of the trade since the first of the year.

An Improvement Looked For.

Next week, however, bids fair to start the wheel again as there are already many social events booked, such as teas, receptions and weddings, besides the regular Germans, which orders, like the unexpected funerals, arrive at the last moment, and help out a great deal.

As an afterthought of Christmas would say the plant trade seemed to surpass itself this year. Especially blooming stuff, such as cyclamens, azaleas, ericas, etc., which in arrangement of pot cover, ribbon, etc., were quite popular. Otaheite oranges, ardisias, araucarias, Farleyense, and Nephrolepis ferns also sold well. Hampers were as popular as ever, while the demand for handle baskets has revived considerably. The prevailing shades seemed to be green and red from the plant arrangements to table decorations.

Notes.

At a recent Gardeners' Club meetng Mr. Paul Binder, of Baltimore County, displayed photographs of two beautiful vases of his seedling chysanthemums—Lady Harriet, pink; Hy. A. Parr, Gold Standard, and Robert Halliday, yellow; Willobrook, Sherwood, and James Pentland, white. Mr. Binder is quite an experienced hand in the art of chyrsanthemum hybridization and has produced many beautiful results.

Mr. M. Rice, of M. Rice & Co , Phila., paid us a short visit this week. This gentleman reported his visit here more than satisfactory, as the Christmas rush has created quite a demand for florist supplies. As a mascot he now wears a white ribbon instead of a rabbit's foot.

Mr. F. J. Mitchell, of Philadelphia, also called upon us in behalf of the seed line.

Another visitor was Mr. Benj. Durfee, of the American Rose Co., Washington.

It is a current report about town that Mr. Edwin A. Siedewitz, of Annapolis, is to run in the next mayoralty race of that city. Hurrah for "Seide"! May his efforts be crowned with success.

C. F. F.

ST. PAUL.

Market Conditions.

The holiday trade is a thing of the past and growers and store men, wholesalers and retailers seem to be well satisfied over results. In the first place a week of favorable weather before Christmas brought out an abundance of good blooms. In the second place the 23rd and 24th were very favorable for shoppers who came early and late and bought more freely than for several years. In the third place Christmas morning dawned bright, clear and beautiful, a most perfect day for delivering stock, thus expediting matters and pleasing customers.

The supply of cut flowers was not equal to the demand, several large shipments being received from Chicago and Milwaukee. Meteor roses and red carnations were in the greatest demand. American Beauties were called for frequently though $12 to $15 per dozen staggered many would-be buyers. Pink roses were in good demand, while Perle and Bride were the least called for. The best roses retailed at $2.50 to $3 per dozen, the latter figure being top notch for the choicest Meteor, Testout, Siebrecht and Bridesmaid. Carnations sold readily at 75 cents per dozen, a few very choice ones bringing $1. There was an increased call for violets at $3 per 100, while Romans, paper whites and valley were in good call at 75 cents to $1.

Increase in Call for Plants.

The greatest increase in sales over previous years was in potted plants. Everything in the plant line sold well. A choice azalea selling at $2 to $5 was rarely turned aside by a customer looking for something good. Lilies sold well also, though that is such a distinctively Easter plant that many people would not think of buying it at Christmas. Palms carried off all honors in the plant line and never sold better. As a random estimate I would say that the sale of palms had more than doubled in value over a year ago. There was a big trade in greens and, at the last minute, a shortage in holly, though about enough to go round.

New Year's Trade Keeps Up the Record.

New Year's Day trade was correspondingly as good as Christmas. Charity ball occurred on New Year's Eve, also a reception to M. Martinelli, a high church dignitary—the former calling for a great many loose cut flowers, the latter for extensive decorations of holly, green, palms, etc. Shipping trade has been unusually brisk, while funeral work in the city has dropped off somewhat.

A Serious Drawback.

The only serious drawback to the holiday business here is the high prices on loose cut flowers. While a moderate advance of twenty-five to fifty per cent. would not be taken amiss by the majority of buyers, an advance of 100 per cent. or more causes hard feelings and many a solemn vow not to be "fleeced again" by the same florist; consequently the trade is boycotted for several months afterwards. If the growers, commission men, wholesalers and retailers would only get together and resolve to cut and offer only the best fresh cut stock, not to advance prices unreasonably, much good would result, and the trade for months to come be benefited instead of injured.

The quality of the stock this year was better than ever before offered here. Local growers at any rate did not pickle their stock, and good blooms were the rule, not the exception.

W. G. Bunde, representing J. C. Vaughan, is in the city spending the holidays with his parents.

Mr. E. Nagel, of Minneapolis, was a recent caller and reports a very favorable business in our sister city.

Mr. Swanson displayed a very beautiful basket of cypripediums and ferns neatly tied with ribbons.

Dr. Schiffman has a fine collection of orchids now in bloom, including some rare C. Trianæ and C. Schroederi.

X. Y. Z.

PHILADELPHIA.

Business Forecast.

The cut flower market has been very quiet since New Years. Prices remain fairly firm, but the supply exceeds the demand and in consequence the second-class stock suffers severely at times. The large balls being given now, while lavishly decorated with foliage and flowering plants, do not require many cut flowers. The German favors are sometimes of flowers and a few choice roses are often sent, but large bouquets are not popular this winter at the private balls.

General business, our own included, is steadily improving. The depression through which we have passed in the last few years is clearly shown by the number of growers who are willing and anxious to dispose of their places; some to leave the business entirely, but most of them to improve their facilities for producing elsewhere.

The retailers, taken as a class, hardly seem to have suffered so much, which would appear to show either that there is more profit in selling than in growing plants and flowers, or else that the retailers are better business men than the growers. I am disposed to take the latter view. In an admirable paper, written, I think, for the 1896 convention of the S. A. F., Mr. C. W. Ward pointed out that in times of general prosperity nearly everyone who attended to his business made something, while in times of general depression only the man who had thorough business ability could make ends meet. This is of course speaking generally, there are exceptions to all rules. Now it seems to me that the growers as a rule are not nearly such good business men as the retailers. Many of our very best growers are woefully careless in their methods, having only a general idea whether a given house has or has not paid. If you ask them the question point blank, "Did so and so pay you last year?" they would probably reply, "Well, it looked well all the season, but the sales were a trifle slow." In fact a gentleman who is posted in matters floricultural asserted a few days ago that you could count the growers around Philadelphia on your fingers, who could tell you certainly just what a house had produced and whether or not it had paid. I can hardly believe this possible, but if it is true, little wonder the retailers have the best chance of succeeding.

What successful retailer would answer such a question in a general way? He knows just what he needs and how much of it for his normal business. Of course, if the market offers good stock at a reasonable price, he may speculate a little when business is likely to be brisk, but as a rule he knows just where he stands and acts accordingly. Each grower should know just what a house costs to run, add the interest on construction and on the land, and then grow only what will pay them a living profit over this expense.

Notes.

The florist team won their first match game at ten pins in the Philadelphia Bowling League, defeating the Zingari team by 190 pins. Eleven clubs have entered the competition.

I am probably the first floricultural writer who ever mentioned the consumer at Christmas, which undoubtedly accounts for the REVIEW proof reader substituting "consignor" for "consumer" in my last letter wherein appears "the consignors (?) too, received more value for their money than of yore."

J. W. Y.

Trade Dull.

Trade on the whole is very dull. The notable exceptions are easily counted on one's fingers' ends. So when we say the Harrison Ball at Horticultural Hall was a blooming success we want to say that Graham, who had the contract, did the act creditably to himself and to the profession. The local papers speak of this society event in terms of praise, and say: "The blaze of electric lights among the gorgeous foliage produced a dream of beauty." Philadelphia cannot squeal at the condition of trade. It is about as you will find it all over the east.

Mr. Charles Fox Retires.

Among the business changes announced at the first of the year, is the retirement of Mr. Charles Fox from active business. Mr. Fox has been a life-long florist. The past fifteen or twenty years he has carried on a lucrative business on North Broad street. His trade was among the fashionable set of the North end of the city, where he made a reputation as a skilled artist in his line. While he leaves the active walks of life as a business man of our craft, we will all remember him as a most congenial and wholesome friend, who will still be seen among the florists' gatherings. May his days of leisure be blessed with health and pleasure is the wish of his many friends.

Club Meeting.

The last meeting of the Florists' Club was of exceptional interest. The club was called on to receive with deep regret the resignation of Mr. Thomas Cartledge, as treasurer. Mr. Cartledge, who has been in poor health for several months, is compelled to relinquish all work, hence the step. After reluctantly acceding to his request the club, as a token of his valuable services, tendered a resolution expressing the feeling of his many friends in trade circles.

The sad announcement of the death of Miss Lily Dean was a surprise to many present. Evidently but few of the members knew her personally, but the esteem in which the Dean family is held here called forth a resolution expressing to Mr. Dean the deepest sympathy of his many Philadelphia friends.

Mr. J. Wm. Colflesh was unanimously elected to succeed Mr. Cartledge as treasurer.

A resolution introduced by Mr. G. M. Watson which strongly condemned the free distribution of seeds by the government was adopted by a unanimous vote.

Carnation Exhibit.

In connection with the reading of the paper on the newer carnations, already published in these columns, there was an extensive display of carnation flowers at this meeting. Following is the report of the committee on exhibits:

Your committee beg to report that the exhibits comprise a long list of well grown varieties, including many novelties, in describing which the committee can scarcely do full justice in the short time allotted to them, and difficulty in properly distinguishing the exact color by artificial light.

R. Witterstaetter, Sedamsville, Cincinnati, O.—Evelina, white; good calyx; good stem.

Wm. Swayne, Kennett Square, Pa.—Empress, dark maroon; large flowers on good stiff stem.

Hugh Graham.—Vase of fine blooms of well-known variety Victor.

C. M. Fick, Philadelphia.—No. 14, exceptionally fine large white; with good calyx; compact flower; also Laura E. Doty, pink; Kathryne, white, and Mrs C. M Fick, pink.

Stollery Bros., Argyle Park, Chicago, Ill.—One plant and vase of bloom of new carnation Argyle; plant seems to be clean, healthy grower; flowers produced on long, stiff stems; bright dark pink in color; large good shaped flowers.

Collection of seedlings, H. Weber & Sons, Oakland, Md.—A number of which give promise of being first class varieties; vase of new rose, Mrs. Robert Garrett, large, delicate pink, fine form.

Henry A. Niemeyer, Erie, Pa.—Uncle Sam, variegated variety; Pluto, crimson; Goliath, red; Snow Queen, white; Rob Roy, red.

C. F. Baker, Utica, N. Y.—Red Jacket, scarlet; Oneida, good pink; both full fine flowers, and likely to prove good commercial varieties.

E. G. Hill & Co., Richmond, Ind.—Painted Lady, large fine dark pink; exceptionally good; Psyche, variegated white and pink, large and full; Seedling No. 1.000, large pink, full flower. All these varieties are exceptionally fine, with good stems and large blooms.

The Cottage Gardens, Queens, N. Y.—Collection of new varieties, many of which are likely to prove valuable additions to our list of commercial kinds, especially Bon Ton, scarlet; White Cloud, white; and John Young, another good white. Other varieties are New York, crimson seedling; Mrs. Jas. Dean, blush and scarlet seedling; a particularly fine collection in its entirety.

F. A. Blake, Rochdale, Mass.—Vase of scarlet Bon Ton; on strong stems; fine.

E. J. Weaver, Bird in Hand, Pa.—White; lightly penciled red; good calyx; gives promise of being a good sort.

C. Besold, Mineola, N. Y.—Two vases and one plant; Mrs. Francis Joost, a large flowered pink variety; on good stems, plant shows a clean robust growth.

C. S. Swayne, Kennett Square, Pa.—Sweetheart, white, deeply penciled with red.

Wm. P. Craig, Philadelphia.—Collection of standard varieties; Flora Hill, white, a fairly well known variety of the present day; Victor, pink; Mrs. G. M. Bradt, variegated, good heavy stem, large full flower; Harrison's white; Mayor Pingree, yellow; Lily Dean, large variegated variety; Jubilee, scarlet; Maud Dean, blush, with deep pink center.

John Burton, Chestnut Hill, Philadelphia.—Vase of Alba Superba, large pure white on long erect stems, well formed globular blooms: will undoubtedly become one of our standard varieties.

F.

ORANGE, N. J.

The regular meeting of the New Jersey Floricultural Society was held in Decker's Hall on Monday night, President McRorie in the chair. The secretary presented his annual report, which gave the society an active membership of eighty-six, and the treasurer reported a balance in the society's favor of $242.50. The

BUY YOUR COCOS SEED FRESH.

Our main shipment arrives this week. $7.00 per 1000 seeds. Write us for special quotations on large quantities.

ASPARAGUS Sprengeri Seed; new crop to arrive, $10 per 1000.
ASPARAGUS plumosus nanus Seed; new crop on hand. $10 per 1000.
CANNA Austria; strong, field-grown pieces. $3.50 per 100.
CANNA Italia; strong field-grown pieces. $7.50 per 100.
All other leading varieties of Cannas at equally low prices.
SPIRAEA astilboides floribunda; the best variety for pot plants. $5 per 100, $45 per 1000.
BERLIN LILY OF THE VALLEY; selected pips. $10 per 1000. Per case of 2500, $23.50.
GLADIOLUS The Bride. 60 cents per 100, $5 per 1000.
PEARL TUBEROSES; selected long bulbs, 4 to 6 inches in circumference. $7 per 1000.

TO CLOSE OUT.

CHINESE SACRED NARCISSUS (Chinese grown).
Strong selected bulbs, fine for forcing, $3.50 per 100. Case of 300 bulbs for $9.

If you want only the very best varieties of Florists' Flower Seeds, such as Verbenas, Asters, Sweet Peas, etc., send to us.

CLUCAS & BODDINGTON CO.,

TELEPHONE CALL 403 18TH ST. 501 & 503 WEST 13TH ST., NEW YORK CITY.

old officers having been unanimously re-elected there was no change—J. Hayes being vice-president, George Smith treasurer, and Peter Duff secretary.

The reports presented were adopted, and the president appointed his committees for the year. The meeting then adjourned, and all present re-assembled at John Churchouse's to partake of the annual spread, about forty members and friends sitting down thereto. President McRorie officiated as toast-master and a long list of toasts was duly honored and found responsive speakers in Dr. J. W. Kitchen, Dr. W. Dodge, G. Bird, George R. Stagg, W. A. Manda, W. Duckham, A. Herrington, C. Jones, F. L. Atkins, and J. W. Withers. Messrs. Valentine, Smith, Bird, and Morrow contributed largely to the lighter side of the evening's entertainment. The occasion proved a most enjoyable one to all present and manifested the existence of much good-fellowship among the craft located in the Oranges. H.

SHORT HILLS, N. J.

The American Bulb Co. (the United States Exotic Nurseries), successors to Pitcher & Manda, are rejuvenating the place under the able management of Mr. McFadden. They are working up a nice stock of young palms, ferns, etc., and are making goodly preparations for the spring trade in all branches of the business.

Clear Cypress Greenhouse Material.

This *with us* means the best growth of Cypress Lumber and the best grade of that growth; and from this grade all the sap—bright sap, which only experts can detect—as well as stained sap, knots and other defects cut out. Others do not equal our quality if they do beat our prices. It is not hard to see the reason: You can not buy gold dollars at fifty cents each. Experienced growers know that the best is not too good and cheapest in the long run.

Write for Circulars or Estimates.

Lockland Lumber Co.,
LOCKLAND, O.

WANT ADVERTISEMENTS.

SITUATION WANTED—By a reliable, industrious young man in park or private place. Single, 23 years of age; seven years' experience; good references. Address G, care Florists' Review.

HUNT'S REVIEW OF THE CHICAGO MARKET.

Since last report market has ruled steady, prices remaining at about the same level throughout entire period. Volume of business rather light, but equal to supply in most lines.

Roses seemed to be somewhat weaker stemmed and softer in substance. Most growers report stocks breaking well and chances of prospective crop being fine. Meteors are, perhaps the poorest, save from a few favored ones. Perles in somewhat short supply. Beauties getting better color and stem and improving in cut. Brides and Maids are best of all and in most cases really tip top.

Carnations seem shortening up. Whites have been and still are in extremely short supply, and as a rule sell at an advance over colored varieties, although dealers generally quote them the same. Scotts are, perhaps, the hardest to move, due more to their own fault than anything else, as many of them are poor in many of the essential points that go to make up a good salable carnation. Good reds are still shy. Many more Portias to be seen, however. Tidal Waves are now coming in real good, and in fair supply, relatively.

Violets more plentiful and prices weakening in consequence. Lack of fragrance in them is particularly noticeable just now.

Fair supply of other seasonable stock save in small fine stuff; adiantum at a premium. Unfavorable weather conditions at present should prevent any overloading during coming week.

A number of important social events should help local business somewhat, and inquiries from outside points show that amusement season is coming into life over a wide range of tributary territory.

ST. LOUIS BOWLING CLUB.

The bowling club rolled four games of cocked hat. C. Beyer was high man, with 130; Beneke second, with 123, and Fillmore third. High single score was by Fillmore, with 45; Weber second, with 44, and Beyer and Beneke a tie for third, with 41. The regular ten were present, and we will continue to roll this game until the end of January. J. J. B.

LONDON, ONT.

A Catastrophe Creates Funeral Work.

On Monday, Jan. 3rd, municipal election day, our beautiful Forest City suffered one of the worst catastrophes in the annals of Canadian history. When the final returns were known, the mayor and aldermen elect with many thousand enthusiastic supporters, resorted to the city hall to celebrate their victory. The enthusiasm had reached a climax, when suddenly a portion of the floor gave way and the speakers, together with several hundred, were precipitated to the floor beneath. To add to the horror a large iron safe and heavy steam coil fell with and amidst the maelstrom of human beings. As soon as the debris could be cleared and assistance rendered it was found that twenty-five had been killed outright and several hundred more or less injured.

A. G. Stephens, one of London's best known florists, gives a very graphic description of his experience while pinned under heavy timbers, to see and feel those about him being crushed to death and each moment expecting that to be his last. Fortunately he escaped with a few injuries and a never-to-be-forgotten scene, vividly and indelibly pictured.

As a consequence there has been a large demand for funeral work. Nothing elaborate has been made up, but dozens of pieces ranging from $5 to $15 have been turned out. Dates for immediate social events have been cancelled, and we may expect trade to be a little dull for a time at least. W. G.

OBITUARY.

Kwai Pahn Lee.

Mr. Kwai Pahn Lee died at his home near Yonkers last Sunday morning of heart failure, following an operation for appendicitis. Mr. Lee was a Chinaman, and the junior partner of the firm of Henry & Lee, New York City, general bulb importers, better known among the large seed houses than the retailers. He was sent to Annapolis by Li Hung Chang, graduated at Yale and married the daughter of Professor Jewett, of Oberlin College.

Mr. Lee was associated with Mr. Henry about five years and was very popular with all who came in contact with him. He was also a man of deep thought and learning, thoroughly Americanized in all senses of the word. He was buried at the home of his wife's family, Norwich, Conn., Tuesday.

PROPAGATING.

Headgardener Stromback, at Lincoln Park, Chicago, is now sowing seed of Cineraria maritima candidissima and Torenia Fournierii. In the propagating bench are cuttings of chrysanthemums, coleus, ageratum, Abutilon Souv. de Bonn, achyranthes, fuchsias, Vinca elegantissima and Begonias Sandersonii, incarnata, floridus, Schmidtii and Rex varieties.

CINCINNATI, O.

Club Meeting—Exhibition.

The exhibit at the regular monthly meeting of the Cincinnati Florists' Society at the Jabez Elliott Flower Market was held January 8 and was considered to have been one of the best so far held under the schedule of 1897–8. Violets were to be the feature of the exhibition, but owing to their scarcity they were somewhat overshadowed by the grand display of carnations and roses.

E. G. Hill & Co.'s collection of seedlings was unusually fine and well grown. The same may be said of his vase of Flora Hill. Mr. Hill was awarded a special certificate. A. Sunderbruch's Sons were as usual in the lead with some well grown foliage and flowering plants. The City Greenhouses made a good display of decorative plants and orchids. George and Allen made the best general display, consisting mostly of roses and bulbous flowers. Wm. Murphy showed some well grown carnations, standard varieties. R. Witterstaetter's Opal, new pink, Evelina, white, were greatly admired.

In the evening the election of officers took place with the following result: R. Witterstaetter, president; A. Sunderbruch, Jr., vice-president; H. Schwarz, secretary; Ben George, treasurer; Wm. Murphy, director. Lunch and refreshments were served at the close of the meeting.

NEGRUM.

KINSMAN QUEEN MUSKMELON.

This new muskmelon seems to be meeting with considerable favor among market gardeners who have tried it. It is being introduced by Mr. Frank Banning, seedsman and florist, Kinsman, O., and his plan of having the melon tested by market gardeners in various sections of the country before offering it to the catalogue trade is certainly to be commended, and shows confidence in its merits. It is undoubtedly worthy a thorough trial by any grower of melons.

OUR GENERAL INTRODUCTION.

No. 5 of our general introduction will appear next week. Every subscriber is requested to send us a cabinet size photo for use in this general introduction, but please do not send us photos that must be returned as we have to cut them in arranging the groups.

RHODODENDRONS IN JADOO.

Feeling I have made a discovery in relation to growing rhododendrons perfectly and at the same time economically, I am sure you will confer a favor on all lovers of this beautiful plant by publishing my experience with the use of Jadoo fibre.

To grow rhododendrons properly outside of districts where peat abounds is quite an expensive luxury, and yet no plant is more desirable, and in my opinion no garden is complete without them, for they stand at the head of the list of those plants that possess a furnishing feature the year round.

In one of our city parks we have a large bed of rhododendrons. They have been planted some years, but have never done well, occasionally producing a flower or two, and barely holding their own.

On examination I found the cause to be improper soil, seasoned with a few brickbats, and tin cans. My intention was to lift the plants, remove the soil to a depth of two feet and fill in with peat, replace the original plants and replenish the same with new plants, but finding the appropriation would not allow this, they had to remain as they were. However, last spring I purchased fifty small imported plants and resolved to try them in "Jadoo fibre." These were planted as an edging to the others. The holes were dug and lined with Jadoo fibre, the plants placed, and the root balls covered with the fibre, using about half a peck to each plant. The soil was then filled in and firmed. They were then left to themselves.

The experiment has proved successful. The new plants not only developed their flower buds, but have made from four to seven inches of strong growth, have formed quite a number of flower buds, and the foliage is of a rich and healthy color, and next spring I shall make an effort to treat the entire bed in the same way. If Jadoo liquid had been used in addition I presume the growth etc., would have been greater. JOHN C. LEWIS.

City Forester and Landscape Gardener.
Philadelphia.

GRAND RAPIDS, MICH.

An Increase of Twenty-five Per Cent. in Christmas Trade.

We enjoyed a good Christmas trade, fully twenty-five per cent. greater than last year. There was an increased demand for palms for Christmas presents, as making the most desirable showing for the amount invested. The carnation crop was not so abundant as last year, but yet above the average and the demand very brisk, so much so, that many out-of-town orders had to be refused. Henry Smith says his sales increased thirty-five per cent. over last year. He had a vacant store rented on the main street and did a fine business in holly and potted plants. Christmas green was a drug and all hands wished they hadn't bought any. Holly sold well and is increasing in popular favor particularly the fad of hanging a wreath of it in each window.

Poinsettias Find Favor.

The Floral Co. made a decided hit, financially, by having a fine crop of poinsettias in; no other florist had them; they were a novelty here, in quantity, none having been grown for years and they made a decided hit. Next Christmas, all will have them. A limited quantity of needle pines and palm crowns sold round town, but nothing to speak of.

Violets sold well with the better trade, but the bunches were critically examined before accepted at thirty-five cents per dozen. In carnations the would-be customer was not nearly so particular, but in violets, nothing but choice stock went unchallenged.

New Years trade was good, but nothing compared to Christmas, besides, flowers have been scarce all the week, but what few were left were cleaned out close. It has been a very profitable Christmas for all hands and everyone wears a smile. G. F. C.

MITCHELL, S. D.—Christmas trade was considerably larger than last year and quality of stock was good. Cut flowers sold out clean. Plant trade was better than usual. Palms and ferns sold well.

TOPEKA, KANS.—The thirty-first annual meeting of the Kansas State Horticultural Society was held in this city Dec. 28 to 30.

MADISON, N. J.

Meeting of Gardeners' and Florists' Club.

At the regular monthly meeting of the Morris County Gardeners' and Florists' Club at Masonic Hall, Wednesday evening Dec. 8th, Mr. A. Herrington, president, in the chair, a review of the first year of the society's existence was given, the treasurer's report showing the very creditable balance in its favor of $358.50. During the club's existence it had held two very successful chrysanthemum exhibitions, the result of good organization, hard work by the officers and thorough co-operation of the regular and honorary members.

Nomination of Officers.

The business of the evening was the nomination of officers for the ensuing year and four committee men, there are eight altogether, four being holdovers. The style of nominating was the same as that carried on by the S. A. F. A. O. H. at their yearly convention, and resulted as follows: For president, Wm. Duckham, H. C. Holmes; for vice president, C. Totty, J. Jones; for secretary, C. H. Atkins, C. Totty; for treasurer, Wm. Charlton, J. Jones; for committee, M. McNulty, J. Robertson, W. Monroe, D. Shannon, Wm. Deed, J. Davis, Wm. Duckham, A. Cook, Wm. Scott. The election takes place the second Wednesday in January.

Paper by Mr. J. Jones.

Mr. J. Jones, Convent Station, N. J., read a very practical paper which resulted in some profitable argument and the advisability of holding exhibitions at the monthly meetings.

PLANT SHIPMENTS TO MICHIGAN.

In making shipments of trees, shrubs, plants or vines to points in the state of Michigan, it should be borne in mind that the laws of Michigan, Act 137, laws of 1897, section 4, provide as follows:

"Whenever any trees, shrubs, plants or vines are shipped into this state from another state, country or province, every package thereof shall be plainly labeled on the outside with the name of the consignor, the name of the consignee, the contents, and a certificate showing that contents have been inspected by a state or government officer, and that the trees, vines, plants or shrubs therein contained appear free from all injurious insects or diseases. Whenever any trees, vines, plants or shrubs are shipped into this state without such certificate plainly fixed on the outside of the package, box or car containing the same, the fact must be reported within twenty-four hours to the State Board of Agriculture by the railway, express or steamboat company, or any other person or persons carrying the same; and any agent of any railway, express or steamboat company, or any other person or persons who shall violate this section shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not less than twenty-five nor more than one hundred dollars, or imprisonment in the county jail not less than five nor more than thirty days, or may be so fined and imprisoned in the discretion of the court, and any such fine shall be paid to the State Board of Agriculture.

Express companies refuse to accept shipments for Michigan points unless the provisions of this law have been fully complied with.

SIMMONS'

New Light Colored CARNATION

Mrs. S. A. Northway

We introduce this variety with even more confidence than we did Portia, Silver Spray, Tidal Wave, Daybreak, Rose Queen, or J. J. Harrison, knowing that it will become as great a cut flower variety as any of the above. Plant of strong, free growing habit, entirely free from disease or rust; large round high built flower with perfect calyx and extra strong and long stem. Color a beautiful soft shell pink becoming almost white when fully open.

Orders booked now and filled in rotation. We shall commence to ship soon after Jan'y 1st. Price, $10.00 per 100; $75.00 per 1000.

Geraniums. Md. Bruant, Md. Jaulen, Fleure Poitevine, J. Ricaud, and J. Sallier, 2¼-in. pot plants, $5.00 per 100. Rooted cuttings, $3.00 per 100; $25.00 per 1000. Our superb stock of all the finest sorts, 2¼-in. pot plants, named, $25.00; unnamed, $20.00 per 1000. Rooted cuttings, $12.50 per 1000.

Fuchsias. A grand lot of summered-over stock in small pots that will make early bloomers, $3.00 per 100.

All Rooted Cuttings Cash with Order.
Our Price List describes many other fine plants. Send for it.

PALMS AND FERNS

The Largest Stock of Plants in the West.

Geo. Wittbold, 1708 N. Halsted St. Chicago

YOU CAN HAVE PLANTS RIGHT AWAY OF THE

New Pink Carnation **Mrs. Frances Joost**

Seedling from McGowan x Wm. Scott; tested for four years. It is of an exceedingly pleasing color and proved itself an early and most prolific bloomer. It makes in a short time a fine bushy plant, and has the form and habit of what carnation men say make an ideal plant. Positively free from rust. The stem is strong and heavy enough to carry the large flower erect without tying of any sort. Calyx perfect; never bursts. It is a good keeper and a good shipper. You will make no mistake by trying a few. All orders filled in rotation. As the sale of the stock of this Carnation will be limited, it is advisable to order early if you want any. Satisfaction guaranteed.

Price, $2 per doz.; $10 per 100; $75 per 1000.
Cash with Order.

NEW BEDFORD, MASS.

Report of Christmas Sales.

With a successful Christmas trade we now settle down to hard work in preparing our houses for Easter stock. There will not be so many lilies grown here as last year owing to the increased price of bulbs, and the outlook for higher prices for some of the florists is gratifying. Christmas trade was unusually good. It nearly doubled last year and good prices were received. Carnations sold better than ever, reaching 60 cents a dozen. A few roses were left on hand. Ferns, palms, primulas and cyclamens went with a rush. All the florists are happy except one who received several hundred decorative plants just too late for Christmas trade.

Notes.

Jahn Bros. are well pleased with the trade in their new store on Pleasant street, but are unable to meet the demands, especially for carnations and roses. They were obliged to depend on others to help them out, and will probably increase their stock another season.

C. H. Waite's trade in his new store went far beyond his expectations. He filled all his orders with the exception of roses, which he was obliged to purchase of other growers.

Wm. Pierce had his usual large Christmas trade, but could have done more had he had the stock. Violets were in great demand, and there was also a lively call for primulas.

R. H. Woodhouse reports large sales of decorative plants.

The Gardeners' and Florists' club hold their annual meeting for election of officers the second Monday in January.

The Weekly Florists' Review is received among the trade here with great pleasure, and many have signified their intention of subscribing. The article on packing as a fine art with its fine illustrations, was well rendered, and in itself (for information) was worth more than a year's subscription. C.

WARREN, OHIO.

Christmas trade was not nearly so satisfactory as had been hoped, but prices were lower than last year. We never had better roses, but there was a lack of sale for them. Carnations sold well and at good prices; could have sold twice as many of these. Trade in plants was not up to last year, but the falling off was not so bad as in cut flowers. Azaleas were in best demand.

Trade since Christmas has been better than for a long time but there are few cash sales, most of the amounts having to go upon the books. Stock at present is looking fine. G.

Mr. N. Greivelding, of Merrill, Wisconsin, has in use a boiler made of fifty pieces of 2-inch pipe, the grate bars being also of pipe through which is a flow of water, and he reports that it has worked very satisfactorily with him. He considers it the most economical and best boiler he has ever had on his place.

"

AN UNPARALLELED SUBSCRIPTION OFFER.

EVERY one to whom this issue of the FLORISTS' REVIEW is addressed, and who fills out, signs and returns the accompanying subscription blank, accompanied by $1.00, within 30 days from date, will receive not only the FLORISTS' REVIEW for one year but also a certificate entitling him to the earnings on one-tenth of a share of stock in the company formed to publish the paper. The shares will be of a par value of $10.00 each.

Why do we make such an unparalleled offer? It is very simple.

You will have an interest in the success of the paper.

You will see that you can buy everything that you want to just as good advantage from advertisers in the FLORISTS' REVIEW as elsewhere and at the same time benefit yourself by increasing the earning power of your certificate.

This mutual arrangement cannot fail to bring to the paper a heavy advertising patronage, and as a result the stock represented by your certificate will earn good dividends.

And the more you buy of advertisers in the FLORISTS' REVIEW (always mentioning the paper) the larger your dividends will be.

You will get a better paper than has yet been published in this field, and a share of its earnings. Please let us hear from you by early mail.

FLORISTS' PUBLISHING COMPANY,

530-535 Caxton Building, - - - CHICAGO, ILL.

Following is the form of certificate we issue to subscribers:

$1.00 **$1.00**

The Florists' Publishing Company, Chicago.

This Certifies that _____ of _____

_____, is entitled to the annual dividends on one-tenth of a share (par value of each share $10.00) of the stock of the FLORISTS' PUBLISHING COMPANY, of Chicago, Ill., that has been placed in my custody as Trustee, so long only as

_____ shall remain a paying subscriber to the FLORISTS' REVIEW.

This certificate is transferable only to _____ successor in business, and then only on application to the undersigned. Dividends will be made of net profits on the first day of January of each year.

Certificate holders are reminded that by confining their purchases to those who advertise in the FLORISTS' REVIEW (always mentioning the paper when writing) they will greatly enhance the earning power of their certificates.

Buy to best advantage always, but, everything else being equal, give the preference to those who advertise in the paper in which you have an interest.

Witness my hand and seal at Chicago, Ill., this _____ day of _____, 189

(SEAL)

_____,
Trustee.

FREE DISTRIBUTION OF PLANTS BY THE DEPARTMENT OF AGRICULTURE.

Your Washington correspondent is in error when he states in last week's issue (page 275) that there is no appropriation made for the purchase of plants for free distribution by the Department of Agriculture. Here are quotations from the bill approved April 25, 1897, appropriating the money. At page 8 it reads: "For the purchase, propagation and distribution of valuable seeds, bulbs, trees, shrubs, vines, , cuttings and plants, and expense of labor, transportation, etc., for putting up and distributing the same, etc., one hundred and thirty thousand dollars." On page 9 it says the secretary "is authorized, empowered, directed, and required to expend not less than the sum of one hundred and ten thousand dollars in the purchase of valuable seeds."

So it will be seen that there is or was available the tidy sum of twenty thousand dollars for the distribution of "bulbs, trees, shrubs, vines, cuttings, and plants."

WASHINGTON.

Palmer's Hotbed Mats

FROST PROOF

MADE expressly for winter covering of hotbeds, cold frames, plants and seeds of all kinds.

INDESTRUCTIBLE, CHEAP AND WARM,

Will not harbor mice or vermin. Easily handled. Dry out quickly after rain. Have now been in practical use three years. Cost less than old-fashioned straw mats and entirely take their place. MADE IN FOLLOWING GRADES:

No. 1. **Burlap Cloth,** filled with combination wool and quilted, seams 3 inches apart and edges firmly bound. Size 40x76 inches, 50c each. Size 76x76 inches, 75 cents each. Made any length 76 inches wide, at 12 cents per running foot.

No. 2. **Duck Cloth** outside, filled and quilted same as No. 1. Size 40x76 inches, 75 cents each. Size 76x76 inches, $1.00 each. Made any length, 76 inches wide, at 16 cents per running foot.

No. 3. **Waterproof,** made of oil duck, filled and quilted the same as Nos. 1 and 2. Size 40x76 inches, $1.00 each. Size 76x76 inches, $1.25 each. Made any length, 76 inches wide, at 20 cents per running foot.

That these mats are a **much needed improvement** over anything heretofore used for the same purpose, is demonstrated by the large demand and many testimonials from prominent men in the trade. Everyone using Hotbed Mats should give them a trial. We also make

THE WEEKLY

FLORISTS' REVIEW

FLORISTS' PUBLISHING CO., 530-538 Caxton Building, CHICAGO.

Vol. 1. CHICAGO AND NEW YORK, JANUARY 20, 1898. No. 8.

Bed of Gomphrena Globosa.

BED OF GOMPHRENA GLOBOSA.

The accompanying engraving shows one of several beds of this "everlasting" which were a feature at Lincoln Park, Chicago, the past summer. The flowers are purplish red and are produced with great freedom all summer.

Mr. Stromback grows the plants from seed which is sown in flats of sandy loam in March. Overwatering is to be specially guarded against and bottom heat will assist germination. When two or three leaves show prick out the little plants in flats of the same soil and give bottom heat as before. When of suitable size pot the plants in thumb pots or rose pots. Shift later into 2½-inch and keep in these till time to bed out.

Plant out early in June in beds of sandy loam, placing the plants about ten inches apart. Be careful in watering, as, if the plants are overwatered they are liable to rot off at the neck.

There was a border of Phragmetes communis (quill rod) around this bed, and its silvery foliage was very effective, but it was carried off piecemeal by the English sparrows who used it in building their nests.

Beyond the bed of gomphrenas and in front of the bed of geraniums seen in the background is a bed of Cope's Pet ageratum bordered with Pyrethrum aureum (Golden feather). The ageratums are bedded out about a foot apart and will then soon fill up the intervening space.

PROPAGATION.

With the new year well under way the thoughts of the mum grower lightly turns to propagating stock for the coming season. Our system, as has previously been stated, is to root the strongest suckers as soon after the flowering season as possible and plant them out in a bench. From these we shall soon be able to propagate, and they throw good healthy cuttings that strike easily and come away much better than cuttings taken from the old stools. When the stock is limited this cannot be done, and space, too, is not always obtainable, so doubtless the old plants form the basis that most florists have to work on. If these old stools have, as too often happens, been relegated to some out-of-the-way place or under the benches, they should be brought up to the light. There is probably a space somewhere that has been cleared out by the Christmas trade that can be thus utilized. If the plants are in boxes or pots it should be seen to that the drainage is perfect, and a slight topdressing of light soil, as leaf mould or rotten manure, be given to encourage new growth.

It should be remembered that the roots are yet comparatively dormant and consequently the plants do not need much water, but a good syringing bright days will help them to start away. Golden Wedding at this season of the year is more impatient of water than any other variety and it is now generally that the foundation is laid for the disease and yellows that so often attacks this magnificent kind. The temperature should be kept up to about 50° at night, for if too low a temperature is maintained, the cuttings come hard and stunted and take a good deal longer to root. Air should be freely given in the day time as this is the best preventive of mildew and the mum hates to be coddled.

Varieties of slow growth like Major Bonnaffon, Mrs. Jerome Jones and Mrs. Robinson may be rooted any time now, the sooner the better in the case of Mrs. Jerome Jones, as the stem is short if not started in good time. Mrs. Robinson, too, does not like to be rushed at any time, for if this practice is followed a weak-necked flower generally results. Strong, vigorous growers like President Smith or Frank Hardy need not be bothered with yet. They will have lots of time to make a good stem if rooted any time up to June. Cuttings should be permitted to get a nice size for handling before they are taken off and the practice of rushing in big and little, good, bad and indifferent cuttings into the bench together cannot be too strongly condemned.

I believe more can be done in the way of raising the standard of any variety (and while you are doing that you are also necessarily raising your own grade of flowers) by careful selection than by any other means. This will be seen in the case of novelties very frequently. The plants are propagated to death to work up a big stock and it takes a couple of years before their position in the list is settled. No matter how many successive batches you may have to make don't put in a cutting till it is ready and your reputation as a grower will be all the better for it.

C. TOTTY.

New Jersey.

THE NATIONAL CHRYSANTHEMUM SOCIETY OF ENGLAND.

On page four Mr. E. G. Hill asks for information respecting what I suppose must be considered the premier chrysanthemum society of the world. Mr. Hill says, "judging by the printed report this year's exhibition has eclipsed all former efforts" If he will look up his English gardening papers containing reports of previous exhibitions, he will, I regret to say, find very similar reports, "always excelling;" still little progress seems to be made. One or two of the trade exhibits, as we are annually told, surpassed everything yet staged. If blooms increase in size at the rate which several of the horticultural papers expect us to believe, the entrances to the exhibition building would have to be widened to admit them. Candidly, the late November exhibition was not on a par, either in quality or quantity of exhibits, with many previous ones. Some of the provincial societies are enabled to offer much larger prizes than the N. C. S. and several of the best growers sent their flowers to these, rather than to the N. C. S.

Mr. Hill says, "nothing has been said in any of the various reports as to the attendance, the admission fee, the advertising, the decorations, or any other features so absolutely necessary to an American chrysanthemum show." As to the admission and attendance, owing to what many consider a peculiar arrangement made with the proprietors of the building in which the exhibition is held, the N. C. S. has nothing to do with this item. The "Aquarium" proprietors pay the N. C. S. £300, find tables and a portion of the advertising, and take the whole of the gate money which amounts to very considerable.

Now as to the "attractions." The Aquarium is really a music hall with a large number of side shows, such as "Wonderful women," prize fighters as shown by a magic lantern arrangement, fire-eaters, sky climbers, sensational divers, shooting and a hundred and one other performances accompanied by bands of music, shouting and the playing of a large organ. If these are the "attractions" which Mr. Hill considers necessary, the greater portion of the members of our N. C. S. would very much like to get rid of them.

In decorations, so to speak, there were but few. Several tables of wreaths, crosses, harps and other designs of a very ordinary character and a few tables of cut flowers from trade growers, but containing nothing remarkable, with a few groups of plants, completed the decorations. Yes, all the enthusiasm is among the 12s, 24s and 48s of blooms on hard and brightly painted green boxes. Foliage, stem, color and form, what have these things and particulars to do with chrysanthemums on this side of the "herring pond?"

The first thing we must have is size, and after that, still more size, and then when we have this we look for color and form, but such things as stem and foliage are never considered. Chrysanthemums here are grown principally to win prizes, and are not admired for their general beauty. Why, at the last floral committee meeting of the N. C. S., it was decided not to award certificates to market varieties, by which is meant commercial varieties. Exhibits of blooms arranged in vases are gradually increasing here, but very little interest is taken in this manner of exhibiting, especially at the N. C. S.'s exhibitions, for the Aquarium is about the worst place in England to make such a display; insufficient and distorted light, and a general "stuffiness" which makes the blooms soon droop and fade. Stem and foliage count as nothing in these vase exhibits, in fact the stems and blooms are generally supported by a wire arrangement.

In spite of what folks may say, I think and feel sure, we have much to learn from our American cousins as to judging and exhibiting chrysanthemums, especially if flowers are grown for what they ought to be—beauty. FORWARD.

CHRYSANTHEMUM MERRY CHRISTMAS.

We present herewith an engraving from a photograph of four flowers of this new late white chrysanthemum. It is a seedling raised by Mr. Fred Dorner, Lafayette, Ind., and will certainly be very useful in view of the fact that the flowers can be cut for Christmas sales. The blooms illustrated were cut on Christmas day and were shipped to us a few days later. We were so favorably impressed with them that we had the photograph taken. Mr. Dorner writes that the plants of Merry Christmas were growing in the same house with the earlier varieties and that when the latter

New Late White Chrysanthemum Merry Christmas.

were already beginning to bloom, Merry Christmas was just showing signs of buds.

GERANIUMS FOR WINTER FLOWERING.

On all sides one hears of a growing demand for plants and there is much to reflect over in the detailed reports of Christmas trade that have recently appeared in these pages, so many writers remarking that the demand for plants was greater than the supply. This is a healthy indication of substantial progress and depend upon it, it is a branch of the trade that is going to grow rapidly in direct ratio with the efforts that are put forth to foster and extend it.

A cyclamen or an azalea that has gone into the homes of thousands recently has proved a thing of beauty and a joy for many days, and the purchaser has got satisfaction from the purchase; yet all the cut flowers that were fit to offer found a remunerative market. The plants, therefore, should not be considered usurpers. They are rather a power for good all round and find ready purchasers in a class whose means are more limited, and who, but for them, would forego purchasing cut flowers at holiday prices.

This by way of preface, because unless the signs of the times are misleading the go-ahead florist must be looking for something else likely to take the popular eye and I certainly think geraniums in winter can be made to do so, more especially round about Christmas time. From first to last, however, they must be grown with that definite object in view, and in advocating them I am not suggesting a new and uncertain thing, although new to winter trade here. The geranium as a winter flowering plant is indispensable across the water and nothing at that season can compare with it in brilliancy, profuse blooming and in general all-round satisfaction, its beauty developing and unfolding, too, beneath leaden, sunless skies, under which the rose and carnation languish and refuse to expand.

Haphazard treatment will not make them a success, and because they grow and flower anyhow in open ground in summer, let no one think those plants can be lifted and potted as cold weather approaches and be fit to put on the market a little later. The geranium that has to flower in the winter must not be allowed to flower in summer at all, nor will it show much disposition to do so if treated after the manner indicated below.

To be a good selling article it must be a presentable plant, compact, bushy, with from eight to twelve shoots, having from ten to twenty trusses of bloom in different stages of advancement or expansion. There is a wide color range to choose from and the wise grower will adapt his colors to what his market wants, though it would appear, judging by the demand for things red at Christmas, a good red would pay best and fortunately in this family reds of intense brilliancy predominate.

The month of April or even May would not be too late to start raising stock of this kind; it would not be advisable to begin earlier than this date. Choose some good strong cuttings and insert them in the propagating bed in a temperature of about 55°, allowing each cutting ample room. An even better way would be to insert cuttings singly in a 2½-inch pot as this ensures sufficient isolation of the individual, and there are after advantages in that no check is felt when the time comes for shifting on. They should be potted on into 4-inch pots just as soon as they show an abundance of root growth, using a compost of three parts loam and one part well decayed manure. As soon as these pots are well filled with roots another shift must be given; this time into 6-inch pots, the plants to be firmly potted in soil not over rich, the aim being to secure short jointed growth and firm wood. A rank growth with a superabundance of large leaves is something to avoid, being unlikely to flower satisfactorily.

From the time that there is no more danger of spring frosts, the best place for the plants is standing upon or plunged in a bed of ashes in a sunny spot out of doors, each plant standing far enough apart to allow of exposure all round, thus inducing short stocky growth. The plants will naturally manifest a tendency to run up with two or three shoots, but this is to be corrected by pinching, an operation they will probably need about three times in the course of the season, once while in the 4-inch pots and twice after their final potting.

Further, all flower spikes that appear must be picked off up to within eight weeks of the time at which it is desired to have these plants in bloom. As the fall season advances the pots will become full of roots, and just as soon as there is a liability of frost the plants must be brought in under cover.

It occurs to me to suggest here the advantages of frames in connection with these plants as with the aid of these the plants could be kept outside longer, the simple protection they afford being sufficient for many weeks in fall. If one had frame conveniences it would be comparatively easy to have a grand batch of geraniums kept safe and sound, ready for

housing right after the houses had been cleared of early chrysanthemums and thus bring another paying crop along to maturity and realize upon it in short space of time.

To return to the plants when housed. Ventilate freely day and night while conditions permit, keeping the atmosphere dry and buoyant with a night temperature of about 50°, better a little lower than in excess of that figure. Sunlight of course will cause a proportionate rise, but air can then be freely admitted. By this time, too, the pots will be rootbound and the soil somewhat exhausted, so from now onwards manurial assistance must be freely given, cow or sheep manure water answering admirably with an occasional change off to some approved concentrated plant food. This assistance will come at the right period and materially assist flower development.

It appears to me that such geraniums, as the treatment here advised would produce, could not fail to find purchasers at remunerative prices. I should have mentioned earlier that for market work preference should be given to varieties with double or semi-double flowers as likely to stand shipment better than the single varieties.

I should like to mention Jadoo as an aid to the culture of these plants. When it was first offered in England several years ago, a sample was sent me to try and I potted some geraniums right into it. They were grown on and flowered without any additional food, merely watered with pure water as occasion demanded, and finer trusses of flowers I never had. Someone may think the cost would counteract against its use, but there is a compensating advantage in its lightness of weight.

Therefore the grower who has to ship by rail would save enormously on expressage with plants in Jadoo, and it is well known that in this material they will go longer without water. I have not actually tested the respective weights, but it seems to me that a plant in a 6-inch pot of Jadoo would only weigh about one-third as much as a plant in ordinary soil.

A. HERRINGTON.

Madison, N. J.

SOME ROSE QUESTIONS.

"Inquirer" asks: "Is Morgan rose sensitive to overwatering or running cool. Mine have dropped many of the lower leaves and as I can find no spider, wondered if 55° and sometimes 50° or 52° on cold nights caused it, or if they cannot stand as much as Bride and Bridesmaid which are growing in the same house all right."

If you kept the rose house up to 60° and suddenly dropped to 50° it might cause a change in the growth, but if your night temperature was pretty steady at 55° to 58° then no great harm would result from an occasional drop to 50°, and some other cause for leaf dropping must be looked for. Nearly all rose growers consider that the Morgan and the rose from which it is a sport, "Mad. Cusin," will take and need more water than other teas, and my own experience has been that this is correct. The quantity of water given any rose should be guided by the way water passes through the bench. If well drained there is so much less danger of over-watering than when the boards have swelled and but a small space is left for water to pass through. If the bench is properly constructed and the water quickly passes away, then Morgan will take more frequent waterings than Bridesmaid or Perle.

"Am I burning too much coal? Have about 10,000 feet of glass, half devoted to roses and half to carnations, and burn about ten tons in December, January and February each. Heated with hot water, houses well built and about eight years old; about same latitude as Buffalo." No, I don't think you are burning too much fuel. You ought to be satisfied. It depends though whether you are paying $5 per ton for hard coal or $2.50 for soft, but as you heat with hot water you are doubtless using hard coal and my answer is based on that supposition.

"What time should one stop disbudding the American Beauty to get the crop as near Christmas as possible?" Disbudding a hybrid perpetual rose, which American Beauty really is, is entirely different from disbudding a tea rose. Some growers use all the flowers that the Beauties throw up after the plant is strong enough, cutting the flowers with some length of stem to make them salable. Others merely pinch out the bud or flower. The same shoot that would produce a flower about middle or early in November, if the flower was sacrificed, would produce another about Christmas.

"What is the proper soil for American Beauty?" I have seen them grow rampant in several different textures of soil. Broadly speaking the hybrid perpetuals like a heavy soil and will thrive in a well drained clay, while the tea roses will grow in a much lighter soil. But watch them out of doors. I have seen the hybrid perpetuals grow grandly in a light loam, and the teas thrive luxuriantly in a clay, showing that soil has not half so much to do with success or failure as temperature, ventilation, watering, etc. A heavy loam sod, not too much enriched with animal manure, will suit Beauties first rate.

"Is not President Carnot rose a very slow grower, that is, slow to make new shoots where the bud is cut?" No, the experience I have had with a few hundred is that it may not break so quickly as perhaps Bridesmaid or Cusin, but nearly so. It is a grand grower, making a fine, long, stiff stem. No mildew, no spot; a grand rose and come to stay.

W. SCOTT.

NEW ROSE MRS. ROBERT GARRETT.

This new hybrid tea rose, raised by Mr. John Cook, Baltimore, is meeting with considerable praise from those who have had an opportunity to see it growing, and it is confidently believed that it will take a prominent place among desirable trade roses. The form of the flower is well shown in the accompanying engraving. The color is a pleasing pink.

GLOXINIAS—THEIR USES AND CULTURE.

It was several years ago since this strikingly attractive genus became closely associated with florists and plant lovers, and year after year from their first appearance they have been growing more in favor until at the present time the demand for them is on a par with the majority of other flowering plants. While they will not resist a great amount of rough usage in packing and shipping, their usefulness, beauty and distinctiveness in contrasts of coloring certainly equalizes these qualities and deficiencies; some being pure white, rich crimson and purple, while others are delicately spotted and penciled.

Gloxinias are naturally summer-flowering plants, but successions may be kept up the entire year, if necessary, by retarding the bulbs or raising late seedlings. They are tropical plants and so require tropical treatment, more especially when growing, to get free, healthy, luxuriant and well developed plants of floriferous habits.

The plants are more frequently started from bulbs of recent years than they were formerly, on account of several Euopean firms making a specialty of their cultitation, raising plants by the tens of thousands for the purpose of selling the bulbs, many thousands of them passing through

New Pink Rose, Mrs. Robert Garrett.

(Photographed and engraved by J. Horace McFarland Co., Harrisburg, Pa.)

our custom houses every year, being imported by four wholesale bulb and seed firms, then in turn sold to the florist and general buyer. It is a simple matter to start the bulbs and can be done in the following ways: As soon as they are received, put them in shallow flats, the propagating beds or in small pots, whichever way is the most convenient, one way being equally as good as the other under ordinary conditions, but in the latter they are more apt to dry out and be injured than in the former methods. If the bulbs are started in flats on a bench they should be potted up as soon as they begin to grow, as the extremely fine fibrous roots will be damaged if allowed to remain until the leaves begin to form and the flower buds show. Select a light material for potting, in order that the delicate roots may have free access to every part of the pot without resistance. For the ordinary size bulb a 5-inch pot will be found amply large, perhaps nothing will be gained by the use of a larger size. The question of potting and repotting is frequently raised, but in this case there is nothing to decide as all depends upon judicious watering and the least the roots are disturbed the better results the plants will show.

The soil should only be pressed down lightly with the fingers and the potting stick dispensed with entirely in this particular form of plant cultivation. After this operation put the plants in a light position, but where they can be shaded from the direct rays of the sun, or the leaves will burn and the kinds of diseases known to them will soon develop and once in poor condition they will never recover with any degree of satisfaction and may as well be consigned to the same place, and in the same way and manner, as many pretty and interesting plants have gone before without the least delay.

By the time flower buds begin to show it will be beneficial to them to apply weak doses of cow and sheep liquid manure alternately, never allowing them to become dry upon any occasion as growth will stop abruptly and the character of the plant will be disfigured. Gloxinias like a moist atmosphere in which to grow, but when the first flowers open the plants can be removed to a more congenial house and where the blooms will no be spotted or damaged by moisture or syringing.

If anyone does not wish to incur the expense of purchasing the bulbs, which are at this time sold at a very low figure, or may wish to experiment in the way of getting something new they can build up their expectations by raising seedlings which is more or less a fascinating occupation. It will take about three to four months to raise and flower a batch of this beautiful plant. Seeds can be sown any time after the fifteenth of the month and raised with a large degree of satisfaction. They should be sown in shallow pans in a light sandy soil and kept dark for a few days by covering with glass and again covering the glass with damp moss; this will encourage a more equal germination. After filling the pan with soil, first draining it thoroughly with rough material before sowing the seed, soak the soil with water. This will enable the seeds to germinate before it is necessary to water the soil again. This will prevent the seeds from being washed from their original position as no soil should be used to cover the seeds. A light pressure with a flat instrument will accomplish the same purpose as covering them and will at the same time be much safer, as in the case of covering many of these diminutive grains might be buried and lost. Should, however, it be found necessary to moisten the soil it can be done with the aid of a sponge without any ill results if carefully applied.

In about ten days the minute green germs will show. Light must be given gradually, avoiding the sun. When the plants are large enough to remove on the point of a lead pencil, flats should be made ready using a finely sifted soil to prick out the little plants, planting them about an inch apart. Don't allow the sun to shine upon the flats or the plants will disappear as if by magic, nor must they get too much moisture or they will figure in a similar act. When they are large enough pot them in 2-inch pots and give them light and water, as in the preceding instructions only a fine rose can be used to water with until the plants are started and the soil settled on the top of the pot. The plants being well rooted in this size pot should be transferred into a 5-inch; when established should get liquid manure as above outlined.

Gloxinias can be readily propagated in several ways if you want to increase the stock of a particular color. Cuttings taken from the old bulb when first started

will root very quickly and make bulbs that will give you a large plant the following year. Leaf cuttings may also be made when the leaf is matured. Cutting the leaves into small pieces with a portion of petiole attached, a bulb will form at the base which will make a flowering plant another year.

Another method may be used to propagate more rapidly with matured leaves. Lay the leaves upon the propagating bed and cover the ribs about an inch apart, peg down each end where the incision was made and small bulbs will form that can be carried over for another year. Thrip and red spider are their principal enemies. These can be kept down and entirely eradicated by the free use of tobacco stems.

The flowers and plants can be used for many admirable purposes, table pieces, mantel decorations and as a house plant it appears to hold its own with many others. F. L. ATKINS.

Short Hills, N. J.

CARNATIONS

PROPAGATION.

Manifold are the ways in the arrangement and location of the propagating houses; in their interior arrangement, or the arrangement of a bench or part of one in a house where other plants are also grown; in the procedure of taking and trimming the cuttings; in the selection of the sand, and treatment of the cuttings while in course of rooting. The ways may differ, but the principles of rooting a cutting successfully are invariably the same.

Temperature and moisture have to be mostly considered. If we detach a cutting from the mother plant and try to root it in a much higher or lower temperature it can only result in failure. The change in temperature will affect the working of the cells, for on the uninterrupted activity of the minute vessels filled with pulsating life, of which stem and leaves are constructed, depends eventually the formation of roots, the completion of a new plant.

Combined with temperature is moisture. To attempt to root a cutting in a higher temperature than the carnation requires for its welfare may result otherwise than what is intended, to root them more quickly and save time. First, a higher temperature is generally the cause of the appearance of cutting bench fungus. It will cause to evaporate more moisture from the leaves than the cutting is able to absorb, cause wilting, consequently inaction, and when not eventually ending in a total collapse, retards the formation of roots for a long time.

The other cause is just the reverse, but often not less disastrous. The atmosphere may be kept so moisture-laden that evaporation is decreased to a minimum, the action increased, root formation hastened, but the whole structure of the new plant is made so sensitive, so delicate, that it easily falls a prey to disease, and when replaced again into the cooler, normal temperature, the check is so severe that the time gained is lost again, two and three times over, and besides the young plant may have become impregnated with the germs of disease, that will break out sooner or later and end in destruction. A low temperature will retard the formation of roots and cause loss of time, but will otherwise not affect the health of the plants. The best temperature for general cultivation is the average night temperature of 55°; day temperature, if it can be avoided should never run above 60°.

The need of watering depends much on the texture of the sand. A coarse sand will require more water than a finer one, as it will not retain moisture so long. In a normal temperature the cuttings should never wilt when properly shaded; if they do it is owing to lack of water.

I will shortly describe our propagating house, and mode of propagation, as it will best give my idea of this work. Our propagating house is a common even span 20x100 feet running north and south. The whole is shaded with a whitewash made of white lead and coal oil. I have found this the best shading, as it gives the glass a milky appearance; while giving shade it still leaves it light enough in cloudy weather. The interior arrangement is one large center bench and two smaller side benches. The center and east side bench we use for propagating. They are four inches deep, have brick bottoms, with the heating pipes running underneath and are entirely open on the sides. There is enough drainage between the bricks to drain all surplus water, and the bricks are an excellent conductor of a gentle bottom heat. One steam pipe runs overhead. On the west side we leave the two lower lights of glass without shade, for we use that bench on which to place flats with rooted transplanted cuttings, before removing them to a lighter house.

The sand we use is a medium grained, clean pit sand. Before the sand is filled in we give a light sprinkling of sulphur over the bottom. The benches are filled even full, then well watered, and the sand pounded down solid; the four inches of sand generally pound down to three inches. This makes the bench ready to receive the cuttings. To insert the cuttings we draw a line with a knife about one inch deep, insert the cuttings three-fourths of an inch apart and the rows one and one-half inches. After each row is planted the sand is gently pressed on again. We water freely in a gentle spray so the water runs through the bench. The drainage between the bricks allows us to do so, and I find that our stock keeps healthier than with less watering, and the water is retained in a tight bench.

There are different opinions as to what constitutes a good cutting. That only healthy stock should be selected from which to take cuttings should need no repetition. I consider any young shoot from three to four inches long a good cutting; if longer, the flower bud may have commenced to form, and these buds push out quicker than the cutting will form roots; the strength of the cutting is divided, but when the buds are removed in time will still make good plants. The most desirable cuttings are those taken from the base or along the lower part of the flower stem. They can be taken from the axil of the leaves, coming off with a clean heel that does not need any further trimming. Cuttings otherwise taken we break out and trim afterwards. I object to the pulling of the cutting, as it seems to me the pulling must strain and injure the cells at the break. In trimming I prefer to make a clean cut with a sharp knife a little above a joint, so the lower pair of leaves can be peeled off; this leaves a clean heel.

On all cuttings the lower leaves are removed as far as the cutting will be inserted in the sand. We often find cuttings taken from the axil of a leaf that do not have a clean heel, but a rosette of hard leaves at the base. Such cuttings will never root well; one-quarter to one-half of an inch cut away will generally give a clean heel. We invariably trim the leaves of our cuttings. I may add yet that a good cutting should not be too soft, neither too hard, and should have a good proportionate stem and not all leaves, as is often the case.

When rooted the young plants should be planted in a light, rich soil and placed in a cool, sunny house, where the young plants can be kept growing and shifted to larger pots as they will require, the early made cuttings being unmistakably the best. Otherwise when room is scarce, and they are placed in out-of-the-way places, kept in small pots or flats, planted close together, so they will become stunted, the later struck cuttings are much more desirable. A young plant should be kept uninterrupted in a growing condition until planted out if one wishes to derive the benefits of an early propagation. FRED DORNER.

AMERICAN CARNATIONISTS.

At the risk of being called visionary I offer the following suggestions, and trust that they will be freely criticised in the trade papers and at our meeting in Chicago:

As the $500 proposition made some time back does not seem practical, I now propose that I will be one of twenty or more to donate annually $25 for the use of The American Carnation Society, one-half of the money thus donated to be used toward offering premiums at our annual

Simple Floral Arrangements. No. 1.

exhibition, the other half to be used toward the running expenses of the Society on the following lines:

First, that a committee of three be appointed to take charge of the interests between the shipper of either flowers or plants and the express companies. Let this committee get up a shipping label and have it copyrighted for use by members of this society only. Give them power to enforce care being used in the handling of goods shipped under this label. Rivalry between the express companies and the knowledge that this committee is backed by a good live society would soon cause them to accede to any reasonable demands made by said committee.

There should also be an arbitration committee appointed to whom could be brought all differences of any magnitude between members for adjustment. This would still further improve trade relations between members of the society, although the society by its mere existence has already accomplished this to a great degree.

A reference list should be established and issued three times a year: September 1, January 1, and June 1, giving the bad-pay purchasers throughout the country, both growers and retailers or store men.

A blank form should be gotten up giving the principal characteristcs of carnations that are grown, old and new, or being introduced, and these filled in by twenty or more members from different localities. Bulletins containing such reports to be sent twice or three times a year to all members of the society.

All of these things would take money, as the men who do the work should be fairly remunerated for their trouble, but I believe they could all be done and the actual expenses of the society met with the $250 and the annual dues received.

Other lines of work would develop and could be added as the membership increases. This it would be bound to do if the benefits are confined to members only (where they rightly belong) but not excluding trade papers from matter to which they are entitled. This society should be, and can make itself, worth considerable more than the $2 annual dues to every man who grows carnations and to every store that handles them.

There is only one thing necessary and that is for every member who can, to attend the meeting in Chicago determined to put his shoulder to the wheel and make it a business meeting of business men. Those carnationists who are not members should come and join and make 1898 the most successful year of the American Carnation Society.

A. M. HERR.

CARNATION MRS. BRADT.

In Mr. Dorner's notes he very properly criticised my remarks on Mrs. Bradt. When I issued my first batch of notes I was thinking of Mrs. Bradt as I saw it last season when the stem was much weaker than it now is. I have seen a number of batches of it growing lately and they are producing much stronger stems, showing that one can easily be mistaken in forming an opinion of a variety from those shown at the exhibitions.

A. M. HERR.

SIMPLE FLORAL ARRANGEMENTS.

The editor of the FLORISTS' REVIEW has asked me to send occasional photographs of floral arrangements that we turn out, and any other details about a florist's business that would make interesting illustrations; and says further: "We have frequent calls from our subscribers for illustrations of the more simple floral arrangements, such as they can use themselves. They find the elaborate arrangement of flowers in the large cities of interest, but desire also to have something more in line with the work they are obliged to make up themselves. Of course, every florist has more or less of this class of work, but as a general rule he does not consider it worthy of a photograph."

I trust this explanatory paragraph will set me right with the readers of the REVIEW; and that I will not be thought presumptuous, nor out of date, if in compliance with the reasonable request, I send for reproduction photographs of ordinary every-day work such as any fairly equipped florist can turn out on short notice at any season of the year.

I feel more free to do this because I have seen at pretentious flower shows, work entered for competition that I would have been ashamed to offer to my most unappreciative patron; work in which the stems of all the flowers used seemed to be cut to the same measured length, and where each rosebud was inserted in the design at an exact right angle to its surface, accurately spaced, and so far apart that the base of moss covered with shining foil, was very much in evidence. If such things were thought worthy to win a prize in good competition, what must some of the work be that is turned out in country towns, made with insufficient or improper material, at a ruinously insufficient price?

Fashions in flowers and floral work vary with the locality; and although we do not make up nearly so many pieces of formal shape as we did a few years ago, pillows are among the number most often required; and the illustration presented herewith represents one made on an 18-inch frame, and will I think require little explanation. Ordinarily the flowers and greenery used project so much on the lower side that they hide the wire support in front, and it is necessary only to cover the longer supports at the back; but in this case the camera was set too low, and the wires should have been hidden by smilax. The kinds of flowers used will vary with the season; but rosebuds and carnations should very rarely be absent, and may well be the only flowers used.

We try to avoid lettering when we can, or if we must use some, advise shortening to one or two short words, and use a small plain letter; the overhanging foliage sometimes partially concealing some portion of the inscription. The letters should be properly spaced, securely fastened, and if placed on a narrow field of white immortelles, or Cape flowers, will be more likely to retain their position than if set on fresh flowers. Lettering is often run directly across the design; but looks very formal and angular in that way. The method indicated is our own, and we think it more pleasing. Adiantum fronds make the most beautiful garnishing, but matured pieces of Asparagus plumosus will be found more lasting.

Franklin, Pa. W. T. BELL.

GOVERNMENT SEEDS.

By a vote of 155 to 19 Congress has passed another appropriation to continue the free seed distribution. Evidently the end of this absurdity is not yet.

MISCELLANEOUS SEASONABLE HINTS.

Azaleas.

I have often reminded you to rub off the young growths of the azaleas. It has to be done more than once during the winter. If you don't the growth of wood will take precedence over the bud, which will shrivel up. Some varieties are more liable to do this than others. Vervæneana is one of the worst, but all need watching,

Genistas.

It is too late to do any more stopping of genistas except where a straggling growth is made. They are generally rather early for Easter, at least when Easter comes "medium to late," (this year April 10th) so keep them as cool as possible without freezing for the next six weeks. They are not a good house plant, dropping flowers and leaves quickly, but are very pretty and attractive and will last quite as long as fifty cents worth of cut flowers.

Dutch Hyacinths.

You can now bring in some of your first potted Dutch hyacinths and in a night temperature of 60° they will be entirely satisfactory. Some varieties are better adapted for early forcing than others, but few of us, even if we grow thousands and import them under name, keep varieties separate, so to mention particular varieties would be useless. Don't attempt any hot-box business with them as you would tulips in December. They would be best with a subdued light till the spike is well up, then give them full daylight.

Hydrangeas.

Hydrangeas are forced for Easter sales, but there is so much "force" about the operation, and when sold so soon collapse that we can get along without them. They bring vexation and trouble into our otherwise quiet life. A plant that will look well for two weeks, such as an azalea, is sold with a clear conscience, but one that wilts over night, never to be revived, can be dispensed with. Those who find it profitable to get hydrangeas in flower at Easter will continue to do so, whatever is said. If we don't approve of them as an early spring plant, we value them highly later on and a few brought into heat now will flower in May without much forcing. Look out for red spider, they attack the flowers as well as the leaves. Plenty of syringing will keep these little pests down. Of late years the hydrangea has been much asked for as a plant in a large pot or tub for a veranda plant. Now those that have been in the least forced are by no means fit for that purpose. If fully out in the greenhouse their period of beauty will be brief out of doors, so if you have any large plants and you wish to sell them for a good price and bring you credit, keep them as dormant as possible; under a bench wont do nor will a warm cellar. A cellar where there was some light and the temperature down to about freezing would be the ideal place for them. A very handsome pair of hydrangeas, that for years ornamented one of our beautiful Delaware avenue lawns, were wintered in the basement of a large coach house and stable, where no artificial heat was used, and not brought out till beginning of May, or till danger of frost was passed. Those lifted and potted last fall will need no more shifting this spring. Larger plants carried over summer in pots will want a shift, or if that is not convenient, a heavy mulch. Of all gross feeding plants or shrubs the florist handles, the hydrangea takes the cake, or rather the soil, manure and water. When the old plants are starting to grow, as they now are unless kept very cool, is the best time to take cuttings for your next year's flowering plants. Short, stout growths make the best plants, and the sooner they are rooted the larger plants you will have for next fall. There is always a number of young shoots springing from the bottom of the plant which would not give flowers, but make excellent material for cuttings. Don't wait till April and take the top of a long, blind shoot; they make poor plants.

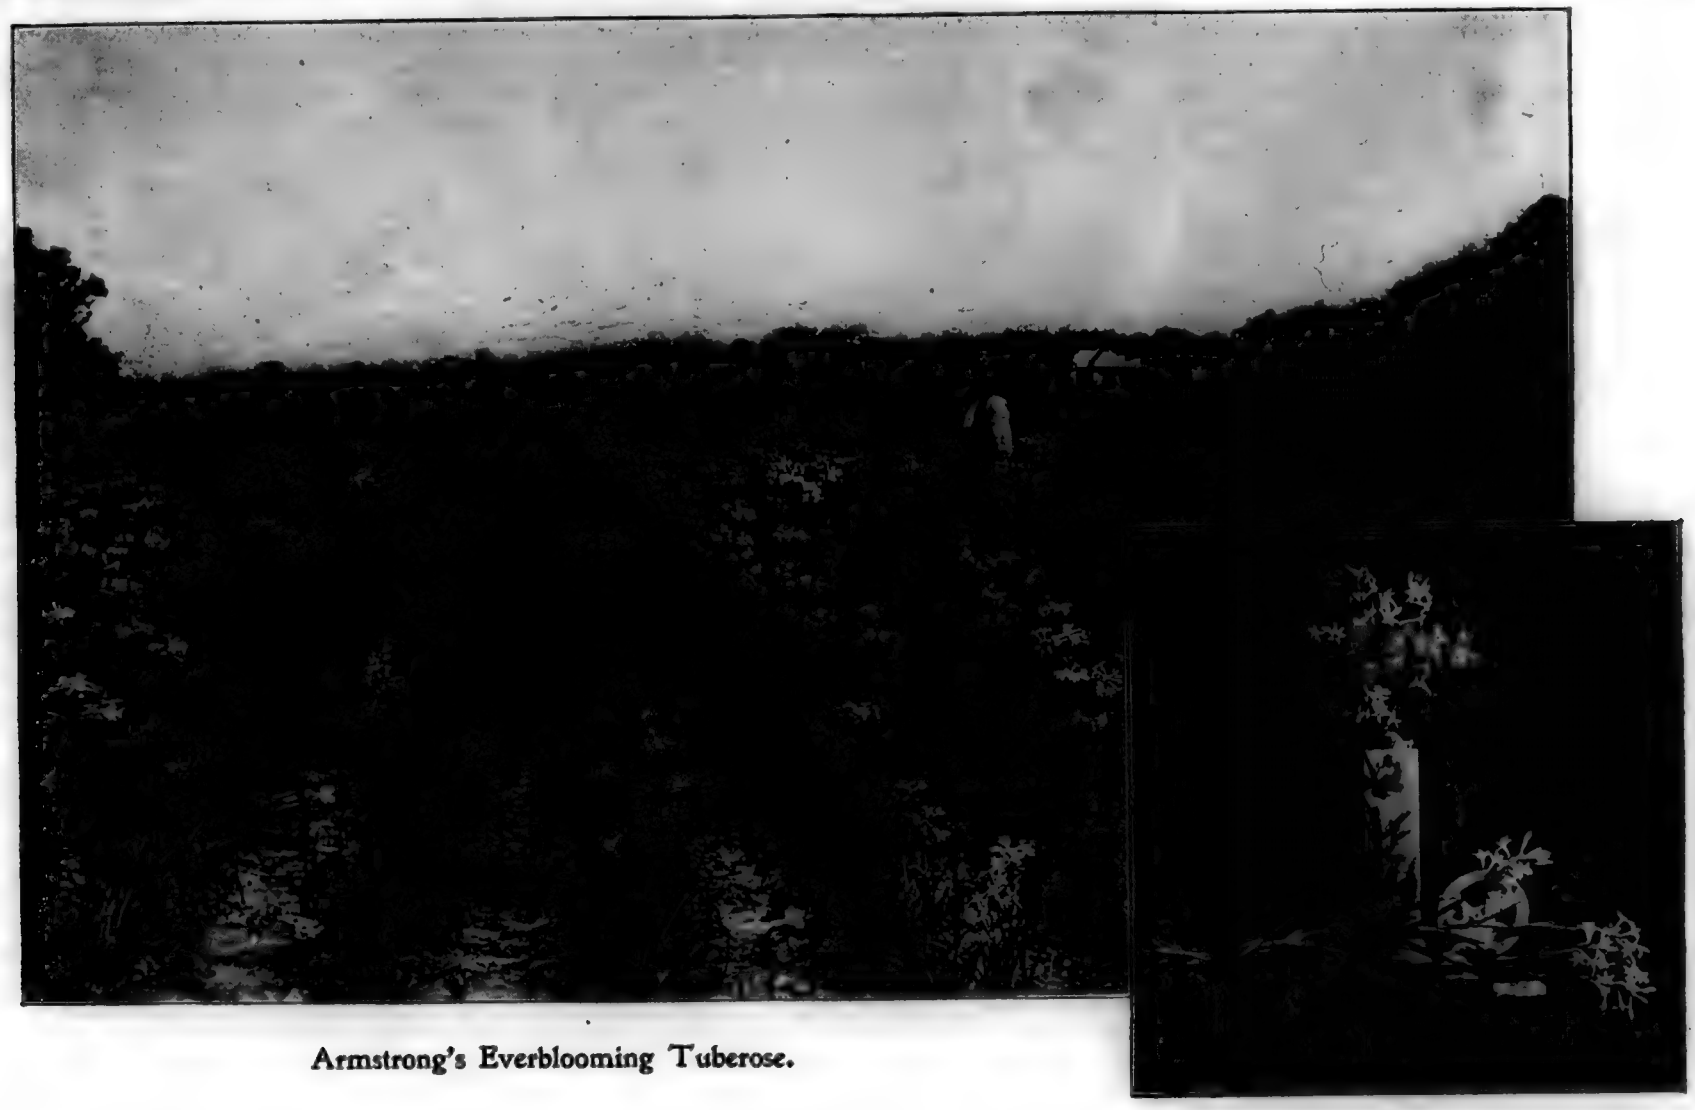
Calceolarias.

The calceolaria is not as much grown now-a-days as it should be. What cheap plant is there more attractive? They are bound to sell. Beside that much-grown plant the cineraria they are an aristocrat. If you have any coming on take care of them. Why you don't see them more often is because they need to be well understood. I would not say they are a difficult plant to grow; few plants are when you know how, but they are much easier ruined than a cattleya, a croton, or a Caryota urens. Those I see now, daily, are in 5-inch pots. They want a low temperature; 40° at night will do well. When you see the dew glistening on the woolly surface of their leaves, the plants are in their right element. Like the cineraria, an over-watering will kill them; but they don't want to be starved for water for all that. Greenfly delights to pasture beneath their handsome leaves and attains its maximum size while sucking its juices. A heavy fumigation, particularly if they are not accustomed to it, will burn the leaves and ruin the plants beyond recovery. But if you have allowed the fly to get a foothold, you must smoke, but do it often and mildly. Fresh tobacco stems among the pots will help greatly to keep down the aphis. If you don't want to fumigate, vaporize the Rose Leaf Extract with the cake dish and red-hot iron. I have never seen the most tender leaf or frond in the least injured by it.

Cyclamens.

If you want first-class cyclamens by next Christmas you must not neglect the young plants now. They should be *grown* from the day the seed germinates till they are in flower. Those sown the end of September or early in October will now be in 2 or 2½-inch pots. Keep them near the light. If you have a light bench it will do, if not, a shelf a foot or two from the glass will suit them well. Fifty-five degrees is cool enough for the little plants. They should be in a house where you weekly fumigate, for greenfly is very fond of the cyclamen at all stages, especially the young growths. When the roots are showing plentifully don't be afraid to give them another shift. Never let them get stunted or stunted they will remain.

Pelargoniums.



I notice a few pelargoniums that are now showing bud and will easily be in full flower by early April. Give them the lightest, driest, and airiest bench you have and a temperature of 55° at night. These are plants that were cut down last September. Plants from cuttings taken from these old plants when cut down are now in 4-inch pots and on a cool bench kept rather on the dry side. They will make their best growth in March and April and flower in May.

Harrisii Lilies—Staking.

We have just completed tying or rather staking our Harrisii lilies, which we think are just right for Easter. When a lily, however strong it may be, is one foot above the pot it should have its stake. In handling, I have seen them broken off at the top of the bulb and if they get long and heavy will sway to one side, and when straightened up there is a cruel operation performed. You will hear a cracking at top of bulb; this can't be good for the health of the lily. As it must be done some time, tie them when the plants are small. It will be done in half the time. You can guess the necessary height of the stake by the growth of the plant. If your stake should be a few inches too long it is easily cut off, much easier than splicing a piece on. Staking and tying plants, like potting and shifting and some other of our operations, are purely mechanical, unlike watering which is only slightly mechanical and largely mental; admitting of course that to be expert at a mechanical operation, you must when learning have exercised considerable brains, but when expertness is once acquired it is no longer a tax on your thinking powers, but comes to you as easy as the proverbial "falling off a log" or that social function which demands the observation, "Here's to ye". Yet it is strange that men do not observe.

I have seen gardeners, who should know better, stake plants very crudely. It requires a little practice, in fact a good deal to put the stake into a lily pot perfectly perpendicular as it should be. Then again they will ram the stake down close to the bulb, when it not only looks better, but is better two inches away. Then they will tie the lily stalk right to the stake, hardly allowing room for the stem to grow in size. No need of it, a play of an inch or two has a better appearance and much more natural.

Raffia is much better for a tying material than any string of whatever texture or color. Some florists don't seem to know that a very small strand of raffia is strong enough to hang a man, so a very thin piece will hold a lily in place and a twist between the thumb and finger rolls it up into a thread, making it still stronger and neater. I have seen some leave the raffia in a broad band round the stake and plant, having the appearance of a sore throat, with a bandage round it.

Armstrong's Everblooming Tuberose.

Ventilation.

Last week we had almost the weather of April. When such days occur you should never lose a chance to give air and lots of it to the plants you are wintering in cold frames. Carnations, roses, clematis, pansies will be greatly benefited by fresh air, especially if it is warm. If the weather is cold and the ground covered with snow, they will go for weeks without harm, but whenever the temperature gets near 32°, open the sash and brush off the snow, or the latter first.

WM. SCOTT.

AN EVERBLOOMING TUBEROSE.

The accompanying engraving shows a field and some individual spikes of bloom of the everblooming tuberose that originated with Mr. Luther Armstrong, St. Louis, Mo. There is a continuous formation of flower buds around the old flower stalk, the same bulb continuing to bloom from year to year. The flowers are single, pure white during the hottest and driest weather, and the buds open after being cut and placed in water like the gladiolus. All the bulbs in the field illustrated had bloomed the previous season.

This tuberose was awarded a certificate of merit at the Providence convention of the S. A. F. and won the Shaw gold medal at the last St. Louis exhibition, offered for a plant of merit not before in commerce. It will undoubtedly prove exceedingly useful as a summer cut flower and take the place of all other varieties of the single tuberose.

THE HARRISII DISEASE.

Mr. E. Buettner, Park Ridge, Ill., believes the trouble is entirely due to a little insect which can be readily seen under a strong hand magnifying glass, and he has found this insect on longiflorums from Japan and Spanish irises from Holland as well as on Harrisii from Bermuda. He has found as many as 500 of these insects on one bulb and rarely less than 20 to 30. He believes that a diseased shoot of the lily is evidence that this mite had reached the center of the bulb, and that the spots on the leaves are where the insect has bitten through the tissues of the shoot in the heart of the bulb. In bulbs that failed to grow the center was rotten and full of these mites. He believes that the decay is simply the natural result of the injury done to the tissues by the mite. In the scales of the bulb were found cavities containing the mites. He has never seen a diseased bulb that did not contain these mites.

The mites are about the size of the red spider and under the naked eye are apt to be confused with the fine grains of white sand that generally adhere to Harrisii bulbs when received. Under the magnifying glass they are seen to be a translucent white, nearly round in shape and slow in their movements, color turning to brown with age.

In the future he will have each bulb inspected under a hand magnifying glass and each bulb having any of these mites will be rejected. He hopes that the Bermuda growers will take steps to check the spread of this insect and establish a system of inspection which will prevent the exportation of affected bulbs, as otherwise their market in this country will be destroyed. He says he cannot afford to pay a high price for bulbs and then lose from twenty-five to fifty per cent. of them. If this continues he must stop growing Harrisii lilies, and has already reduced his orders for bulbs simply on account of the losses due to the insect.

Mr. Buettner notes a great difference in Japan longiflorums. Some with broad leaves seem to flower well and others with narrow foliage seem to be coming blind. He presumes that the bulbs are grown largely from seed in Japan and that the difference is due to seed variations.

LONG ISLAND NOTES.

Mr. Besold, of recent carnation fame, being the grower and introducer of the new variety, Mrs. Frances Joost, met me at the Mineola depot with his 2:40 horse and a smile.

After a drive of about a mile over a typical Long Island road we arrived at the greenhouses and I was there introduced to Mrs. Frances Joost (no rhyme intended) for the first time. My first impression was that it was a very strong upright growing variety, and not a stake is used. Some were grown in solid beds and some on benches. Mr. Besold prefers the solid bed for this variety, or for any carnation for that matter, if set out in the house by the first of June, or earlier if you can spare the room. A description appeared in our columns recently. It is all the introducer claims for it and it will, I

am sure, stand comparison with any all round pink in the market.

A house of Scott and McGowan, the two parents, reminded one more of a field of wheat with their wealth of buds and luxuriant growth. There was also a bench of promising seedlings of which more will be heard later.

Every inch of space is utilized to advantage here and a succession of crops is aimed at. For instance, after the chrysanthemums were cut, Mr. Besold planted out a lot of Harrisii from 4-inch pots and from indications it was a very wise move. Order and cleanliness is the rule rather than the exception here and the boiler room even was as clean as a kitchen. Hot water under pressure is used here and a pressure and temperature gauge are precautions that result in equalizing the temperature in the houses.

Among other things, I noted a very fine house of cinerarias that will be in prime shape about Easter. The young plants of Mrs. Frances Joost were very thrifty and free from rust and contrary to a good many varieties, were "breaking." even though in small pots and not pinched.

It was dusk when I arrived at the Seawanhaka Greenhouses, Oyster Bay, and was somewhat disappointed, when the smiling manager, Mr. "Jim" Clark, told me that they did not raise oyster plants at his place. A hurried glance through revealed a well appointed place, and a house of excellent cyclamens. Big stocks of "soft stuff" are raised here. Besides a nice collection of ferns and small palms, there were some handsome baskets of Asparagus Sprengerii, and a small bed of Asparagus plumosus, from which Mr. Clark said he had gathered over 35,000 seeds. A good paying crop, I should think.

B.

HORTICULTURE IN HOLLAND.

Illustrated Lecture by John K. M. L. Farquhar Before the Massachusetts Horticultural Society.

John K.M. L. Farquhar, of Boston, gave a lecture before the Massachusetts Horticultural Society, January 15, on "Horticulture in Holland." The stereopticon illustrations added much to the lecture, of which the following is an abstract:

Holland presents to the horticulturist many interesting features of her own. For two hundred years she has supplied the nations of northern latitudes with bulbs from which to raise flowers to brighten their conservatories in winter and their gardens in spring, and she has established a constantly increasing business, the monopoly of which seems assured to her for ages so come. Her exports of bulbs and nursery stock now aggregate five million dollars annually.

Such elaborate flower stores as we have in Boston are not found in Holland. As we pass through Rotterdam or Amsterdam we see a flower market where a few men and women do the business, the flowers being chiefly of the more ordinary kinds, brought there in the morning and sold at low prices, and by noon the business is over. Dutch horticulturists devote most of their energy to supplying the wants of other nations, their home trade—especially in cut flowers—being exceedingly small.

In Holland we find no such gigantic greenhouses as may be seen on large estates in England, such as Chatsworth or Zion House, hardy trees, shrubs, vines and herbaceous plants being more generally depended on for landscape decoration. This policy we find successfully exemplified in Boston's new parks. Many of the residential streets and even the narrow business streets of Rotterdam have valuable space devoted to trees—more, I think, than our citizens would be willing to allot under similar conditions.

Haarlem is the largest city of North Holland, and the trade center of the bulb-growing district. If we proceed by steam train from Haarlem by way of Vogelenzang we pass through extensive bulb fields, towards the Lake of Haarlem. There is, however, no Lake of Haarlem now; only a great canal, surrounded by seventy square miles of lowland that fifty years ago was lake. Here on the western side of the canal we find the finest hyacinth ground in Holland. The soil is of various kinds—peat, clay and sand; the last being what is chosen for hyacinth culture. It is prepared by giving it a heavy application of cow manure, which is brought to the fields in boats from Leyden, Amsterdam or Rotterdam.

Hyacinths, narcissuses and tulips are set in trenches six inches deep; crocuses, scillas and snowdrops in trenches three inches deep. Before the cold sets in all the planted fields are thickly covered with reeds, which grow along the edges of the canals, and are cultivated in the north of Holland for this purpose. Great care is taken to prevent frost from reaching the bulbs, for as they are planted early in autumn they soon make long roots, and frost reaching the bulbs would raise them up and detach them from their roots. Spring flowering bulbous plants are rapid growers, requiring a large supply of nourishment, and unless their roots are well developed in advance of the top and kept in good condition, they will be unable to furnish the needed food, and failure, or partial failure, will result.

Large growers are prepared to furnish from four to five hundred sorts of hyacinths. Now, we prefer the single varieties, and the list of sorts is not as long as formerly. The propagation of hyacinths is by offsets, which form at the base of the bulbs. The largest bulbs are cut across the base several times or hollowed out, to increase the number of offsets which are formed. More of the single pink variety, Norma, is grown than any other. One grower's trade requires 80,000 of them annually, the product of about two acres.

The average grower must cultivate in all about four hundred and fifty varieties of tulips. Of these about four hundred are varieties of the ordinary garden species. Tulipa Gesneriana was introduced to western Europe from Turkey in 1554. Tulips are propagated by offsets, each root producing two, or sometimes three, salable bulbs, and perhaps one or two of smaller size, which require another season's growth before they are fit for market. They are also easily raised from seed, the seedlings coming at first self-colored; while they remain so they are known as breeders. These have been made very popular recently under the name of Darwin. After a few years of cultivation they break away from their original color. If a white tulip comes striped or marked with another color it is called a Byblœmen. Of this class the rose or red-tinted Byblœmens known as "roses" are perhaps the most desirable. A tulip having a yellow ground marked with another color is called bizarre.

In the early part of this century tulips having variegated flowers were most esteemed. To-day such self-colors as Gold Prince, the beautiful rose-carmine Proserpine, Vermilion Brilliant and the white, yellow and scarlet Pottebakkers are most esteemed. There are, of course, exceptions; the most conspicuous is the noble Keizerkroon, crimson with a wide edge of yellow. The tulip has become with us the most popular of the spring flowering bulbs. We use from a million and a half to two millions here in New England annually.

Daffodils are now receiving more attention from hybridizers than any other class of bulbs. Although the largest and finest bulbs come from Holland, they are extensively grown in England, Ireland, the Island of Guernsey and France. Japanese lilies are seldom grown in Holland; the Dutch dealers find it cheaper to import them from Japan.

The bulbs are lifted by hand, as spades or forks might injure them. They are carefully laid in baskets and conveyed by boat to the warehouses, where they are carefully dried and counted out into bags. When needed for shipment, buckwheat chaff is put in to prevent bruising. The value of bulbs exported annually from Holland aggregates three million dollars, the United States taking about $300,000 worth.

On the southerly side of the Lake of Haarlem are the nurseries of Boskoop. We see in these nurseries many plants which are not hardy enough to survive our winters, for many of which there is a large demand from England. The visitor to Boskoop, if going from Haarlem, will find it most convenient to make the journey by steamer in the great canal, lined on each side with interesting and picturesque scenery.

CHRYSANTHEMUM SHOWS.

[*Read before the St. Louis Florists' Club by F. J. Fillmore.*]

Shall we have another Chrysanthemum show is the question. I will answer it in the first place by asking, what are we here for? If merely for routine business there would not be much attraction. We assemble here, I think, as a kind of reunion once a month, but with always the main object in view, of holding a show, not for chrysanthemums alone, but for almost every variety of plant and flower that can be had at that season of the year to make a creditable display.

I am sure that there are very few grow-

The Shower Bouquet.

ers that could not furnish a few good plants, if not cut flowers, even the smallest grower among us. Nearly all grow geraniums, carnations, chrysanthemums, and a variety of blooming plants, for all of which there are desirable premiums offered, and we should exert ourselves and take pleasure in growing a few plants, not how many but how good. If you have never attempted to grow for exhibition you will be surprised the amount of pleasure you will derive. Of course it takes a great deal of hard work and study to attain success, but just make up your mind to do your best, not minding if you do meet with difficulties; and you will be amply repaid, if not in the almighty dollar at least in the amount of pleasure you will feel in looking at the result of your handiwork and the words of praise you hear from customers and friends.

Although a true gardener's love for his plants and flowers is the first consideration, still you will find it will greatly benefit you from a business standpoint when customers see your fine show plants. They will naturally want to have some like them, even if not quite so large and fine, and it is sometimes a hard task to refuse to sell the very plants and flowers that are intended for exhibition.

I am sure if you cast aside all jealous and selfish thoughts and grow for pleasure alone, you will attain success in one class or another, but do not be disheartened or disappointed if you do not take as many blue ribbons as you expected; remember, the other fellow will be there. If you do not succeed at first, try, try again.

In conclusion, Mr. President and brother gardeners, I would repeat, let us all unite and success will be ours, but disbanded we will meet with failure. By putting our shoulders to the wheel and leaving nothing undone to achieve success, I am sure we will have a most successful show, not only from an artistic standpoint, but also financially. I think those that exhibit can be reasonably sure of having their premiums paid in full.

I again repeat by all means let us have a show, only give us a chance and we will give our citizens and visitors such a show as will be heard of. Let us make the chrysanthemum show and floral exhibition of 1898 a grand success, and I only hope the executive committee, whoever they may be, will be able to secure space in the exposition building, for success depends a great deal on location, as I have always maintained.

SHOWER BOUQUET.

Our illustration portrays one of the most beautiful additions to the narrow variety of bouquets, and is the one used almost exclusively these days by the "smart set." There is no variety of flower that lends itself more gracefully than lily of the valley to this style of horticultural architecture, as a ground plan to work upon, and then finished here and there with sprays of orchids, buds of roses, violets, or for that matter any seasonable flower that will balance evenly with the whole, then the *tout ensemble* effect is all that can be desired and will satisfy the most exacting customers.

The bouquet seen in our illustration contains about two hundred valley, eighteen Cypripedium insigne and a fair proportion of fern and asparagus; cost to you about $12 including ribbon and "fixins" and to cost "the other feller" what you can get—price usually asked in New York $25 to $35 at this time of year.

The bouquet is usually built up in sprays and then bound together, a few smaller sprays being placed where needed; the main sprays as follows:

Two sprays 18 inches long.
Two sprays 12 inches long.
Two sprays 8 inches long.

Finished with asparagus or fern, Adiantum cuneatum or Adiantum Farleyense if preferred, and broad and narrow lace ribbons from which are attached small sprays of flowers that are used in the general make-up.

A NOVEL JARDINIERE.

While we are scouring the tropics for novelties, while we are absorbing catalogues to find something new and useful to attract our customers, there are many things pretty, useful and ornamental right at our very door and this was never more thoroughly impressed on my mind than when I saw a very pretty jardiniere at Galvin's in Boston, composed of the following native plants: Hardy ferns in variety, goodyearas, sarracenias, ground pine, Partridge berries, bird berries, and finished off here and there with little masses of "silver" moss, the whole making a unique and very pretty effect. B.

VIOLETS.

A Chicago grower finds that if Marie Louise is kept very cool and dry the flowers come paler in color and with a greater amount of fragrance. And the color so secured seem to make the flowers more salable in the Chicago market, while, of course, the increased fragrance considerably enhances their value.

Another grower says violets should be picked only in the middle of the day when the house is warm. They are then fragrant and if picked then will retain

their fragrance. They should then have a little wet tissue paper on the stems and each bunch be wrapped in soft waxed paper. This will best preserve the fragrance. Market as soon as possible.

PHILADELPHIA.

Many Flowers Used at Assembly Ball.

The first assembly ball, held in the Academy of Music, on Friday evening January 14th, was a most brilliant affair. The supper tables were formerly laid in the lower hallway, which is bounded on each side by broad staircases ascending to the foyer on the second floor, where the dancing takes place. This screen-formed supper room has always been one of the chief beauties of the assemblies. The ladies in full evening dress seated on the stairs with bouquets of handsome flowers banked on the balusters beside them, forming a beautiful setting to the animated scene below.

This year's managers, however, decided to turn the lower hallway into a parlor, transferring the supper room to the Academy proper. The stage curtain was lowered and the parquet floored over. The balconies were then hidden by alternate rows of green and white cheese cloth, stretching entirely around the house. In front of these draperies were used evergreen trees and a great number of incandescent lights, the idea being to turn the parquet into one large room, plants and flowers being used freely all around the sides of this room, the boxes being especially pretty.

The idea was an excellent one, the difficulty being that the space to be decorated above was so vast that it was almost impossible to prevent it from seeming bare despite the quantity of material used. The dancing took place in the foyer, which was beautifully decorated. There was decidedly more bouquets carried than last season, a very encouraging sign.

The Market.

The market has been in bad shape; flowers are too plentiful. The dull, extremely mild weather has told on the quality of the stock and worse still, several stormy days kept shoppers indoors. The Assembly brightened things up decidedly as far as choice stock was concerned, especially roses, but the next day being very wet, prices broke badly on second quality stock. Carnations have suffered considerably; the best now bring $2.50, while very good flowers can be bought for $1.50. Good roses bring excellent prices, about the same as last week, but medium and poor blooms bring prices which I hesitate to name.

State Board of Agriculture.

An institute meeting of the State Board of Agriculture was held in Horticultural Hall on Saturday, January 15. There were a number of interesting papers read both in the afternoon and evening sessions and the "question box" proved of great interest. The meeting was well attended, not perhaps by exactly the farmer class but the gentlemen farmers came and lots of florists and amateur gardeners, which will do just as much good or more, as a meeting of this kind attended by farmers only would not be nearly so interesting. The average farmer gets up too early and works too hard to think of questions when in a meeting. He would probably take forty winks while there, and think of the question he meant to ask on the way home.

Should More Beauties Be Grown?

There is a very interesting letter from this city in the *American Florist* of the 8th inst., signed "K." I am a great admirer of Mr. K. and his writings; in fact, there have been times when I have waited with painful suspense for his judgment on some plant or flower. The letter in question gives an account of the increase in the quantity of glass devoted to forcing American Beauty roses for this market, and goes on to say that the demand still keeps ahead of the supply. The natural inference is that the growers hereabouts should devote more glass to Beauties next season.

Now I am not at all sure that the facts justify such a conclusion. Here are the facts: The Beauty is a crop rose; every grower tries to get a good crop for Christmas; very many of our growers succeeded this season. Naturally, when this letter was written, on or about Tuesday, January 4, the best long-stemmed flowers were scarce. Immediately after the holidays, for about two weeks, this market is likely to be dull, and a quantity of any fancy flower is apt to bring prices down.

It is this desire to produce enough for every emergency which has caused the tremendous over production from which the New York cut flower market has suffered in the past few years. It will take close watch on the account books next summer to decide whether or not more glass can be profitably devoted to this popular rose.

Notes.

S. S. Pennock is receiving some exceptionally fine mignonette which brings $10 to $12.

Madame Chatenay rose continues to be greatly admired by the ladies. It seems like a good rose for the florist who retails his own flowers, from first appearance. (Will not some one who has grown it tell us about it?)

The Florist Bowling Team were not so successful in their second match as in their first. Our men led until the third game was begun when somehow the pins didn't fall our way. Mr. J. K. Starr has been elected manager and better things are expected. J. W. Y.

BALTIMORE.

Business Continues Dull.

Although an improvement over last week, business has not as yet come up to expectations. In fact, the unceremonious drop things took after New Years has caused a general distrust all around, both wholesale and retail, and one now hesitates to prophesy. Shall consequently confine myself to facts and the sayings of others.

Some of the retailers are complaining very much, others are reticent or resigned (it is hard to say which), while a very few reported "trade greatly improved." To the uninitiated, one would think we were a set of "croakers," but to the florist, who can appreciate our predicament, it is quite plainly depicted that something else is wrong, for it is an old failing of the craft never to discuss business unless it really is *dull*.

At the commission houses the sales are both light and unstable, while the consignments have in their turn increased in contrasting proportions. Flowers of all kinds are plentiful now, and prices have taken a tumble. The best roses only bringing $6 and $7 per hundred, Beauties $3 and $4 per dozen. Carnations are getting quite plentiful and are back to $1 and $1.50, while violets also are more than equal to the demand, at the rate of 50 cents per hundred.

Baltimore Florists' Exchange.

The stockholders of the Baltimore Florists' Exchange held their annual meeting at the Exchange rooms, No. 229 Park avenue, Monday the 10 inst at 6 p. m. Our able manager, Mr. Alex. Scott, submitted a very favorable financial report, which was accepted. A new board of directors for the coming year was then elected as follows: I. H. Moss, E. A. Seidewitz, Wm. Fraser, A. Repp, J. M. Rider, Ed. Kress and C. F. Feast. The board then elected the following officers: I. H. Moss, president; Wm. Fraser, vice-president; Edwin A. Seidewitz, secretary; Chas. F. Feast, treasurer.

No Show Next Fall.

The regular meeting of the Gardeners' Club at the Royal Arcanum Building, Monday, January 10, was quite well attended owing perhaps to the fact that a question of vital importance to the club was to be discussed and decided. The secretary, Mr. N. F. Flitton, read for a second time the executive committee's report on the question of holding a show next fall, and after a somewhat lively discussion it was placed before the house and voted down. The general sentiment being that at the present another attempt would only add another financial failure to our list.

Question Box.

The question box as usual contained a miscellaneous collection of subjects which were of more or less interest. One question was asked, "What caused violets to have green centers?" The answer "over feeding and not enough light" was given. Also, "What are the best new carnations?" Mr. Fischer thought Flora Hill, Victor, Lily Dean, Mrs. Chas. Duhme and Jubilee. "What effect has nitrate of soda upon carnations?" Mr. Seidewitz answered that it gave a dark green lustre to the foliage.

Upon motion the first meeting in February has been appointed carnation night, all members being invited to contribute an exhibit, a certificate of merit to be awarded to the best vase of pink, one variety.

Mr. Charles M. Wagner gave an impromptu exhibit of a well-grown and beautiful white cyclamen, which caused

general admiration. The crown contained four dozen flowers in all, thirty of which were wide open, the balance in large buds.

Notes.

Messrs. Halliday Bros. and Samuel Feast & Sons have both issued very pretty calendars this year as an advertising medium.

Messrs. Fischer & Ekas have a new seedling carnation, pure white, with the habit of Storm King and Lizzie McGowan, which bids fair to be a seller.

A Lexington street florist has money, not "to burn," but for exhibition. He places one dollar bills in his windows as a gentle reminder that violets are only $1 per hundred. There is an example where you "advertise and get your money back." Another good method is to try the FLORISTS' REVIEW. C. F. F.

BUFFALO.

Dullness Prevails.

If it were not for that mournful business metioned last week, and which I hope was distributed among the craft generally, it could be called very dull indeed. For the time of year it is too dull to be healthy. A little drifting business falls on us all the time but there is a sad lack of events which demand any quantity of flowers. Flowers are in abundance to fill all orders. Carnations of good quality meet with the quickest sales and violets are getting more plentiful.

A Trip to Corfu.

Last week's dull routine was enlivened by a small delegation consisting of the retired C. F. Christenson, W. J. Palmer, Sr., Daniel B. Long and W. S. taking the noon train for Corfu, Genesee Co. Christenson is retired from active business but very much with us in spirit and thinks he knows as much as the rest of us, but such is the enormous strides and marvelous velocity with which our business travels, aquiring knowledge and experience in its flight, that one who is even seven and a half months out of the business is lost. Too late! he can never catch on again. He will see the express train glide around a curve and be lost to sight and he had better then and there make up his mind to sit on the pleasant bank and live on a "moderate competency."

Two of the party were invalids of a kind. One had lost a little piece of the natural covering of his shin, the other the same material from his big toe and neither of these injured members have shown a marked inclination to heal, so the two quiet members solaced themselves with quiet converse about the respective merits of the newer carnations, while the other two went on with their wild frolic. A view of a bench of the local new carnation, "Genesee" was really the object of the visit and all were very favorably impressed with it. As Flora Hill was growing in the same house, the same soil, same temperature and same attention, it was a good opportunity to pass an opinion which I will leave others to express. After a very enjoyable lunch at the Hotel de Thayer, we journeyed on to see Mr. T. Webb and his new scarlet carnation, at present without a name, but which produces large quantities of good flowers. Time was short and the boys had to return to town.

A Delegation from Rochester.

On Friday a large delegation from Rochester reached town. There was a pair of Salters, a pair of Kellers, a Schlegel and three other gentlemen whose names I did not accurately get. When such an imposing and important party as that visits our city why don't they notify us? Proper courtesy could then be extended. It appears, however, that the boys at home attended to their wants, and late in the day they arrived in the Genesee village and found the writer watering freshly planted lettuce. We were very glad to see them, but regret we saw so little of them.

Visitors.

I forgot last week to say that we had, a few days ago, a short visit from Mr. George Stollery, of Chicago. It was only a lay-over for an hour between trains, but the visit was long enough to convince us that Mr. S. is an enthusiast on carnations, and we will say as the "Heilandman" did when he saw the sign post and mistook it's purpose: "God bless the Duke of Argyle."

Visitors in town of late have included Mr. Henry Wise of East Aurora, Mr. Fred Lewis of Lockport, and within a few hours the aristocratic-looking Mr. A. Ringier of Chicago. Mr. R. has natural ability enough to be Senator from Ohio, but prefers a more honest livelihood, selling bulbs, seeds, Indian produce and other necessities for a reputable firm.

We expect a revival of business in the near future. W. S.

TORONTO.

Election of Officers.

At the annual meeting of the Horticultural Society, held last Wednesday, at which about seventy-five members were present, the following officers were elected: President, J. McP. Ross; 1st vice-president, H. Lucas; 2nd vice-president, Mr. Tyrrell; directors, Messrs. J. Chambers, Vair, Utley, G. Manton, Watkins, Collins, Ewing, Simmers and Mills; secretary and treasurer, Chas. Chambers. These annual meetings have very little of the horticultural about them except the members, but the above appears to be a strong team and should be able to give a good account of themselves on the second Wednesday in 1898.

Business Conditions.

From the remarks of a correspondent, signing himself "Toronto," in your Chicago trade contemporary, it might be gathered that roses were losing their popularity in this city, but this I don't think is by any means the case. Carnations are, no doubt, very popular with the masses and those who have little money to spend on flowers, as also with the higher classes. There is a good demand for them, and they are better than the cheap, flabby, weak-stemmed roses, of which many are to be seen about. But it does not follow that these same people would not buy good roses if they could afford it. In the spring, after Easter, when there is a glut and they are sold in large quantities on the market, people are falling over each other to get them. Roses are still popular, and depend upon it they always will be; they have their ups and downs like everything else, and under the present means of cultivation it is doubtful if the average prices covering the year could be lowered to any extent and leave any profit.

Collections are reported to be much better this year. A College street florist told me yesterday that he has had very little trouble, where in former years he would have had to wait six months for his money. This, I suppose, may be taken as a sure sign of better times; it takes a long time though for them to filter down through all the various strata of society, and poor public gardeners never feel them at all in their salaries; only in an increase of work are they felt by him. Pity the poor public gardener!

Trade has been a little slacker this week, and prices have come down a notch or two. Bulbous stock is beginning to arrive in variety. A few daffodils are to be seen, hyacinths in pots, tulips, etc.

E.

CLEVELAND.

Resume of the Market.

Business has been very good of late all around, no flowers of fair quality going to waste. In fact there has been rather a scarcity in good grades right along, more particularly in carnations, which have not been as good so far this season as in other years. Owing possibly to gloomy, cloudy weather or to some more occult cause, the plants as a rule show a good deal more rust and bacteria than usual and the blooms are considerably smaller and weaker in stem than they should be.

Roses have been in good demand but as a rule a little off in quality. Bulbous stuff, in the form of tulips in the varieties Proserpine and Yellow Prince mostly, with a few Dutch hyacinths and single Von Sion narcissus, is beginning to come in. The tulips are pretty good in quality although still a trifle short in stem. They sell at from 75 cents to $1 a dozen retail. Roses bring from about $4 to $7 a hundred, wholesale, according to variety and grade. Carnations run in price from $1 to $3, fair ordinary stock bringing about $1.50 per hundred. The $3 grade is not much seen and the dollar stuff ought not to be seen at all.

A Visit to Mr. Eadie's Establishment.

Having important business lately in connection with certain clay pigeons on the premises of James Eadie, the opportunity to inspect the rose houses was taken advantage of. The houses are all even-span structures and most of them are solid beds underdrained and heated, having two beds in each house with a walk through the center and at each side of the

house, there being no side benches at all. They are planted mostly with Bride and Bridesmaid, with a house each of Meteor and Perle, these two latter houses being the only ones upon the ordinary raised benches.

The stock looked fine throughout, although the houses of Bride and Bridesmaid surpassed the others in appearance, having an abundance of clean, healthy foliage and carrying a good lot of bud and bloom that, notwithstanding the bad weather and the fact that the crop was almost off, were very good in stem and size. Contrary to a theory that is still very popular in many quarters, that roses should be replaced annually with young stock the old plants here were preferred. They threw more flowers, of better size, color and stem than the blooms from the younger houses, and in addition got into productive condition much earlier in the season than did young stock. It should, however, be understood that the old stock was transplanted into fresh soil during the summer and not run through a series of years in the same old earth, with only top dressing and manure watering to supply lacking elements in the soil.

The carnation houses were looking well, although Scott here, as usual elsewhere, is considered the best variety for general good qualities. Your correspondent was shown a batch of valley, part of which was in condition to cut before New Years, which would average ninety per cent. of good salable stock. This is rather unusual for pips of the past fall's importation, and speaks well for the quality and handling of them.

NEMO.

ST. LOUIS.

Club Meeting.

The Florists' Club held its regular meeting Thursday afternoon at 3 p. m. with President Halstedt in the chair and thirty members present. This is the largest gathering of members that the club has had for a long time. After reading the minutes of last meeting, the exhibition committee made its report stating that all special prizes would be paid in full and the club prize would be paid at the rate of seventy-five per cent. As a few special prizes are yet uncollected the committee could not make its final report until next meeting.

Balloting for new members was next in order. The first candidate was Mr. Andrew Meyer, Jr., who was elected by an unanimous vote. The next candidate was Mr. Fred. Foster, manager of the Krebs Floral Co. Mr. Foster's application was rejected by a vote of nineteen to seven. New applications for membership were made by Wm. E. Jordan, Fred. Meinhart and Fred. Billings. They were read for the first time. Mr. W. C. Young and R. F. Tesson were appointed as a committee to change the constitution and by-laws of the club.

A communication was then read from Jos. R. Freeman, president of the Commercial Florists' Club of Washington, D. C., asking the club to take action with them in condemning the free distribution of cut flowers and seeds by the government. It was adopted by an unanimous vote and the chair appointed Messrs. Tesson, Will Young and E. Schray to draw up resolutions condemning the practice.

The committee on smoker was then appointed as follows: J. J. Beneke, Frank J. Fillmore and Will C. Young. The smoker and entertainment will be gotten up by subscription among the members of the club. Any member wishing to subscribe can do so by addressing the chairman, or the secretary of the club.

Show Questions.

The next order of business was the questions. Messrs. Guy, Fillmore, Trillow, Beneke and Young answered their questions to the entire satisfaction of the club. Messrs. Ammann and Steidle were not present and Messrs. Meyer and Tesson were not ready, so the chair requested these four members to be ready with their questions for next meeting.

Mr. Young's question as to "when and how shall we begin preparations for our next chrysanthemum show" brought out quite a discussion, especially his remarks on appointing a committee to run the show from beginning to end. Mr. Young's idea was for the club to elect a manager, he to act as chairman of the executive committee, and to select six members to act with him as the executive committee, each one of these six to select three members and act as a committee, he to act as chairman of the six committees, which will have their own work to do after meeting with their own committees each week, the six chairmen to meet with the chairman and manager and report what they are doing or what they have done. The club decided this a good plan and started in at once to elect a manager-chairman. Mr. W. C. Young and J. J. Beneke were nominated, and after counting the ballots Mr. Beneke was elected manager-chairman of the next chrysanthemum show.

The club has decided to hold its annual carnation meeting on Thursday, March 10 at 3 p. m.

Exhibition.

Richard Witterstaetter, of Sedamsville, Ohio, exhibited through Mr. C. A. Kuehn, a vase of his new white carnation, Evelina, which was given a certificate of merit at our late show. Those shown at the meeting were very fine, some thought even surpassing those exhibited at the show. The club thanked Mr. W. for the display.

An Invitation to Belleville.

Just before the meeting adjourned the Belleville brethren, better known as the "Big Five Belleville Florist Club," through their secretary, Mr. Trillow, invited all the members of the club to Belleville next Tuesday to spend the day with them. The invitation was accepted and about twenty members will go.

Trade Conditions.

Business the past week was still very quiet. Large decorations are unknown and the floral arrangements at most of the socials are very small. Stock in some lines is rather scarce at present, particularly first quality roses. Good Beauties which bring $3 and $4 per dozen are scarce. Brides, Meteors and Bridesmaids are worth from $4 to $6 a hundred, second quality $2 and $3. Perles and Woottons bring $3 and $4. The latter part of the week there was an increased demand for white roses owing to some extra funeral orders. Carnations have been very plentiful, some being very fine, and run from $2 to $3 for the best, some extra fancy bringing $4. Portia and Jubilee are the only good red seen in any quantity.

Bulbous stuff is moving very slowly. Romans are plentiful at $2 and there are plenty of paper whites which go for about the same as Romans. The demand for valley is slow and it is not extra good. Harrisii and callas sell well and are not over plentiful at $12.50 per 100. Violets have also been plentiful but seem to hold their own. Californias go at $1.50, common single 15 and 25 cents. Smilax appears to be selling a little better than it did, owing to the scarcity of ferns for a few days.

Various Items.

Frank Ellis, manager of the Mound City Cut Flower Co., is very sick with pneumonia, but from last report is improving and expects to be out again by the latter part of the week.

Burt Van Simon, formerly with Crossman Bros., seedsmen, of Rochester, N. Y., is now with the Plant Seed Co., of this city.

Wm. Blanking is in the city looking after the interests of Crossman Bros., seedsmen, Rochester, N. Y.

Frank Fillmore and Emil Schray paid a visit to Max. Herzog at Gratiot Station and report that Max is in very good shape to grow good stock and that his plants for spring trade are looking at their best.

Wm. Lingenbrink, of 22 Olive street, who is going to the gold fields the latter part of this month, sold out his establishment to Mrs. Marten, on Monday, January 17.

Bowling Notes.

The Bowling Club rolled its regular three games Monday night at Cocked Hat and the usual ten were in attendance. C. Beyer rolled high in the three games, with 156; high single score, 52. J. W. Kunz was second with 141; high single score, 48; Beneke, third, with 131; high single score, 41. Look out for next Monday night and don't forget to be on hand.

J. J. B.

NEW BEDFORD.

Annual Meeting of Gardeners and Florist Club.

The Gardeners' and Florist Club of New Bedford held its annual meeting last Monday evening. The annual report was interesting as it showed an increase financially over the past season. It showed the full progress for the year and outlined work for the future. The report of Treasurer Waite was very encouraging,

showing a balance in the treasury of three times the amount of last year.

Officers for the present year were elected as follows: President, Wm. Keith; vice-president, Robert Mitchell; secretary, Peter Murray; treasurer, Chas. Waite; assistant secretary, T. H. Dahl; executive committee, James Russel, James Garthley, A. J. Fish.

Remarks were made by the new president, Wm. Keith, in which he gave some excellent advice regarding the next show. The executive board held a short meeting in reference to same subject.

Business is dull and prospects are very poor, as the city is in the shadow of a long and hard labor strike. C.

NEW YORK.

In the Market.

Last week was a record breaker—for bad business—the worst in the recollection of the "oldest inhabitant" of the street, for the time of year. Wednesday was "Black Friday" and Saturday, that started in with a drizzling rain which continued the whole day, was even "blacker." The week ending January 15 will linger long in the memory of every one as a record breaker for "innocuous desuetude." Violets suffered worse, and towards the evening of Saturday were selling for 25 cents per 100. Brides suffered the next in the rose line and the very finest stock was sacrificed at phenomenally low prices. In fact, all flowers touched rock bottom. Luckily, however, stock was not what you might call plentiful or the result to the grower and wholesaler might alike have been disastrous. Won't you please send us some nice cold weather from the west and we will try to reciprocate when the summer comes. If this weather continues I know some of the wholesalers will go into the umbrella and straw hat business; yes, and rubbers, too. Some are selling the last named now, but 'pon my honor, I think they would sell anything these days. Don't think I am a chronic dyspeptic or a pessimist of the worst kind, and if you don't believe me just try and run the gauntlet of the street yourself. To-day, however, as I write this, it seems as if the turning in the long lane of depression and bad weather had really taken a turn for the better. The air is more bouyant and the hopes of the dealer are inclined to respond, with the aid retailers and the general flower buyer.

Mr. J. I. Raynor, who handles a specially fine lot of Beauties, Maids, Brides, Meteors, and violets, also special grades of carnations and some very fine cypripedium insigne, reports a steady increase in the shipping trade in spite of the elements and general condition of trade.

Various Notes.

Paul de Longpre, who has been aptly termed the Rosa Bonheur of flower painters, is holding his annual exhibition of water color drawings in the city, and all lovers of art in this particular sphere should attend, for while nothing is scarcely harder to portray, yet visitors will find some rare gems both from an artistic and botanical view, far different from the usual stereotyped and so-called plant portraits.

For my part I would like to see some of the Florist Clubs and Horticultural Societies attend in a body, or do they think they would be called aesthetics.

Our Wholesalers' Special Report.

The supply of all varieties of stock has been sufficient to meet the demand during the past week. Trade was spiritless and prices ruled lower than the previous week. The lower grades of roses were most affected; those of higher quality with the exception of Brides cleaned up fairly well. Quality is good in spite of the dark days. Shipments are not heavy. Meteors are selling better owing to a shortening up. Beauties are showing up, somewhat improved in shape and color, but the price is very unsteady.

Carnations fell away in price during the first half of the week but recovered some of the loss at the finish. Violets are in over supply, quality superb and price almost anything the buyer will pay.

Valley is evidently not now in great favor as indicated by the selling price. Tulips are coming in more freely, and all colors are cleared out with the exception of red. Lilies are steady in price but move slowly. Good adiantum finds a ready sale. The prospects for better trade seem brighter.

Seed and Bulb Trade.

There will be a meeting of the Seed Trade Association, January 21, at 10 a. m., at the Park Avenue Hotel and all members are invited to be present as questions of vital importance will come before the association.

William Elliott & Sons are renovating their store, putting up a new set of hardwood seed drawers and otherwise making improvements. When I tried to get to the office recently it was like passing through Chilcoot Pass. The reception I received was far different, however, than one might expect, and instead of a diet of snowballs and fricasseed icicles, Mr. Elliott extended the right hand of fellowship with one hand and one of his choicest perfectos with the other.

After doing business for sixty years in John street, J. M. Thorburn & Co. will remove to Cortlandt street sometime during the coming July or August, their present building having been condemned. Mr. F. W. Bruggerhof, who has been associated with the firm for forty-nine years, feels very reluctant to move from the "old homestead" and the ties that have bound it. The name of Thorburn has been a landmark for nearly a century, for it was in the year 1802 that Grant Thorburn established and laid the foundation of the present firm of which Mr. Bruggerhof is the present active partner.

The Retailers.

The business in the retail trade since the holidays is still in a spasmodic, sporadic, and chaotic condition, though today (Monday), with a nice sharp frost and a bright sky, the streets are filled with hustling crowds and lines of carriages, so that the transient trade, an all important factor, is helping business considerably.

Social events, from the sublime to the ridiculous, are in full swing, with an occasional funeral order to clean up (that is, the poorer grades of flowers), so that things in general are not quite so bad as they might be, which is saying heaps. The Old Guard ball takes place soon, as does also the charity ball, and, not the least, the French ball, and so, with these and a few other events, the silver lining is almost an assured reality.

Various Notes.

Mr. Thomas Young, Jr., is without a bookkeeper at present. His man "Friday", John Sharkey, is at home at present keeping company with our natural enemy "La Grippe."

Mr. F. W. Creighton, who represents W. A. Manda, "on the road," has just returned from the middle west and reports the outlook for the future as good, and general tone of business one of confidence.

Mr. A. Herrmann reports a very heavy shipping trade during Christmas and New Years, also that good cape flowers are exceptionally scarce. I had an interesting trip through his factory and saw the several processes of manufacturing of "still life" in horticulture.

MADISON, N. J.

There was a full attendance of the members of Morris County Gardeners' and Florists' Club at its regular meeting on Wednesday night, the election of officers for the ensuing year being in order and resulting as follows: President, Wm. Duckham; vice-president, John Jones; secretary, Charles H. Atkins; treasurer, Wm. Charlton.

The essayist of the evening was Mr. John E. Lager, of Summit, his subject "Orchid Collecting" than which no one is better qualified to speak upon, and treat it so fully in all its varied aspects. On previous occasions we have heard Mr. Lager deliver carefully prepared lectures committed to paper but on this occasion he relied solely upon mental notes indelibly imprinted on the memory. With his traveling maps spread upon the wall he took his audience on an imaginary journey up the Rio Magdalena, which is navigable by river steamers, 600 miles to Honga, an important center as receiving the imports for all the vast interior of Colombia and exporting the products likewise of which coffee and cocoa are an important part. So far the journey is easy and involves from ten to fifteen days according to the state of the river. Leaving Honga, however, the collector's troubles begins as there confronts him a journey of 300 miles or more on mule back before even the region where Cattleya Trianæ grows is reached. In fact at this present time with the wide spreading tracts annually cleared and devoted to coffee and cocoa, the area of this cattleya distribution is fast diminishing and the nearest point at which it can now be profitably collected is 1,200 miles from the coast.

On the face of the map he outlined his journeyings down the Magdalena valley

across the central chain of the Cordilleras, up the Cauca valley, recrossing the mountains back to the starting place; a route that he spent two and one-half years in traversing. He demonstrated the localized distribution of the different and best known species each with one or two minor exceptions confined to its own area and separated by hundreds of miles from any other cattleya, so that the collecting of any species demanded a special journey for that alone and as in the case of Cattleya Schroderæ, the expenses of the journey were the ruling factor in fixing the selling price. It is one of the most plentiful cattleyas to-day yet one of the most expensive.

While explaining the immensity of the country he wished to dispel the idea that it was all cattleya ground. Just as soon as you get below the foothills of the Cordillera you searched in vain for the vestige of orchid life. At elevations of from 2,000 to 4,000 feet the cattleyas were mostly found but the odontoglossums had a much wider range. O. vexillarium being found up to as high as 6,000 feet, while in crossing the Cordillera he had found O. ramosissimum at an elevation of 12,000 feet, where far above the zone of tree growth it had adapted itself to conditions and grew freely on low bushes less than a yard in height, some plants even on the ground itself and not merely subsisting but thriving healthily with flower spikes as long as a walking stick.

At the close of his remarks the lecturer was asked numerous questions on the conditions of life, etc., in those latitudes to which he gave interesting replies, while all present united in a hearty expression of appreciation of the intellectual treat afforded. H.

WASHINGTON.

Resolutions.

The last meeting of the Commercial Florists' Association was, as usual, well attended, despite the stormy night. After the reading of the minutes by the secretary, which were amended and adopted, the rules were suspended, and, on motion, the application of Mr. Adolphus Gude was taken up, and he was uanimously elected to membership.

The committee appointed to draft a bill to congress made its report, and after a long and full discussion the following was adopted and ordered to be introduced in congress at once:

"That hereafter it shall be unlawful for any person in charge of any establishment in the District of Columbia supported in whole or in part by the United States, or for any of his subordinates, to appropriate to his own use, loan, distribute gratuitously, or sell, or offer for sale, in the District, any products of greenhouses or grounds under his charge.

"Provided that nothing in this act shall be construed as prohibiting the president of the United States from using at his pleasure, the products of the White House conservatories and grounds.

"And provided further, that nothing in this act shall prevent the secretary of agriculture from distributing any new or rare plants not in general cultivation.

"Violators of this act or any of its provisions shall be subject to dismissal from the government service."

A committee was appointed to draft a circular letter to be sent to all florists' clubs in the country. The same committee was also instructed to wait on the Board of Trade with the view of securing its co-operation.

Messrs. Field's Orchids.

During the past three or four years Messrs. Field Bros. have been collecting orchids until now a fine collection, taking up nearly half of their large establishment, is the result. Five houses two hundred feet long are almost entirely devoted to orchids, and all in perfect health. In one house there were two benches devoted to C. Trianæ with hundreds of flowers; C. Mendelii in fine shape and promising well for a good crop; then came a fine batch of C. Skinnerii, followed by a grand lot of C. Gaskelliana and C. labiata in superb health; then followed a part of a bench with about fifty plants of C. speciosissima with flowers eight to ten inches across. Oncidium splendidum, with spikes three feet high; next a large quantity of Vanda cœrulea in full bloom with tall graceful spikes well flowered; Cymbidium eburneum coming in flower; C. Mossiæ, showing well for a fine crop; following came a bench each of Pilumna fragrans and Cœlogyne cristata in flower.

Among dendrobiums there were about one thousand formosum, also quantity of Phalænopsis Schilleriana, Wardianum, nobile, Findleyanum and Jamesianum. One house was devoted to cypripediums which were in full flower. Messrs. Field Bros. state with a few varieties, the demand is not equal to the supply.

Their roses were in good health and from the quality and quantity of bloom show careful growing and judicious feeding. Their "bete noir" is carnations, hard luck attending them. In one house McGowans all died outright with stem rot, though other varieties looked fairly well.

A Quiet Week.

The week has been very quiet with the trade with the exception of an occasional ball. One of these was given by the Leiters at which there were one or two little decorative groups that were very effective. The center of one group being a fine Kentia Forsteriana sixteen feet tall and as much in spread of foliage; another, a mound of Farleyense, cattleyas and dendrobiums in variety and Cœlogyne cristata.

The price list remains the same as the past week, quantities of good valley on hand without takers.

Reply to Criticism.

In reply to the criticisms in regard to the statement I made in my last letter about the free distribution of plants and the law in reference to it, it is only a question of interpretation. I concede there is a law for the agricultural department to distribute new and rare plants; that is what that department was established for. But I do not interpret it to mean they shall send latanias, kentias, araucarias, and azaleas to private homes, as the agent who purchased the plants for the department stated that they were intended for. Also the official seal stated they were to be paid for out of the fund for the "free distribution of valuable seeds." These plants were purchased for the sole and express purpose of sending to members of congress when they arrived here, and to a favored few office holders. If the Washington correspondent of the *Exchange* can prove a law exists to so dispose of good plants I will retract. Until then I have nothing to take back. W. H. K.

BOSTON.

Weekly Exhibition at Horticultural Hall.

John Mutch, gardener to J. E. Rothwell, Esq., Longwood, showed some exceedingly fine orchids, among which may be mentioned Odontoglossum Wilckeanum, with twenty-one flowers on a spike, also a very fine Odontoglossum crispum, finely marked; Cypripedium Leeanum Maesereelianum, a very fine plant with nineteen growths and ten flowers; Cyp. Bellona, a very choice variety; also Cyp. Ceres, very fine; for which collection he was awarded a gratuity.

Mr. Clinkaberry, gardener to C. G. Roebling, Trenton, N. J., exhibited a monstrous flowered Cattleya Clinkaberryana, for which he was awarded a silver medal. The flower measured eight and one-half inches across, petals four inches wide and two and three-quarter inches across the lip, a splendid color, and of good substance for so large a flower.

Carl Blomberg, gardener for Oakes Ames, North Easton, showed a collection of cattleyas, among which was the beautiful variety, Cattleya Trianæ var. "Lilian Chatman," for which he was deservedly awarded with the society's silver medal. Lager & Hurrell, Summit, N. J., also showed two very fine spikes of Cattleya Trianæ, large flowers and very fine color. James Comley, superintendent for the Hayes estate, Lexington, also showed three vases of a seedling acacia, of which he says grandis is the parent; it is certainly a very fine variety and would be a useful florists' flower; also some Cattleya Trianæ spikes, for which he was awarded a gratuity.

Seed Trade.

The seed trade is beginning to move lively and good business is reported. The principal seed houses say their catalogues will be ready in short order, but the first to issue is that of R. & J. Farquhar & Co.

Mr. John K. L. M. Farquhar, of Farquhar Bros., seedmen, delivered a very able lecture before the Massachusetts Horticultural Society, last Saturday, on Holland, its floriculture, and public parks, illustrated with nearly 150 stereopticon views. The meeting was very largely attended.

The Market.

Trade is quiet. There is decidedly more supply than demand, although the quality is very much better than a week or two back. The retailers are reporting a little better business, as weddings and parties are now beginning to appear. The following are about ruling prices: Beauties $1 to $4 per doz.; Brides, Bridesmaids and Meteors $3 to $12 per 100; Perles and other varieties $3 to $8 per 100; carnations $1 to $2 per 100; valley $1 to $4 per 100; Roman hyacinths, per 100; $1 to $2; paper white narcissus, per 100, $1 to $2; Lil. Harrisii, per 100, $8 to $12. Violets are coming in more freely, but in some instances are very poor quality. The price ranges from 50c to 75c per 100.

C. H. J.

OBITUARY.

Henry S. Rupp.

Henry S. Rupp, of the firm of Henry S. Rupp & Sons, Shiremanstown, Pa., died Jan. 14, of heart failure, in his 72d year. He started in life as a farmer, but in 1862 embarked in business as a nurseryman and florist and was remarkably successful. Mr. Rupp was an honored member of the community in which he lived, taking an active part in everything that tended to the public good, and was a sincere Christian. He leaves a widow, four sons and two daughters, his being the first death in the family, which is quite remarkable. The ages of the children range from thirty to forty years.

During the past two years the firm of Henry S. Rupp & Sons has been closing out the nursery department of their business, the son, John F., having taken the floral and seed department and removed the greenhouses to the village of Shiremanstown to secure more perfect mailing and shipping facilities. This well-known firm has had a wide-spread reputation for improving the Chinese primrose and growing large quantities of seed and plants of the same. They also were amongst the first to engage in the mailing of flowering plants.

ROCHESTER.

Favorable Trade Conditions.

To record the continuance of a flourishing trade affords great pleasure to the writer. Several years have passed since we last could conscientiously report such favorable trade conditions. In the past our florists would feel hopeful whenever the demand was brisk for a few successive days, but their hopes were only of short duration, the spurt would pass over quickly and a relapse into the old inanimate trend cooled off their premature exaltation. Now they have learned to be reticent in the expression of their hopes but do not deny the constant and marked growth in the bulk of business which they have experienced in the last six weeks or more. If the improvement should not turn out to be pemanent, we at least had a very favorable December and the present month has distinguished itself so far by crowding closely together social events in variety, which have proved a source of profit to our decorators; indications, in my opinion, point to continued and increasing prosperity, yet I may err in this assumption and the rosy view I have here depicted may be shattered to smithereens in another week by a sudden change for the worse.

A Visit to Buffalo.

After having two or three days of hard frost we again are favored with unusual mild weather, but without the bright sun which we had in the first part of the month. Rain and soft snow falls frequently, but the unpleasantness of the weather was not heeded by a party of Rochester florists who, last Friday, gave up their usual position behind the counters for a day to pay a visit to the then partly inundated streets of our great neighboring city of Buffalo. The party would have been wise if they had provided themselves with rubber boots, for in some instances it was necessary to wade through watery mud in order to reach certain places of safety and comfort, where the inner man could find the necessary encouragement to venture further on and continue on the march through the soft mixture, but nobody hesitated to walk on, and the proverbial hospitality of the Buffalonians and their amiable and obliging manners smothered every thought of complaint in the bud.

The party was royally entertained, and after viewing several greenhouses and stores they were escorted to W. J. Palmer's place, in Lancaster, where Daybreaks are grown to such perfection. They were unanimously pronounced as the finest ever seen, and it is not surprising that Mr. P. can, as he stated, dispose of a thousand of these grand flowers to every dozen of Scotts, but not everybody can raise such Daybreaks; they are simply perfect. A low house, shaded heavily with canvas, is used here for forcing out the fine tulips for which this place is so favorably known in this vicinity. A good steady heat is kept up here, and Mr. P. manages to develop a long stem even on the early lots under these conditions.

Here the Buffalo delegation bid good bye to the party, who journeyed on to Corfu, where Wm. Scott was caught planting lettuce in a house in which the violets would not respond to generous treatment; and he got mad at them, so they had to make room for the lettuce. Two other houses planted to these blue beauties are in fine shape and it remains a mystery why the other house should act differently. All the carnations show remarkable vigor in their new growth, promising a great crop before long. Mr. Scott thinks a world of the new white, Genesee and calls it a bread and butter carnation. Certainly it is here in many respects superior to the other whites. Dazzle, the new scarlet, was shown to the visitors with the same justified pride, but Dick Salter ventured the remark that this variety might prove a razzle dazzle to many of our growers although under the hands of a W. S. it appears not only to bloom freely, but its growth is also vigorous enough to satisfy all. Time had past quickly, while viewing the houses, and it was getting late. A contemplated visit to Mr. Webb's houses had to be postponed for a future day much to the regret of our party. They had to catch a certain train, else they would have been obliged to remain over night, and their presence in the stores on Saturday morning was a dire necessity, so they parted reluctantly from our highly esteemed jovial friend and his hospitable farm as he calls it.

K.

Armstrong's Everblooming Tuberose------

A new departure in Tuberose growth. Flower bearing buds continue to form around the old flower stalk indefinitely. Flowers greatly superior to those of all other single Tuberoses. Awarded Certificate of Merit by the S. A. F. at Providence last August, and the Shaw Gold Medal at St. Louis in November.

WANTED—A first-class grower who knows enough to run a place on business principles, to buy one-half interest and take full charge. For particulars address A. H., care Florists' Review.

GREENHOUSE WOODWORK.

Open-air-dried Cypress Lumber is more durable, and better suited to Greenhouse conditions, than kiln-dried stock. But you cannot get it from those that are engaged in the business in a small way—even though their entire business is confined to greenhouse material—for it takes a long time for the lumber to thoroughly dry and this means an investment in lumber that only those of large capital can make. The only way to have air-dried lumber is to buy green lumber and hold it until it dries. Those that order dry lumber from the producers of Cypress get kiln-dried stock. It is cheaper for them to kiln-dry than to hold the stock long enough to season it in the open air. We carry a large stock and fill all orders with open-air-dried Cypress clear of knots, sap and all other defects.

Write for Circulars or Estimates.

Lockland Lumber Co.
LOCKLAND, O.

NOW READY, 1898 TRADE LIST.

Dreer's Special Offer of New Cannas

THE CREAM OF THIS SEASON'S INTRODUCTIONS

GOLIATH. The finest crimson extant, rich and dazzling, large bold flowers thrown just the proper distance above the foliage, dwarf and uniform in habit, never exceeding three feet in height, broad massive dark green foliage.....**75 cents each**

J. D. EISELE. A magnificent vermilion scarlet, overlaid with orange, a fine flower and the best of its color.....**75 cents each**

MENELEK. The finest of Crozy's recent introductions, remarkably free flowering, with good sized flowers of a rich nasturtium red, a color that will contrast well with all other shades....**75 cents each**

FURST VON HOHENLOHE. An ideal yellow bedding Canna that is certain to please.....**50 cents each**

SAM TRELEASE. The nearest approach to a pure scarlet yet introduced, with almost perfectly round flowers which open out flat, almost like a single Petunia, the freest flowering Canna known to us and certain to become a standard sort...**35 cents each**

SUNRAY. An entirely distinct striped variety, ground color bright yellow, with stripes and dashes of bright scarlet running through almost to the edge of the petals.....**35 cents each**

We will furnish one each of the above select varieties for $3.00

For full descriptions of the above as well as all the leading new American, French and Italian varieties and a full line of standard sorts see our Quarterly Trade List, which has just been mailed to all in the trade. If you have failed to receive a copy apply for same, enclosing your business card.

HENRY A. DREER, 714 Chestnut Street, Philadelphia.

No order for less than 100 of one variety accepted.

REINBERG BROS.,
51 Wabash Avenue, - CHICAGO.

A HANDSOME BASKET FERN.

A most attractive feature at the Lincoln Park Conservatories, Chicago, is a 24-inch wire hanging basket containing a fine specimen of the beautiful Polypodium subauriculatum. Some of the pendent fronds are ten feet long. This plant is from a small piece obtained about six years ago from Headgardener Pfister, at the White House, Washington. It has certainly made a wonderful growth and is a remarkably handsome specimen. The house has a night temperature of 65° to 75° and about 10° higher in day time.

Mr. Stromback thinks it could be readily propagated from runners, and also from spores which seem to be produced freely. Such specimens would be grand for decoration, and Mr. Stromback thought the fern could be so used if first hardened by keeping in a lower temperature for a time.

MR. N. GREIVELDING, of Merrill, Wisconsin, has in use a boiler made of fifty pieces of 2-inch pipe, the grate bars being also of pipe through which is a flow of water, and he reports that it has worked very satisfactorily with him. He considers it the most economical and best boiler he has ever had on his place.

HUNT'S REVIEW OF THE CHICAGO MARKET.

A quiet week. Local and shipping trade both complaining of lack of orders and few caring to carry stock speculatively.

Roses seemed to be off crop everywhere, but latter part saw some improvement and a few good bright days will help wonderfully, though continued shortage for some little time yet is probably still in store.

Carnations were good and at times plentiful. At present, however, best grades go quickly at a slight advance over last quotations. Whites of any sort and really first class Tidal Wave being in shortest supp'y.

Violets are good with uncertain supply and demand—the two often fa'ling to connect.

Romans and paper whites not quite so plentiful; most growers having forced the bulk of their surplus stock and now only turning out enough for regular trade. Tulips are now coming better and the scarcity of white roses has helped sales greatly.

An uncertain feeling pervades the market and one hardly knows whether there is really a good supply of stock in sight or whether we are about to enter a period of real scarcity—chances favoring the latter.

Trade Conditions.

There has been a shortening of supply and a slight increase in demand. Nearly all the growers seem to be off crop, and if the demand should turn very brisk the shortage would be serious. As it is, all stock of fair quality meets with ready sale, and in roses there is very little high grade stock to be had. All seem much encouraged over the outlook and feel that by the time the supply increases there will be demand enough to use up the cut at fair prices.

Kennicott Bro.'s Co. expect to soon begin receiving the annual cut of fancy pink tulips from Klehm's Nurseries. They are growing 70,000 bulbs this year and it is hoped the supply will more nearly equal the demand than in the past. Kennicott Bro.'s Co. will handle the lot.

Club Entertainment.

The Florist Club's entertainment last Thursday evening was a very enjoyable affair. The program as printed in last issue was carried out with but two exceptions. For No. 5 a song by the club quartette was substituted, owing to Miss Blumenthal's illness. Miss Wolf was also unable to be present, and Mr. Flint Kennicott was called upon to fill the number. He responded by calling upon his daughter Grace, a miss of fourteen years, who recited "Shamus O'Brien" in a way that took the audience by storm. Every number on the program called forth a storm of applause, and, owing to the numerous recalls, the program was really doubled in length. "Ladies' Night" was certainly an exceedingly pleasant one.

Program for Next Meeting.

At the next meeting of the club, January 27, Mr. Joseph Reeve will read a paper on "Pot Plants for Market," and in view of the constantly increasing demand for good flowering plants at the holidays, the subject is a very timely one. In addition to above Mr. Geo. Stollery will tell the club about the pot plants grown for the eastern markets, and which he noted on his recent trip.

The Coming Convention.

Last Saturday there was a meeting of the committee in charge of arrangements for the coming convention of the American Carnation Society. Steps were taken looking to the securing of suitable space for the meeting and the exhibition, the providing of vases, tables, attendants, etc. A banquet was decided upon as the form of entertainment. An excellent start toward a sufficient fund was made at the committee meeting, and work will now go rapidly forward.

Visitors.

Among recent visitors was Mr. Reed, of McPherson & Reed, Council Bluffs, Ia.

Mr. C. C. Pollworth, of Ellis & Pollworth, Milwaukee, was in the city last Wednesday.

ST. PAUL, MINN.—The state of Minnesota pays a bounty of $2.50 an acre for tree planting, and the state auditor recently issued 3,000 warrants aggregating $20,000 to various planters of trees.

One sale makes two other sales. A trial of our apparatus will make you a customer for all the apparatus you may ever need. We want you to give it that trial—the apparatus will do the rest. Quaker City Machine Co., Richmond, Ind.

Kennicott Bros. Co. is the oldest and most reliable wholesale commission cut flower establishment in Chicago.

CAMBRIDGE, MASS.

Nephrolepis Bontoniensis had a phenomenal sale at Christmas. Fred C. Becker sold right out and could have sold hundreds more. He has planted up for next season. W. E. Doyle disposed of an immense number at retail, also azaleas.

I noticed some fine lilacs in bloom. Mr. Murphy told me he could have had Legraye in at Christmas had he desired. He is putting in continuous batches until Easter. Mme. Legraye produces considerable foliage with the flowers, which makes it more desirable. It is more fragrant than Charles X.

Clerodendron Balfouri is grown in considerable number; trained on balloons, and in full flower it is an attractive plant.

P. O'Brien & Son were well pleased with holiday trade. Houghton & Clark echoed this sentiment; in fact, I found but one gentleman in the City of Beans who objected to the Christmas rush. He said the crush turned away one's regular customers, who were then forced to go elsewhere. Maybe they went to Houghton & Clark, who noticed a host of new buyers.

James Delay and W. E. Doyle had a big rush; Galvin at both stores, especially at the Back Bay. Everybody was rushed and stock cleaned out. W. M.

HARTFORD, CONN.

The cold snap was the only drawback to a grand holiday business. D. A. Spear had a fine stock and cleaned right out. John Coombs had a great run on violets, of which he has a fine house of Marie Louise. Bulbous stock is coming in well.

A. N. Pierson is sending in some well grown stock, especially roses and carnations. I understand Mr. Pierson has been in Maine nearly all winter, where with a party of refiners he is engaged in a process of extracting gold from salt water (fact). Latest reports are quite encouraging. Mr. Pierson's brother is in charge of the business during his absence.

I met W. J. Boaz, the pushing representative of Edwards & Docker. He reports an unusual demand for folding boxes which augurs well for a good season. W. M.

CINCINNATI.

A Brighter Outlook.

I am glad to be able to report a noticeable improvement in the cut flower business this week and so far as can be learned the outlook is becoming brighter. There has been a falling off of stock, especially roses, occasioned by dark weather and off-crops. The glut of last week was not caused by an increased supply but rather a lack of business. Carnations are still abundant, ordinary varieties selling at $1.50 per hundred, fancies going slow at $4 and $5. Brides and Maids are held at $5 and $6, Meteors $6 and $8, Perles $4, callas $8, Harrisii $10, Romans $2 and $3, narcissus $3, violets 75 cents and $1. The latter still seem to be losing their popularity, Princess of Wales and California selling in preference to the double ones.

A Visit From the Indianapolis Brethren.

A party consisting of ten brother florists from Indianapolis spent last Sunday with us calling upon Messrs. Witterstaetter, Murphy and Peterson. To say that Dick's Evelina opened their eyes expresses it mildly. The boys all had a pleasant time and departed feeling well satisfied with their visit.

Notes.

C. C. Murphy met with another accident Monday. As he was driving over the 8th street viaduct, a car struck his wagon. Mr. Murphy was fortunate enough to escape with a slight shaking up, but I am sorry the same cannot be said about his vehicle, which was badly damaged

H. Weber of Oakland, Md., was a caller last week. B.

OMAHA.

Trade Fair.

All the florists report a good and steady business, especially in funeral work. For the last two weeks we have had nice spring-like weather, which is helpful to stock, although roses are somewhat scarce. Carnations and violets are more plentiful. Bulbous flowers are in large supply and come handy for floral work. Cyclamen and primroses are showing up well in most the florists' windows and are reported to sell well.

Mr. R. Unger has closed his store on Sixteenth street and intends to sell his stock at wholesale.

The Trans-Mississippi Fair Association intends to grow their own plants for the grounds. They want to rent some houses from a local florist, but the indications are that they will erect new houses for their own use.

A Visit to Lincoln.

Having visited Lincoln, Neb., last week, I called upon several florists, visiting the storemen first. I first called on Frey & Frey, and found their store well stocked with azaleas and palms. Mr. J. B. Frey, of the above firm, reports a good steady business. Calling upon C. H. Frey, I found Mr. M. Frey had sold his interest to Mr. A. Eidn, of Lincoln, who has charge of the shipping department. Mr. Eidn also reports trade good. Next I called on Chapin Bros., who have a conservatory located in the most desirable residence portion of the city, where they carry on their retail business as well as shipping department. Their greenhouses are three miles southeast of Lincoln, and found them in good condition, especially their carnations and roses.

C. H. Frey has a range of eleven houses 20x127 which are all new and modern, and every inch of space occupied by No. 1 stock, which impresses the visitor with an air of prosperity.

Frey & Frey's greenhouses are located nearer the city and were well stocked. They have a house of Easter lilies, as well as a house of violets which show the skill of the owners.

A few blocks north of Frey & Frey's is located the establishment of C. B. Keller, which is a model place, in a good residence portion. Mr. Keller reports good business. J. J. H.

A Record Breaker!

:::: NEW CANNA ::::
JOHN B. DUTCHER

Certificated by New York Gardeners' Society and Westchester Hort. Society. A first-class Canna superior to any crimson flowering Canna advertised or introduced to date. 3½ ft. high, vigorous and good bloomer, $25.00 per 100 dormant eyes; $4.00 per dozen 12 dormant eyes; 50 at the 100 rate. All stock controlled by Rowehl & Granz. We offer the dormant eyes up to Feb. 15th. Cash with order.

ROWEHL & GRANZ,
Hicksville, L. I., N. Y.

SIMMONS'
New Light Colored CARNATION
Mrs. S. A. Northway

We introduce this variety with even more confidence than we did Portia, Silver Spray, Tidal Wave, Daybreak, Rose Queen, or J. J. Harrison, knowing that it will become as great a cut flower variety as any of the above. Plant of strong, free growing habit, entirely free from disease or rust; large round high built flower with perfect calyx and extra strong and long stem. Color a beautiful soft shell pink becoming almost white when fully open.

Orders booked now and filled in rotation. We shall commence to ship soon after Jan'y 1st. Price, $10.00 per 100; $75.00 per 1000.

Geraniums. Md. Bruant, Md. Jaulen, Fleure Poitevine, J. Ricaud, and J. Sallier, 2¼-in. pot plants, $5.00 per 100. Rooted cuttings, $3.00 per 100; $25.00 per 1000. Our superb stock of all the finest sorts, 2¼-in. pot plants, named, $25.00; unnamed, $20.00 per 1000. Rooted cuttings, $12.50 per 1000.

Fuchsias. A grand lot of summered-over stock in small pots that will make early bloomers, $3.00 per 100.

All Rooted Cuttings Cash with Order.
Our Price List describes many other fine plants. Send for it.

W. G. KRABER, 125 Florence St., New Bedford, Mass. (CASH WITH ORDER.)

NORTHAMPTON, MASS.

The annual meeting of the Northampton Horticultural Society was held on January 10. All officers were elected with the exception of secretary and treasurer, those to be elected at the next meeting. April 5 and 6 were selected for the spring exhibition, November 10 and 11 for the chrysanthemum exhibition. A committee was appointed to revise the premium list. Mr. Parks had a nice exhibit of very good Daybreak carnations, California violets and paper white narcissus. Mr. Macgregor showed some seedling carnations.

Trade since the holidays has been on the average rather dull, but carnations that have good flower and stems sell readily. The same may be said of flowering plants.

A visit to Mr. Parks shows that he is all right on carnations, especially Daybreak, Scott, Jubilee and McGowan. His cyclamens, primroses, cinerarias, palms and ferns all show the careful attention they have had.

DONALD MACGREGOR.

FALL RIVER, MASS.

Chatt. Warburton reports a "bang-up" holiday business, but fears a slump will now happen owing to the cut-down in the mills. Still he is pushing ahead optimistically. He has an excellent idea in running one house of Alaska disbudded for cutting and another not disbudded for piece work. Freedom is also an excellent variety with him. Flora Hill and Edith Foster are the quartette of whites. C. A. Dana is a splendid keeper and of good color, takes well and will be grown more extensively next season. Quite a number of the pretty Bermuda oxalis is grown; it sells freely. Mr. Warburton, Sr., was in Jamaica recently and is returning by way of the southern states. He is deeply interested in the culture of cotton and incidently that of bulbs.

George Smith is the proud owner of the first daffodils in town. They are in good demand. He cleaned right out at Christmas of a big stock, both plants and flowers.

POUGHKEEPSIE, N. Y.

Meeting of the Horticultural Society.

The annual meeting of the Dutchess County Horticultural Society for the election of officers was held at the courthouse on Wednesday afternoon, the 12th inst. The gentlemen who were honored with the offices are as follows: President, Mr. George Saltford; vice-president, Mr. Herman Asher; secretary, Mr. A. A. Laughren; treasurer, Mr. James Stran; assistant secretary, W. G. Saltford.

The secretary read his report, which was a rosy encouragement to the society. It stated, in brief, that during the past year the membership had been augmented by eighteen new members, making the total number of members 111. This is certainly a remarkable showing, considering the limited existence of the society. It also showed a surplus of several hundred dollars in the treasury. The past year ten meetings have been held, which were well attended, showing the amount of enthusiasm that existed.

Eight papers were read during the year opening many new points for discussion and giving much-needed information to its members.

The chrysanthemum show was voted a success in every way, and it is refreshing to know a similar exhibition will be given next fall. The proceedings of the society will be printed in pamphlet form and a copy mailed to each of its members. This is also to include the essays. A motion was made and carried that all manuscripts read before the society should afterwards become the property of the society.

Banquet.

In the evening the society's annual banquet was given in the Nelson House, which about fifty members enjoyed. It was generally conceded the happiest evening in their lives. Speeches were made by Patrick O'Mara, Richard E. Connell, John I. Platt, F. L. Atkins, Wm. Haubermistel, Clarence Reynolds, and others. Mr. MacPherson, Mr. Good, and others sang selections which pleased the whole company. F. L. A.

NEW HAVEN, CONN.

Smith T. Bradley reports fully twice the amount of business during the holidays to former years. His latest innovations are an electric sign and a handsome delivery wagon.

S. H. Moore has been too busy to make comparisons, but believes this season eclipses all previous ones. Flowering plants sold well.

R. Veitch & Son have issued an attractive seed catalogue and anticipate a good demand, as usual.

Jno. Champion is having success with the western carnation Outcast, which no doubt will improve upon further trial. His grower, F. K. Burfitt, thinks well of it.

W. J. Rowe is very successful with the Farquhar violet. He grows Marie Louise also but it does not do nearly so well. He intends discarding the California another season. W. M.

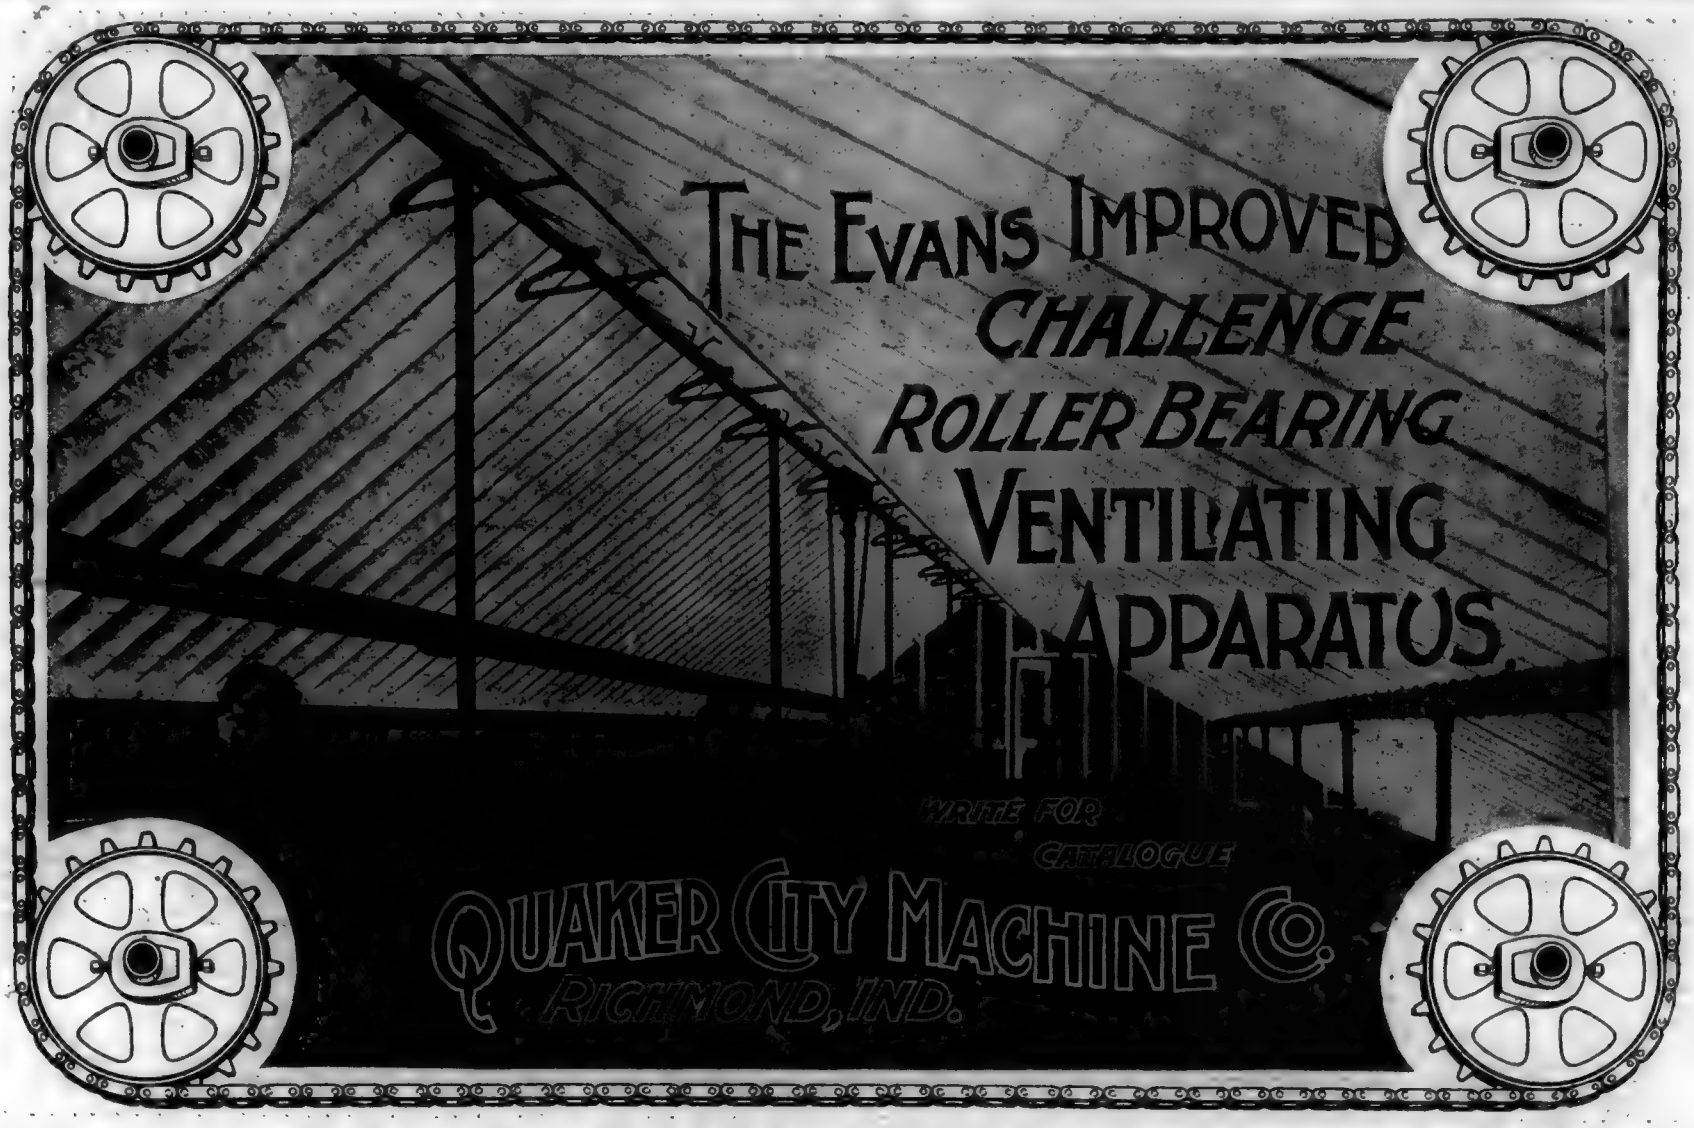
AN UNPARALLELED SUBSCRIPTION OFFER.

EVERY one to whom this issue of the FLORISTS' REVIEW is addressed, and who fills out, signs and returns the accompanying subscription blank, accompanied by $1.00, within 30 days from date, will receive not only the FLORISTS' REVIEW for one year but also a certificate entitling him to the earnings on one-tenth of a share of stock in the company formed to publish the paper. The shares will be of a par value of $10.00 each.

Why do we make such an unparalleled offer? It is very simple.

You will have an interest in the success of the paper.

You will see that you can buy everything that you want to just as good advantage from advertisers in the FLORISTS' REVIEW as elsewhere and at the same time benefit yourself by increasing the earning power of your certificate.



This mutual arrangement cannot fail to bring to the paper a heavy advertising patronage, and as a result the stock represented by your certificate will earn good dividends.

And the more you buy of advertisers in the FLORISTS' REVIEW (always mentioning the paper) the larger your dividends will be.

You will get a better paper than has yet been published in this field, and a share of its earnings. Please let us hear from you by early mail.

Palmer's Hotbed Mats

FROST PROOF

MADE expressly for winter covering of hotbeds, cold frames, plants and seeds of all kinds.

INDESTRUCTIBLE, CHEAP AND WARM,

Will not harbor mice or vermin. Easily handled. Dry out quickly after rain. Have now been in practical use three years. Cost less than old-fashioned straw mats and entirely take their place. MADE IN FOLLOWING GRADES:

No. 1. **Burlap Cloth,** filled with combination wool and quilted, seams 3 inches apart and edges firmly bound. Size 40x76 inches, 50c each. Size 76x76 inches, 75 cents each. Made any length 76 inches wide, at 12 cents per running foot.

No. 2. **Duck Cloth** outside, filled and quilted same as No. 1. Size 40x76 inches, 75 cents each. Size 76x76 inches, $1.00 each. Made any length, 76 inches wide, at 16 cents per running foot.

No. 3. **Waterproof,** made of oil duck, filled and quilted the same as Nos. 1 and 2. Size 40x76 inches, $1.00 each. Size 76x76 inches, $1.25 each. Made any length, 76 inches wide, at 20 cents per running foot.

That these mats are a **much needed improvement** over anything heretofore used for the same purpose, is demonstrated by the large demand and many testimonials from prominent men in the trade. Everyone using Hotbed Mats should give them a trial. We also make

FLORISTS' REVIEW

FLORISTS' PUBLISHING CO., 520-535 Caxton Building, CHICAGO.

Vol. 1. CHICAGO AND NEW YORK, JANUARY 27, 1898. No. 9.

Bed of Penstemons.

PENTSTEMONS—ALTERNANTHERAS.

In the foreground of the accompanying engraving appears a bed of Pentstemon campanulatus bordered with Alternanthera latifolia aurea, as seen at Lincoln Park, Chicago, last summer.

The pentstemons can be raised from seed, but Head-Gardner Stromback propagates them by cuttings. The cuttings are taken from bedded plants in the latter part of September, and placed in sand on the bench, without bottom heat. They root in about three weeks, and are then potted in 2½ inch pots, in which they are kept over winter in a house with a temperature of 45 degrees, water being given sparingly, as with all plants kept in so low a temperature.

In January the plants are shifted to 3 inch pots and remain in these till bedded out. The plants are placed

about a foot apart in the bed. They bush out from the bottom and soon fill up the intervening space. When the plants are in 2½ inch pots an occasional one may send up a straight shoot, and in such case the tip is taken out, but no other pinching is required. The plants bloom well all summer and are excellent where variety or a change is wanted.

The bed is bordered with Alternanthera latifolia aurea. It is a taller grower than Alternanthera aurea nana, growing about 8 inches high, but colors up quicker and holds the color much better than the last named variety, which has been practically discarded by Mr. Stromback on account of its failure to color well. A. latifolia aurea has a slight rose color mixed with the yellow in the top leaves which brightens its decorative effect. It is propagated from cuttings taken about the middle of August from bedded plants and carried over winter in the same way as Alternanthera paronychioides. The latter variety has also been discarded by Mr. Stromback for failure to color up till late in the season. He has substituted Alternanthera rosea, which colors early and holds color well through the summer. With him both aurea nana and paronychioides have been growing less and less satisfactory for years, and he has now discarded them altogether, though their dwarf habit made them very useful in carpet bedding. A. rosea is propagated in the same way as its predecessor.

Back of the bed of pentstemons is seen a bed of the yellow coleus Peter Henderson, with plants of Celosia cristata nana scattered through them, the whole having a border of Cineraria maritima candidissima. The culture of the celosias is about the same as that of Vincas alba and rosea, previously described. The cinerarias are grown from seed sown in February or early March, and the after treatment is about the same as for pansies. When large enough, the heart is pinched out to make the plant bushy. They are kept in 2½ inch pots till time to bed out and are then planted about eight inches apart.

On the terrace is seen a bed of Florence Vaughan cannas, with a border of crimson zinnias. The zinnias make a very good border and are good for variety's sake. Side of the steps is a short row of Berberis Thunbergii. The vases on the steps are filled with geraniums, vincas, maurandyas and tropaeolums, with a Dracaena indivisa in the center.

VANDA COERULEA.

The Blue Orchid.

This is one of the most handsome and remarkably distinct species of the genus, and when you consider how easily it is grown, and the fact that it has been in cultivation for more than sixty years, it is surprising that it is not oftener met with. I understand that any or all of this species that finds it way into the hands of the florist is readily sold at a good figure, and the blue orchid is invariably asked for. Although this beautiful plant in indigenous to tropical India, it requires comparatively cool treatment, as it is found in its native haunts at an elevation of from 3,000 to 4,000 feet, and when I describe the conditions under which it exists you may perhaps hit upon the right mode of artificial treatment.

It is found growing upon tall trees, fully exposed to the sun and the full force of the elements at the above mentioned elevation on the Khasia hills, Bengal. The Khasia hills are situated about 200 miles from the Bay of Bengal, rising very abruptly to a great height almost from the sea level, and it is here that the heaviest annual fall of rain in any known part of the world is registered. It generally averages 600 inches, not because it is always raining, as there are months when there is not a cloud visible or a drop of rain falls, but the monsoons, peculiar to that country, attend to the irrigation of plants that perhaps would otherwise suffer or become extinct through lack of moisture.

In the intervening space between the hills and the bay is a vast low, inhospitable region of jungle swamps and marshes. Consequently there is a continuous evaporation, to which may be attributed the almost incessant growth of the vegetation in the vicinity of those mountains. It is when the monsoon springs up from the southwest, charged with the vapor taken up from those swamps and a vast expanse of ocean, that those beauties referred to get a thorough sprinkle, although not always in the most tender fashion.

To be successful with this lovely vanda you must grow it in baskets, which may be suspended from the roof, where they will be greatly benefited by the best air currents available, and as already explained, they require but little shade. Give abundance of water when in active growth, with the addition of a little weak stimulant after you see the flower spike; and you can improve upon nature by removing the plants to a cooler and drier atmosphere just before the flowers expand. If handled in this manner the flowers will retain their beauty for six weeks. During the resting period, which is after they have flowered, they must be watered very carefully and should not be dried off. Keep them in a temperature of 50 degrees, and remember that too much water in this stage is liable to blemish the foliage, when the inexperienced would be very liable to think that some dreadful blight had struck them. However, any one that will exercise a little forethought may obtain good results. J. Robertson.

A FEW ORCHID GEMS.

Some lovely flowers are before me, kindly sent by Mr. H. Clinkaberry from the superb collection under his charge. A peerless, spotless gem is a flower of Cattleya Trianae alba, fine in size and proportions, as white as the snow without, saving the characteristic yellow blotch seen in all albinos, guiding lines, as it were, to attract insects and mark the way to the flowers' secretive parts.

Another albino is seen in Laelia anceps alba, an exquisite flower, delightfully odorous. Laelia anceps Dawsoni, the "Simon-pure," as the sender remarks, is a great beauty, pure white in sepals and petals, but with a lip showing wonderful pencilings of color, purple lines radiating upwards and branching out, but leaving a broad unspotted margin of white around the two lateral lobes. The expanded portion of the lips, which forms the front lobe, is tipped with rich, rosy purple, narrowly margined with white and having the characteristic yellow crest in front of the column.

Phalaenopsis Brymeriana, a variety of intermedia, is a dainty little flower, sepals and petals white, but flushed with rosy lilac from their base towards the center, the lip three-lobed, the lateral lobes erect, overlapping the column, the front lobe heart-shaped, of an amethyst hue in varying tones, according as the light falls upon it.

A flower of Cypripedium Prewetti is truly giant, its dorsal sepal nearly three inches deep and the same in width, lined and spotted in dark purple brown, overlying a yellow green ground, broadly tipped with white. The petals are three inches in length, one and one-half in width in their broad-

Group of Vanda Coerulea.

est part; have a well defined medium line of dark purple and suffusions of a lighter tint. The pouch is two and one-half inches in length, broad and blunt, tending to coarseness, as it lacks finish. It is like comparing the wooden sabot with the finished shoe of today. The parents of this giant were Harrisianum and villosum, but good examples of either are dwarfed in comparison of this one of their offspring.

A. Herrington.

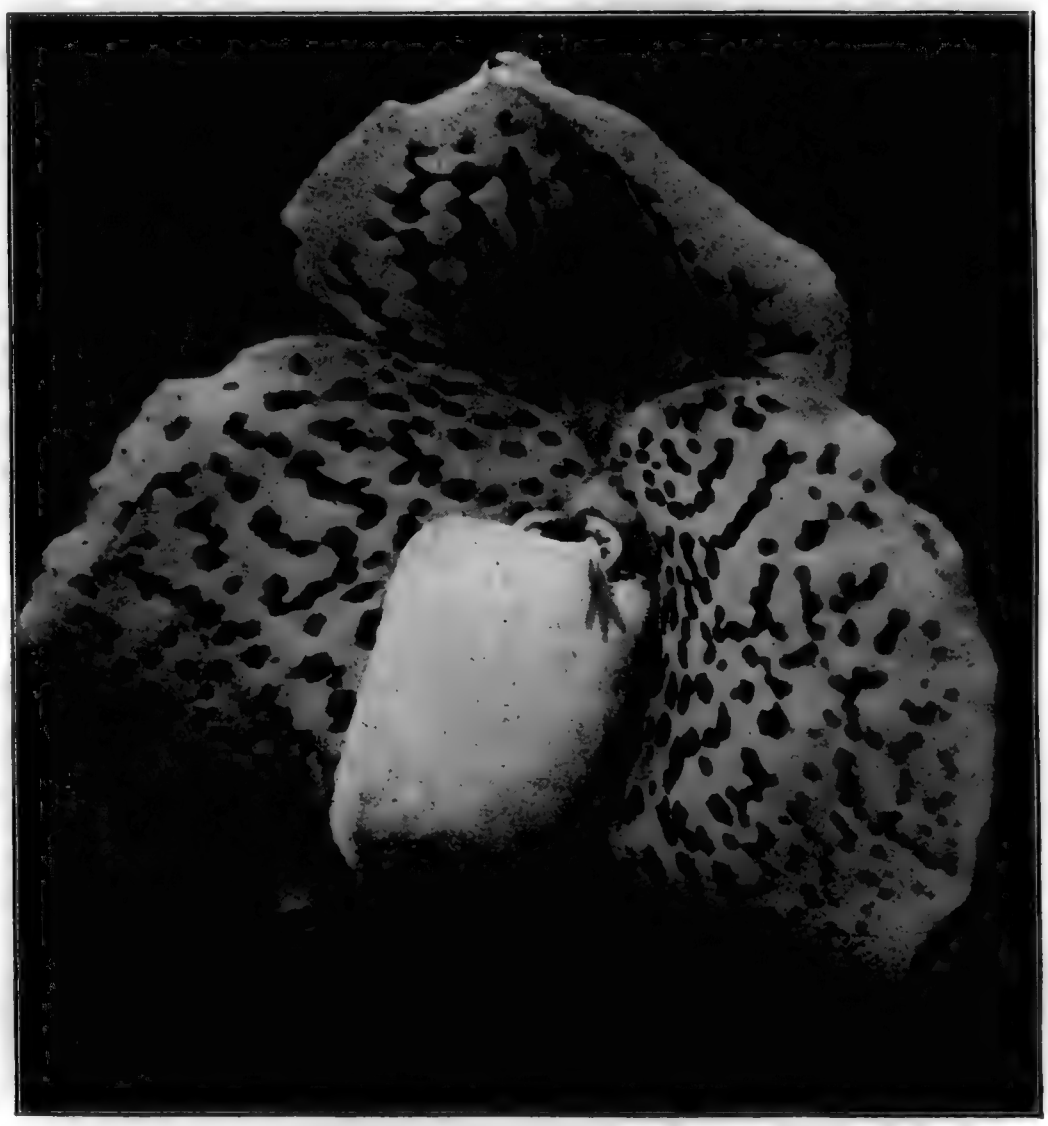
Madison, N. J.

CYPRIPEDIUM LEUCOCHILUM GODSEFFIANUM.

It may be that from a botanical view this variety resembles the typical C. Godefroyae. Its superiority is, however, so absolute, the coloring so perfect, while the size is simply colossal, that Mr. R. H. Measures, the fortunate possessor, has described this wonderful form under the varietal name of C. leucochilum Godseffianum, and has refused $5,000 for the plant, preferring to keep and increase it in his collection at Streatham, England.

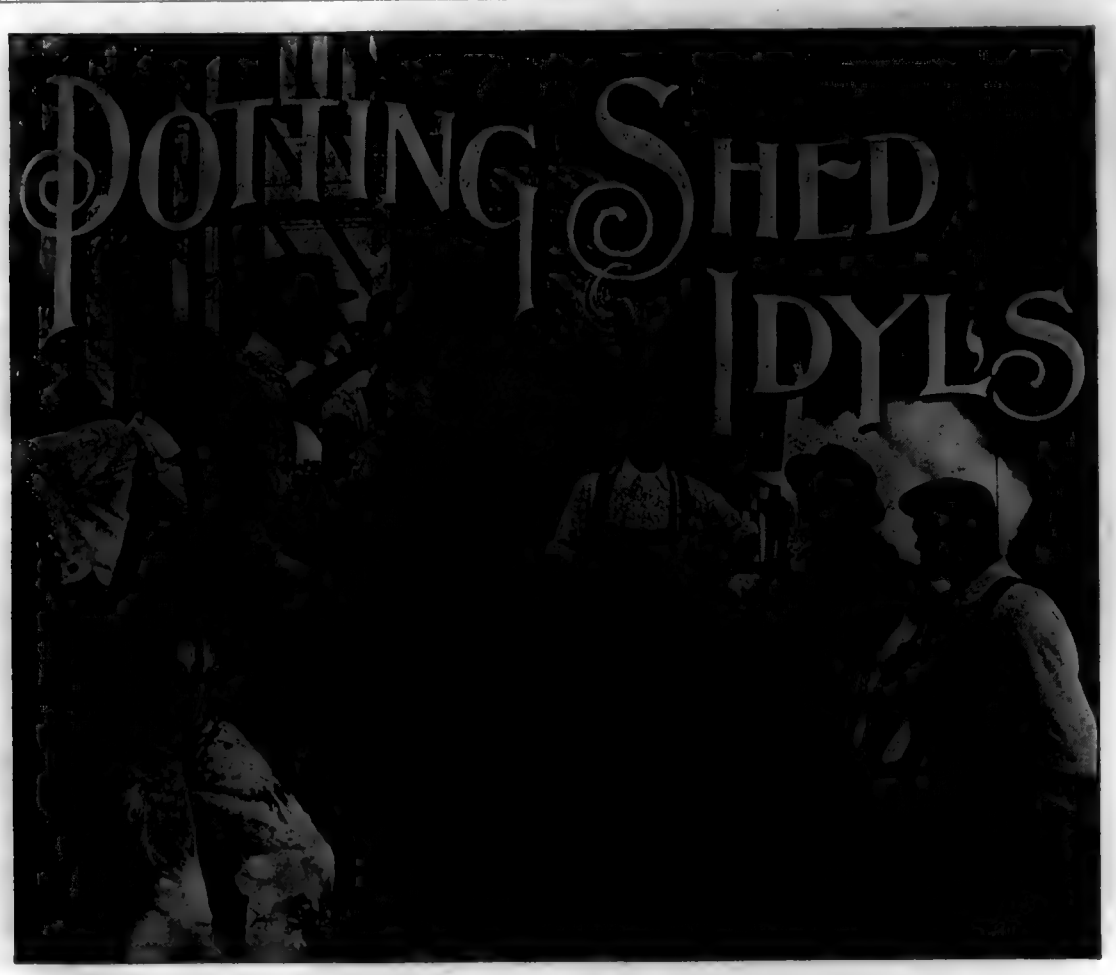
The blossoms measure four and one-half inches across, are beautifully proportionate, the coloring leaving nothing to be desired. The shell-shaped dorsal sepal is a soft creamy white, heavily splashed with purple-red and maroon; the lower sepals repeat these colors, while the petals are white at the base, with a cream shading, profusely studded with deep maroon. The giant labellum is of a pure shining ivory white on the exterior, the interior being spotted with purple. The staminode is similarly marked with a central shade of bright yellow.

A flower of this exquisite and most valuable orchid figured prominently in the Royal Diamond Jubilee bouquet presented to the queen by Messrs. F. Sander & Co. For size and beauty it undoubtedly has no equal. The clear purity of color, one of the greatest charms in the original, has very much deteriorated in our figure.



A. Dimmock.

AZALEAS FOR CRISTMAS.



Mr. August Jurgens, Chicago, finds Vervaeneana, Mme. Van der Cruyssen and Simon Mardner the best sellers at Christmas, and would confine his stock for holiday sales to these three varieties if he could. He confines his orders to these three sorts, but the Belgian growers always work in other varieties. The Belgians who seek American trade should propagate more largely the three varieties noted.

Deutsche Perle is all right, but white-flowered plants are little wanted at the holidays.

Mr. Jurgens would strongly recommend the variety President Adolph d'Haene, if it were not so difficult to obtain. It is a fine double flower, of a deeper red than Van der Cruyssen, and the blooms last well. The Belgian growers would do well to grow this variety largely for the American trade.

Cypripedium Leucochilum Godseffianum.

A TEMPORARY ECLIPSE.

The place at Lonesomehurst wore a subdued and melancholy air; its gayety was under eclipse. The joyous Jaggs, who grew restive after the Christmas rush, had wandered away without formal leavetaking, and under circumstances which rather clouded his popularity. The boss had taken a contract to pot up and generally set in order a lot of demoralized orchids belonging to a near-by amateur, and as Jaggs possessed more knowledge on the subject than anyone else on the place, he was sent over to attend to the work. Then, in an evil hour, the boss went to a town in an adjoining state, to make an estimate on some planting. Jaggs finished the orchids, collected the money for the work from the amateur who was much taken by his profound knowledge and agreeable manners, then went back to Lonesomehurst and collected his week's wages from "the missis." Then, after borrowing from the Scotch propagator the Sunday suit which that worthy described as his "blacks," Jaggs departed. Hunting up the absent boss, Jaggs described his regret at leaving Lonesomehurst, and asked for his week's wages and a trifling advance until he should return from the pressing business which now called him away. He received the wages, but not the advance. However, having thoughtfully annexed a couple of budding knives and a stray thermometer or two, by way of souvenirs, he was able to go on his way rejoicing. When the "old man" got back to Lonesomehurst and discovered the way in which the deceptive Jaggs had levied contributions, his state of mind was worthy of deep commiseration. He didn't say very much, but what he did say upon the subject was put in italics, and whenever Jaggs was mentioned among the men, Tommy Atkins always suggested the propriety of removing Marmaduke, the parrot, "in case as the boss might 'appen to be sayin' w'at 'e think about Jagg's prospects."

It was a few weeks after the disappearance of Jaggs that Tommy got a brief leave of absence, which he occupied in visiting a friend who was deck-steward on an Atlantic liner. Tommy's return from one of these excursions was always looked for with some excitement by the potting-shed coterie. He always brought with him a choice collection of the newest trans-Atlantic anecdotes and music-hall songs, to say nothing of more material cheer. The men were seated in their usual places on the various boxes and barrels that formed the potting-shed divans, smoking their after-supper pipes in silent meditation, when the wanderer burst in. Everyone brightened up; even the horticultural graduate forgot his dignity, and rushed forward with the rest. Tommy beamed affably at his audience, remarking: "'Ere, ketch 'old o' that some o' you chaps, till I gets my coat hoff," at the same time handing two or three packages to Davie. "Steam all right, Jimmy? Maybe we've got a bit o' use for them steam-pipes," and he winked affably at the graduate, while he continued to search through his overcoat pockets.

"Whaur ye been linkin' round this time, Tommy?" inquired Davie, dexterously catching a bundle of Greenock papers which Tommy unearthed from his capacious pockets.

"Oh, just visitin' a few o' the chaps aboard the Carpathic. Yer know as I took a few runs myself; that was after I go across in one o' they cattle steamers."

"What was you doin' on a cattle steamer?" inquired the night fireman.

"Just chaperonin' a deck load o' steers," observed Tommy, indifferently.

"'And us over that there brown paper parcel, and we'll get supper agoin' while I tell you a thing or two," and Tommy began slowly to peel off numerous wrappings. The object of his solicitude was finally revealed as a large round mass tightly clad in a dingy cloth, tied up with string. The horticultural graduate, whose youth had passed in an environment of pumpkin pie, gazed at it with some suspicion, but the others recognized the familiar contour, and Tommy continued:

"Yes, that's a real imported Christmas puddin', same as we used to get at 'ome, and it didn't pay no bloomin' Dingley hadd vollerum, neither. We'll set it on the pipes, while we 'as a start on the menoo."

By the time the pudding had been dissected with a budding-knife, and dished out on an array of orchid blocks Tommy was ready to give a joyous version of his holiday adventures.

"You chaps 'll never guess who I see—Jaggs! and 'e's been and gone into the mermaid business—anything fishy is right in 'is line."

There was an astonished pause, while Tommy dexterously harpooned a large slab of mahogany colored pudding upon the tip of his knife. "Me and Johnson," he continued, "takes a stroll down by the Brooklyn bridge to see a bird-stuffin' chap as was mountin' a lot of parrots for one o' the stewards on a Red D. steamer. First thing we see, when we open the door, was a stuffed leopard grinnin' like a Cheshire cat, and the next thing was Jaggs, talkin' to a chap as wore a necktie like a colored supplement, with a regular headlight for a scarf-pin. Jaggs smiled pleasantly, and 'e says, 'Glad as you 'appeaned in. What do you think the right finish for a mermaid—dull surface or shellac?' Me and Johnson nearly falls down; we wasn't neither of us so chummy with mermaids as to know just 'ow they sets off their complexions. The other chap says as 'e never see a mermaid yet as wasn't shellacked, then 'e get out."

"Well, I guess a fellow would be just as likely to see a mermaid without shellac as with it, seeing there's no such thing," observed the graduate, with scorn.

"Say, Johnny, was you born ignorant, or did you just acquire it?" asked Tommy, sweetly. "You see, the bird-stuffin' chap made mermaids and all them natural curiosities for the museum trade; 'e 'ears Jaggs tell about the beasts as 'e see horchid collectin', and thinks as 'e know a thing or two. Jaggs was thinkin' o' takin' a job as 'orticultural reporter on one o' they Sunday newspapers, but 'e say as they

Simple Floral Arrangements. No. 2.

exaggerates so much as 'e can't abide 'em."

Tommy paused to throw his orchid block plate over to the night fireman as an intimation that supper was over, and after filling a stubby briar pipe, he continued his narrative.

"Jaggs thought as 'e might run a lot o' new ideas into the curiosity business. You see them mermaids is mostly papier mache, with real fishes for their tails. Jaggs thinks as a mermaid with 'air like a Circassian girl would be a real novelty, bound to make a hit with all them Reubens at the country fairs. 'E show me a flyin' dragon of the Hindian ocean; looks like a halligator with bat's wings, seal's flippers and walrus tusks. Blest if 'e wasn't like one o' them bloomin' beasts as they put in a coat of arms. 'Is backbone stood up in ridges, which Jaggs says was doorknobs. Jaggs said as 'e did 'ave a notion o' buildin' one o' they fish-lizard-bird things as them bloomin' scientists gets up, give it a good name, and say as it was caught out on the Jersey meadows. But the showmen say as it wouldn't be realistic enough."

"Jaggs ought to go into the show business himself," suggested one of the men.

"Couldn't get 'im to stay away from the pottin'-shed," said Tommy. "Next thing you'll hear of 'im 'e'll be back again in the good old trade."

Tommy's prophecy was correct; Jaggs spent but a few months in providing genuine novelties for the show business, and was next heard of under glass, but that, as Mr. Kipling often observes, is another story.

SIMPLE FLORAL ARRANGEMENTS.

The Flat Cluster.

In the arrangement of flowers, as in painting a picture, simplicity is an element of beauty, and one too often disregarded by painters and florists. In this locality, and I presume everywhere, those who buy flowers select more and more of the simple and natural forms of using them; the cut flowers, tastefully placed in a suitable package, or the loose "bunch" held together by a neat bow of ribbon, and fewer of the mechanical and formal designs.

Some of the latter will probably always be required for special purposes; many lodges, and other public societies, firemen, military companies and those who think it necessary to display an inscription or motto on their offering, must be accommodated. But the floral locomotive, or straw cutter, or sausage stuffer, should be allowed to rest in peace without regrets by the "floral artist."

Thirty years ago flower buyers wanted bouquets, and florists seemed to think it was necessary that they should have them. Tons of good wire and indifferent foil were used in their construction, and they were not considered complete until they were supplied with a stiff collar of lace paper under their chins for a finishing touch. And indeed these same cartons were often a very good thing if the work was not skillfully done, as they held the heterogeneous mass together. Generally, the greater the assortment of flowers that could be packed in these stiff and clumsy affairs, the better the customer was pleased. But gradually and slowly a change came, sometimes brought about by the florist, sometimes by his patrons, sometimes with contributions from both sides of the counter, until, from the fearfully constructed bouquet of the olden times, has been evolved the graceful form of the present, the loose and flowing fascicle of flowers, usually all of one kind, with its appropriate garnishing of greenery, as it comes from the deft fingers of the tasteful florist, still often overdone, overlarge, and overberibboned by the less tasteful members of the craft, perhaps at the command of some purse-laden client.

The illustration shows one of the simple forms of the small flat cluster, so much used now for funeral flowers, and will scarcely need an interpreter. A rather stiff background of some suitable green, such as rose foliage for roses, Dicksonia fronds, certain kinds of palm leaves, or long sprays of Asparagus plumosus, is first made as a foundation upon which the flowers are arranged, according to the taste or skill of the maker, using the longest stemmed first and avoid crowding. They are securely fastened with a strand of Raffia, over which a bow of ribbon is tied, care being taken first to remove the moisture from the stems of the flowers. We use only the best quality of silk ribbon, and like it rather stiff, as the bow then keeps in shape better. White, cream-white, delicate pink, purple and lavender are the colors mostly needed, and in widths from No. 9 to No. 22, No. 12 being used most often. A pretty effect may be produced by occasionally using a very narrow ribbon, doubling it together several times, making a bow, and cutting through the doubles at the ends. The material in a cluster such as is shown should be worth $3 or $3.50, including 50 cents for two yards of No. 12 satin ribbon.

Other clusters will perhaps be illustrated, showing different material and arrangement, and more finish about the stems of the flowers where tied.

Franklin, Pa.

EXTRA EARLY ASTERS.

To any florist wishing an extra early lot of asters I would recommend the following plan of culture:

Prepare your soil carefully, have it well screened and as light in character as you dare. Fill 3-inch pots by forcing the pots into the heap and level

with the hand. Into each pot drop two or three seeds, the number depending on vitality test of same. Have the pots standing level and cover seed by screening a light soil (preferably two-thirds coarse sand to one-third loam), carefully over them, after which press lightly with bottom of an empty flower pot.

Water sparingly with lukewarm water, and at no stage ever allow them to become dry. Set on a bench well up to the glass and keep carefully shaded from the sun's hottest rays till seedlings show second leaf. When second leaf is well developed select the strongest plant and after a good watering pull out the others. If care is taken the remaining plant will be scarcely disturbed, and those pulled out can be potted or pricked out with but slight loss.

Let the plants stand close and allow the plants to be drawn. The bottom leaves may turn yellow and drop, but that is wanted. This gives a stem, which allows the plant to be set deeper than can be done otherwise.

When about four or five inches high, which they will be before planting time if sown now, pick out the center. The plants will then throw the side branches well toward the bottom and will form a strong, shapely plant that in most cases will not need support nor require further disbudding. The flowers will be uniform in size and stem, and will open in quick succession—in fact, will be nearly together.

In regard to preparation of soil in the field, I will offer no suggestions, as each grower knows his own soil best, but as to culture would say: Do not water if you cannot soak them, and, weeds or not, cultivate them regularly, that the ground may as near as possible be at all times light and loose on top. Retlaw.

NEW STORE OF L. L. MAY & CO., ST. PAUL.

The accompanying illustration shows interior views of the new store and conservatory in connection recently opened by L. L. May & Co., at 64 East Sixth street, St. Paul.

The store proper is 25 feet wide by 80 in depth, fitted up in the latest style. The refrigerator is 4x18 feet in dimensions, with beveled mirrors and beveled plate glass doors. Back of the store and leading to the conservatory is a reception room, 20x20 feet, with divans, settees, etc., for visitors.

The conservatory is 50x50 in size, with the dome in the center of the roof rising to a height of 28 feet. Directly beneath the dome a fountain throws water up to the electric chandelier, while the lower basin is filled with goldfish. Canary birds are scattered about the conservatory and fill the place with their sweet music.

The benches, as will be seen in the illustration, are of different shapes and sizes, arranged about the fountain as a center. They are raised about 18 inches from the floor, and the arrangement of plants is varied each week, the idea being to have something new each week or oftener. The view herewith presented was obtained the week before Christmas, azaleas and primroses being the predominant flowering plants, with palms, ferns, begonias, etc., for a background. At present the display consists of cinerarias and cyclamens, palms, ferns, etc.

general offices are located on the Minnesota street side of the building, entrance to same being had through the conservatory, the conservatory being the connecting link to the two wings of the building.

S. D. Dysinger.

DAPHNES.

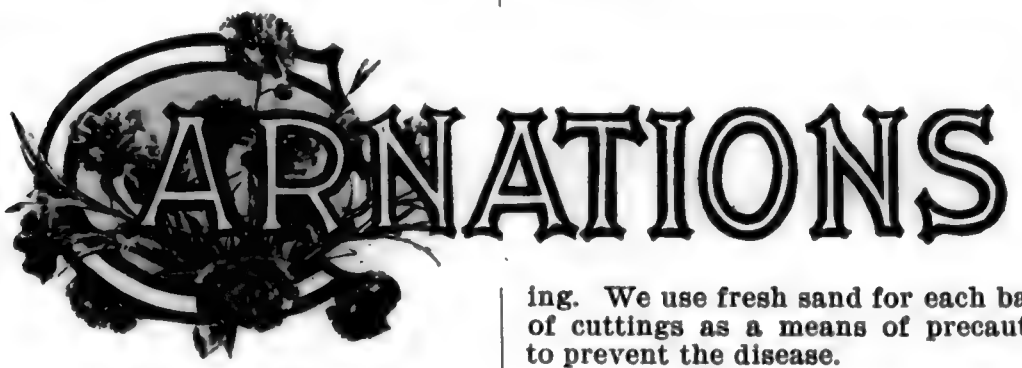
These are Chinese and Japanese plants of easy culture, though comparatively slow growing. Daphne indica has long been highly esteemed for its delicious fragrance, and there are few European gardens where a collection of plants is grown but have some of it. Its name is suggestive of Indian origin, but it comes from China and thrives admirably in the temperature of an ordinary greenhouse. Although its flowers are not large and showy, it would find popular favor by reason of its fragrance, one little plant in flower being sufficient to scent a room with an odor that would please the most fastidious, as though powerful, it is not oppressive. In the rank of sweet scented flowers I would place it next to the rose and in any decoration where plants are largely used a few of this daphne interspersed would help immensely to give satisfaction, and would further elicit many inquiries as to the source of the exquisite perfume that would pervade the air.

Daphne indica is a dwarf growing evergreen bush, and is not a plant to recommend to the ordinary grower who has one course of treatment for all things, but the man who endeavors to familiarize himself with the needs and peculiarities of the plants he is growing may take hold of this daphne with the prospect of meeting with success in its cultivation. Heaths are not grown so easily as geraniums, but already we have seen evidence here that good plant growers can grow marketable stock. The daphne comes into this category of plants and wants similar careful handling in the matter of potting and watering. By nature a sparse rooting subject, overpotting is the main thing to avoid, for if overpotted and soaked with water the few roots it has will speedily be lost. I have seen plants grown on into fine specimens occupying pots 12 and 14 inches in diameter and kept healthy and floriferous for years by some of the past masters in the art of specimen growing, but the object of these notes is to recommend it to the trade, and it would naturally find the best market in pots of smaller sizes—from 4½ to 8 inches in diameter.

It used to be a general practice to graft Daphne indica upon small stocks of Daphne Mezereum, this last being a common plant in the woods of northern Europe, but this stock is not procurable here and is utterly needless, as Daphne indica can be rooted from cuttings and does just as well upon its own roots. Cuttings are taken from the tips of the shoots and should be made about three inches in length, stripping off a few of the lower leaves. A good time to propagate it is in the late summer or early fall days. Insert the cuttings in sand, in pots or pans, and place these in a frame on the north side of a house or some other cool, shaded spot, keeping them close and moist until on examination a callus is found to have formed at the base of the cutting. They cannot be hastened in this, and there must be no attempt to do so, but just as soon as well callused an increase in the temperature facilitates rooting, so they may be removed to a house where a night temperature of 50 degrees can be maintained, still,

however, keeping them moist, shaded and fairly close until root growth is fairly manifest, when more airy conditions may be given.

Early in the year they should be ready for potting off singly into 2½ inch pots, using a compost of light, open character made by mixing some fine peat or thoroughly decayed leaf mould with the loam in the proportion of one to four, and a little well-rotted manure may be added. When they have made two or three inches of growth the points of the shoots should be pinched out to induce them to make nice, compact bushes. As soon as they break again, after the pinching, they should be ready for a shift into 4½-inch pots, and from these latter they may go into 6-inch pots. Syringing overhead is always beneficial throughout the growing period, but it must never be to cause excess of moisture at the root.



By the latter part of the fall they should be neat, bushy plants, each shoot having set its flower buds at the tip after the manner of an azalea. They may now have azalea treatment, in fact, plants introduced into more heat will soon come into flower, while others kept cool may be retarded so you can have them for Christmas or Easter. The flowers coming in close heads or clusters, if it is desirable to cut them the shoot must be cut as well, but it may be noted that there are auxillary growth buds at the base of the leaves that will break out again. I think, however, this daphne would find most favor to sell as a pot plant.

Two hardy species only occasionally seen in cultivation would soon find favor, too, if offered in pots to appreciative patrons, especially D. Genkwa, a deciduous species from Japan, where it is much prized. I find it hardy here, and in a neighboring garden a group of it is one of the features of the place quite early in the spring. The flowers are of a light violet blue, disposed in clusters all along the shoots, and look like the Persian lilac in miniature. Stock of this could be raised by layering the shoots of a plant in the open ground. A batch of plants established in pots or tubs would furnish useful material for cutting, and with proper cultural attention they might be kept for years, as there would be ample time for the plants to grow and ripen flowering shoots after they had been denuded by cutting the shoots off the previous season's growth. The flowers come in advance of the leaves, and are delightfully sweet scented.

D. Cneorum is another sweet kind, never exceeding a foot high, but spreading out into broad masses in course of years. It flowers profusely in spring, and a little again in the fall, its flowers being a bright rose pink color and disposed in compact clusters terminating the shoots. It can be increased by division, as also from cuttings. Plants carefully lifted from the open ground, potted up and brought on with gentle warmth might be had in blossom at any time during winter.

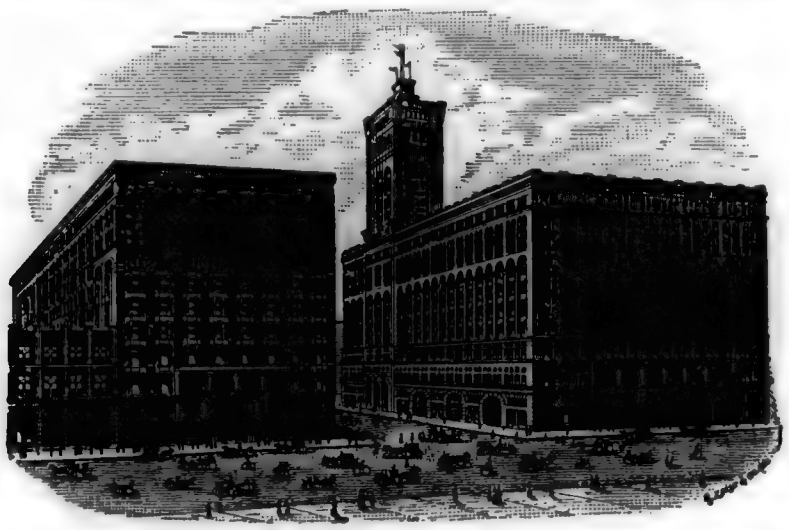
A. Herrington.

Madison, N. J.

VENTILATION.

In reading over my last notes I find that I forgot to mention ventilation. We ventilate freely in our propagating house, and to a large extent regulate temperature with the ventilator. But there one has to be careful, for a draft through the house will cause more wilting than a rise above the temperature it is desired to regularly maintain. Further, it is important to observe the greatest cleanliness in the sand, in the walks and under the benches. Nothing should be left lying around to decay, for we must never forget that the condition of the cuttings, the condition in which the house is kept are important factors in the development of fungous diseases. If that dread disease, cutting bench fungus, appears, the affected cuttings, together with the sand, should be removed from the house at once, in order to prevent the disease from spreading. We use fresh sand for each batch of cuttings as a means of precaution to prevent the disease.

Rooted Cuttings.



As I said before, as soon as the cuttings are rooted they should be planted in soil. Any delay in this respect will cause the roots to become hard, and the young plants pass into a stage of inaction, from which it often takes considerable time to arouse them. We had occasion to notice this in a lot of rooted cuttings we received, that were planted in small pots. Part of them were kept too long in the sand, and had a good bunch of roots, but were yellow and hard. The others were rather too young to ship, for with a somewhat careless packing the young, soft roots were nearly all broken off; at a casual glance one would have thought they were never rooted. But these younger, softer cuttings with the broken roots filled the pots with a new growth sooner than the uninjured but older ones, and kept in advance of them in their future growing. When cuttings are grown for shipping they should attain a degree of hardness in order to stand the packing and to save the young, brittle roots from breaking. When intended for flats or pots, the younger and softer the roots the better, when handled by a careful person.

Types in Carnations.

Among carnations we can observe different types as regards their habit of growth and as to the form of the flowers. To make a classification is nearly impossible, as we find the habit of growth and the form of bloom intermixed. The most desirable habit of growth is the one that is slightly spreading, so that it cannot be called compact. The strong branches standing firm, clothed with medium to heavy foliage, assuming a nearly upright growth, but leaving space enough between for the air to circulate, is the type which generally has the strongest flower stems, and I will mention Mme. Diaz Albertini as an example. They are easily managed and kept in a healthy condition. The possible free circulation of air through the branches causes the plant to dry out faster when wet. This is still more pronounced in the extreme type of the spreading habit, as in Daybreak and intermediate varieties, such as Wm. Scott, when properly supported. The reverse of this is the short bushy growth of which Jubilee is a good representative. They have very short branches, are of more compact growth and nearer the ground. They are the nearest approach to the original garden or hardy carnation, from which our present varieties have sprung.

None of the different forms or size of bloom are to be found in any one type; neither is fragrance, strong or weak flower stem, sound or bursting calyx, shy or free blooming qualities. But it indicates much how they produce their blooms as to time, whether they come in crops or whether their time of blooming is evenly distributed over the whole season, being in the latter case continuous bloomers. The closer the type resembles the original or garden carnation, with its one crop lasting only a short time, the oftener we find the cropper, as for example, Bridesmaid. While on the other hand, the more spreading habit represents the continuous bloomer, like Wm. Scott. Most of those which we call continuous bloomers come also in crops, but their crops are so extended in time, the period of the going out and coming in of the new crop being so closely linked together that is is scarcely perceptible, but it is very noticeable in the quality of the flowers. The only variety coming to my notice that absolutely does not show any cropping, that furnishes an even quality and quantity of blooms during the whole season, is Mrs. Geo. M. Bradt.

Now as to the value of these different types to the grower, the quality and the quantity of the blooms will decide their value. A cropper is only of value to the grower situated near a

Auditorium Hotel, Chicago, where the convention and exhibition of the American Carnation Society will be held February 17 and 18. The building at the right is the main hotel. The one at the left is the Annex. The two are connected by a marble lined tunnel under the street.

suitable market. The continuous bloomer is valued by every grower. A cropper in the hands of a grower situated near a large market is profitable when the quality is high grade, for such flowers will always find sale. It does not matter much whether the same quantity of flowers can be grown, marketed and sold during a period of two months or six. And when it can be managed so that the crop will come in for Christmas or Easter, as has been done with Bridesmaid and other varieties, profits will swell considerably.

Quite different it is with a grower situated in or near a small city, who retails his flowers and depends on a regular supply. At one time he will have more flowers than he can sell, part necessarily going to waste, or obliged to be sold very cheap, and at other times he has to buy his flowers. For him are the continuous bloomers the only profitable varieties. In my next I will give my opinion regarding the new varieties of the past season.

Fred Dorner.

AMERICAN CARNATION SCCIETY

Officers.

Pres., W. N. Rudd, Mt. Greenwood, Ill.; Vice-Pres., Fred. Dorner, Jr., Lafayette, Ind.; Sec., Albert M. Herr, Lancaster, Pa.; Treas., Chas. H. Allen, Floral Park, N. Y. Executive Committee: The above and Wm. Scott, Buffalo, N. Y.; Eugene Dailledouze, Flatbush, N. Y.; W. R. Shelmire, Avondale, Pa.

Seventh Annual Meeting.

The seventh annual meeting will be held at Chicago, Thursday and Friday, February 17 and 18. Headquarters will be at the Auditorium Hotel, where the meetings and exhibition will be held. A special rate of $3 a day on the American plan and $1.50 on the European plan, has been secured from this hotel, which is the finest in Chicago. Rooms may be secured in advance by addressing the chairman of the local committee, Mr. P. J. Hauswirth, 318 Wabash avenue. Mr. J. T. Anthony has been appointed superintendent of the exhibition. He also may be addressed at 318 Wabash avenue.

CARNATION KATHLEEN PANTLIND.

We have received some blooms of this excellent new pink carnation from the originators, Messrs. Hopp & Lemke, East Grand Rapids, Mich. The flowers are of good size, a very pretty shade of pink, and borne on long, stout stems. We are advised that it blooms very freely and that the plants are rust proof. It certainly gives promise of being a very useful commercial variety.

NEW WHITE CARNATION GENESEE.

We have received some specimen blooms of the new white carnation Genesee, which originated with Messrs. Harmon & Burr, and for which Mr. D. B. Long, Buffalo, is sales agent. The flowers indicate that the variety is a very promising one, the blooms being of good size, clear white, with perfect calyces and borne on very good stems. Growers who have had opportunity to try this variety are exceedingly well pleased with it.

ASTERS.

I would like to plant a lot 40x200 feet with asters next spring, and would like to know how much seed I will need, also the variety which pays best, when to sow the seed and how far to plant apart; or would it not be best to plant some other flowers there besides asters? If so, what would pay best?

K.

Asters are a good crop for summer, if the best varieties are obtained, and they receive the best of cultivation. Earliness, of course, is a great consideration. As I know the market in which these flowers will be sold, it is fair to say that for the past year or two, summer outdoor flowers have not been profitable. The supply has been much in excess of the demand, and only the very best have brought a fair price. Sow early in March, transplant into flats when they are an inch high, giving plenty of room between plants. If you wish to give still more encouragement, you can put them from the flats into 2½-inch pots and plant out middle of May. The rows can be 12 inches apart, and the plants 10 inches. Semple's is now considered the best strain of asters, but I would also grow some of the Truffaut's Perfection flowered.

Early and good sweet peas pay well, but best of all would be some strong carnation plants, put out end of April, stopped once and then allowed to flower during July, August, September and October. You will pick more profit than you would off any other crop.

W. S.

EXHIBITIONS.

"Exhibitions: Their Value and Management," is the title of a paper by Mr. James W. Withers, read before the Westchester County (N. Y.) Gardeners' Association January 22.

As illustrating the far-reaching importance of even local exhibitions, the essayist notes that the Hoe printing press and the Morse telegraph system were both first presented to the public at the annual fair of the American Institute, New York, and were assisted into prominence through receiving the gold medal of that society. Referring more directly to horticultural exhibitions, he holds that the reputation of all the leading houses in the trade in England has been built up by their displays at the numerous exhibitions held in that country, and that many a struggling business man has found the exhibitions an opportunity to bring his merit to the attention of the world. He notes that but for a display at an exhibition Mr. Henry Eckford might still be only growing a few sweet peas for his own amusement, as it was through a local exhibition that his work in improving the sweet pea first became known to the horticultural world.

The essayist refers to the many difficulties encountered in giving a satisfactory exhibition, and emphasizes the importance of giving the management into the hands of one man whose decision shall be final, and of selecting judges with the greatest care. As likely to deter protests against the awards of the judges, he suggests a rule adopted by certain English societies, which is that each protest must be accompanied by the sum of one guinea ($5), this sum to be returned to the one making the protest in case the decision of the judges is reversed after the facts are investigated, otherwise the amount to revert to the treasury of the society.

He advocates the "educational" as against the "pictorial" methods of ar-

ranging exhibitions, and holds that the judging cannot be properly done unless the competing entries are placed side by side for comparison.

MISCELLANEOUS SEASONABLE HINTS.

Dracaena Indivisa.

One of two plants that I shall very shortly sow seeds of is Dracaena indivisa. It is a plant that we find a continuous use for. They do not make better plants, but they sooner make a good sized plant, if planted out in a deep rich soil during the summer months. If sown at once the young plants can be put out in early June and if lifted in the fall and kept growing during winter will make useful plants the following spring. It is a plant not yet overdone, for at this moment it is not easy to buy any quantity of the right size. Never keep this plant in a shaded, moist house, where you would expect a kentia or erica to thrive. Keep it warm, if you want it to grow, but light, airy and not over-wet, and don't overpot it.

Grevillea Robusta.

The other plant is Grevillea robusta. Sown now they make just the right size for inexpensive decorations the next winter and for vase and veranda box work the following spring. The grevillea does its growing in the summer and you always have a spare yard or two of bench, but I trust not many, for you should find some crop to occupy the benches every day in the year.

Smilax.

A good many times I have advocated planting a smilax bed every year and after deviating last summer from my own judgment, I come back still more convinced that annual planting is in every way better than carrying over an old bed. The strings are more uniform in size, quicker to make a new growth and less liable to die even if they are given ignorant care. Sow the seeds soon, so that on July the 1st you have a nice plant in a 3-inch pot about to make its second growth. By that I mean the growth that will make a string. If planted early in July and given a night temperature of 60 degrees, you can easily get four crops before it is time to replant.

Tuberous Begonias.

It is too early to start tuberous rooted begonias for bedding purposes, but a few can be started for selling in May in pots. They don't all start at once, and instead of potting them in 3 or 4-inch pots, as we used to do, we put them in flats of sand and place in a warm house. When they have made a couple of leaves they lift out with all their roots and receive no check when potted in 4 or 5-inch pots. I am sorry to say that they cannot be commended as a plant for a room, dropping their flowers quickly; this is the constant report. But as a bedding plant they are yearly becoming more popular. People want a change from a bed of geraniums occasionally, and we have a fine one in a bed of begonias. For several years there have been some grand beds in our North Park, also in Forest Lawn cemetery, and last year our customers asked for them. There is a notion that these begonias want shade. The finest beds I ever saw had not a particle of shade. It is true they need more care than a bed of geraniums or cannas. John Thomas, the coachman-gardener, cannot be allowed to hose them every evening. But surely it will pay to keep the soil stirred between them and a careful watering once a week. Begonias that have been grown under glass for two months, especially shaded glass, are by no means best suited for a flower bed. Although several weeks ahead of time, I may as well give you my experience with them the past two or three years, and I see no reason to change it. The end of March the bulbs were placed in flats quite thickly (one inch of sand and one inch of soil). The flats were placed on hot water pipes, where the heat wasn't too strong. In three or four weeks they had made two or three leaves. They were then potted, the very strongest in 5-inch, next grade in 4-inch, and smallest in 3-inch. They were plunged in a mild hotbed and grew like lettuce. Two weeks before bedding time the sashes are removed so the plants get a thorough hardening off; for which more of our bedding plants would be the better for their future welfare. These begonias treated in this way were sold for $1.50 to $2.50 per dozen. Surely this is a better paying plant than many we grow.

Cannas.

It is rather early to start the main crop of cannas, but of varieties that you are short of or varieties that you want in flower, it will soon be time to get them growing. Many of them are now so fine that if in bloom in May you can easily persuade a customer to plant a bed, which you could not if they saw only the green leaves, and to the humbler dwellers in a cottage with a small garden their beauty appeals, and if which is the truth you can say, "Yes, ma'm, they will grow large and flower continuously all summer." That settles it; you have made a sale. Under a bench where there has been no drip on them and a temperature of about 50 degrees they are wintering finely. When you do start them, cut up the roots, leaving one lead or eye to each. Place in flats of three or four inches of sand, where they can remain until they have made a growth of several inches, then pot into 4 or 5-inch pots. By starting them in flats you will save nearly a month of valuable bench room and really lose fewer than when started in pots.

Geraniums.

Geraniums that were shifted at New Year's have made growth enough to give a good cutting. They would need stopping anyway. When you stand over these geraniums, which should be done with lightning speed, beheading them as they pass through your hands, don't expect the man that cuts their heads off to reset the plants on the bench. A cheaper man can do that, and don't have the cutting in your mind; study the plant. It is useless to destroy or cripple the plant for the sake of getting a good cutting. The plants will not be of a uniform height, and some may not give you a cutting, as you have no time to go over them again, so top them all, with the welfare of the plant in view, and you will get a uniform lot of plants that will all flower about the same time. It is waste of time to put the cuttings in sand, and they would not make as good plants if you did as those potted at once into 2-inch pots. Pot firmly, not by pressing your thumbs on the surface, as you see too many do, but get your finger down by the side of the cutting like a wedge. You ought easily, if somebody is carrying away the plants, to pot 8,000 a day of such material as this. Give the cuttings a thorough watering and then be careful and water only when they are dry till they make roots.

Wm. Scott.

KENTIA DUMOINEANA.

The palm here illustrated is comparatively rare, and probably is a seedling variation from K. Belmoreana, showing, as it does, many characteristics in common with that species. K. Dumoineana, so far as noted in a young state, appears to be of compact habit, and with leaves of much the same graceful form as those of K. Belmoreana, but having narrower segments and a greater number of them.

The leaf stalks are dark olive to

Kentia Dumoineana.

bronze in color, and the young leaves when first opening also show a bronze tint at times. K. Dumoineana appears rather slow in growth as a young plant and is not likely soon to become common, from the fact that probably no seed of this variety is on the market at the present time. W. H. TAPLIN.

PHILADELPHIA.

A Beauty Wedding.

The June weddings, the October weddings and the Easter weddings, usually in April, are proverbial. It remains for the first season of the Florists' Review to chronicle the appearance of the January weddings in this city in sufficient numbers and size to give business a decided impetus. The present style is to have one color, often one flower almost exclusively, in a choice decoration, with much greenery added. Probably the most fashionable of these January weddings was a Beauty-full affair, so to speak, the center piece on the breakfast table at the home of the bride being what might be termed a Christmas tree of Beauties. The tree standing up quite high from the middle of the table was lavishly adorned with Beauties; nothing else, and was considered most effective. Beauties were used everywhere, over the side of the mantel and in great bowls on the parlor tables.

Two Important Events.

Tuesday, the 18th inst., marked two events of interest to florists. The first, the Forestry meeting of the Pennsylvania Horticultural Society, which was addressed by Gov. Hastings and by Prof. Rockwell. The professor has made our forests his study and works hard to convince our people of the importance of taking immediate steps to replace the trees we have lost and are losing every year by wholesale replanting of the despoiled tracts of land, which in many cases would otherwise lie waste.

The other was the annual Charity Ball, which took place in the Academy of Music. The decorations, especially on the stage, were more than usually handsome. The effect as a whole was lessened by the management of the Academy declining to allow the decorations to be put on certain woodwork, lately repainted. This must have been a great disappointment to the florist—Graham, I think—spoiling the finish of an otherwise excellent piece of work. It is some consolation to know that such short-sighted policy on the part of the Academy management will probably send the Charity and Assembly balls to Horticultural Hall another season. Most of the large private balls are given there now, and it only needs these live subscription dances to make our hall the first place of its kind in the city, as it deserves to be.

Improvement in Business.

Business has improved wonderfully during the past week. All kinds of flowers sell readily, many varieties being in rather short supply. The weather has been most remarkable; mild and spring-like, and with enough cloudiness and rain to remind one of April. Double daffodils made their appearance this week and are in brisk demand.

The plant trade has been more satisfactory than last season, taken all in all. The show windows of nearly all the stores contain some choice specimens, often in bloom. One window was filled entirely with Otaheite oranges, another with ferns and azaleas, Mme. van der Cruyssen.

Notes.

William Graham has presented the bowlers with a cup to be competed for on the club alleys. The conditions are calculated to promote interest in the game.

Mr. C. W. Ward came here from Queens this week. Mr. Ward believes that by seeing a grower's place and the conditions surrounding it, he can form some idea of the new varieties of stock that grower may reasonably expect to succeed with him. This seems an excellent plan; intelligently carried out it should prove of mutual benefit.

We are told in the Bible how Joseph was sold by his brethren. The old adage that history repeats itself has proven true, for now Joseph Heacock has sold Elizabeth to the highest bidder. J. W. Y.

CHICAGO.

Among the Wholesalers.

The shortage in supply continues, with a brisk demand for all good stock that reaches the market. And the outlook for an increase in the supply is not the best. A heavy fall of damp snow last Saturday night, which was later converted into a mixture of snow and ice, has not tended to increase the light in the houses. Sunshine on Monday indicated a possible change in conditions, but on Tuesday another heavy fall of snow began.

Vaughan, McKellar & Winterson are enlarging their florists' supply department and are now manufacturing their own wheat sheaves.

E. H. Hunt is well satisfied with the condition of trade. His books indicate a very large increase over the same period last year.

Referring to the recent notes about the neglect of cut flower packages by

the express companies, our attention has been called to the prompt delivery always given by the United States Express Company. We are told that when a box with a cut flower label on reaches this city by this company, and there are no wagons available, the box is delivered by messenger, and under no circumstances is allowed to linger around the freight house. Those who have had trouble with delivery by other companies might do well to try this company when possible to do so.

The advance guard of the "Novelty" tulips are beginning to arrive at Kennicott Brothers Company from the Klehm nurseries. It is remarkable how well colored the Klehms always manage to have these tulips. They will cut 70,000 of these this season.

George Reinberg, of Reinberg Brothers, suffered a serious loss at his greenhouses during the heavy snowstorm Saturday night. Heavy drifts of wet snow broke in the roofs of two rose houses and both houses and contents are practically a total loss.

American Carnation Society.

As announced elsewhere in this issue, arrangements have been completed for the convention of the American Carnation Society, to be held in this city Thursday and Friday, February 17 and 18. The meetings and exhibition will both be held at the Auditorium Hotel. Mr. J. T. Anthony has been selected as superintendent of the exhibition. A banquet has been decided upon as the form of entertainment for the visitors, and this also will be held in the Auditorium. Any who have not yet contributed to the entertainment fund may do so by addressing the chairman of the local committee, Mr. P. J. Hauswirth, 318 Wabash Ave.

Club Meeting.

The regular meeting of the Florists' Club takes place this Thursday evening at the usual place. Mr. Reeve's paper on plants will undoubtedly prove very instructive, and Mr. Stollery's report of what he saw on his recent eastern trip should prove equally interesting.

Parks.

Mr. James Jensen has been reelected superintendent of Humboldt Park for another year. All friends of our parks will be glad to learn that Mr. Jensen has been retained in spite of the political influences that are rife in the west park system.

OUR GENERAL INTRODUCTION.

No. 5.

Every subscriber is requested to send his photograph (cabinet size preferred) for use in our general introduction, but please do not send us photos that must be returned, as we have to cut them in arranging the groups.

NEW YORK.

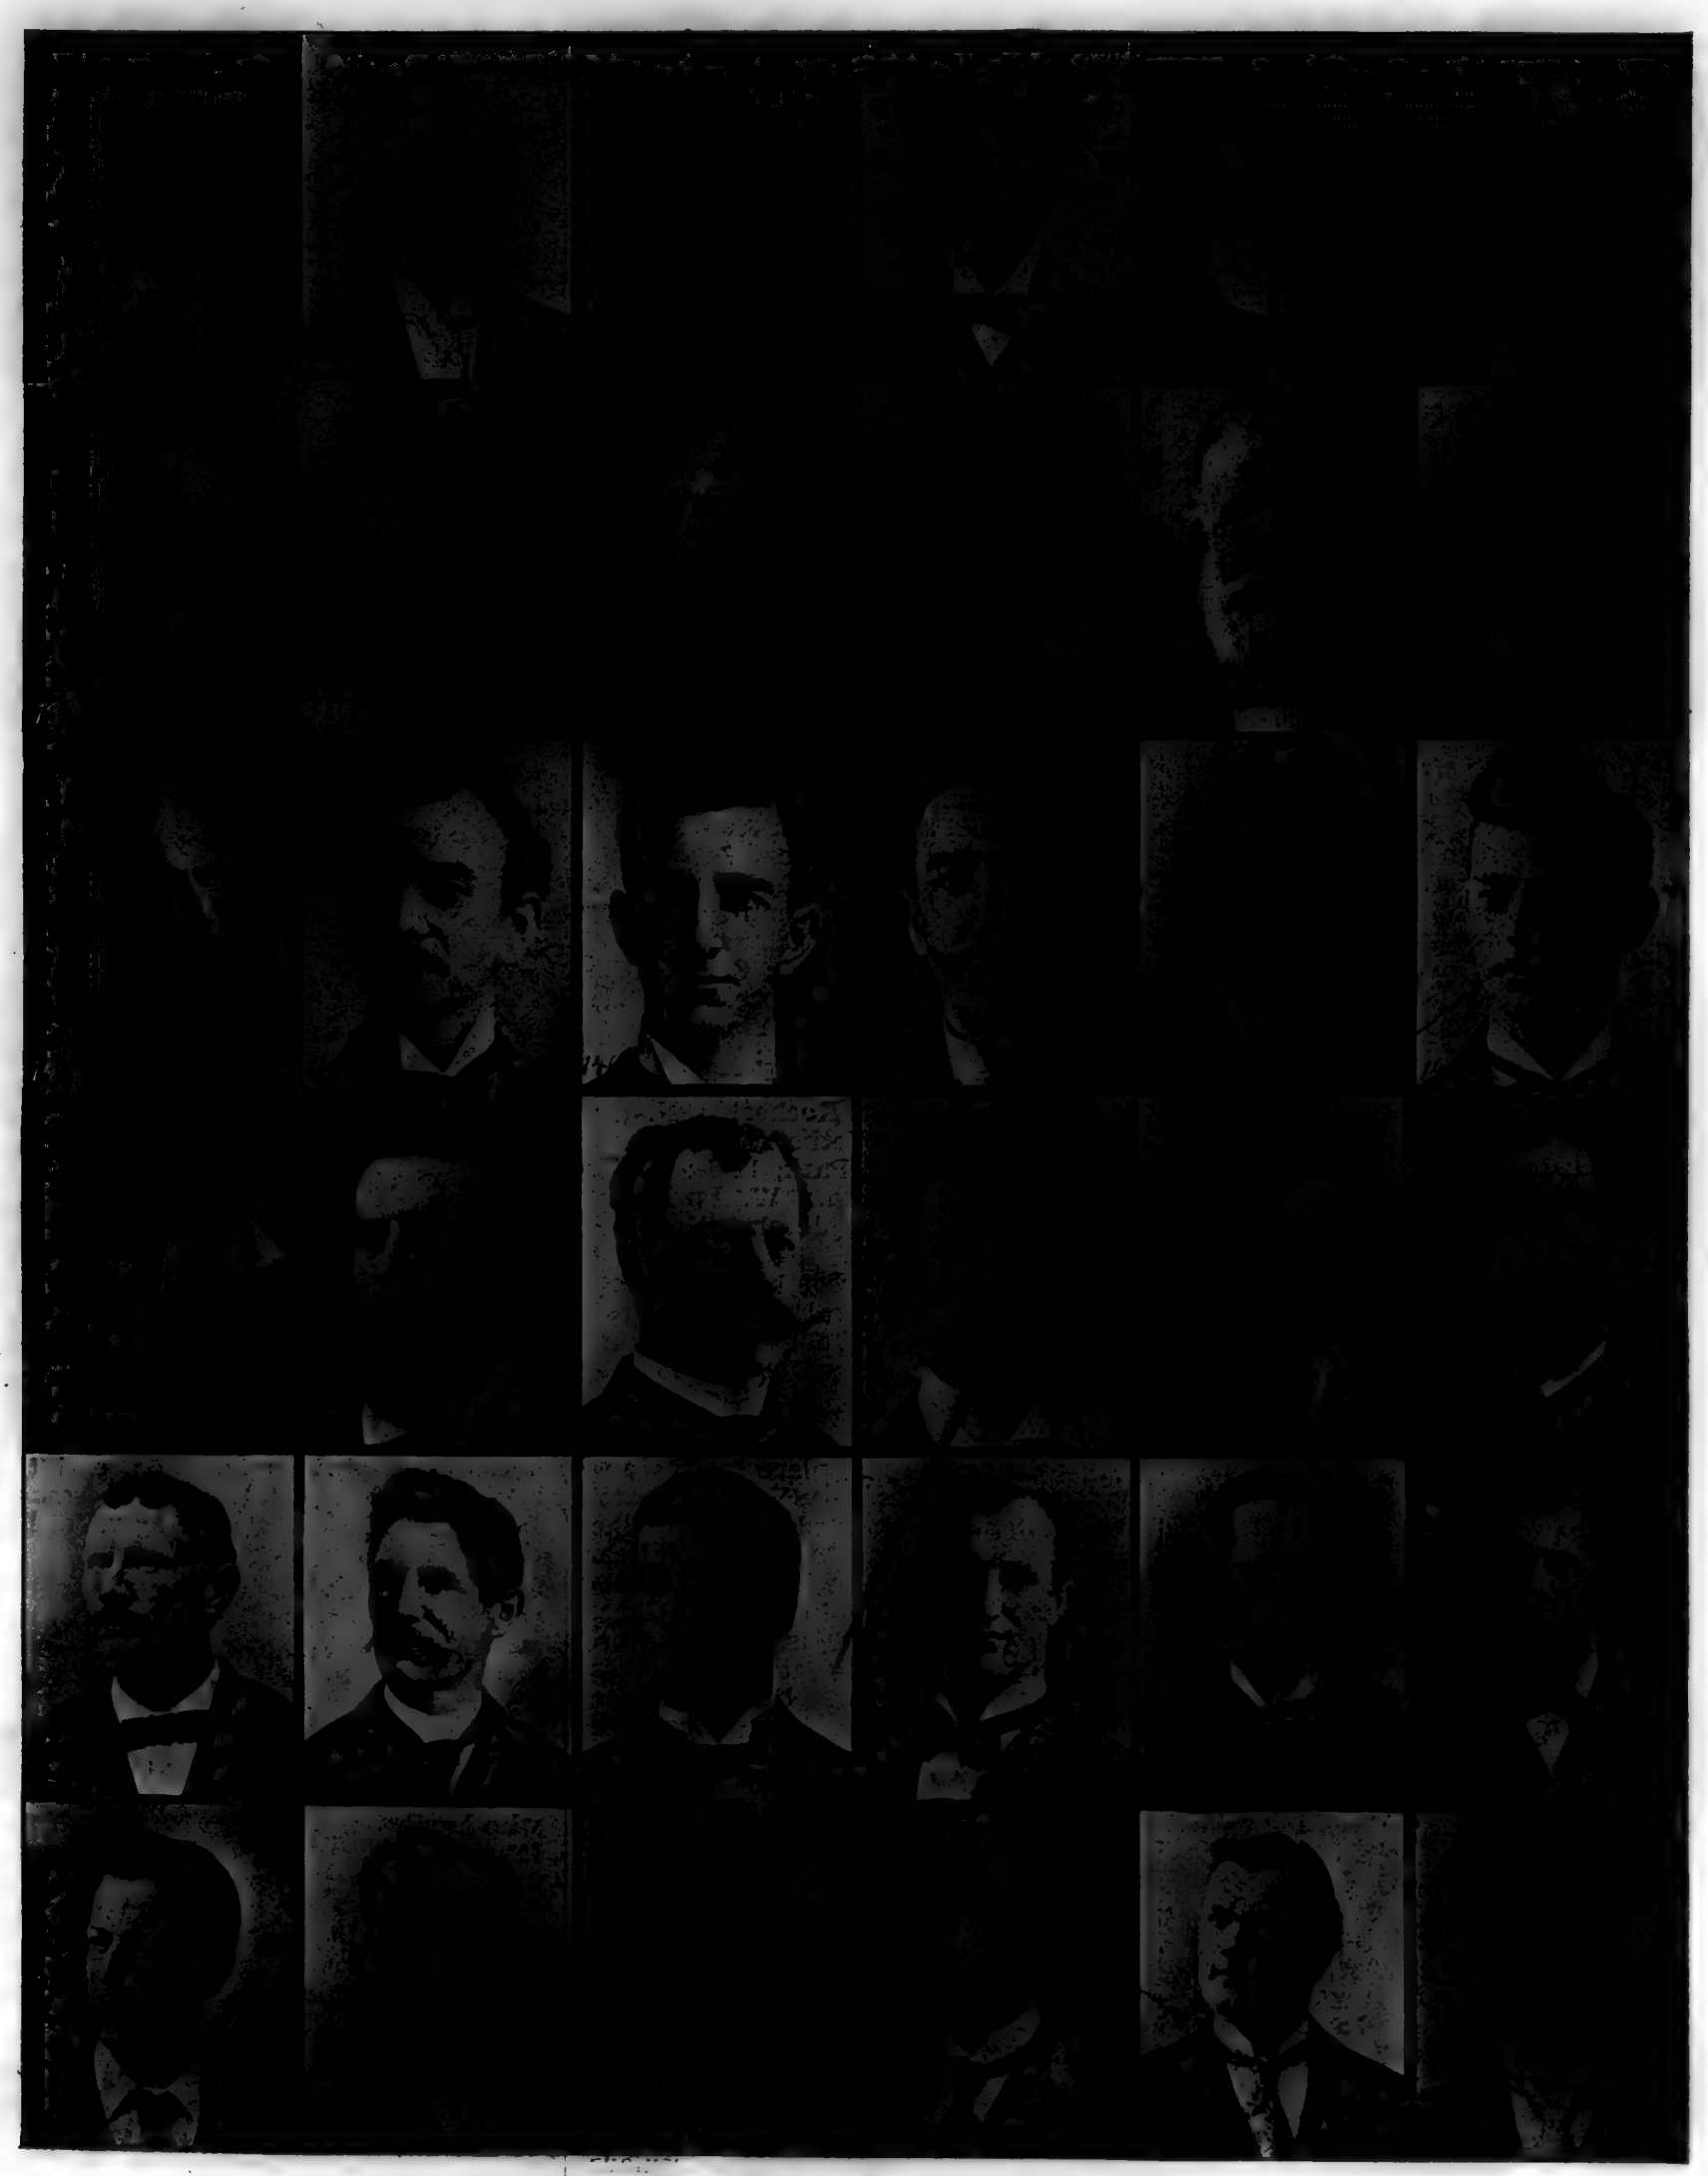
Among the Wholesalers.

Contentment reigns! instead of the wet kind that we have been having. "That tired feeling" has almost left the faces of our friends in the cut flower district and has been replaced by a "Rembrandt" looking countenance as rotund and smiling as a Falstaff or Pickwick. Optimism has replaced pessimism, bad prices by better prices, unkind weather by good weather and so it is the pulse of the trade is again beating normal. Not that things are what they ought to be, but then the millennium is not yet, and Greater New York is not Utopia.

By comparing last week's market report with this, you will notice that prices have improved in some lines considerably. Good Beauties are somewhat scarce, but 75 cents apiece is the top notch. Fancy Maids, Testouts and Meteors realize $10 to $12 per hundred, and Brides a trifle less; Morgan and Cusins, special, $6 to $8, though it must be understood that only specially selected long stem stuff realizes these high prices. A woman always thinks her child the smartest and brightest, and so it is the grower thinks his roses are just as fine as his neighbor's. If, however, he were to look at his flowers through the same pair of "pince-nez" as the wholesaler, he would note the difference between graded extra fancy and "ornery" stuff, and therein lies the secret of contention. If you see roses marketed at a certain price, don't jump at conclusions and think, "Well, why don't I get these prices?" Just look home and say, "I'll try and improve my goods." "Grow less and grow the best," should be your maxim. It will pay you better in the long run. Quality is what counts for price. It is the middle grade stuff that gets it in the neck.

There is a plethora of valley in the market and price was beaten down to $1 and $1.50 during the week. This is a thing that can be controlled, so valley growers, please paste this in your hat: "Valley is exceeding the demand."

Fancy carnations gained a point and some sold as high as $8. Cattleyas are plentiful with the price steady at 40 cents, while some specially fine are sold for 50 cents. Coelogyne cristata is coming in slowly and is very pretty when it can be used to advantage. Cypripedium insigne are plentiful, though they have not been a glut at any time. A few Blanche Ferry sweet peas are to be seen and sell readily at $2 to $3.



For other quotations and report, see our wholesalers' special, which is prepared expressly for The Florists' Review.

Our Wholesalers' Special Report.

Business assumed somewhat larger proportions last week. A number of social events helped matters and resulted in a pretty general cleaning up of stock of nearly all kinds. There was no advance in price to speak of, but a better average was made on the lower grades than the week previous.

In roses the supply was light. Maids easily led in demand, extras and good No. 1 realizing a satisfactory price. Brides did not fare so well, particularly those of the best quality. The call for this variety was very moderate. For the first half of the week Beauties sold only fairly well, but the light cut resulted in a stiffening of price all around. The quality is good. Meteors went well and good stock was readily taken up. Testouts, Morgans and Cusins did better at a slightly advanced price over the week before. The supply of Brunner increases slowly, but was equal to the demand.

In carnations, while good stock was readily absorbed, inferior quality dragged somewhat and brought low figures. There is a considerable supply of fancy sorts from a number of sources of excellent quality.

OUR GENERAL INTRODUCTION. No. 5.

the express companies, our attention has been called to the prompt delivery always given by the United States Express Company. Our Wholesalers' Special Report.

Business assumed somewhat larger proportions last week. A number of social events helped matters and resulted in a pretty general cleaning up of stock of nearly all kinds. There was no advance in price to speak of, but a better average was made on the lower grades than the week previous.

In roses the supply was light. Maids easily led in demand, extras and good No. 1 realizing a satisfactory price. Brides did not fare so well, particularly those of the best quality. The call for this variety was very moderate. For the first half of the week Beauties sold only fairly well, but the light cut resulted in a stiffening of price all around. The quality is good. Meteors went well and good stock was readily taken up. Testouts, Morgans and Cusins did better at a slightly advanced price over the week before. The supply of Brunner increases slowly, but was equal to the demand.

In carnations, while good stock was readily absorbed, inferior quality dragged somewhat and brought low figures. There is a considerable supply of fancy sorts from a number of sources of excellent quality.

OUR GENERAL INTRODUCTION. No. 5.

Violets have done better during the past week except on Thursday, which was rainy. The stormy weather affects the sale of no other flower so much as violets. The supply continues large. A limited number were sold for $1, but the bulk were disposed of at figures ranging from $4 to $7.50 per thousand.

Harrisii is moving better, though at no advanced figure. A number of growers have lost thousands of these flowers from disease. Cattleyas are in excess of the demand and are accumulating. Price is unsteady. Valley is very plentiful and in large lots is sold low. Supply of tulips increasing rapidly with a consequent lowering of price. They are of good quality. White lilac is coming in from a number of growers and is quoted from $1 to $1.50 per bunch.

Among the Retailers.

There are many attractive windows in New York City and those of Mr. J. M. Hodgson are not an exception. He has a wealth of window front and they are always shown to advantage. Those facing Fifth avenue usually divide the honors, one being decorated with plants, the other with seasonable flowers. The former was tastefully arranged with small ferns, Dracaena terminalis stricta, Ardisia crenulata, large Nephrolepis Bostoniensis and pretty pieces of the bird-nest fern, Aspidium nidas avis. In the background were five kentias and a large cork branch upon which were orchids in flower and stag-horn ferns, Platycerium alicorne. In the flower window were handsome vases of fancy roses and standards, from which were suspended small glasses filled with cattleyas, cypripediums, valley, Pancratium fragrans, Imantophyllum miniatum, Amaryllis Johnsonii, etc. Besides vases of fancy carnations, there were large branches of Forsythia Fortunei and the double-flowered almond. Mr. Hodgson believes in carrying only the finest stock in plant and flowers and attributes a great deal of his success to this one important point.

Assorted weather, spring, summer, autumn, and winter, has given variety that should have pleased the most fastidious. There has been a general improvement since my last letter and it has come none too soon. We are midway between the only really busy season of the year, and it must make a good many leaps and bounds to catch up, and make a good average for the season.

Really big jobs are few and far between, even the Old Guard ball, which has usually caused a little flurry in the flower market, now has no perceptible effect, and if any one takes the work now it is more for the advertising than the money there is in it. Swell dinners are the "good thing" these days, and novelty in this direction is much sought after. Orchids and Farleyense are used very extensively and the fancy roses, Bridesmaids and all high colored roses have the call.

Many flowering plants are to be seen in the florists' windows, azaleas, heaths, cyclamen, primulas being specially noticeable, and the quality excellent. There used to be an idea that heaths and cyclamen could not be grown to perfection. A glance at the stock now seen would soon dispel this misconception, and in future years I expect to see much more variety. The field is broad; here, growers, is your opportunity.

Palms are still "de trop" and medium and smaller sizes find a ready sale. The large sizes of arecas and kentias are exceptionally scarce, the former not to be had at any price.

The so-called naturally prepared palms do not seem to have any material effect on the sale of the "real article." In fact, I think like every dog, they have had their day.

Jardinieres are filled by the hundred, and this pretty little knickknack has not lost any of its popularity, and it is surprising how many times they are filled during the season.

Seed and Bulb Trade.

The following members of the Seed Trade Association were present at their meeting, held at the Park Avenue Hotel, Friday last: President Jerome B. Rice, Cambridge, N. Y.; Secretary S. F. Willard, Wethersfield, Conn.; ex-President T. W. Wood, Richmond, Va.; Vice-President Everett B. Clark, Milford, Conn.; W. Atlee Burpee, Philadelphia, Pa.; A. L. Don, New York; Albert McCullough, Cincinnati, O.; W. H. Duryea, representing Henry Nungesser, New York; J. Vick, Rochester, N. Y.; William Meggart, Wethersfield, Conn.; C. L. Allen, Floral Park, L. I.; A. N. Clark, Milford, Conn.; W. P. Langbridge, representing Jerome B. Rice, Cambridge, N. Y.

The proceedings were held "in camera." The next general meeting of the association will be held at Old Point Comfort, Va., Tuesday, June 14, 1898.

The Club Dinner.

The date, time and place for the annual dinner of the New York Florists' Club has been decided and is "The Arena" (Machenheims), Saturday, Feb. 19, 7 o'clock. The following committee has the matter in hand: Chas. Weathered, Ernst Asmus, John Taylor. Tickets will be $5, and intending diners are requested to notify the committee or the secretary, Mr. John Young, so that matters can be facilitated and success assured.

Contributions of flowers, plants and "fixins" should be sent to Mr. Lawrence Hafner, who will have charge of the decorations, and they should be addressed care of Mr. John Young.

Various Notes.

The National Florists' Board of Trade, born in the fertile brain of Mr. Cornelius S. Loder, for the protection of florists and allied interests, is "protection that does protect." As secretary, he is at present sending circulars to all the trade, which contain many testimonials from leading houses that bear the "ear marks" of gratitude, from being saved from losses they might otherwise have sustained. The New Year has brought increased membership. Let's hope it will bring increased prosperity, too.

Mr. F. Lehnig, of Hackensack, and Mr. David R. Rose, Jersey City, respectively president and secretary of the New York Market Florists' Association, have been seriously ill with "la grippe," which seems very prevalent at this time. They are, however, well on the road to recovery, I am glad to report.

Mr. Jas. A. Fraser, traveler for the Lovett Company, Little Silver, N. J., has severed his connection and has now joined forces with the firm of Morrison & Halstead, Troy, N. Y.

President Clausen, of the Park Board, has abolished the office of superintendent of parks, which position was held by Mr. Samuel Parsons, Jr. Mr. Clausen's excuse is that he wishes to separate the artistic from the practical features. For the former he has appointed Mr. Nils. J. Rose, and the latter, Patrick St. John. Mr. Rose is well known to the horticultural world, graduating from the Horticultural College of Almard, Sweden, in 1881, and has made a study of landscape work in all its branches. He is the author of several text-books on gardening subjects, and was connected with the horticultural department of the World's Fair. He afterward came to New York and held a position under Mr. Parsons from which he is now promoted.

When the members of the S. A. F. A. O. H. (I am going to buy a rubber stamp for these initials if I have to write them very often in the future) go to Omaha next year, they should engage the new limited train of Pullman cars recently "put on" by the Pennsylvania railroad. Each car is named after a popular flower, and I noted "Gladiolus," "Justicia," "Camelia," "Azalea," etc. Perhaps we could make up a car of specialists for each, and the scribes could ride in the car "Papyrus." P. S.—This is not a reading "ad." for the P. R. R.

Mr. W. A. Hanft, for 25 years in the retail business, and lately with the well known Sixth avenue florist, Wm. P. Sears, has taken a position with Mr. Thomas Young, Jr.

W. F. Jagger, Westhampton, L. I., who recently started in the florist business with three carnation houses, and who has been very successful with the fancy varieties, will erect two houses during the coming spring, 18x100, and the contract has already been let to Lord & Burnham, who will build, heat and finish them in every detail.

Mr. Joseph Kift, of Philadelphia, was a recent visitor. We are always pleased to see our friends from the City of Brotherly Love. What do you think of us now, Brother Kift, since we have grown out of our knickerbockers and are now Greater New York?

ST. LOUIS.

Trade Looking Up.

Cut flower trade in the city has been better for several days past and the outlook is very encouraging from now on until Lent sets in. Dinners, wedding receptions and other entertainments make a call for quantities of cut flowers.

Roses have been very scarce, good blooms selling well. This condition of the rose market is undoubtedly due more to the smallness of the cut generally than any special increase in consumption. The last three days of the past week were very brisk, especially in funeral work, and the commission men say they soon sold out all their stock. Good Beauties are very scarce, particularly first-class grades. The few that come in go at from $3 to $5 per dozen. Brides and maids, which have been plentiful right along, are also scarce, the first grades bringing from $6 to $10; seconds, $5. Meteors are very scarce, Woottons taking their place for good red roses and bringing from $5 to $7 per 100. Perles and La France have fallen in line with the scarce ones, and good blooms demand $4 to $6.

Carnations are comparatively scarce and are going well. Daybreaks and Scotts sell at $2 to $4, with some extra fancy at $5. The scarlet Portia and Jubilee bring $4 for the best. Bulbous stock is still in good supply. Fine Valley brings $4, Romans and paper white, $2 to $4. Daffodils (Von Sion) are coming in now and go at $4. Tulips are rather short stemmed, and sell at $3 and $4. Narcissus and callas are selling well at $10 and $12.50; Freesia, $1 to $3. Stevia is fine at 20 cents per bunch. Violets are flooding the market just now and Californias (home grown) can be bought at 50 cents, and the small single as low as 10 cents per 100, while good double can be had at 40 and 50 cents. Complaints of dull business seem general all over the country, according to the notes in our last issue, both shipping and local trade suffering alike.

With the Belleville Craft.

The invitation extended to the Florist Club by their Belleville brethren was accepted by twenty-four of the members, and on Tuesday morning at 10:25 they met at the Union station and took the Air Line for Belleville. Among those who were in the party were: C. C. Sanders, F. C. Weber, Fred Meinhart, John Ammann, C. A. Kuehn, F. J. Fillmore, Carl Beyer, Albert Michel, R. F. Tesson, William Ellison, F. W. Ude, Jr., H. G. Ude, Gus Ude and Theodore Richter, of Kirkwood; A. Windler, Charles Juengel C. W. Wors, Emil Schray, Julius Schray, Max Herzog, H. Schulte, P. G. Brackenburg, J. J. Bucke and Miss Ellison. The party arrived at the Belleville junction at 11 o'clock and made their first visit to Mr. Emmons, of the West Park Floral Company, who was in waiting at the depot. The party at once proceeded to inspect Mr. Emmons' place. A little keg painted green, in the potting shed caught the eye of jolly Max Herzog and his side partner, Frank Fillmore. Mr. Emmons has five houses, each 150 feet long, planted in carnations and roses, and everything looked to be in fine shape.

After sampling the green keg the party started for the city, with Mr. Emmons as our guide. At this point we were met by Dr. Halstedt, E. W. Guy and M. Semmler. From here we were taken to Mr. Guy's establishment, which we also found looking at its best. Next door to Mr. Guy is the St. Clair Floral Company, with Mr. William Trillow in charge. This place has greatly improved under Mr. Trillow's care. Carnations and roses are mostly grown here, and all things are in finest shape.

We next visited Mr. Fehr and Mr. Grossart, and also Mr. M. Semmler. At the latter place the old gentleman and his wife received us with open arms. After looking through the houses Mr. Semmler invited us into the house to partake of a light lunch of cake and wine. Mr. Semmler's place is of the old style, but is kept in apple pie order, everything being very clean and nicely arranged.

From this place we were taken to Lavaux's for dinner, where we found a fine spread. The room was nicely decorated with potted plants of all kinds and the tables with smilax, roses and carnations. This part of the program was very much enjoyed by all present. Mr. E. W. Guy delivered an address of welcome to the St. Louis florists. After dinner the party visited the Belleville Commercial Club rooms, and after bowling a few games it was train time. At 6:30 all were on the train headed for St. Louis, and expressed themselves as having spent a most enjoyable day, thanks to our Belleville brethren.

Shaw's Botanical Gardens.

A visit to Shaw's Botanical Gardens a few days ago was much enjoyed, as Prof. Trelease had several things of interest to tell me. I found the professor in his office, and glad that I had come. He has been sick the past week with the grippe, but was feeling much better. Our talk was on the Chrysanthemum show for 1898. The Shaw premiums will again head the list, and the professor would very much like to see more competition for the Henry Shaw gold medal, which is given for a plant of decided merit, for cultivation, not previously an article of North American commerce, and introduced to such commerce by the exhibitor during the year in which said award was made. He hopes that some of our eastern florists will fall into line at the next show. The professor is enthusiastic for the success of our show this year and will do all in his power to help make it the grandest affair we ever had.

"How do you like our new trade paper, The Florists' Review, professor?" "It's a grand paper, and such men as Scott, Grant and Dorner assure its success."

Death of Henry Michel.

We regret to note the death of Henry Michel, formerly of this city, who died a few days ago at Marion, Ind. For many years he was president of the Michel Plant and Bulb Company. He has a number of relatives in this city, among them being Albert Michel, a brother, and Eugene Michel, a nephew, and friends by the score.

E. J. Berterman, of the Berterman Floral Co., Indianapolis, Ind., was a visitor last week.

Of Interest to Bowlers.

The Bowling Club on Monday night rolled four games of cocked hat and J. W. Kunz was high man with 141, high single score 48; Kuehn, second, with 131, single score 41; E. Schray, third, with 19, single score 34. The weather was bad and the attendance not good. Next Monday night will end the cocked hat series. J. J. B.

INDIANAPOLIS.

12th Annual Meeting of State Florists.

The twelfth annual meeting of the State Florists' Association of Indiana was held at the state house, this city, in the horticultural and agricultural rooms, an exhibition of choice flowers and plants in the former and the meeting in the latter. The attendance was satisfactory throughout, the meeting having life and vim to it. President Stuart's address was full of good points and suggestions. The annual report of the secretary showed the usual membership, with a sufficient surplus in the treasury to print the annual report and pay other expenses for the coming year. The report of the eleventh annual chrysanthemum show showed somewhat discouraging on account of a cut in premiums to the state members under the favorable circumstances of last fall, but the majority present felt that much good had been accomplished in education, and an extra effort should be made to bring the financial matters into better shape.

A report from the local society members indicated that they are negotiating with the Commercial Club of Indianapolis for support. A permanent committee was appointed to confer with a like committee of the Indianapolis Florists' Club for further consultations and report to the officers and executive committee in one month from now to decide definitely on holding the twelfth annual chrysanthemum show. No doubt exists but what a show will be held—it is only how extensive it shall be made. On invitation of Mr. E. G. Hill the July meeting of our Society will be held in Richmond.

Election of Officers.

The election of officers resulted in the following satisfactory manner: J. D. Carmody, Evansville, president (by the way, our first president in 1887); John Berterman, vice-president; R. A. McKeand, secretary; Fred. Huckriede, assistant secretary; J. T. Huntington, treasurer; executive committee, H. W. Rieman, W. G. Berterman, E. A. Parker of Indianapolis; Fred Dorner, Lafayette, and E. G. Hill, Richmond.

The state fair controversy was well discussed. The committee is backed by this association in all it has done and is given full power to go ahead, adding to and revising the coming premium list. A reconstruction of the State Board of Agriculture by the next legislature seems a foregone conclusion.

The Exhibition.

The exhibition of plants and flowers was very creditable. Some really very fine carnations were shown, among them the following varieties by Messrs. Hill & Co.: Arbutus, Daybreak color, a shade darker, very fine; Scarlet Queen, a dazzling red, very promising; Painted Lady, a good bloomer, but color somewhat doubtful, a light crimson, with shading toward ends of petals; America, a fine red; Flora Hill, well known white; Psyche, a heavy flower, white with scarlet stripes.

In Dorner & Son's Co.'s exhibit were shown Golden Nugget, by far one of the best yellows, somewhat loose in texture but otherwise good; Mrs. Bradt, well known; White Cloud, by far the finest white shown—deserved a certificate; Dazzle, scarlet, very good; John Young, white, weak stems.

Stollery Bros., Chicago, showed Argyle in good shape. R. Witterstaetter, Cincinnati, exhibited Evelina, white, in fair shape, good stem. Stuart & Haugh, Anderson, Ind., showed some fine carnations and roses. South Park Floral Company, New Castle, Ind., staged a lot of the finest Bridesmaids, Albertini, Jubilee and Helen Keller ever seen in this market, also some beautiful violets. In the exhibit of H. W. Rieman, Indianapolis, were roses, carnations and a few elegant azalea plants. Berterman Floral Company's exhibit consisted of some good seedling carnations, cyclamens, Farleyense and other choice plants.

Certificates were awarded as follows: Best yellow carnation, Fred Dorner & Sons Co.; best white, R. Witterstaetter, with Evelina; best pink, best variegated, best red, South Park Floral Company, with Albertini, Helen Keller and Jubilee, respectively; best Bride and Maid roses, also violets, same firm; best Meteors, H. W. Rieman; display of plants, Berterman Floral Company; Azaleas, H. W. Rieman, and primroses, E. Huckreide & Son.

The Banquet.

After the meeting about forty members and invited guests were evidently interested in the invitation of the side show committee, as they were promptly on hand at the Commercial Club rooms and made themselves at home for the time being. At promptly 10 o'clock our genial toastmaster, J. D. Carmody, gave the sign to sit down around a table in the shape of a T, profusely decorated with specimen flowers, asparagus, smilax, etc., with palms and other plants, giving the room an ideal banquet appearance. The eatables were plentiful and the tea of all colors. After the disposal of the good things to eat and drink, every one was expectant as to how our own J. D. Carmody would handle some of those whose talents were hard to guess at. He fulfilled this expectancy in the most satisfactory manner. The official program was as follows:

The Indianapolis Chrysanthemum Shows; What They Have Done for this State, E. G. Hill; The Florists' Business of the Past, Fred. Dorner; The Florists' Business of Today, J. S. Stuart; Our Amateurs, E. A. Parker.

After the toasts had been completed the general merriment began, and every one left the building with the satisfaction of having spent a profitable and pleasant evening. As one old member remarked, "This was one of the old-time banquets we used to have." We shall have more of these pleasant gatherings.

Notes.

The wife of Mr. E. A. Parker, one of our most faithful amateur members, passed away Saturday. The funeral was held Monday afternoon. Many members of the local floral society attended and suitable floral emblems were sent by the local and state associations.

A delegation of eight florists visited our Cincinnati brethren Sunday, January 16. From all reports they had a very pleasant trip and were entertained royally by those Cincinnati leaders, Witterstaetter and Gillett.

Trade has been very slack, but is improving considerably, with all stock scarce and not up to standard. Violets and carnations are getting more plentiful, however. The great monetary convention promises some extra work, with other receptions, conventions and banquets in sight.

CINCINNATI.

Scarcity of Stock—Prices.

While trade during the past week has been good, at the same time it has not been very satisfactory, especially in the wholesale houses, as it was impossible to get enough stock to supply the demand. The word scarce fails to express it in regard to roses, and the indications are that they will continue to be so for some time to come. Plants are showing the effects of dark, rainy weather. Beauties seem to have suffered the most, as no first-class flowers and very few poor ones are coming in. Tulips are now with us and sell fairly well, although the stems are a little short. Prices on all stock have advanced somewhat. Harrisii lilies are scarce and in demand. Several of our growers are complaining about the Harrisii disease, a large proportion of the bulbs being worthless. This, together with the duty, does not realize much profit for the grower unless the price of the flowers advance accordingly.

A Novel Window Display.

J. A. Peterson had an attractive window display last week. The principal feature was a large frame of black velvet on an easel, to which were attached numerous small vials of water, in which was arranged a beautiful assortment of orchids, principally Cattleya Trianae. Mr. Peterson has a new white carnation of which he is justly proud. It is a sport from McGowan, and is certainly a good flower.

Bowling Notes.

It looks as though our bowling club had gone to pieces, or perhaps the store boys are afraid of those greenhouse fellows. Last Thursday evening was the appointed time for a match game, but not a store man showed up, and just to think, that only a short time ago these same bowlers (?) were talking of sending a challenge to the Chicago club.

Various Items.

Notwithstanding the scarcity of roses last week, that old familiar sign we behold during the summer, "Roses 50 cents per dozen," was to be seen in the window of an up-town store.

This city was visited by a severe wind storm Saturday night. In fact, it was the biggest gale known for years. Very few of the craft escaped without some loss, principally from broken glass, ventilators and loose sash taking French leave. Fortunately, the weather was not very cold, and a few days' work will put things in shape again.

Chas. Raynor, of Anchorage, Ky., was a caller the latter part of the week.

B.

ROCHESTER, N. Y.

Market Conditions.

A very fair amount of business was transacted during the week, though no extra exertions were needed at any time to keep up with the steady demand, but nobody was idle. On all pleasant days the transient trade of the best located stores is greatly increased in volume, and such days were not rare lately. If the weather condition had been less favorable, perhaps we would have to record a slight falling off in sales; as it was, the total receipts compare favorably with those of former weeks in January. The dearth in the flower line was relieved to some extent; a few sunny days had materially increased the weekly cut of our local growers, but no overstock is in the market yet, and good roses are still a scarce article.

Stock—Prices.

Violets are now for the first time in this season coming to market in larger quantities, and have declined in price; only the best bring $1. Good tea roses are not to be had for less than $8 to $10, while the poorer grades are correspondingly high; Meteors bring $10 to $15. Tulips in all colors are seen now everywhere; $4 is their price. Paper white narcissus of best quality are bringing $3. Callas are scarce and have been in good demand at $1.50 per dozen. Stevia is nearly over, still some of it is yet to be had at 20 cents per bunch. Valley is now rather plentiful at $4, and carnations sell at $1.50 to $2 for ordinary and $3 for fancy. Mignonette is $3. Smilax sells at all prices, generally bringing 15 cents, but some shorter strings were disposed of last week at 6 cents.

Some remarkably fine heads of heliotrope, grown by Chas. Suhr, have sold well all this winter. They remind us of times gone by, when these sweet flowers were in greater demand and grown more universally. Of late years the inquiry for them has declined, and but few were offered in the market; now the public seems to again take a fancy to them, and they sell at sight. Though the market is now far better supplied in all lines than at any time since December, there is by no means an over supply, nothing goes to waste and the decided scarcity of best grade roses is a constant source of annoyance. K.

TORONTO.

Horticultural Meetings.

This has been a month of horticultural meetings, in fact, they are beginning to get a little too numerous perhaps. What, with annual meetings, regular meetings, special committee meetings, standing committee meetings, directors' meetings, and other kinds of meetings, one will soon lose track of his family affairs altogether. Are we not getting a little too much of a good thing? Could not the Gardeners and Florists' Association and the Horticultural Society be rolled into one, with a professional section to take the place of the former? It seems to me we are using altogether too much steam for the work accomplished, and that one strong society could do as much work if not more than two weak ones.

The regular meeting of the Gardeners' and Florists' Association was held last Tuesday and was fairly well attended, and a good deal of business was done. Mr. C. Tidy having resigned the first vice presidentship, Mr. Geo. Vair was elected in his place, and Mr. Vair's place on the executive committee was filled by Mr. Fitzpatrick, gardener to J. Long, Esq. The annual dinner will be held on Thursday, Feb. 10, at Webb's rooms. It is hoped that the Canadian Horticultural Association may find it convenient to hold its first meeting about that time. It would be a good opportunity for meeting our country brethern in a social way. A motion was brought up to reduce the annual fee of $2 to $1, but the question was left for the executive committee to wrestle with, along with a scheme which Mr. Ewing is incubating, the particulars of which were not given to the meeting.

Some Fine Orchids.

There are some fine orchids in bloom in this city now and lots of them. Most of the public and private conservatories have some fine specimens. Horticultural Gardens, amongst others, have Angraecum sesquipedale, Dendrobium nobile, Lycaste aromatica, Coelogyne cristata, Odontoglossum pulchellum, a very pretty pure white orchid, easily grown, and good for commercial purposes. I have seen it knocking about here in various places for 27 years. Mr. Langnell, at H. A. Massey's place, has, amongst many others, a Phalaenopsis Schilleriana just opening, with 85 blooms, and there is another at the Normal School in the same state with 95 blooms. Mr. Chambers, too, has a large collection at Exhibition Park in the West End, but it is too far off for a busy man to run out there this time of year. Mr. Glitherson, with J. Hoskin, Esq., has another large collection and always has some good things to show. This is the place where Joe Spring, now foreman of the big greenhouses at Pittsburg, once grew a Phalaenopsis Schilleriana with 164 blooms, the most, I believe, ever recorded. Mr. Houston's large collection at the Central prison was unfortunately entirely destroyed by fire there last fall.

More Club Meetings

At the annual meeting of the Electoral District Society the ancient and original board of directors were re-elected in about the time it takes to write this paragraph. However, it being understood that the board intends to devote more of its funds to horticulture and less to hogs, no objection was raised, and the meeting was very short and very sweet—quite a "love feast" in fact.

I hear now that the first meeting of the Canadian Horticultural Association will be held in St. George's Hall, Elm street, on the 10th prox., at 9:30 a. m., for the purpose of organization and discussing future proceedings. The secretary (W. H. McLean, of St. Thomas) will send out notices to as many as possible shortly. It is desirable that every one who can make it convenient to attend will do so in order to make the association as geographically general as possible.

The last few days here have been dull, comparatively mild and rainy, and there is now very little snow left on the ground. Trade has been rather slack, but prospects for brightening up in two or three weeks are good. Prices remain about the same, with perhaps a tendency to descend in some lines. E.

BUFFALO.

A Fish Story.

It is highly proper that ornamental horticulturists should mention the weather, the condition of which makes so much difference to our crops and peace of mind. To describe what we have had to endure and the variety would occupy a column. I meant to tell you of the floods that have visited South Buffalo. They are expected in the springtime, but seldom in midwinter. Mr. Cowell had a steam tug to convey him to distant parts of his charge. However, "it's an ill wind that blows nobody good." Through open windows of several bowling alleys floated in with the flood many fine pickerel, and when the waters receded the fish forgot to float out, and a fine haul was made.

Supply Short.

The long-continued dull days have shortened up the supply of roses and carnations and both are holding their own so far as prices are concerned. Violets are getting very plentiful and there are more on the market than can be profitably disposed of. A recent visit to the busy mart of "Billy" Kasting showed us large quantities of these little beauties mostly from the Hudson River Territory; not only violets, but anything else you want is found there in quantity and quality to suit any section of the city or weight of your roll. If W. K. should not be home you will get equally well served by his manager, that much-traveled, accomplished cosmopolitan gentleman, Monsieur Stokes, late of Masholiland, S. A.

Florists Must Move.

There are rumors on the street that there will be an exodus of downtown florists to regions farther north, or as we would say, farther uptown. Some of the rumors are well founded. This is the inevitable and what has occurred in every city. As fashionable dry goods and other retail stores move up, and carriages no longer have need to carry their occupants into the congested part of the city, the florist must follow. It would not make any difference if all the flower stores were in one block for buyers of any consignor would all go there and if "Messrs. Jones & Son" were out of Beauties, "Brown the Florist" would be next door and, if disappointed there, "Messrs. Thrip & Spider" would be sure to have a fine lot.

A Rumor.

There was a still, small voice whispered but recently that there was a desire on the part of the public that the florists hold a flower show next fall, and it was accompanied with promises of patronage and support. I hope our President, W. A. Anderson (perhaps he has forgotten he is president), will call an early meeting and sound the opinion of all of us. Our citizens have had

a rest of three years and now should be ready to support it. Just here let me say, regarding the much-discussed "why flower shows are so hard to make even both ends meet," it is simply that flower stores, or rather their windows, are so attractive, the displays made more artistic than any display seen at a flower show, and the public know it. This is not an original conception, but that does not detract from its truth. We are certainly better equipped now than ever to hold a show, for we have as contributors the fine houses of the North Park, the fine decorative plants in Forest Lawn and the choice collection of the Professor at the Botanic Garden. If our president should call a meeting it is to be hoped that he would engage Mr. Adams or some other popular member to introduce us to our brother florists. What, with death, emigration, retirement, collapse and new blood, we would be most all strangers.

Visitors have not been plentiful. We record the visit of Mr. Anderson, of New Jersey, offering trees and shrubs, and the monthly call of Mr. Mott, who offers, in addition to his smile, everything from mushroom spawn to Phalaenopsis Rivertoniana. W. S.

BALTIMORE.

Business Slightly Improved.

Business has shown somewhat of an improvement. We still admit the awful truth that things are dull and not up to the season's demand, yet we are by no means discouraged.

The wholesale price-list remains about the same as last week, with perhaps a few exceptions. Owing to an excessive spell of cloudy weather good roses are somewhat scarce. Perles, however, are plentiful and of good quality. La France are coming in pale, while Brides, Kaiserin and Maids are scarce. Meteors are of moderately good supply, but have little demand. Beauties are exceptionally scarce. Carnations, though always in demand, are getting so plentiful that the commission men have to resort to cut rates in order to handle them all. Scotts, especially, are being shipped in profusion, but there is still a scarcity for good white varieties. Violets, though plentiful, are about equal to the demand. Home valley and tulips are now being shipped; also plenty of miscellaneous stuff.

Among the Retailers.

Among the retailers numerous small entertainments such as receptions and afternoon teas have taken their attention while on the other hand there has been not only a lack of transient trade, but the funerals have also been conspicuous by their absence. No fancy prices now prevail, as everything has reached rock bottom.

The Markets.

The markets presented a dismal appearance when the writer visited them Saturday afternoon. The inclement weather prevented many of the stallholders from putting in an appearance, while it played havoc with the trade of those who did venture out. The pedestrians were even few and far between, the cold, drizzling rain having frightened them away also. Little business was done and disconsolance reigned supreme. On a clear day during Lexington market hours a continuous throng parades the streets along the shopping district to the market-house, from all points of the compass; and one passes en route, stall after stall of miscellaneous collection of cut flowers, plants and immortelle work. There one sees competition on every side, with a motto of "Undersell or else be undersold." A select few, however, have their regular customers and are above the influence of this antagonistic spirit.

Various Items.

At a recent visit to the greenhouse of Mr. A. Stoll, his sons, Messrs. Adolph and Leopold, courteously showed the undersigned over the place. These gentlemen grow a miscellaneous lot of stuff for market sale, principally Perles, violets, carnations, smilax, bulbous stock and potted plants, all of which are looking in good condition. They are, however, having exceptionally bad luck this season with diseased Harrisii bulbs, about 75 per cent having completely gone back on them. They look in perfect health until they attain the height of about 18 inches, when the crown becomes deformed and withered. Their entire range of houses have recently been equipped with a new hot water heating apparatus.

Messrs. Samuel Feast & Sons have a bench of Allen's Defiance mignonette varying from 24 to 36 inches tall and showing hundreds of flowers 7 to 10 inches long. This is the first year that the firm has grown this variety to any extent, and they are more than pleased with their experiment.

Mr. Samuel S. Pennock, of Philadelphia, paid us a flying visit last week. He is looking extremely well and is as genial as ever.

Mr. Ernest Ashley is now in town and, as usual, on the hustle.

C. F. F.

BOSTON.

Weekly Exhibition Mass. Hort. Society.

At the weekly exhibition of the Massachusetts Horticultural Society Carl Blomberg, gardener for Oakes Ames, Esq., showed a very fine Dendrobium Wardianum, a fine specimen with bulbs four feet long and well flowered, for which he was awarded a gratuity. Mr. Clinkaberry, gardener for J. E. Roebling, Esq., Trenton, N. J., sent a seedling cypripedium of great merit named President McKinley, a cross between Cyp. insigne Chantinii and Harrisianum superbum, for which he was awarded a first class certificate of merit as a new American seedling. John Mutch, gardener for J. E. Rothwell, Esq., Longwood, showed a nice healthy bit of Cyp. Leeanum var Rothwellae, Odontoglossum Cyro-glossum with a fine spike about three feet long containing about 24 fully developed flowers, and Vanda Caerulea in fine flower, for which exhibit he was awarded a gratuity.

Mrs. E. M. Gill, Medford, staged an exhibit of miscellaneous cut flowers, among which were some fine blooms of Coelogyne cristata. Mr. Geo. B. Brown, gardener for James L. Little, Esq., Brookline, showed Bignonia diversifolia, which was very attractive with its masses of orange scarlet flowers. W. E. Coburn, Everett, showed three dishes of Chinese primula flowers of good size and texture. James Comley, superintendent for The Hayes Estate, Lexington, made his usual attractive display by showing a piece of Philodendron Andreanum in flower, four vases of seedling acacias and some fruit of the guava (Psidium Cattleyanum) and a jar of jelly made from some fruit, which was a very delicate flavor, and was awarded a gratuity.

The usual Saturday lecture was given by the Hon. Aaron Low, of Hingham, the subject being vegetable growing and originating new varieties, which brought out considerable discussion. There was a very good attendance.

Exhibition at the Flower Market.

The carnation exhibition held at the Boston Flower Market was well attended and some very fine flowers were shown. The most attractive variety exhibited was a seedling raised by Peter Fisher, Ellis, Mass., which he has named Mrs. Thos. Lawson, an exceedingly large flower, 4 to 4 1-2 inches across, bright clear pink, with a good calyx holding the flower in perfect shape, never bursts. He also exhibited a very good yellow named Klondike, and Morning Star, a very fine white, deeply fimbriated and very fragrant. Mr. C. W. Ward, Queens, L. I., made a fine exhibit, as follows: John Young, a fine white, large and good form; White Cloud, very fine; Storm Queen, a very good flower and deeply fimbriated; Bon Ton showed up in great shape, a dazzling scarlet on strong stems; Mrs. James Dean, fine pink; New York, very fine; Mrs. G. M. Bradt, extra large flowers; Gomez, very large dark flower about 3 1-2 inches across, very fine, said to be a sport from Maceo; Gold Nugget, good yellow. Sewall Fisher, of Framingham, exhibited Servia, a white of good form and substance. A. Roper, Tewksbury, Mass., exhibited two varieties, Mayor Quincy, a very fine pink, good flower, for which he was awarded honorable mention at the Massachusetts Horticultural Society show, and May Whiteley, a variety on the style of Daybreak, but deeper in color and with a charming fragrance. Wm. Simm, of Cliftondale, showed a vase of Edith Foster, a very fine flower, pure white, excellent form and substance.

J. D. Twombley, Winchester, showed

BUY YOUR COCOS SEED FRESH.

Our main shipment has just arrived. Cocos Weddelliana, $7.00 per 1000 seeds. Write us for special quotations on large quantities.

We can now offer a limited quantity of **ASPARAGUS SPRENGERI DORMANT FIELD GROWN ROOTS**

for spring delivery. 1 year, $5 per 100; 2 year, $10 per 100; 3 year, $15 per 100; 4 year, $25 per 100.

ASPARAGUS SPRENGERI SEED; new crop to arrive, per 1000	$10.00
ASPARAGUS PLUMOSUS NANUS SEED; new crop on hand. Per 1000	10.00
CANNA AUSTRIA; strong, field grown pieces. Per 100	8.50
CANNA ITALIA; strong, field-grown pieces. Per 100	7.50
All other leading varieties of Cannas at equally low prices.	
SPIRAEA ASTILBOIDES FLORIBUNDA; the best variety for pot plants. $5 per 100, per 1000	45.00
BERLIN LILY OF THE VALLEY; selected pips. $10 per 1000. Per case of 2500	23.50
GLADIOLUS THE BRIDE. 60 cents per 100, per 1000	5.00
PEARL TUBEROSES; selected long bulbs, 4 to 6 inches in circumference. Per 1000	7.00

If you want only the very best strains of Florists' Flower Seed, such as Verbenas, Asters, Sweet Peas, etc., send to us.

CLUCAS & BODDINGTON CO.,

TELEPHONE CALL 403 18TH ST. 501 & 503 WEST 13TH ST., NEW YORK CITY.

a very fine vase of Buttercup, well grown and good flowers. J. H. Leach & Son, North Easton, a vase of well grown Daybreak. H. A. Cook, Shrewsbury, put up a vase of his No. 1 Seedlin 1897, a very fine, delicate pink, large flower of good form and substance. Patten & Co., Tewksbury, showed Edith Foster, remarkably well grown, also F. Mangold, an excellent dark variety. W. C. Stickell & Co., North Cambridge, had a fine vase of Jahn's Scarlet, of good color and fine flowers. J. Tailby & Son, Wellesley, exhibited a vase of their seedling Wellesley, a brilliant scarlet, the flowers measuring in the regular growth 2 to 2 1-2 inches, also three seedlings, one white, one very dark crimson, and one scarlet, all good flowers. Mr. Littlefield, of Worcester, staged for Wm. Swayne, of Kennett Square, Pa., a vase of a brilliant crimson, "Empress," large, well formed flowers and from the strength of the stems shows a very robust habit.

C. Besold, Mineola, L. I., showed Mrs. Francis Joost, a good flower much after the style of Scott. H. F. A. Lange, Worcester, a good vase of Storm King. Mr. Nicholson, Framingham, staged a very fine white named Genesee, a cross between Daybreak and McGowan, of excellent form and good substance; this variety was sent from Harmon & Burr, Darien, N. Y. He also staged for R. Witterstaetter, Sedamsville, O., a vase of Evelina, a very large fine white of beautiful form and texture. It was in excellent condition after three days' travel.

There were no prizes awarded at this exhibition, but there will be several silver cups to be competed for at the February exhibition.

Various Items.

Visitors to the Hub: C. H. Maynard, representing the American Jadoo Co., Philadelphia; Albert McCullough, of J. M. McCullough's Sons, Cincinnati, O.

Warren Ewell, of Dorchester, is now bringing in a quantity of finely grown bulbous plants in pans and pots, and finds ready sales among the retail stores.

Cypress Greenhouse Material.

We are the pioneers in Clear Cypress Greenhouse Material. We discovered that Cypress is better than any other wood for greenhouses from top of posts up and we introduced it, and fought for it against many prejudices, and finally succeeded in bringing it into general use.

Others have attempted to follow where we lead, others are trying to reap what we sowed, but we have the experience and are recognized as experts in greenhouse construction.

Lockland Lumber Co.

LOCKLAND, OHIO.

A Visit to North Easton.

A few gentlemen interested in horticulture recently paid a visit to Mr. Carl Blomberg, gardener to Oakes Ames, Esq., to see his very fine collection of orchids and other plants, and it was certainly a treat.

The center house holds a general collection of palms, ferns, dracaenas, etc., all of which are in a very healthy condition and among which may be mentioned Begonia Rex gogoensis. Although not new, still it is not grown as much as its merits deserve. Also B. Smaragdina, a striking variety with rich velvet green foliage, and Imperials, also very fine deep velvet green with rich velvet green foliage, and Imperialwards, we see suspended from the roof a quantity of choice orchids, some just past flowering and others showing a profusion of flowers. We noted some exceedingly fine Dendrobium Wardianum with bulbs four feet long and showing a dense profusion of flowers. Mr. Blomberg says they are an extremely fine variety, with large flowers and fine color.

We were escorted into his treasure house as he calls it, and verily may it be called so, for here he has some exceedingly choice and valuable varieties. Here was arranged a fine lot of Cattleya Trianae, healthy and in most magnificent flower, among which may be noted a very distinct and beautiful variety named Lilian Chatman, a very large flower, petals and sepals pure white, citron yellow throat, and rosy carmine lip, a very superb variety. Also in good condition and well flowered were Cattleya Trianae virginalis, Speciosisima, and Chocoensis, and some fine pieces of Trianae with from thirty to forty flowers open at one time and four to six flowers on one bulb. The cypripediums are also a choice and select lot, among which are some beautiful and rare varieties such as Bellona, W. W. Lunt, Charlesworthii, Niobe, Dayanum, bellatulum album, Amesianum, etc. We noticed that Carl or his attendant in this department had been at work fertilizing, trying to gain that much sought for new variety which may forever immortalize his name. The odontoglossums were also looking fine and will at a little later period repay with a display of beauty the amount of attention which has been devoted to them. C. H. J.

About Jadoo

Protected by Letters Patent of the U. S. dated Nov. 26, 1895
Trade Mark Registered.

The purpose of the soil in which plants are grown is two-fold,—it acts as a support for the plants, and as a storehouse of the food and moisture by which the plant is nourished. The ideal soil, then, is that which will support the plant firmly and present the greatest amount of nourishment for the plant, and in such form that the plant may most readily absorb it. But to go a step farther, the soil must be of such a nature that the roots,—the absorbers and collectors of the plant food,—may penetrate it freely and develop in proportion to the needs of the plant.

While it is true that earth has the property of containing and retaining plant food, yet it is also true that it contains it but sparingly in most cases, and gives it out with equal reluctance. Soil has but little power to retain moisture. Its density retards proper root action. And above all, the soil which will sustain one species of plant, may be totally useless for others.

All these facts may sound trite to you, but they serve as a good basis of comparison between the merits of soil and those of the two most wonderful products of modern horticultural science,—the new potting material, JADOO FIBRE, and its companion watering material, JADOO LIQUID.

Jadoo fibre is peat moss impregnated with a combination of all the elements necessary to sustain and nourish plant life of every description. It weighs but half as much as an equal bulk of earth, —and while it forms a firm root support, it allows the roots to develop freely and penetrate it thoroughly in their search for nourishment. The chemicals which it contains are of such a nature that the plant finds its food in the most available form,—and bear in mind, it is a REAL food that it finds, not merely stimulants. But, you say, will not the plant suffer from overnourishment? Will it not take too much food and exhaust not only itself, but the Jadoo Fibre also? Experience has shown that this is not the case. The extraordinary growth of plants in Jadoo Fibre simply shows the result of ideal conditions, and the marked difference between Jadoo-grown plants and earth-grown plants is merely another proof of the inefficiency of earth. While its wonderful retentive properties enable Jadoo Fibre not only to hold a far greater amount and variety of plant food than earth does, these same properties prevent this food from being drawn off any faster than the plant requires, and Nature has taken care, on her part, that the plant shall neither overfeed nor take such food as is not suitable.

Jadoo is not a manure. It is not a special fertilizer. It is a substitute for earth, an improvement upon earth, a material in which not only one, nor twenty, but every variety of plant will grow more rapidly, produce finer blooms and foliage, remain in more uniform health, and require less care and attention than when planted in soil. Experiments have been made with almost every known species of plant, tobacco and vines, many vegetables, and some varieties of trees; and in every case the improvement in the condition of these plants was so marked as to need no pointing out.

One remarkable feature of Jadoo Fibre lies in the fact that plants grown in it may be transplanted, with practically no danger of flagging. This is undoubtedly due to the fact that it retains moisture a great deal longer than soil, and also to the fact that in transplanting, the ball of Jadoo Fibre adhering to the roots of the plant furnishes it with nourishment while it is adapting itself to its new conditions. The wonderful lightness of Jadoo Fibre makes it invaluable for use in window boxes, hanging baskets, and plants grown for decorative purposes. Being cleanly to handle and absolutely free from offensive odor, it is especially desirable for house plants. A plant in Jadoo Fibre will grow in a pot two sizes smaller than that required for earth, and a plant will continue in Jadoo Fibre without needing a shift, more than twice as long as it would were it planted in earth. Seeds germinate and cuttings strike in it in a marvelously short time.

Now, in regard to Jadoo Liquid.

Jadoo Liquid is a highly concentrated solution of the elements which enter into Jadoo Fibre, the proportion of these elements being slightly changed. It is used, diluted with water, in the

proportion of one part Jadoo Liquid to 48 parts water. We conscientiously believe it to be the best liquid fertilizer made. It is easy and clean to handle. Its composition never varies, thus avoiding all possibility of mistakes in its use. The next best thing to planting a plant in Jadoo Fibre is to water it with Jadoo Liquid, and even plants in Jadoo Fibre will continue far longer before needing a shift if Jadoo Liquid is used in watering them.

It possesses the same good qualities as Jadoo Fibre of increasing root action, improving foliage and blooms, and bringing the plant to a higher stage of development than could be attained by any other known means.

Not only is it the best liquid fertilizer, but the cheapest, as reference to our price list will show. When you consider that one gallon will produce 49 gallons of liquid fertilizer you can readily understand the justice of our claim.

Of course, its action upon plants grown in earth, while remarkable, will not be so great as on plants grown in Jadoo Fibre, for the reason above given, that the density of earth retards proper root action. At the same time, the results will be astonishing to anyone who has never used it before.

These claims of ours are not merely on paper. They are borne out by the testimonials from which we quote, representing the experience of amateurs, florists, growers, and scientific men in England, France, Germany, Holland, Denmark, our own country, and, in fact, practically every part of the civilized world. To try Jadoo Fibre and Liquid is to use them,—to use them is to become their firm friend. Since May, 1897, we have received testimonials from all parts of the United States. Jadoo Fibre and Liquid, as well as plants grown in them, have been awarded prizes as follows:

National Chrysanthemum Society, London, England, November, 1895.

Devon and Exeter Horticultural Society.

Torquay Horticultural Society.

Liverpool Horticultural Society.

Royal Aquarium, Westminster, London.

New Orleans Horticultural Society, November 1896; 11 first and 3 second prizes.

Exeter Horticultural Society, April, 1897.

Bordeaux Agricultural College, June, 1897.

Society of American Florists, Providence, R. I., August, 1897, (honorable mention and recommendation for trial).

The Monmouth County Horticultural Society, September, 1897:

First Prize for 6 Specimen Crotons.

First Prize for Best Center Piece for Table.

First Prize for 6 Specimen Plants of Dracaenas.

Special Certificate of Merit for 6 Phrynium Variegatum.

Special Certificate of Merit for Rustic Work.

Society of Vine Culture, Cognac, France, September, 1897.

Durban and Coast Agricultural Society, South Africa, September, 1897.

Pennsylvania Horticultural Society, Philadelphia, November, 1897:

10 First Prizes for Chrysanthemums.

1 Second and 1 Third Prize for Chrysanthemums.

3 Prizes for Crotons.

1 First Prize for Asparagus Sprengerii.

1 Second Prize for Asparagus Sprengerii..

1 Special Prize for Dracaenas.

1 Prize for Window Box filled with Ornamental Foliage Plants.

Bordeaux, France, November, 1897: Silver Medal for Chrysanthemums.

Birmingham, England, (Bingley Hall), November, 1897: Special Certificate of Merit for Jadoo Fibre and Liquid, and First Prize for Cyclamens.

The Pennrock Co., Wilmington, Del., Winners of the largest Prize at the Exhibition of Pennsylvania Horticultural Society (November, 1897), say:

"In regard to your inquiry about Jadoo Liquid and Fibre we beg to state that we used it this last season with good results. We grew our exhibition plants of Chrysanthemums, which took first prize at the Pennsylvania show, in soil up to ten-inch pots. In those sized pots the plants became very sick and all the leaves turned yellow. We then shifted them into Jadoo Fibre, and the result was simply wonderful. The plants quickly regained lost vigor and the leaves gradually assumed their natural green color. On becoming potbound, we used the liquid twice a week, and this was all the fertilizer we used. We have had excellent results also with Asparagus Sprengerii, Crotons and large Ferns, grown in the Fibre, and shall use it more extensively hereafter."

The following is a list of plants grown in Jadoo Fibre or watered with Jadoo Liquid, that were awarded prizes at the last exhibition of the Pennsylvania Horticultural Society:

CHRYSANTHEMUMS — Plants — 6 plants, 6 varieties, single stem. First Prize to Pennrock Co., Wilmington, Del.

SPECIMEN PLANT, white, not above 14-inch pot. First Prize to Wm. Robertson, gardener to John W. Pepper, Esq., Jenkintown. This plant had 84 large blooms, with fine foliage all along the stems down into the 13-inch pot, and was raised in Jadoo Fibre and watered with Jadoo Liquid.

SPECIMEN PLANT, any other color, (Pink), not above 14-inch pot. Second Prize to Wm. Robertson, gardener to John W. Pepper, Esq., Jenkintown. This had 82 blooms and foliage all along the stem.

SIX PLANTS, Pink, one variety. First Prize to Pennrock Co., Wilmington, Del.

SIX PLANTS, Crimson, one variety. First Prize to Pennrock Co., Wilmington, Del.

CUT FLOWERS—Chrysanthemums—Six Blooms, Pink, one variety named. First Prize to Pennrock Co.

Six Blooms, one variety named. First Prize to Pennrock Co.

Six Blooms, White, one variety named. First Prize to Wm. Robertson. Grown in bench in Jadoo Fibre and watered with pure water.

Six Blooms, Pink, one variety named. First Prize to Wm. Robertson. Grown in bench in Jadoo Fibre.

THREE VASES, 12 Blooms each, one white, one yellow, one any other color, distinct varieties, named for the "Castle Knoll Prize," to Pennrock Co.

SIX BLOOMS, any other color, one variety named. First Prize to Wm. Robertson. Grown in Jadoo Fibre.

CROTONS, Display of 12 plants, 12 varieties. First Prize to Robert Craig. Second Prize to John A. Shellem, of Philadelphia. Mr. Craig told our Mr. Hamburger that the largest of these plants were grown in Jadoo Fibre. Mr. Shellem's were also grown in Jadoo Fibre.

CROTONS—Specimen Plant — First Prize to John A. Shellem. This plant was grown in Jadoo Fibre with admixture of soil.

ASPARAGUS SPRENGERII—Hanging Basket. First Prize to Pennrock Co. Second Prize to John A. Shellem. Both grown in Jadoo Fibre.

DRACAENAS—Special premium to John A. Shellem for collection of Dracaenas. These were grown in Jadoo Fibre with admixture of soil.

Window box filled with ornamental foliage plants for house decorations. Prize to Pennrock Co.

Were we to say all the good things that could be said about Jadoo Fibre and Liquid, or were we even to reprint all the good things that others have said about them, we would have to use space many times larger than this. We can only echo the advice of the Society of American Florists,—try them. As the price list shows, they are not expensive. A small trial package means a small outlay, but the returns in satisfaction, plant health, and monetary profit,—if this latter is a consideration to you,—will more than repay you. We have no fear of the results if you give them a fair trial,—you will simply become another of their host of friends.

Hornellsville, N. Y., Dec. 7, 1897.

I have seen plants on exhibition at the Philadelphia, Boston, Chicago and London shows, but I have yet to see plants grown in geranium pots equal to those of which I send photographs.

The plants were grown by me for Mr. W. A. Wettlin, by whom I am employed. They were not grown for exhibition, but merely to test the value of "Jadoo," and were not given extra attention.

The single stem plant was struck in Jadoo Fibre and flowered in a 3-inch pot,—the photographer makes it appear a 5-inch pot; he also is to blame

SPECIMEN PLANT GROWN IN JADOO.

"The illustration is from a photograph of a specimen plant of 'Miss Florence Pullman,' grown in Jadoo Fibre by William Robertson, gardener for John W. Pepper, Esq., Jenkintown, Pa., and shown by him at the exhibition of the Pennsylvania Horticultural Society, November 9 to 13 last. He received first prize for it in the class calling for best specimen plant, white. The plant had 84 blooms, averaging 6 inches in diameter, the specimen itself measuring about six feet through, each stem being well foliaged right down to the pot."

CHRYSANTHEMUM MISS FLORENCE PULLMAN.

Mr. Robertson gives his method of treatment as follows:

"The cutting was struck in January and put in a 4-inch pot about the first of February. Five weeks later it was shifted into a 6-inch pot; in May being given another shift into an 8-inch pot, in pure Jadoo Fibre. Later shifts were made, in the same material, and about August 1 the plant received its final shift into a 13-inch pot, in which it was exhibited. When the buds were set I started watering with Jadoo Liquid according to directions about twice a week, gradually increasing the strength until the blooms were half developed, when a little of the Liquid in a much weakened form was given. Altogether I used about half a gallon of the Liquid on the plant."

for the unsightly stake, as the plant never had a support until it reached his hands. It may interest you to know that "Jadoo" has given much satisfaction, especially with Petunias, Gloxinias, Rex Begonias and Asparagus; Cyclamens also seem to like it, but they have not had a fair trial. Beside a batch of Mums, which struck nicely, I also had successful results in striking Pelargoniums and a batch of Pandanus Veitchii.

Respectfully,
(Signed.) James Power.
Care Wettlin.

Mr. LEONARD BROWN,

Hon. Sec. National Amateur Gardeners' Association.

Brentwood, England, 2nd Dec., 1897.

"I have used Jadoo Fibre with the best results possible for Ferns, Cannas, Arums, Hyacinths, Tulips, in fact, for Bulbs of all sorts. I find the material most suitable for spring flowering Bulbs, as the pots get quite full of roots before the top growth commences, a condition that goes a long way towards success. Lilies, too, have been particularly good; not only did they flower unusually well as regards both size and colour, but the Bulbs are in a splendid condition for next season. I have also used Jadoo for propagating from seed and cuttings with good results, seeds germinating very quickly when sown on the fibre. I consider Jadoo to be of the greatest assistance to the Amateur, more particularly to those who are engaged in business during the day, as much less water is required, and consequently more time can be given to other work."

Wyncote, Pa., Nov. 30, 1897.

The American Jadoo Co., Philadelphia, Pa.

Gentlemen:—I have been using Jadoo for several months with great success. Some of my Chrysanthemums which won first prizes at the Exhibition of the Pennsylvania Horticultural Society this November were grown in Jadoo Fibre, and I noticed that the foliage was much darker than in the others, and clean to the bottom. My single bloom Chrysanthemums are grown in 4-inch pots, and measure six inches from tip to tip.

I have a Ficus Variegata in Jadoo Fibre in an 8-inch pot that measures five feet six inches in height, and two feet five inches across, and I consider it a good specimen plant.

I have had excellent results with Palms, and especially Ferns. With Dracaenas and Crotons in a sickly condition in earth, by putting them in Jadoo Fibre the result is extraordinary, so that plants that I hitherto threw away, I now save and make fine plants.

I find also that Jadoo Liquid is wonderful in getting immediate results in all plants, whether in earth or in Jadoo Fibre. I have Asparagus Sprengerii, Rex Begonias, Begonia Rubra, Anthericum, Dieffenbachias, Dracaenas. Grevillea Robusta, Pandanus Veitchii, Araucaria, all doing finely in Jadoo Fibre. The Araucaria was dying and foliage falling off when I put it in Jadoo Fibre, and it is now recovering speedily and throwing out new growths. I also note that my Chrysanthemums in Jadoo Fibre are much fresher to take stock from than those in earth. I can highly recommend the Jadoo Fibre and Jadoo Liquid for the above list of plants, all your claims being fully sustained as far as my experience has gone.

(Signed.) George Middleton,
Gardener for Mr. C. H. K. Curtis.

(Extract from "Success with Flowers," Dec. 1897.)

WONDERFUL RESULTS WITH JADOO FIBRE AND JADOO LIQUID.

"The recent Exhibition of the Pennsylvania Horticultural Society, at Horticultural Hall, Philadelphia, brought forward some wonderful results obtained from the use of Jadoo Fibre and Jadoo Liquid, the new potting material and liquid fertilizer. After such practical demonstrations of the real merit of these new materials, there no longer exists a doubt that they are destined to play an important part in the advance of floriculture, both as a recreative art, as well as from a lucrative standpoint. Such results as were obtained from their use at this Exhibition stamped them at once as infinitely more valuable than any other potting material or liquid fertilizer. Flower lovers in general are ever ready to welcome practical improvements that will enable them to get better and surer results from the plants they love. It was a noticeable fact that the finest flowers shown at the Exhibition referred to above were either grown in Jadoo Fibre or watered with Jadoo Liquid."

(Extract from "The Weekly Florists' Review," Dec. 2, 1897.

JADOO FIBRE.

"This substitute for soil in growing plants seems to be meeting with much favor with those who have given it a trial. Many of the prize winning plants and flowers at the recent Chrysanthemum Show of the Pennsylvania Horticultural Society, Philadelphia, were grown in Jadoo Fibre, and the superb Crotons shown at the Providence convention by Robert Craig, Philadelphia, were also grown in Jadoo. These Crotons will linger long in the memory of all who saw them. Perfection seems the only word to apply to both growth and coloring. Mr. Craig attributed his success to the Jadoo Fibre in which they were grown. It is certainly worthy of a trial by every one who grows plants and flowers."

(From "American Gardening" of June 12th, 1897.)

During the past year there has been placed upon the market a new soil and a new liquid manure, namely, "Jadoo Fibre and Jadoo Liquid," and my experience in the use of them has convinced me of their genuine merit. For some years I have had charge of an extensive commercial establishment in the city of Philadelphia, and to meet the sharp competition of to-day I have been continually on the alert for that something that will produce plants as near perfection as possible, with the least trouble and expense. I have found it in Jadoo.

In one year, instead of using it by the pound, we are now using the fibre by the ton, and the liquid, instead of by the pint, by the hogshead. All our decorative palms and also those for the market, are potted in "Jadoo." The root and top growth is 100 per cent better than we ever had them in ordinary soil; they keep moist for days at a time, are light and cleanly to handle, and that means much when you have an extensive decorating trade.

In the past we lost many plants from the drying out process they received in hot, dry rooms; now they come back moist and fresh as the day they are sent out, which means a saving of hundreds of dollars annually, both in plants and pots, as the pots used are much smaller when Jadoo is employed.

During the present season I have used it for germinating all my seeds, such as Petunias, Lobelias, Aralias, Ardisia, Grevilleas, Thunbergias, Phlox, Asters, Begonias, Gloxinias, Verbenas and so on, and I find it admirably adapted for the purpose. It is so fine and light that the most delicate seeds push through it with ease, and so retentive of moisture that when watered upon the date the seed is sown, will be found sufficiently moist until they are well up; and if pricked out of the seed boxes into Jadoo there is no danger of the plants wilting; they take to it and grow immediately, even if placed directly in the sun. Something which cannot be claimed for the most carefully prepared soil. When you are ready to place them in pots they lift from the boxes with a fine ball of fibrous roots and Jadoo.

All our spring bedding plants have grown better, bloomed better, and what is more, were all ready to sell from ten

ASPARAGUS SPRENGERII.

The plant of Asparagus Sprengerii shown in the accompanying picture is the one which took first prize at the recent Chrysanthemum Show of the Pennsylvania Horticultural Society. The plant was only in a six-inch pot last spring, and during the month of June got a shift into an eight-inch pot. The potting soil up to this shift was rotted sod and manure with some sand in proper proportions. Shifting into a ten-inch pot, half Jadoo and half soil was used, and for the final shift pure Jadoo. The plant was watered a few times with the Jadoo Liquid 48 to 1, and grew quickly and strongly. No special care was exercised in its culture; in fact, a good many of the long sprays were cut for decorative greens.

ASPARAGUS SPRENGERII.

In potting Asparagus Sprengerii we do not ram the soil so tight as for palms, etc., believing that only a medium tight potting allows the large corms and fibrous roots more room to develop properly. We have faith in the future of Jadoo Fibre and Liquid but they must be used with intelligence and common sense.

PENNROCK COMPANY,
Wilmington, Del.

to fourteen days earlier than those which I grew for comparison in prepared loam.

Outside of Europe I have never seen really good Tuberous Begonias; this year I potted them all up in Jadoo and they are magnificent to-day—large flowers of fine color and immense foliage—just as I love to see them, and they are selling rapidly. Our only regret is that we did not grow more of them.

The Gloxinias are coming along in the same manner, and Fuchsias grow and bloom in it in fine style. Ficus elastica has the size and dark green to the foliage not obtainable with ordinary soil. You say roses require a heavy soil; that is the general opinion and practice, I know, but I can show you President Carnot rose growing in Jadoo, and foliage, stem and flower attest its superiority over heavy soil. Crotons flourish and color immediately they are removed from the cutting bench.

Last Easter week saw our Hydrangeas unsurpassed, if equalled, in Philadelphia. I attribute it to Jadoo Liquid applied once a week—one part liquid to forty-eight parts clear water. It is without doubt the cheapest and most efficient, and what is more, safest, liquid fertilizer on the market today. All the species of Asparagus make a rich growth in Jadoo, and for hanging baskets it is unsurpassed.

To the amateur I would say, grow all your plants in Jadoo. It is cleanly to handle and you don't have to stand over it with a watering pot. You can go away for a day and come back and find them moist and fresh—not dried out and dead or permanently injured, as has been too often your experience with soil, and during the winter months in rooms heated with hot, dry air you will find that Jadoo Fibre and Jadoo Liquid is all I have found them to be.

James S. Reid.

Philadelphia, Pa.

(Extract from the "Florists' Exchange," Sept. 25th, 1897.)

EXPERIENCE WITH JADOO.

"In the early part of 1896 I was the recipient of a new soil (if I may so term it), called "Jadoo Fibre," and along with the fibre was a quart of liquid manure, called "Jadoo Liquid." (Jadoo, I think, is the Hindustanee word for Magic), and accompanying the goods was the request to subject them to a fair trial. To speak the truth, I was rather sketptical of its usefulness as a medium in which to grow plants, even though it had the unanimous endorsements of many noted horticulturists at home and abroad. Having the appearance of fibrous peat, I resolved to grow a few palms, ferns and pandanus in it, and carefully watch developments. In a few weeks the plants I had placed in Jadoo, by their clean vigorous growth, clearly demonstrated its superiority over soil prepared in the usual way for such plants. After the pots were well filled with roots, I applied Jadoo Liquid, in the proportions of one part liquid to 48 parts clear water, and these few plants continued to flourish, when under ordinary conditions a shift to a larger pot would be imperative. My employer and myself were fully convinced of the great merit of this new introduction, and the result of our conviction was the placing of an order for a larger quantity of Jadoo Fibre and a hogshead of Jadoo Liquid, and from that day we began to use it in earnest.

"Some growers assert that it is unnecessary to use a compost of peat loam and sand in which to grow palms, ferns, and kindred subjects of the stovehouse. My experience has taught me different. and the most successful growers of palms and ferns that I know to-day say such a compost is necessary. But since the introduction of Jadoo Fibre, I have abandoned peat and sand as too costly and use the fibre almost exclusively. My reasons for so doing are: It requires no preparation, being always ready for use, it retains moisture for a much longer period, it encourages better root action, and as a natural sequence the top growth is better, larger leaves of strong texture and deep green color, offering greater resistance to insects; it does not become sour or soggy. I find Jadoo admirably adapted for decorative plants of every description. They keep moist and fresh for days at a time in rooms heated to a high temperature by steam or hot air, whereas those grown in soil dry out very rapidly under those conditions, and soon become unsightly and unfit for decorating. Such is the experience of all who decorate to any extent with plants. I have used 'Jadoo' very successfully for hanging baskets and vases in cemeteries, plant boxes for windows and porches. It retains the moisture for a long time in situations exposed to the direct rays of the sun.

"I use it entirely for germinating seeds of every kind grown in a greenhouse. The surface never becomes hard or caked, and the most delicate seeds can push their way through it, besides it contains no weeds; and it seems to be free from fungus of any kind whatever.

"We have not yet commenced to grow orchids, but when the time comes for us to do it, Jadoo Fibre will be my choice of material in which to grow them. Throughout the past winter and spring I used Jadoo for our Hydrangeas, Begonias, both tuberous and fibrous rooted, Gloxinias, Crotons, Geraniums, Fuchsias, Ficus, Pandanus, Lilies, Roses, Carnations, and the host of other plants usually grown by the commercial florist, and it proved all that was claimed for it by the introducer, the plants grown in Jadoo being uniformly superior to those grown in ordinary loam.

"Our Hydrangeas were especially fine at Easter; to them I applied Jadoo Liquid once a week from the time the buds set until they began to assume color, with the result that the flower heads were of immense size; consequently we sold them all. My method of application is as follows: I have a tank in each house; I fill each tank with liquid and water and then apply through the Kinney pump at the rate of 16 to 1, maintaining the correct proportions of 48 to 1. I find it a cheap, efficient and safe liquid manure, which will give equally good results when applied to soil.

"In using Jadoo Fibre care should be taken to use smaller pots than you would naturally use for soil, and because of its spongy nature it requires to be packed firmly around the roots of all plants. Lastly, use common sense when watering, for I find it the easiest thing in the world to give it too much."

"James S. Reid."

(Extract from "American Gardening," Sept. 4, 1897.

JADOO FIBRE AND LIQUID.

"To the Editor of American Gardening:

"The workings of the human mind are similar among all the sons (and daughters) of Adam. We read an advertisement for months, for years perhaps, without taking in its full signification. Suddenly we are seized with the temptation to prove the merits of the advertised article, and we send our order forthwith. The above bit of philosophy is introductory to the story of an amateur's experience with Jadoo Fibre and Jadoo Liquid.

"The word 'Jadoo' was graven on my mind from having seen it in this paper every week for months. In the early part of July the thought struck me suddenly that I ought to give it a trial. I sent for a 120-pound bale of the Fibre and a 2-gallon can of the Liquid. Just at the time I received them, I also received from Costa Rica some tubers of fancy Caladiums which a friend sent me, thinking they were something indigenous to that country. Packed in wet sphagnum, they had made during their two or three weeks' journey a frail, sickly growth of about three or four inches. Two of the tubers were planted in rich soil and four in the Jadoo Fibre. Those planted in the Fibre immediately grew, the sickly white growth changing quickly to healthy green, handsome spotted leaves. Those in the soil made no additional growth, and finally died down entirely. I thought they were dead, but they sprouted again, and are now growing well, but not so freely as those in the Fibre.

"A Latania borbonica had been perishing for years from inanition, or some other occult cause, until it had dwindled down to nothing, and naught but a single point of green could be

discovered. On shaking it out of the soil, I found that every trace of root was gone. I immediately potted it in the Fibre. It picked up from that moment, and while the improvement is so slow as to be almost inperceptible, yet it really has made a new growth of at least two or three inches. My hired man is exceedingly pleased with it as a potting medium for Ferns.

"The cost of the Fibre renders its use impossible in the open border; although I wrapped the roots of some Crotons and Geraniums in it and planted them in the ground in the same bed as others, I cannot say that I notice any advantage in so doing.

"The Jadoo Liquid appears to be remarkably concentrated, and it must be diluted forty-eight times. This I have used about twice a week for plants in the open ground, in tubs, and in pots.

"Conditions vary so much in gardening that it is impossible to attribute to any one cause given results. My opinion is that for Roses in open ground this Liquid is very beneficial. For soft wooded plants and those grown in pots or tubs, there seems a possibility of its turning some of the lower leaves yellow, even diluted as freely as the above. Whether that result with tuberous Begonias, Abutilons, and some other plants, was due to the use of the liquid, or to other causes, I cannot positively say, however.

"My feelings in the matter may be summed up as follows: Every plant that I have in the house this winter shall be potted in Jadoo Fibre. It is clean to handle, light in weight, and will no doubt obviate bringing into the house many eggs of insects found in garden soil. Retaining moisture it obviates the necessity of watering so often. As it never bakes or gets matted, all my seeds shall be sown in it in the spring in boxes. For this purpose it is necessary to sift it. Amateurs should give it a trial. Perhaps more anon on this subject.

"L. C. L. Jordan, N. J."

(Extract from "Success With Flowers." Oct. 1897.)

OF INTEREST TO FLOWER GROWERS EVERYWHERE.

"We call the attention of our readers to Jadoo Fibre and Jadoo Liquid, for we believe they fill a long-felt want. We have tried them and the results have proven that they will do what is claimed for them. As many as thirty different earth mixtures are required for the different varieties of plants that are grown. To the amateur gardener it is next to impossible to know just what ingredients are necessary to combine with the soil to get the desired results, while with Jadoo Fibre you have only one material to deal with, and that is ready for use, and so clean that you need not soil your hands. Other advantages are that it is very light, requires less watering, and all kinds of plants seem to thrive in it. Jadoo Liquid is a safe and cheap Liquid Fertilizer that can be used on plants grown in soil or Jadoo Fibre. They are both very strongly endorsed in England and France, while in this country the endorsations received since their introduction this spring are simply marvelous. Our advice is, correspond with the American Jadoo Co., get their testimonials and prices, then do just as we did—purchase a small quantity of each and try them,—and we know you will be delighted with the results obtained."

(From "The American Florist," April 24, 1897.)

JADOO FIBRE.

If only one-half of what is claimed for this new potting material and fertilizer is true it is indeed an introduction of great value. From all accounts it appears to already have gained the good will of many prominent growers in England and elsewhere, and now that it is formally introduced and is to be manufactured in this country American horticulturists will no doubt give it the advantage of an impartial trial, and its value in various directions is likely to receive practical demonstration. From a number of well known florists in Philadelphia who have been experimenting with the material testimonials of interest have been received. At Julius Wolff's it has given astonishing results in its invigorating influence on root and top growth in foliage and flowering plants and ferns, and at Robert Craig's its effect on crotons and Pandanus utilis in comparison with other plants potted at the same time in ordinary soil is very marked. In striking cuttings and seed germinating, it appears also to have demonstrated its usefulness already.

Of one thing there can be no question that its lightness, cleanliness and retentiveness of moisture make it far preferable to soil for hanging baskets and for plants that are to be used in dishes and jardinieres for table or mantel decoration. Mr. Craig has a lot of four hundred Asparagus Sprengerii planted in this material in hanging baskets, and they are making a remarkable growth. Pres. Carnot roses at the same place which were shifted from thumb pots four weeks ago are now handsome plants in 4-inch pots well filled with roots. A bench of Crotons planted in Jadoo are being grown for exhibition at the Providence exhibition next August.

(From the "Florists' Exchange," May 29th, 1897.)

JADOO FIBRE AND LIQUID.

I think I was one of the first to try these substances in America. I have used them on almost every kind of plant that will do in this climate, from Geraniums to Orchids. Everything potted in the "Fibre" comes fully up to what is claimed for it. The growth is very rapid, the colors in flowering plants being much brighter than when the plants are grown in soil. Ferns do well in it. They grow very quickly and make very long fronds.

My experience with "Jadoo" is that all kinds of plants make twice as many roots in it as they do in earth; in fact, I think it would be hard to say what would not grow in it.

I used it last year on some stove plants, and so satisfied was I with the results that this year I have used nothing else but "Jadoo." It saves a great deal of watering. In using it I find it is almost impossible to pot too firmly. If the "Fibre" is dry I always dampen it; you can pot firmer by doing this. I give good drainage to all plants.

It is very good to mix charcoal and sand with it. Give the plants a good watering after potting and subsequently be very careful not to overwater, for if you do the plants will stand and go back. If used in a right way and at the right time the "Liquid" will soon speak for itself.

It is a simple article to use, but like many other new things you must understand something about it before you get the best results.

Harry Papworth.
New Orleans, La.

(From the "Florists' Exchange," July 17, 1897.)

PLANTS GROWN IN JADOO.

"On Thursday last Henry F. Michell had at his store an exhibition of plants grown in Jadoo Fibre and watered with Jadoo Liquid, most conspicuous among the lot being a splendid lot of Gloxinias in five and six-inch pots, which were grown by Julius Wolff, Jr. These were all well-flowered and of brilliant colors. The bulbs were started in boxes in March, being covered with Jadoo, were potted in April and watered with the Jadoo Liquid all along. Among the other plants growing in Jadoo was a nice lot shown by Robert Craig. There were some very good Crotons, an Areca Lutescens, a Cocos Weddelliana, Pandanus Utilis, a basket of Asparagus Sprengerii and a Carnot rose. These were all in splendid condition. Henry F. Michell has already sold over five tons of Jadoo at retail."

(Extract from "The Florists' Exchange," Dec. 25, 1897.)

JADOO.

"The American Jadoo Co., Philadelphia, Pa., sends us some literature on the subject of their specialty, including a report on results with Jadoo in France, and Jadoo Liquid and Fibre for market gardening purposes. It appears that some very satisfactory results have been obtained in France, by viticulturists and others, from the use of these substances. The pamphlet treating on the adaptability of Jadoo Fibre and Liquid for market gardening purposes gives some practical pointers worth knowing. It is averred that by the use of Jadoo Fibre a gain of two weeks can be made in getting truck to market. The popularity of the Jadoo materials in other lands may be learned from the subjoined extract from a letter sent us by the president of the company, Mr. S. Hamburger:

"' We have been advised that the Austrian Government has ordered ten tons of Jadoo Fibre for experimenting in viticulture and two tons for experimenting with tobacco. In two years the trade in France has grown so large that the Jadoo Company, of England, has been compelled to erect a factory at Bordeaux to supply the French demand; their factory at Teignmouth, with a capacity of six tons of Fibre and 500 gallons of liquid per day, being taxed to its fullest capacity to supply the English demand.' "

Palm Villa, New Orleans, March 17, 1897.

You ask what results we have had with "Jadoo" Fibre and Liquid in connection with Palms and Ferns. So far everything has done better and with less trouble than we have ever had before. The Ferns make extraordinary roots, as well as top growth; they make longer fronds and better color in "Jadoo." Palms do much better in it than in soil. I have tried it on rare and choice plants only. The Palms in it make larger leaves and better color. In all establishments where stove plants are grown I would strongly recommend "Jadoo;" it brings out their true color. Everything I have tried in "Jadoo" Fibre and Liquid have given more than satisfactory results. I would be pleased if you would ship me by Morgan Line, 6 sacks of "Jadoo" Fibre and 20 gallons of Liquid as soon as possible, and oblige

Yours truly,

Harry Papworth,

Gardener to Mrs. T. G. Richardson.

(Mrs. Richardson is said to own the finest private collection of Palms and Ferns in the United States.)

HARRY PAPWORTH,

Palm Villa.

Second and Prytania Streets, New Orleans, Nov. 17th, 1896.

I have made a thorough test of "Jadoo Fibre" and "Liquid" this last six months with plants, namely: Chrysanthemums, Dracaenas, Anthuriums, Marantas, Palms, etc., and all I can say is I do not think there is anything on the market that will give such practical results as "Jadoo Liquid" and "Fibre."

At our Chrysanthemum Show last week, I won five first prizes out of six entries. These plants were all grown with "Jadoo Liquid."

Some of my twelve-inch specimen plants were grown in "Jadoo." Most of my six-inch plants were grown in "Jadoo Fibre." I exhibited six large specimen plants of a variety that I never thought much of before until this year. These six plants won the First Prize with strong competition, and they were pronounced to be the only true pink in the exhibition. They were all fed with "Jadoo Liquid" only.

The leaves on the Anthuriums I exhibited were all very large and a good color, greatly admired; all grown in "Jadoo."

The Judges' verdict was, "Jadoo is a good thing."

In my report to the Florists' Exchange, N. Y., I have mentioned "Jadoo Fibre." I won eleven First Prizes and three Second out of fourteen entries at the show, with the aid of "Jadoo."

ROBERT CRAIG,

Florist.

(Vice President Pennsylvania Horticultural Society.)

Forty-ninth and Market Streets, West Philadelphia, Pa., Nov. 30th, 1896.

We tried Ferns, Cyclamens, Palms and Crotons in "Jadoo." We could notice no better growth in the three first named than when grown in our ordinary compost, but the Crotons did do surprisingly well, making very large, vigorous plants in comparatively small pots, I want to try more of it, if not too expensive. What is it worth by the ton?

Roaring Spring, Pa., Oct. 19th, 1897.

The American Jadoo Co.

Gentlemen:—I received the box of Jadoo Fibre you sent me some time ago, and am greatly pleased with it.

I have been experimenting for some years to find a first-class medium in which to germinate the Cupid sweet peas for bedding stock, but with indifferent success, until I tried the Jadoo Fibre, which I find to be a perfect medium. Every seed planted in it germinated, and the seedlings are flourishing finely.

I have also tested it for Ferns, and Palms in my house, and with the Jadoo Liquid added, they are already showing a great improvement. I shall take great pleasure in recommending the Jadoo Fibre and Liquid for the above purposes.

Respectfully,

(Signed.) Sam. A. Hamilton,
Sweet Pea Expert.

LARGEST HORTICULTURAL ESTABLISHMENT IN AMERICA.

New Rochelle, N. Y., May 18th, 1897.

Messrs. Siebrecht & Son say: "We have just received the last shipment of 'Jadoo.' We must say without doubt it is the grandest material for potting Palms, Orchids and Stove Plants ever introduced. We have tried everything in the market and have failed to find its equal. We notice the difference in the growth of everything —broader foliage, strong growth, and of a beautiful dark green foliage."

E. B. MARTER, Jr.

Vegetable Plant Grower.

Burlington, N. J., Nov. 12, 1896.

I tried the sample sent me of "Jadoo Fibre" and "Liquid" with Tomatoes, Cabbage, Pepper and Egg Plants, and will say they all grew very well after being transplanted and treated with your "Jadoo."

E. T. DENHAM. Florist.

Dealer in Bulbs and Choice Plants.

Pansies a Specialty.

16 Marshall Avenue, Gloversville, N. Y., June, 28, 1897.

The American Jadoo Co.

Having given your Jadoo Fibre a trial since the middle of May, I find it answers all my expectations. My Palms and Ferns are looking very well, and my seedlings of Grevillea Robusta are growing amazingly in it. I have potted a choice lot of seedling Chrysanthemums in the Fibre and they are doing splendidly. The Geranium cuttings struck very quick, in fact I am satisfied that it is a very good thing for florists.

Yours very respectfully,

(Signed.) E. T. Denham.

ARUM LILY.

This Arum Lily was planted over three years ago in JADOO FIBRE.

The potting material has not been renewed, nor has any fertilizer been used during this period. It has bloomed profusely each season. After 26 days in transit from Teignmouth, England, to Philadelphia, arriving in November, it bloomed for the second time in one year.

Note the Root Action!

336 West Franklin Street, Germantown, Philadelphia, April 2d, 1897.

I want to tell you my experience with "Jadoo," which I have used on some plants since Feb. 29th. The box I got from you then was so small that I could only put a few plants in it, so I decided to use it for those that were almost done for. I had an Orange Tree that had no leaves and one-half of it was entirely without life, a Begonia in the same condition, two (2) Geranium Slips that have been all winter without showing a single new leaf and barely keeping alive. I planted these in "Jadoo" Fibre, and now the plants are all healthy and both Geraniums have had flowers. I also had two (2) Maiden Hair Ferns which had died down; one of these I planted in "Jadoo" Fibre, and the other I left in earth, kept them together in the same room and watered them both well. The one in "Jadoo" is almost luxuriant now, while the other has but little life in it, and what it has, it got from being trimmed. I had an Umbrella Plant, which was almost dead after trimming. I did not have enough Fibre for it, but watered it with "Jadoo" Liquid (48 to 1), and now it has a dozen or more leaves and stalks, and the leaves are all green all the way to the tips, a thing which is rare for that plant when grown in a house heated with hot, dry air, as most houses are.

I have within a few days planted two (2) Palms in "Jadoo" Fibre, and am going to get some more from you for a Rubber Plant and a few others, and will let you know of the results.

Many people despair of keeping plants in their houses in winter, but I think "Jadoo" solves the question.

Very sincerely yours,

(Signed.) Saml. S. Sadtler.

Mrs. E. S. Starr, editress of the "Farm and Garden," "The Dairy and Apiary" and "Forestry" Departments of the "Public Ledger," of Philadelphia, says, under date of June 7th, 1897:

"For house plants in pots, hanging baskets and window boxes, the Jadoo Liquid is an incomparable food—a minimum quantity giving an exceedingly rapid and vigorous development.

"I could have answered some months ago for the wonderfully rapid growth, but was not sure that it would prove to be healthy as well. I find nothing to be desired, as the seemingly increased resistant power of the cell resulting from the vigor induced by the food renders the plant fed with it free from blight and other fungous attacks.

"I am indeed well pleased with my experience with the Jadoo Liquid. The Fibre I did not have the chance to test, as some one appropriated the sample sent to me."

David Rust, Secretary Pennsylvania Horticultural Society, says:

"Last spring I received from you samples of 'Jadoo Fibre' and 'Liquid.' I tried the 'Jadoo Fibre' with a large plant of the White Oleander and also with several plants of flowering Begonias. The plants have done much better than they would have done in common soil. They have made a remarkable root growth. The foliage has been more profuse and very healthy; they have also flowered freely and the flowering season has been prolonged. Another very good feature has been that the plants required less water than they would have done if grown in soil.

"I am now trying the 'Jadoo Liquid' on plants growing in the house, on which I will report at a later date."

December 4th, 1896.

A. P. SCHONEMAN.

1934 Mt. Vernon Street, Philadelphia, Nov. 12th, 1896.

Your favor of the 9th inst received. After a full and ample trial of the "Jadoo Fibre" and "Liquid," the best testimony is that they are just what the name implies—magic. All the plants on which I used the "Liquid" responded after three days' application, stimulated in color and growth. On a ten-year-old Pandanus (particularly slow growth), to which the "Liquid" was applied five weeks, developed more advancement than it would have acquired in two seasons, to the delight of my family and the surprise of the florist. A Cordelina (semi-orchid) hanging plant has grown so profusely that I have loaned it to the florist for exhibition purposes.

I find, also, that it is a complete destroyer of plant lice and all insect life; even scales on Palms disappear if washed with the "Liquid."

As far as the "Fibre" goes, I only experimented with two drooping plants, and in two days they showed renewed vigor and are now of good, fine appearance. I am pleased to add my testimony as to the remarkable quality of "Jadoo Fibre" and "Liquid," and am ready at all times to exhibit my plants to your friends.

GEO. GOEBEL, M. D.

(Vice President Pennsylvania Horticultural Society.)

1601 Columbia Ave., Philadelphia, Nov. 23, 1896.

By your kindness I have been the recipient of a quantity of "Jadoo," and since spring have given it an earnest trial, and the results which I have obtained have been most satisfactory, both for propagating as well as admixture to soil, and must say that it was a surprise to me to see how rapid cuttings rooted and with what progress plants attained growth.

Another feature was that soil mixed with "Jadoo" retained moisture for a long period of time and remained sweet, and it is therefore with pleasure that I would add my endorsement to "Jadoo."

J. HAGUE.

Gilroy, Cal., Nov. 9th, 1896.

Acknowledging past favors from you, I now beg to say that I have distributed a large portion of the "Jadoo" which I received from you some months ago. I have had it in constant use since its arrival at the Vineyard and Orchard Home here.

The persons who have tried it coincide with my opinion as to its value. We are all agreed that it can by proper methods have a large sale here. So satisfied am I that I am prompted now to enter into a correspondence with you with regards to the terms on which you would appoint me your exclusive agent for the Pacific Coast.

M. W. McCLELLAN.

Lakewood, N. J.,

writes under date of Nov. 11, 1897:—"I have some Pansy seed planted in Jadoo which is coming up finely, in about half the time it took in earth last year."

New York, Oct. 22, 1897.

American Jadoo Co., Philadelphia, Pa.

Gentlemen:—Please send me one bag of your Jadoo Fibre. It is one of the best preparations I have ever used for Palms and Ferns.

Yours truly,

(Signed.) James C. Menair.

Address, Bogota, Bergen Co., N. J.

Extract from letter of N. F. Peck, Hartford, Ct., of Oct. 27, 1897:—"I am using Jadoo, thus far, with much pleasure. I find it useful not only alone but in many combinations."

Society of American Florists.

This is to Certify that

American Jadoo Co.,

is entitled to

HONORABLE MENTION

for Jadoo Fibre and Liquid.

Exhibited at Providence R.I. August 18th 1897.

Adam Graham
President.

Wm J. Stewart.
Secretary.

Copy of Certificate awarded by The Society of American Florists, August 18th, 1897. In addition to the award the Committee recommended a further trial.

HINTS ON GROWING PLANTS IN "JADOO" FIBRE.

In sowing seeds in "Jadoo" Fibre an even surface must first be obtained, either by sifting the "Jadoo" Fibre, or by putting a little fine soil or sand on the top of it.

Seed properly sown in "Jadoo" Fibre is certain to come up. Every single seed will germinate, provided it has life in it when sown.

Necessity for Cleanliness in Pots.

It is especially desirable that the pots used should be perfectly clean, as otherwise the roots adhere to the pots, and the great advantage of the "root action" of "Jadoo" Fibre is spoilt by their getting broken when shifted to fresh pots.

Potting.

Use pots in all cases two sizes smaller than you would in earth.

In all cases use the "Jadoo" Fibre just as you would earth, but press it tight round the roots. If Fibre is fairly moist the plant will not require watering for three or four days, and be very careful not to over-water afterwards. If by accident plants get dry, soak them thoroughly by standing the pots in a tub of water with the chill off. Use pots for the final shift one-third less in size than if grown in earth—i. e., if a ten-inch pot would generally be used, put in a seven-inch one.

If transplanting from earth to "Jadoo" Fibre, let the plant get fairly dry, then shake off as much earth as possible without injury to the roots, and press the "Jadoo" Fibre firmly round the roots.

Ferns.

Pot very tight, and with A. Farleyense and other delicate Ferns mix a little sand with the "Jadoo" Fibre.

Primulas and Calceolarias.

It is better to use one-third loam mixed with two-thirds "Jadoo" Fibre for these plants, with a good sprinkling also of sand.

Liliums, Begonias, Hyacinths, in fact all Bulbs, do splendidly in "Jadoo" Fibre. Treat exactly as in earth.

Hard-Wooded Plants.

Such as Azaleas, Epacris, Camelias, etc., put the "Jadoo" Fibre very firm, using a free admixture of sand.

Chrysanthemums.

Use "Jadoo" Fibre exactly as you would earth. Last shift to be into 8-inch or 9-inch pots. Do not fill these further than two inches from the top of pot till the buds are set, then fill with "Jadoo" Fibre. When pots are full of roots (not before), water with dilute "Jadoo" Fibre, gradually increasing its strength.

Carnations.

Mix sand freely with the "Jadoo" Fibre. During the winter keep the pots in cold frames with boards under them, giving plenty of air, as a closed frame is the cause of "spot" in Carnations.

Orchids.

Use "Jadoo" Fibre in the same proportion as you would peat, with a little sand, moss and charcoal mixed with it. "Crock" the pots or baskets in the usual way. Use no water till the plant is established, and then sparingly, about once a week or so, according to circumstances. Dilute "Jadoo" Liquid will be found specially adapted for watering Orchids, especially aerial ones.

It must be remembered both with Orchids and all other plants grown in "Jadoo" Fibre, that over-watering is the chief thing to be avoided.

Bedding Plants.

Lobelias, Petunias, and other sorts raised from seed, should be pricked off in boxes about two inches apart—they should be hardened off towards the end of May, when they can be divided and "planted out" in beds for the summer. No "check" whatever will be experienced by the plants when treated in this way, even if they are coming into bloom when planted out, and if watered in the ordinary day, they will flourish through the driest summer.

Lobelias and other annuals treated in this way form a perfect mat of roots in the boxes, which can be broken off without the slightest injury to the plants.

Cuttings.

Geraniums, etc., may be struck in "Jadoo" Fibre, either in pots or boxes, and usually root in half the time they would in earth, and also root much more strongly than in earth. If struck in boxes, they can be cut out into balls for bedding-out, when they will receive no check even in the driest season.

Table Decoration.

"Jadoo" Fibre is specially adapted for growing plants for table decoration. They should be grown in pots a size smaller than the china vases in which they are to be put on the table, so that they can be moved in and out of them without injury to their roots. Plants like Grevilleas can be kept in the smaller sized pots for years in "Jadoo" Fibre.

Window Boxes.

Grow the plants in pots in "Jadoo" Fibre until they are in bloom or showing their flower buds, then shake out and place in boxes, filling up interstices with "Jadoo" Fibre. The great advantage of this is, that the window-boxes look well at once, instead of waiting for plants to get established. Plants can be removed when out of bloom, and exchanged for others, without injuring those that remain.

Hanging Baskets.

Treat just the same as window-boxes. Besides being less than half the weight of earth, they never drip, the water being held as if in a sponge. This is often found a great advantage.

In this and many other ways in which "Jadoo" Fibre can be used, its excessive cleanliness and lightness make it invaluable. Even large pots can be handled by ladies with ease; in fact, it is an almost ideal material for ladies.

CONSERVATORY IN WHICH EVERY PLANT IS GROWN IN "JADOO" FIBRE AND WATERED WITH "JADOO" LIQUID.

Upon application we will send a handsome reprint of this conservatory showing all the plants in their natural colors.

FOR MARKET GARDENING.

The Forcing Bed.

To raise uniform, strong and healthy plants for transplanting, the bed should be prepared with finely divided, moist Jadoo Fibre evenly distributed and packed to the depth of about an inch or more, according to the nature of the plant.

If the seed is small, sow evenly and not too thick, after which water it freely, to wash the seeds well down into the Jadoo.

Large Seeds

May be sown in the Jadoo either over the surface or in drills, and given a thin covering of Jadoo, well watered afterwards.

Asparagus From Seed.

Sow into a thick bed of Jadoo Fibre, cover with earth so that the Jadoo Fibre may not come within four inches of the surface. Asparagus will come to full bearing one year sooner in Jadoo Fibre than if the bed is made in the ordinary way, and will give a much larger yield.

Experience will soon show which plants to grow in pure Jadoo Fibre and which in Jadoo Fibre with loam mixed; also the quantity to be used and method of use. The chief point is to have a small quantity of Jadoo Fibre about the roots and covered with earth. When the fruit or vegetable is maturing, it is not amiss to water with Jadoo Liquid, diluted, forty-eight parts water to one part Liquid, gradually increasing the strength to twenty-four to one.

Cucumbers, Melons, Canteloupes, Citrons, Etc.

Use half Fibre and half loam in the holes or drills and cover the seeds with it. When well rooted, use Jadoo Liquid, at first diluted forty-eight parts water to one part Liquid and gradually increase the strength as the plants are "set" with fruit to twenty-four to one.

Mustard, Cress, Etc.

Sow in pure Jadoo and it will come up perfectly clean with no dirt adhering to the leaves.

Transplanting. Where Plants are Large,

They can be taken up with a ball of Jadoo attached to the roots. To this is added a small handful of Jadoo firmly packed about the roots in the hole and covered with earth. This will feed the plant through the strong root action it produces, will prevent flagging after transplanting, and will retain moisture during the long drought.

Celery.

Sow in frames in Jadoo Fibre; when planting out, put Jadoo Fibre at bottom of trench; this greatly improves clearness of skin and flavor.

When Plants are Very Small

Like Lettuce, the Jadoo should be mixed with loam, into which the roots can be pressed with the thumb and covered.

Fruit Trees, Grape Vines, Etc.

Imbed the roots well in Jadoo and fill in with earth. This will enormously increase the fibrous roots on which the fertility of the tree or vine mainly depends. Mildew in grapevines is due to drying out about the roots. Jadoo will prevent it.

Fruit Trees in Pots.

Every species of fruit tree will give a large return of fruit if grown in moderate-sized pots in "Jadoo" Fibre, and will require no feeding first year; afterwards, use moderate amount of "Jadoo" Liquid, but not till the fruit is set. In the case of Peaches and Nectarines, keep them in a sheltered place till the cold winds are over—covered, if possible, with an old light — then move to the sunniest part of the garden. The lightness of "Jadoo" Fibre makes this practicable.

Raspberries, Blackberries, Currants,

Etc., are treated in the same way.

Strawberries

Can be propagated as follows: Where it is desired to put a plant, stamp a hole in the earth with some tool that will shape it something like a three-inch flowerpot. Pack this hole full of Jadoo and train a runner from parent plant into it. It will take root and form a new and prolific plant.

Strawberries in Pots.

Root the runners in "Jadoo" Fibre; make the first shift in half "Jadoo" Fibre, half loam; afterwards use loam entirely. Flavor will be greatly improved by this, and even if the use of "Jadoo" Fibre is confined to rooting the runners only in it, a much stronger crown will be formed than if the runners are rooted in the usual way in earth.

APPLE TREES, GROWN IN

"JADOO" FIBRE.

One Apple Measures 15 Inches Round.

..CONCENTRATED..

"Jadoo" Liquid

...DIRECTIONS FOR USE...

Mix the Liquid in the proportion of **48 parts Water to 1 part Liquid. Shake well before mixing, and always shake before using.**

On Plants in Jadoo Fibre use the diluted Liquid only once or twice a week. On plants in soil use just as often as you would use water.

The American Jadoo Co.

JADOO.

That the Jadoo Fibre and Jadoo Liquid are worthy a trial by every grower of plants and flowers there can be no further doubt, in view of the experience of some of the most practical men in the trade. Anything so radical as a substitute for soil was naturally received cautiously, but the "proof of the pudding is in the eating," and this proof has been given by a sufficient number of growers to warrant the claims made for it. In the growing of pot plants the fibre has proven especially useful, and in view of the increasing demand for specimen flowering plants in pots, it will undoubtedly be very helpful. As noted by Mr. Herrington in our last issue, the fibre not only produces a finely flowered plant, but this plant can be grown in a very much smaller pot when the Jadoo fibre is used, and that this is a very decided advantage is indisputable. The Jadoo Liquid can be applied to soil if desired, and the same stimulating effect on growth and bloom be obtained, but of course there is no reduction in size of pot or weight of contents. It certainly is, however, a remarkable fertilizer.

Both the Jadoo Fibre and Jadoo Liquid have been used in England for several years. It is now being introduced to American horticulturists by the American Jadoo Co., 817 Fairmount Ave., Philadelphia, Pa.

A SIXTIETH ANNIVERSARY.

The annual catalogue of the old established and always up to date house of H. A. Dreer, Philadelphia, is always very welcome to the gardener and florist, and this year it is of special interest. In addition to a specially handsome catalogue, they issue an elaborately illustrated souvenir of their 60th anniversary. A most interesting engraving gives a view of Chestnut St., Philadelphia, showing the location of the original store 60 years ago. This glimpse of the olden time can not fail to be of much interest. There are also views of the present store, portraits of Mr. Wm. F. Dreer and six of the gentlemen associated with him, and a superb photographic view of the greenhouses and grounds at Riverton, N. J., in addition to other illustrations and interesting historical matter.

PEORIA, ILL.

At a recent reception of the Women's club, the decorations were unusually elaborate and effective. They were all in green and red, consisting mainly of banks of decorative plants, drapings of wild smilax, and poinsettias and American Beauty roses. The Peoria Evening Times pronounces the decorations the handsomest ever seen at this club. They were arranged by Mr. Chas. Loveridge, manager for J. C. Murray.

GRAND RAPIDS, MICH.

The Florists' Club.

The Florists' Club held a meeting January 18 at Mr. and Mrs. Henry Smith's, on West Bridge street. Previous to meeting the members took pleasure in inspecting the greenhouses, which are in fine shape, everything so neat and clean, the plants so healthy and vigorous, bespeaking good management and that close attention to details which insures success. The rose houses were exceptionally fine; his Brides, Bridesmaid, Perles and Wootons being as fine as it is possible to grow them anywhere.

Henry Van Velde read a paper on Violets, which drew out a fusillade of questions and answers, as all are deeply interested in violet culture. The disease received a good share of attention; there is no remedy save hand-picking of the leaves as fast as they become affected. One member said he picked so many leaves off there were not enough left to sustain the plants. The best remedy is to start out with good healthy plants, then do our utmost to keep those plants in good healthy condition. Solid beds versus benches met a diversity of opinion, some preferring solid beds, others benches. Some say one way is as good as the other, provided suitable drainage is used for solid beds, with soil not too heavy.

The question, "Can they be grown under glass successfully all summer?" was answered in the affirmative, Crabb & Hunter having one bench grown in that way very successfully, although the method of removing the glass in summer is preferable. The soil used is two parts clay, one part black muck and one part cow manure. Pot up runners in March and plant direct to the bench in June and July. Some claimed good success from planting in the field first. The sash should be put on from September 15 to October 1 in this locality, according to the weather. The temperature should be 40 to 45 degrees at night, a little higher day time; in dull, cloudy, damp weather, it is preferable to run the temperature as low as safety will allow, so as not to induce a soft growth of foliage, which is weakening to the plants.

The committee on banquet reported having effected arrangements with the Eagle Hotel for holding it there Tuesday evening.

Geo. F. Crabb resigned as vice-president and Wencel Cukerski, the city florist, was elected in his stead. Mr. Crabb was then elected reporter. The next general meeting will be held at Alfred Hannah's, on East street, near Burton avenue, the subject being roses; essayist, Henry Smith.

After a bountiful repast a vote of thanks was tendered Mr. and Mrs. Smith for their kind hospitality.

Geo. F. Crabb.

WASHINGTON.

Trade Conditions.

Each week since New Year's has grown steadily worse for the trade. The retailers one and all have the same mournful tale of no business and say that the past month of January has been the worst ever known. A little stir was created the first of the week caused by the death of Commissioner Butterworth and the Charity ball, and then business dropped with a dull thud. The store windows are filled with bulbous stuff, but there is no demand for it.

Government Competition.

There were several entertainments during the past week in high life, yet the services of the florists do not seem to have been needed to make them successful. The firm of Uncle Sam perhaps got the order. I saw his delivery wagons quite busy last week, loaded with palms, and heading in that direction. It seems as if those in charge of the Department of Agriculture and other plant-growing establishments under the government, have at last concluded that of all sections of these United States, the District of Columbia is the most suitable—soil being the best I presume—for experimenting with the many varieties of plants; the best results seem to be obtained here, if not in the growth of the plants, at least in their distribution. From the frequent deliveries, I would infer that the soil was not suitable to them and that it would be well to try another section of the country before certain varieties become extinct.

A Daily Paper Acts.

The Washington Post, which has the largest circulation of the morning papers and is a fearless and strong paper, has come out in a strong editorial in favor of the Washington florists in their fight against the free distribution of flowers by the government.

Always mention the Florists' Review when writing advertisers.

CORNELIUS S. LODER, Secretary.

WINDSOR, ONT.

The Horticultural Society of Windsor, Sandwich and Walkerville held its annual meeting here January 13. The inclemency of the weather prevented the majority of the fifty-four members of this flourishing floral society from being present.

The society is in a healthy condition, and the finances are greater than a year ago, says Treasurer Joyce, who presented a very encouraging report. Officers elected were: S. Lusted, president; T. P. Gavin, secretary; A. W. Joyce, treasurer.

President Lusted will call a meeting soon to discuss plans for the coming flower show this year. Also special inducements offered to new members who will take an active part under President Lusted's supervision, who takes a special interest in this thriving Horticultural Society. J. E. K.

BETHLEHEM, PA.

During Christmas week, George Charman suffered the sad bereavement of the death of his wife. His little child also died within five days. Great sympathy is felt for Mr. Charman by his many friends in the trade. E. A.

READING, PA.

John G. Brown has left this city, leaving his business at 123 South Fifth street in bad financial condition. It is reported that he has gone to North Carolina to try his luck raising tuberoses. E. A.

Vaughan, McKellar & Winterson, Chicago, acknowledge no superiors in the packing of cut flowers for shipment.

LOUISVILLE, KY.

Installation of Officers.

Our newly elected officers were installed at a meeting held last week at the store of Mr. Henry Nanz. Our retiring president made some very appropriate remarks to the members present, thanking them for the kind assistance which they had given him during his term of office and asking them to continue the same to the new president. The incoming president was presented with a pretty little gavel, with his name engraved on a silver plate. The auditing committee read their report, which shows the society to be in good financial standing.

Mr. Witterstaeller had on view at the meeting some blooms of his carnation, Evelina. The flowers were very large and handsome and were greatly admired.

Quite a number of our florists have signified their intention of attending the meeting of the Carnation Society.

Business is very dull here at present. Romans and narcissus are this year a drug on our market.

SHARON, PA.

At M. I. O'Brien's greenhouses I found everything in fine condition except his roses, which are unfortunately badly infested with eel-worms. He has some fine seedling carnations, but does not intend putting them on the market.

His orchids are in fine shape and the cut for Christmas was large. He ships most of his flowers to Pittsburg. Local trade at Christmas was not up to expectations and the retail trade has been slow all winter.

At John Murchie's most of the glass is devoted to carnations. He has a sport from Tidal Wave that is like its parent in every respect except color, which is a pleasing shade of red. He also has a large number of seedlings. Silver Spray, as grown by Mr. Murchie, shows no sign of having "run out." I have never seen a finer lot of plants, and it is the best paying white carnation grown here. Geo. W. Gaskill.

...BAKER'S...

NEW CARNATIONS

Grown and Tested Five Years.

ONEIDA pure pink, no trace of purple, rust proof, perfectly healthy, good grower, continuous producer, blooms of largest size.

RED JACKET bright red, of largest size, healthy, no rust, continuous producer, long stiff stems, never bursting calyx.

SIMMONS'

New Light Colored CARNATION

Mrs. S. A. Northway

We introduce this variety with even more confidence than we did Portia, Silver Spray, Tidal Wave, Daybreak, Rose Queen, or J. J. Harrison, knowing that it will become as great a cut flower variety as any of the above. Plant of strong, free growing habit, entirely free from disease or rust; large round high built flower with perfect calyx and extra strong and long stem. Color a beautiful soft shell pink becoming almost white when fully open.

Orders booked now and filled in rotation. We shall commence to ship soon after Jan'y 1st. Price, $10.00 per 100; $75.00 per 1000.

Geraniums. Md. Bruant, Md. Jaulen, Fleure Poitevine, J. Ricaud, and J. Sallier, 2¼-in. pot plants, $5.00 per 100. Rooted cuttings, $3.00 per 100; $25.00 per 1000. Our superb stock of all the finest sorts, 2¼-in. pot plants, named, $25.00; unnamed, $20.00 per 1000. Rooted cuttings, $12.50 per 1000.

Fuchsias. A grand lot of summered-over stock in small pots that will make early bloomers, $3.00 per 100.

All Rooted Cuttings Cash with Order.
Our Price List describes many other fine plants. Send for it.

W. P. SIMMONS & CO., - Geneva, Ohio.

Two Great Sports.

Carnation Victor.

Undoubtedly the best Pink Carnation in commerce and certainly the most prolific bloomer, perfectly healthy and of vigorous growth.

Rooted cuttings now ready. $4.00 per 100; $35.00 per 1000. Come and see this Carnation growing.

Chrysanthemum Pennsylvania.

The finest yellow for cut blooms or exhibition purposes ever produced. Plants ready March 15, $5.00 per doz.; $35.00 per 100; $250.00 per 1000.

HUGH GRAHAM
104 South 13th Street, Philadelphia.

FIREFLY!

A Rust-Proof Carnation for Business.

Bright scarlet and Positively RUST PROOF and as productive as Scott. Rooted cuttings, Feb. 15th, $10 per 100, $75 per 1000. Send for descriptive list of Firefly and fifteen other novelties of 1898, as well as fifteen varieties of '97; also older standard varieties.

Geo. Hancock & Son, Grand Haven, Mich.

SMILAX FINE STRINGS 12 1-2 CENTS

A. J. BALDWIN, Newark, Ohio.

The key to success is proper ventilation and watering. The key to proper ventilation is the Evans' Challenge Ventilating Apparatus. Works easily, does the work right, built to last, always satisfactory. No toy imitation but a machine to do its work and do it well. Much the cheapest in the end. Quaker City Machine Co., Richmond, Ind.

Carnations

Rooted cuttings of both standard varieties and novelties at popular prices.

SYRACUSE, N. Y.

When at L. E. Marquisee's I had to look in and see the sweet carnation Columbia, whose fair name I almost blemished in my notes of my last visit, quite unintentionally, as was understood. The name will be changed before it is sent out, should it uphold the promise it has given up to date, as this name has already been bestowed upon a variety disseminated. Its rust resisting qualities are remarkable. All around and about it are kinds much affected, but this has not the least sign of rust. The flower is perfect and very fragrant. A white sport from Daybreak is noticeable, but Mr. Marquisee does not believe in sports, especially in carnations, reasoning that sport is the effect of loss of vitality, which causes the parent to produce something dissimilar and weaker than itself. The general stock of Daybreak, however, is doing as well as usual, promising an immense crop for Easter, to which soon the eyes of the grower will be turned, and as he surveys his stock of lilies, upon which he cannot at all speculate this season, he asks himself where he is at, and what is he going to do in the future.

I had considerable conversation with Mr. Baker, of Utica, upon this most important subject, the lily disease. He has proven by experiment that this disease is communicated, but whether by root action or soil or pollen conveyed, he is not prepared to say. It is some distance from Bermuda to Japan, but the Japs have it. W. M.

WHEELING, W. Va.

Cut flower trade has been very dull since the holidays. No business except funeral work. Carnations retail from 40 to 50 cents per dozen; roses, $1 to $2; violets, $2 to $2.50 per hundred, Calafornias selling for from 75 cents to $1.25.

Low Smith has closed his new store until Easter.

A number of the florists dropped in to see Mr. Zane one evening, remaining until the wee, small hours. All report having had an enjoyable time. Mr. Zane has a nice lot of lilies and hydrangeas coming on for Easter.

Huscroft Bros. are very busy getting out their seed orders. H.

BASSETT & WASHBURN,
CHICAGO

KANSAS CITY, MO.

Your correspondent was told by one of his lady customers the following: "Mr. ——, I saw the most barbarous, most detestable, most ignoble piece of work I ever saw." "What was it, madam?" was asked. "Why, at Mr. B's funeral, in looking over the floral designs, I saw Mrs. ——'s card, and on one corner of the card was stamped the florist's name and business place. Oh, what a fiend, to take that way of advertising his business. You ought to tell him how bad it is." "Oh, no, madam," I said; 'that work will soon kill him. We have worse than that in our city." "What,, worse than that?" "Yes, madam; we have one who travels continuously through our city with opera glasses looking for crepe on doors, and when found walks right into the house, produces his plates of elegant floral designs, and never leaves until he gets one or more orders for designs." "Oh, my, my—may the Lord forgive him." I said, "No, madam; may the devil get him, and that soon, too." And he will soon come to grief, for such hideous means of doing business will soon tell.

S.

WARREN, O.

A. T. Hoyt has been quite sick with kidney trouble, but is now on the mend and hopes to soon be in his usual good health. Mr. Hoyt has made some improvements in his system of hot water heating and expects to put in quite a number of his heaters the coming spring. It certainly makes a great saving in fuel.

At George W. Gaskill's the boys are busy with plants for wholesale trade, of which there is a fine stock. He grows roses and carnations largely for home trade.

Business has been far from satisfactory here and it would appear that that wave of prosperity has not reached here yet.

Mum.

New Pink Carnation **Mrs. Frances Joost**

Seedling from McGowan x Wm. Scott; tested for four years. It is of an exceedingly pleasing color and proved itself an early and most prolific bloomer. It makes in a short time a fine bushy plant, and has the form and habit of what carnation men say make an ideal plant. Positively free from rust. The stem is strong and heavy enough to carry the large flower erect without tying of any sort. Calyx perfect; never bursts. It is a good keeper and a good shipper. You will make no mistake by trying a few. All orders filled in rotation. As the sale of the stock of this Carnation will be limited, it is advisable to order early if you want any. Satisfaction guaranteed.

Price, $2 per doz.; $10 per 100; $75 per 1000.
Cash with Order.

MARTIN BENSON, DONGOLA, ILL.

London Grove, Pa.—Mr. O. F. Passmore has recently started in the florists' business here.

A New Plan for 1898

BURPEE'S SEEDS

Are Sold

ONLY IN SEALED PACKAGES

Seeds of the best quality cost very much more to produce than do seeds of the ordinary commercial grade. And yet many merchants, having little or no knowledge of the value of HIGH-CLASS SEEDS, purchase their supplies wherever they can be obtained the cheapest.

It has been brought to our notice that some merchants will buy a bill of seeds from us, obtain copies of our catalogues and show cards and then purchase a portion of their supplies from other seedsmen, who, growing "cheap seeds," can sell at much lower prices. In many cases planters who purchased from their local merchants, thinking that they were obtaining BURPEE'S SEEDS, got only a few of our seeds (perhaps in packets), and often the seeds bought by weight or measure were of inferior quality, falsely sold on our reputation, but for which we were not in any way responsible.

This deception was brought so prominently to our attention, the past year, that we debated seriously whether we should not decline altogether to sell BURPEE'S SEEDS at wholesale, and announce in "The Farm Annual for 1898" that BURBEE'S SEEDS could be obtained only direct from Philadelphia. Further consideration, however, showed us that this would hardly be fair to the honorable merchants who had been handling our seeds exclusively for years, and in whom we could place confidence. Therefore we decided upon the plan announced below:

Hereafter we will sell Burpee's Seeds only in sealed packages

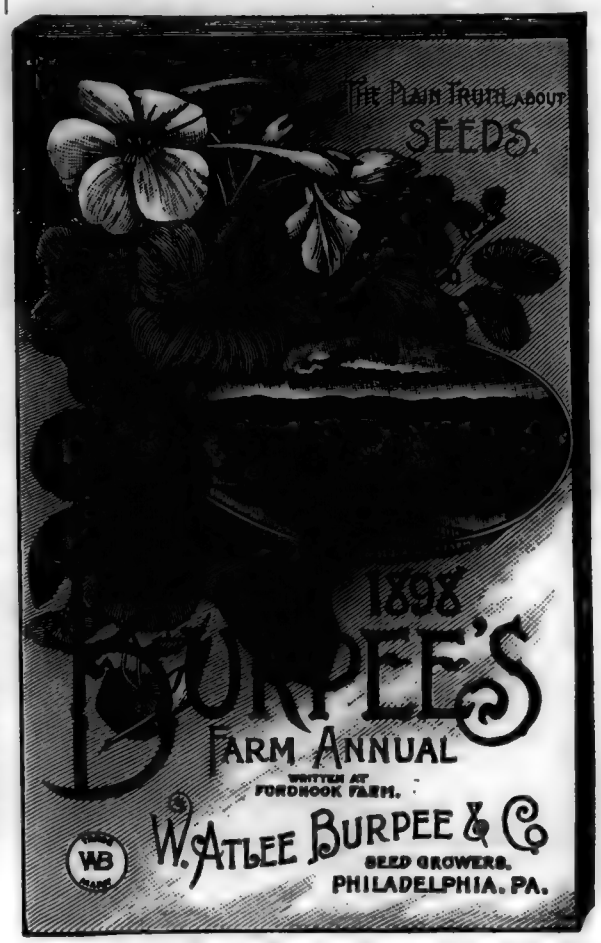
Packets and ounces, in the Spangler Water-tight Bags, are sealed as heretofore, and bear, plainly printed, either OUR FIRM NAME OR REGISTERED TRADE-MARK MONOGRAM, protected by United States Letters Patent. Quarter-pounds, pounds, pints and quarts, done up in paper bags or cartons, will have pasted across the top A GREEN LABEL, worded as follows:

REGISTERED WB TRADE MARK

Burpee's Seeds That Grow For 1898

GENUINE ONLY IF THIS SEAL IS ....UNBROKEN....

SEEDS IN BULK—that is, Peas, Beans, etc., by the peck or bushel, and large quantities of small seeds in bags, will have EACH SACK SEALED WITH OUR TRADE-MARK ON A LEADEN SEAL. This plan will be a protection to honest merchants from competition with other seeds claimed to be BURPEE'S SEEDS, and at the same time will be a guarantee to the purchaser.



Our Only Salesman is our annual Catalogue. We employ no travelers, but will quote prices by mail at any time.

Large Dealers Who Sell on Their Own Reputation, can buy in bulk from us, as hertofore.

As stated above, every sack leaving our warehouse will be sealed, but, of course, the contents, being in bulk, can be handled as desired—except that they must not be sold as BURPEE'S SEEDS, except in original packages.

Burpee's Farm Annual....

1898

The Leading American Seed Catalogue.

Mailed Free to Planters Everywhere.

A handsome book of 144 pages. Tells all about THE BEST SEEDS THAT GROW. All the illustrations are true to Nature, and the descriptions have been written at FORDHOOK FARM, where we conduct the most extensive trial grounds in America. IT TELLS THE PLAIN TRUTH ABOUT SEEDS.

Novelties for 1898.

Never before have so many First-Class Novelties been introduced in any one year.

In VEGETABLES Besides the long-keeping AUSTRALIAN BROWN ONION, introduced last year and still controlled by us, we introduce THREE NEW TOMATOES, each of distinct character and real merit, the GOLDEN EAGLE MELON, a new PEPPER from Japan, a new American LETTUCE, and offer, for the first time, the wonderful extra early wrinkled GRADUS PEAS at a moderate price.

In FLOWERS Besides BURPEE'S PINK CUPID, which is sold in our original sealed packets by seedsmen all over the world, we introduce EIGHT OTHER NEW SWEET PEAS, which can be had only direct from us. Among other exclusive novelties, we would mention the WHITE DEFIANCE BALSAM, the giant-flowered SUNLIGHT and MOONLIGHT NASTURTIUMS, and the beautiful new PRESIDENT MCKINLEY PANSY, as of surpassing merit.

In PLANTS Besides the usual Novelties, we have two of our own exclusive introduction. These are the beautiful NEW DWARF GLORIOSA CANNA and the wonderful free-flowering BURBANK ROSE—the best of seventy-five thousand seedlings raised by the world-famous "WIZARD OF HORTICULTURE."

To Keep Abreast of the Times every one who gardens either for pleasure or profit should read the FARM ANNUAL for 1898, which is brighter and better than ever before. Write TO-DAY! and you will receive a copy by return mail.

Burpee's Blue List for 1898.

has been mailed already to all **Florists** and **Market Gardeners** who are upon our mailing lists. Any others can have it upon application. It gives what are termed **"wholesale prices" to those who plant for profit.** The prices are considerably lower than in BURPEE'S FARM ANNUAL, but of course not so low as the **Trade Prices** quoted in

Burpee's Red List for 1898.

This **Wholesale Catalogue** for **the trade** is mailed **ONLY** to **dealers** who buy to sell again. It cannot be mailed either to florists or market gardeners who buy ONLY FOR THEIR OWN PLANTING. ☞ In applying for this catalogue you must enclose business card or other evidence that you are a **dealer in seeds.**

THUS WE HAVE TOLD THE STORY OF OUR....

Three Catalogues for 1898.

To which are **YOU** entitled? Every reader of THE FLORISTS' REVIEW should certainly have one or more. ☞ **ALL** have been mailed to our regular lists and if **YOU** have not received the right catalogue, **please write TO-DAY** and it will come by return mail.

GREENHOUSE HEATING.

Some novel ideas in the circulation of hot water for heating are advanced by Mr. A. T. Hoyt, the florist of Warren, O., in a circular recently received. His plan may be called an "all up-hill" system. The grade is all up-hill until the point nearest the boiler is reached, when there is a sharp drop to the boiler. There are other details, but this seems to be the main principle in his system. He claims to secure a remarkably rapid circulation by this plan of piping, and visitors to his place report that he is certainly successful in obtaining most excellent results. He also has a novel heater of his own construction.

If you grow good stock for the Chicago market you can get the best returns by consigning to Vaughan, McKellar & Winterson.

AN UNPARALLELED SUBSCRIPTION OFFER.

EVERY one to whom this issue of the FLORISTS' REVIEW is addressed, and who fills out, signs and returns the accompanying subscription blank, accompanied by $1.00, within 30 days from date, will receive not only the FLORISTS' REVIEW for one year but also a certificate entitling him to the earnings on one-tenth of a share of stock in the company formed to publish the paper. The shares will be of a par value of $10.00 each.

Why do we make such an unparalleled offer? It is very simple.

You will have an interest in the success of the paper.

You will see that you can buy everything that you want to just as good advantage from advertisers in the FLORISTS' REVIEW as elsewhere and at the same time benefit yourself by increasing the earning power of your certificate.

This mutual arrangement cannot fail to bring to the paper a heavy advertising patronage, and as a result the stock represented by your certificate will earn good dividends.

And the more you buy of advertisers in the FLORISTS' REVIEW (always mentioning the paper) the larger your dividends will be.

You will get a better paper than has yet been published in this field, and a share of its earnings. Please let us hear from you by early mail.

FLORISTS' PUBLISHING COMPANY,

530-535 Caxton Building, - - - CHICAGO, ILL.

Following is the form of certificate we issue to subscribers:

$1.00 $1.00

The Florists' Publishing Company, Chicago.

This Certifies that _____ of _____

_____, is entitled to the annual dividends on one-tenth of a share (par value of each share $10.00) of the stock of the FLORISTS' PUBLISHING COMPANY, of Chicago, Ill., that has been placed in my custody as Trustee, so long only as

_____ shall remain a paying subscriber to the FLORISTS' REVIEW.

This certificate is transferable only to _____ successor in business, and then only on application to the undersigned. Dividends will be made of net profits on the first day of January of each year.

Certificate holders are reminded that by confining their purchases to those who advertise in the FLORISTS' REVIEW (always mentioning the paper when writing) they will greatly enhance the earning power of their certificates.

Buy to best advantage always, but, everything else being equal, give the preference to those who advertise in the paper in which you have an interest.

Witness my hand and seal at Chicago, Ill., this _____ day of _____, 189

(SEAL)

_____,
Trustee.

WE HAVE TO OFFER AT THIS TIME A LARGE STOCK OF
STRONG DORMANT FIELDGROWN

CANNAS.

Which we offer at very low prices. The varieties are the very best and finest grown to-day. Florists will find this the most advantageous time to procure stocks and start them for spring sales.

We offer the following sorts at only **$3.00 per hundred,** viz:—

Paul Marquant **Alphonse Bouvier** **Chas. Henderson**
Mme. Crozy

The following sorts at only **$4.00 per hundred,** viz:—

Florence Vaughan **J. D. Cabos** **Austria**
Egandale **Pres. Carnot** **Queen Charlotte**
Admiral Avellan **P. R. Pierson** **J. C. Vaughan**

The following extra choice sorts at **$6.00 per hundred,** viz:—

Eldorado **Chicago** **Pierson's Premier**
Souv. de Antoine Crozy

The following newer and scarcer sorts at **$10.00 per hundred.**

Souv. de Pres. Carnot **Burbank** **Beaute de Poitevine**
Italia **Papa** **Franz Buchner**

We also can supply the following:—

Tuberose Pearl, extra quality.....$1.00 per 100; $7.00 per 1000
Caladium Esculentum
Bulbs 6-9 in. in circumference.....$3.00 per 100
Bulbs 9-12 in. in circumference.....C.CO per 1.0

TERMS: Net 60 days, or 5 per cent discount for cash with order.

Palmer's Hotbed Mats

FROST PROOF

MADE expressly for winter covering of hotbeds, cold frames, plants and seeds of all kinds.

INDESTRUCTIBLE, CHEAP AND WARM,
Will not harbor mice or vermin. Easily handled. Dry out quickly after rain. Have now been in practical use three years. Cost less than old-fashioned straw mats and entirely take their place. **MADE IN FOLLOWING GRADES:**

No. 1. **Burlap Cloth,** filled with combination wool and quilted, seams 3 inches apart and edges firmly bound. Size 40x76 inches, 50c each. Size 76x76 inches, 75 cents each. Made any length 76 inches wide, at 12 cents per running foot.

No. 2. **Duck Cloth** outside, filled and quilted same as No. 1. Size 40x76 inches, 75 cents each. Size 76x76 inches, $1.00 each. Made any length, 76 inches wide, at 16 cents per running foot.

No. 3. **Waterproof,** made of oil duck, filled and quilted the same as Nos. 1 and 2. Size 40x76 inches, $1.00 each. Size 76x76 inches, $1.50 each. Made any length, 76 inches wide, at 20 cents per running foot.

That these mats are a **much needed improvement** over anything heretofore used for the same purpose, is demonstrated by the large demand and many testimonials from prominent men in the trade. Everyone using Hotbed Mats should give them a trial. We also make

QUILTED HORSE BLANKETS,
THE CHEAPEST, WARMEST AND STRONGEST IN THE WORLD.

THE WEEKLY

FLORISTS' REVIEW

FLORISTS' PUBLISHING CO., 520-535 Caxton Building, CHICAGO.

Vol. 1. CHICAGO AND NEW YORK, FEBRUARY 3, 1898. No. 10.

Combination Canna and Carpet Bed.

COMBINATION CANNA AND CARPET BED.

The bed shown in the accompanying engraving was one of a pair seen in Lincoln Park, Chicago, last summer. The cannas in the center are the dark foliaged variety Egandale, which Mr. Stromback considers to be decidedly the best dark foliaged variety to date. In the center is a young Ailantus glandulosa, which is cut down each season, leaving only a few inches of last year's growth. Around the cannas is a circle of Begonia Erfurtae, the culture of which was covered in a former article. The geometrical design that encircles the above named is worked out with santolina, the bronze leaved geranium Bismarck, Achyranthes Lindenii, Coleus tessellata and echeverias.

The santolina is propagated by cuttings made in October, put in trays of

sand and elevated on the bench well up to the light, in a temperature of 55 to 60 degrees. When well rooted they are potted into thumb pots and placed in a temperature of 50 degrees, where they remain over winter. Great care is taken not to overwater them, and they remain in the same pots until bedding-out time. In planting out they should be placed about eight inches apart. Where one grows higher than the others the tip should be cut out to induce bushiness and maintain an even height. They should never be watered overhead except in the morning of a bright day. Otherwise the moisture stays in the foliage, and on warm nights the plants will damp off. This is apt to occur during warm, rainy weather. There is not so much danger of this if the plants are used as an outside border instead of being set closely together in a mass, as then the air has more opportunity to get in and dry out the moisture. This also applies to the variegated thyme, the Mme. Salleroi geranium and the lobelia. The Mountain of Snow geranium requires more water than any other geranium, and should not be planted in an elevated position where apt to quickly become dry. It should also be planted quite close together, as growth is not rapid enough to quickly cover the ground if planted far apart.

The Bismarck is the best bronze geranium Mr. Stromback now has. The growth is strong and the foliage holds the color well. He has discarded Earl Roslyn, which became weak and diseased. Achyranthes Lindenii is used merely to line out and separate the several divisions of the bed. This achyranthes is also useful as a border around and between plants that require a support, such as heliotrope, vincas, etc.

In the foreground of the picture appears a section of a bed of geranium La Favorite, semi-double white. This Mr. Stromback considers the best white geranium he has. He has discarded Mrs. J. M. Garr, finding its constitution too weak. He will hereafter grow only La Favorite for white.

OUR LONDON LETTER.

[From our Special Correspondent.]

Begonia Julius.

This is another welcome addition to the hybrid winter flowering begonias, raised by Mr. Heal of Messrs. J. Veitch & Sons, Chelsea, London. This begonia has been raised by crossing the species B. socotrana with a selected variety of the tuberous rooted class. B. Julius is even finer than its predecessors. It is of a compact, leafy growth, the flowers delicate pink, and borne with great freedom. They show up well under artificial light.

Begonia Gloire de Lorraine.

This hybrid begonia of Messrs Lemoine has been exhibited largely on more than one occasion this autumn. The plants have been in 5 or 6-inch pots as a rule, and smothered with the small bright pink flowers, which show up well under artificial light, either gas or electricity. Each year this begonia becomes more largely grown here, and

Phylasis Franchetti.

this is not surprising, considering its easy culture, brightness, and the time its wealth of blossoms is produced.

A New Grape.

The well known fruit growers of Sawbridgeworth, Messrs. Rivers & Son, received at a recent meeting of the Royal Horticultural Society an award of merit for a grape of considerable promise. The berries are of fair size, round in form and excellent in flavor, a point of no small importance, while the almost deep black color is attractive. It has the merit, too, of keeping well over a long season.

The Chrysanthemum Season.

is now over, but it has been as prolonged and popular as ever, the prizes being valuable at the exhibition of the National Chrysanthemum Society, and the Scottish Society, whose show at Edinburgh was magnificent. We suppose the fashion will decline, but the Royal Aquarium, in which the great London show was held, was uncomfortably thronged throughout the three days during which the exhibition remained open. We are pleased to see that exhibiting the flowers in a bold way is more usual. Mr. Norman Davis of Framfield, and Mr. H. J. Jones of Lewisham, both had large vases filled with one variety, a splendid effect being the result.

Chrysanthemum Julia Scaramanga.

From the examples of this I noted at the last November meeting of the Royal Horticultural Society, I should think that it was the finest new Japanese reflexed variety of the present year. The flowers were of big dimensions, reminding one in every way of those of Mme. Carnot, but more graceful, and in color, what is best described as terra cotta, touched with rose, in the case of flowers from late buds, but early buds give blooms of a rose-bronze shade.

Chrysanthemum Mme. Verlat.

Those in search of a really good white incurved flower to go with such as Chas. H. Curtis, should make a note of the above named variety from Mr. Wells, Redhill, Surrey. It is a large flower, and very dense.

The Great Storm.

The fearful storm that raged over the British Isles in the last November days inflicted severe damage, not only to shipping and our coast towns, but to gardens generally. The storm swept the Isles, uprooting many an old tree, smashing glass houses, and generally creating considerable anxiety. No such storm has been known for many years.

Phylasis Franchetti.

This hardy Japanese winter cherry has been exhibited largely during the autumn. There is no question as to its decorative value. The big bladder-like calyces, enclosing the crimson fruit, are of a bright orange red color, and three or four times as large as those of the well known P. Alkenkengi. The strong stems bear several of the "Chinese lanterns," as they have been not inaptly called. Though bold and handsome in form and coloring, the type is welcome, too, being more graceful.

LIVISTONA HOOGENDORPII.

This handsome palm bears some resemblance to Livistona rotundifolia while quite small, but as it attains age it becomes very distinct, having longer leaf-stalks, a more drooping habit and usually much stronger growth. The leaves are also frequently darker in color than those of the above men-

Livistona Hoogendorpii.

tioned species, but this is a rather indefinite characteristic to judge by, from the fact that the color of foliage depends so much upon the conditions under which the plant is cultivated.

The leaves of Livistona Hoogendorpii are borne on stout stems that are usually brownish in color, and surrounded at the base with brownish red fibre, the edges of the stems being also armed with strong spines. The blade of the leaf is much divided into narrow segments, these being cleft at the tips and pendant, and the general outline of the leaf is circular.

This species is a warm house palm, being a native of the Indian Archipelago, and will flourish under similar treatment to Areca lutescens, for example, in a house having a night temperature of 65 degrees, a moist atmosphere and light shading, and should be firmly potted in light, rich loam, or if the soil is naturally heavy the addition of about one-fourth part of peat may prove beneficial.

Though in cultivation for over twenty years, L. Hoogendorpii has not become very common, and in fact is seldom met with in the trade in this country at least, seed of this species being seldom offered here in sufficient quantity to have much effect in the trade. It is, however, a valuable species, though possibly not equal to so much exposure as its well known congener, L. chinesis, but the endurance of a palm depending greatly on the method of its culture, it would be unfair to condemn this or any other species without a more complete test.

W. H. TAPLIN.

THE STORY OF AN EMIGRANT FLORIST.

IV.

To the right and left of the Victoria house and in front of a long range of houses were flower gardens laid out in formal style; geometrical figures with gravel walks between and edged with the little box edging, not allowed to grow 18 inches high, as it is usually seen in this country, but kept closely cropped with the shears, and looking as trim and uniform in size as the gilt moulding round a picture. It's no use, however, enlarging on box edging. The gardens where it was appropriate are no longer made. It gets killed at least by our northern winters, and the "laying" of it is a lost art. The American gardener, unless he is imported, knows nothing about laying box edging, and only a few of those imported ever learned to do it skillfully.

The north side of the Victoria house connected with the main range of houses, in the center of which stood the big "stove." Stove is so universally used as applied to a hot-house that in Europe it is correct. We all know, or at least those who have left their native village, that buildings which in childhood looked castles would on returning home, after a few years' sojourn in a big city, look but cabins; and unless you have thought enough to realize this, you will have too exalted an opinion of the height of trees you climbed for the magpie's nest, the width of the field you threw a cricket ball across, or the size of the village church. All things are high or low, long or short, light or dark, good or bad, merely by comparison. The dull light by which Milton wrote Paradise Lost was light; by the side of electricity it is darkness. Chichester cathedral was very tall (274 feet); by the side of the Cathedral of Cologne it is short.

So this big stove was after all not so large. But for those days it was a good size; perhaps 80 feet long, 50 feet wide and about 30 feet high. In that old stove was a varied and truly tropical collection, besides a fine collection of orchids, nepenthes, hot-house ferns, particularly the beautiful gleichenias; there was the usual collection of crotons, marantas, etc. Sitting on the top of a step ladder and cleaning the leaves of a seven or eight-foot croton with the aid of soft soap and a sponge, was often the peaceful occupation of the younger workmen. There were specimens of old Maranta Zebrina, I am sure four or five feet across. About 1850 a very novel little plant was brought down from London. It had two leaves, and as the plant cost two guineas ($10), it was five dollars a leaf. It was only Begonia Rex, which we now sell in 4-inch pots for 15 cents each.

What the ordinary lad would most vividly remember is what there was in the house "good to eat," and in tropical fruits it was rich. Beside the dwarf banana, Musa Cavendishii, there was always growing with yearly a ripe bunch, Musa Sapientum, the fruit of which is superior to any. The bunch weighs often 80 pounds and the plant grows 20 to 25 feet, the leaf being 8 to 10 feet long. The following incident will show that a liberal education and refinement do not always inject universal knowledge. The wife of the rector of the parish, a beautiful and accomplished converted Jewess, sent one day a sweet note to our father asking

for a leaf of the banana. She wanted it for "a book mark for her prayer book." The banana is the staple food of millions of people whose home is in the tropics, and so prolific is it that compared with wheat it is almost fifty to one. It is a wholesome and delicious fruit, but he that has not tasted it fresh from the plant knows nothing about its flavor. The artificially ripened things we get in our northern states give one no more idea of the excellence of this fruit than the boarding house canned salmon does of the flavor of a 20-pound beauty fresh from the river Tay.

The guava (Pisidium guava) grew trained to a wall, and freely and frequently bore a crop of its dainty little fruit. The granadilla (Passiflora quadrangularis) occasionally fruited, and we urchins flocked round thick when one was to be dissected. These last two fruits may not be relished as a steady diet, but we never had enough to make us tired. They were then as great a treat as a dish of mushrooms would be at the present moment, to the writer.

The diffusion of knowledge in half a century has been marvelous, and all parts of the earth (or nearly all) are open to travel. Every day we meet men who can tell us how this and that grows in Jamaica, the Ayres, Borneo, or the Soudan. Fifty years ago the traveler that was intelligent was a rarity. I say intelligent because sailors are great travellers. The writer when a boy questioned many a sailor who claimed he had been in almost every part of the world, questioned him eagerly; not about the flora of distant lands, but whether he had ever seen a tiger or wild elephant, a rhinoceros or a kangaroo. The result has always been a dismal failure. The poor sailor had evidently seen little and observed less. His recreations and pleasures when ashore were of the same kind, whether he was in Liverpool, Singapore, Sydney, Hong Kong, or even Chicago. The dock and its environments were the limit of his explorations. So to see arrow root, sugar cane, cinnamon, tea, coffee, and many other economic plants and trees did not fall to the lot of every boy. The coffee often bore berries, but not in quantity sufficient to make any difference to our household expenses.

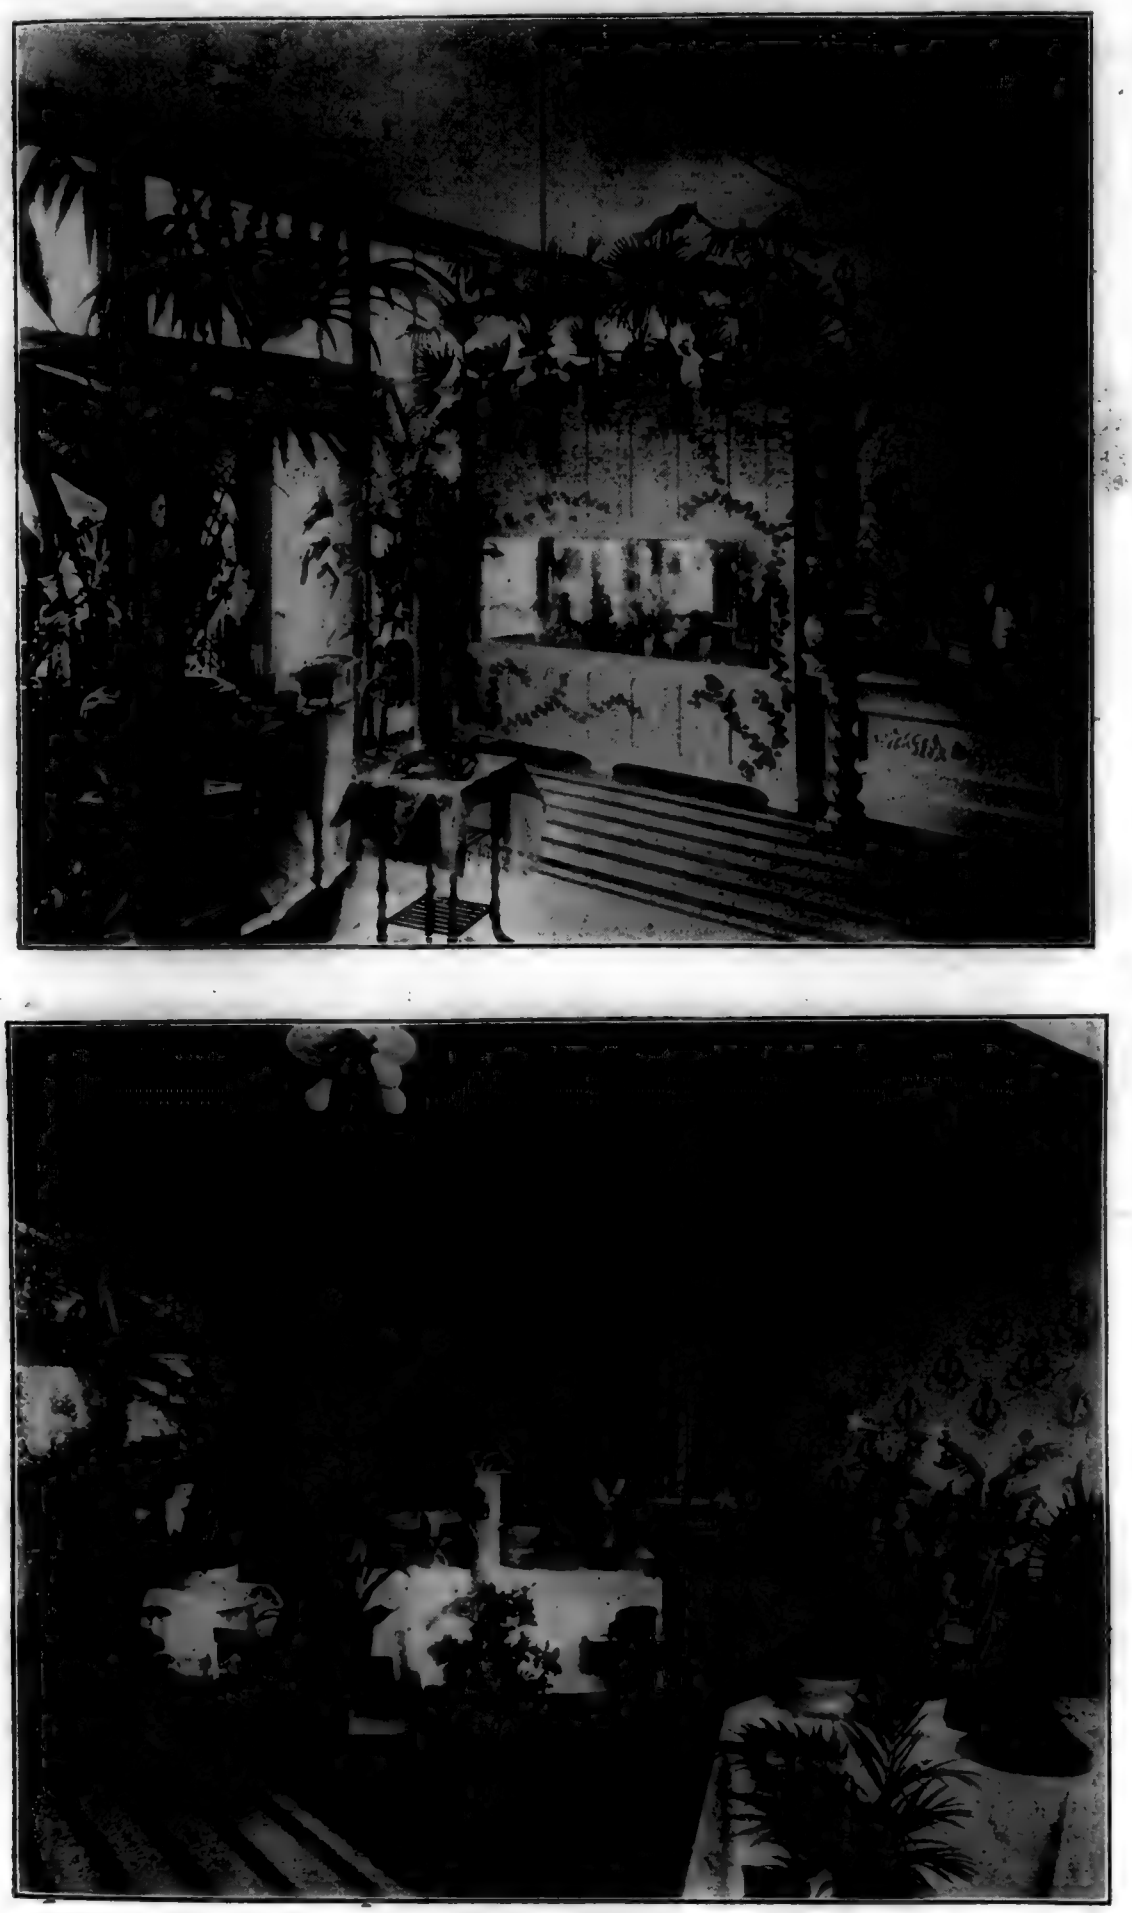
That grand fruit, the mango, was here grown and ripened to perfection. A large plant, or rather tree, some seven or eight feet high, broad and dense, with dark green leaves, annually bore clusters of its rich fruit. A lady friend in Florida kindly sent me a few mangos a few years ago, picked, I suppose, green. When they arrived they were as difficult to masticate as the toughest section of an aged owl. The mango (Mangifera indica) is a luscious fine fruit when ripened on the tree. While referring to tropical fruits, let me say that the mangosteen (Garcinia Mangostrana) refuses to fruit, or readily, away from its native climate, or the tropics. The magnosteen is described as one of the most delightful and nutritious fruits given to man, and is with an occasional change to fricasseed missionary, the chief food of the islanders of that vast expanse dotted with countless islands called Oceanica, or at least of those islands not too far removed north or south of the equator. When the writer was seven or eight years old there were, in the same year, two places in Great Britain that each had a promise to ripen a mangosteen, only one fruit each, but those, I am pretty positive, were the first in Europe. One was at Sion House, the other in this garden, which takes me so long to stroll through. As the fruit developed there was a report weekly in the Gardeners' Chronicle of their respective progress and welfare. The one at Sion House did, I believe, reach maturity, but, alas, the other one never got the chance. A big, raw-boned Scotchman from far north, a new aspirant for "improvement in his profession," doubtless a very worthy young man, splendidly adapted for "tossing the caber," or calling himself "she," got his elbow against this precious fruit and off it came. Poor fellow; in less than two hours his trunk and himself were off the estate. He afterwards, so I was informed, emigrated to one of the small islands, where the mangosteen flourished, was presented with a few dozen native wives and became a virtual "king of the Cannibal islands."

One orchid, I will never forget it, stood in an iron vase, and was some three feet in diameter. It occasionally made a trip to Regent's park, when that was the locality where the greatest flower shows were held before the days of South Kensington or the Crystal Palace. It was old Dendrobium densiflorum, and I have seen 75 spikes of its rich bunch of grape-like flowers on it at one time. What a pity it and Wardianum last but so short a time.

To the east and west of this stove was a smaller house, used for the same class of plants, to begin to mention which would be to you tedious. Westward the range was finished off with a heath house, many fine specimens and a great many species that I will perhaps never see again. Seldom did this heath house need any fire. On the eastern end the range was finished off with a peach house that was forced early, and on a shelf near the glass at the back of the house strawberries were forced to perfection. We hear of strawberries being sold at a high price for the table of New York's millionaires, but I scarcely think they ever bring so high a price as those I have seen picked from this old house, each berry in one of its own leaves, carefully packed in flat trays, only one layer in thickness. Occasionally, for some extraordinary occasion, a few were sent to a fruiterer in London, and the consumer paid one dollar and twenty-five cents per ounce for them, swallowing nuggets, you may call it.

Passing through a small inclosure of dwarf pear trees, we come to four vineries heated with the old brick flues, but they grew good grapes all the same. To any one brought up on Concord grapes, they don't sigh after a Muscat or Black Hamburg, but I do. A friend who will see these lines, likely before they are in type, told me that he did not care for hot-house grapes, but preferred our Delawares and Isabellas. What a degraded taste. What's the good of education if that is the result? But that is only a western taste. Is it not strange, and an evidence of lack of enterprise—it certainly is not lack of knowledge—that great quantities of exotic grapes are grown in Belgium and sent to New York, and perhaps other American cities, to satisfy the palate of our wealthy epicures? This is not Anglomanism, but a correct taste. Champagne is considered superior to elderberry wine, and this is about the relative excellence of a Muscat and Concord.

About twenty-five years ago there was a seemingly endless controversy and discussion in the Gardeners' Chronicle, whether outside vine borders, when the house was forced, should be covered with two or three feet of warm manure or not. After months of windy effusions, mostly from private gardeners who had nothing else to do, the question was left as much undecided as when they began. Looking at it from a distant view, I should say that in a climate where the frost penetrates the ground but a few inches, sufficient manure to keep out the frost was all that was desired, and that smothering the border and roots with three feet of stable manure was all wrong. Neither the element of air or water could be of benefit to the roots. The editor, after long suffering and patience, shut them up, and for fear the editor of The Review will exercise his prerogative, I will for the present shut up myself.



Bibber.

(To be continued.)

ADVERTISING A FLOWER SHOW.

(Read before the St. Louis Florists' Club by J. J. Beneke.)

In regard to advertising a flower show—does it pay? It certainly does pay if the advertising is done in the right way. As to mediums to reach the right people, the newspapers undoubtedly stand at the head. You must have the usual announcements in the amusement column, but way and above that is the securing of advance announcements in the reading columns. This is work that requires a little advance experience. The newspapers will always print what they feel is news, and very often an announcement can be so worded that it will pass the editor as news, when the same matter, if worded in a little different manner,

Views in the West End Store of Ellison & Tesson, St. Louis.

would be promptly turned down as simply a reading notice that should be paid for.

The question resolves itself into an understanding of what is news from a newspaper man's standpoint, and an organization that contains a considerable number of people who are not interested in floriculture commercially will give the organization a much better standing with the newspapers than one which is purely commercial in character. In other words, if Mr. John Smith, the real estate dealer, is interested in flowers as a pastime, the fact that he has added considerably to his collection of plants, etc., would be an item of news to the average newspaper man, but if Mr. Smith had simply done some extra business in real estate it would be considered advertising rather than news.

A decided help to the committee in charge of the advertising is what is known as a press agent. He is usually a man who has at one time been a reporter on a daily paper and who is capable of writing what is called an attractive story. Long experience has told him what editors are apt to let pass as news matter, and not only what will appeal to them in a general way as news, but he is generally familiar with the peculiarities of the various editors in the city. It is an old saying of reporters that they write for their editor rather than for the general public. In other words, they do not always write what they think would interest the general public, but what they think will conform to the ideas of the man who is to edit their copy. It can readily be seen that knowledge of this character cannot be acquired by any one in another line of business, and this is where the press agent, if he is worthy the name, has a very great advantage over any other man, no matter how brilliant he may be.

The press agent should also advise in regard to the advertising, but it is not always safe to take his advice. He may be of the type that requires a rake-off for himself, and he may endeavor to induce the committee to expend the money in directions which will enable him to get the rake-off and which would not be to the advantage of the exhibition. If the advertising appropriation were quite limited, I would suggest that it be confined entirely to the newspapers, except what was needed to print some small posters that could be hung up in the florists' stores. I am convinced that the large display poster on dead walls, etc., does not give value for the money, and I place little reliance on the smaller posters which are placed in general store windows and other places conducted by people who have no direct interest in the exhibition.

Street car advertising seems to be good if you always get what you pay for. It is, however, very difficult to check up the bills of the man supplying the street car advertising. He will tell you that he will place the card in all the cars on certain lines, and when he brings you the contract to sign, it will specify a certain number of cars. If you have stepped into a number of cars and found that the card is not there, and make a complaint he will explain that a few extra cars were put on that line that day and that is the reason you did not find your card in them. He will assert that the card appears in the number of cars you had contracted for, and he will exhibit a string of car numbers about a yard long and suavely request you to check it up. To a man who can find barely a moment to spare at the time, this request is anything but humorous.

But the story could be drawn out to

an indefinite length. Let us sum it up by advising this: Get a good press agent. Be guided largely by his advice. He should be engaged at least two months before the time of holding the exhibition, and $100 to $150 is not too large an amount to pay for his services from that time until after the exhibition is closed. Up until toward the time for the exhibition to open he will do nothing but secure space for an occasional short advance note of what is being done in the way of preparation for the exhibition. About three weeks before the time of holding the exhibition these notes should be larger and more frequent, and probably he will select the Sunday before the opening of the exhibition as the day for what he will call his "grand stand play." He cannot figure on getting more than one large advance notice, and he will arrange to have it as close to the opening of the exhibition as he can get it. Then he will arrange for a good report in the papers the opening day of the exhibition. He will be at the exhibition hall the night before and will explain to the various reporters who call just what is going to be done in addition to what can be seen already by the reporter, and it would be wise to provide him with a quantity of flowers which he could present to each of the newspaper men that call.

A box of cigars and a few bottles of liquid refreshment in the side room for the use of the press agent would also prove a good investment. All during the exhibition he should have a supply of four or five dozen good chrysanthemum flowers each day. After showing a reporter around the building and giving him the desired information for the reporter's story, he will finish up by presenting him with a bunch of flowers and possibly a clove. Sometimes the clove is preferred to the flowers, though in the case of a lady reporter the flowers are sufficient.

In securing good press notices it might be put briefly thus: In the first place you must have the editor in sympathy with you, that he may send a reporter to the exhibition with instructions to give the story liberal space. Secondly, you must give the reporter plenty of facts upon which he may build a good story. Thirdly, you must have the sympathy of the reporter, so that he will exert himself in the matter. Fourthly, you must be sufficiently lucky to have the story come in at a time when there is no great political excitement which is making a large demand for space in the daily press.

EEL-WORMS IN ROSES.

Last spring I did not propagate any roses as my stock was badly infested with eel-worms. I bought young stock and when it was ready for planting I found it also was infested with the eel-worms. The roots were covered with large galls and a glance through a microscope showed the young by the million.

It was too late to secure a supply of clean stock so I tried my luck at doctoring. I made a solution of one part Rose Leaf extract of tobacco to ten parts pure water, and soaked the ball of every plant in it. They were then set back in their pots again for a week. They were then soaked again and at once planted on the bench, while the balls were wet with the solution. A week later I gave the soil a sprinkling of lime and have given the bench two top-dressings of lime since, with the result that up to date I have seen no sign of eel-worms.

Warren, O.

POT PLANTS FOR MARKET.

By Joseph Reeve.

(Read before the Chicago Florist Club Jan. 27.)

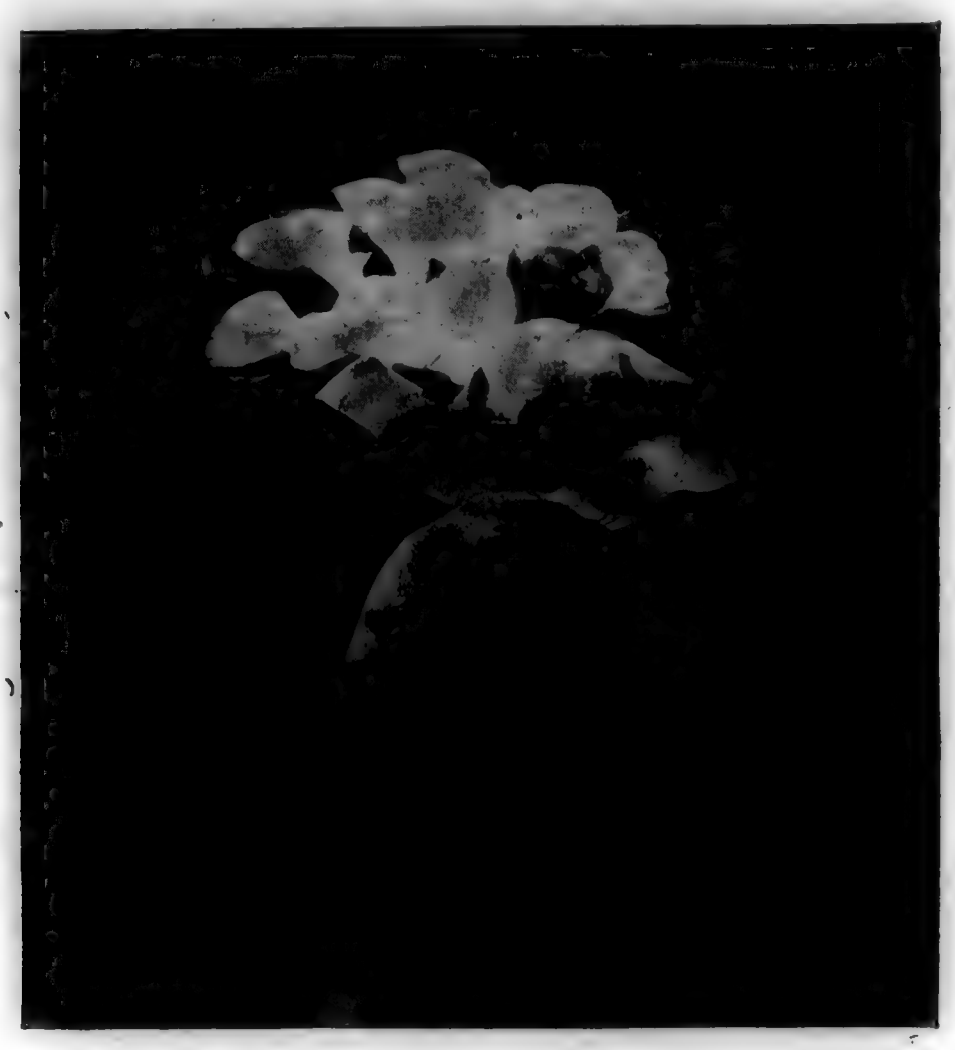
In view of the present demand, the growing of pot plants for market is a subject of importance to both the grower and the retailer. We have given so much of our attention to the perfecting of the growing of cut flowers, and devoted to this so much space, that the growing of pot plants for market has been left to a very few. It was very evident to the retailers during the past Christmas, that there is a brisk demand for well-grown flowering pot p ants. Should we not cultivate the tastes of our customers in this direction?

We have ascertained that to obtain good prices we must grow first-class stock. No off-colored, spindling plants will do. The requisites are abundance of flowers and foliage with graceful or stocky habit and colors such as are at present sought after. We should pay particular attention to the obtaining of the very best strains and varieties. As we sell the greater bulk of plants at holiday times we must aim to have them in at their best for the time specified. In doing this we must avoid overcrowding or overforcing. Only the most careful cultivation will insure us complete success. In taking a summary glance over our list of plants for market, I will note such varieties as are meeting with favor here and elsewhere.

From October to January we have pot mums, azaleas, cyclamens, primulas, heaths, double geraniums, lilies, poinsettias and epiphyllums; and in berried and fruited plants, peppers, solanums, ardisias and dwarf oranges. The mum grown in from 5-inch to 8-inch pots is very popular and salable if grown dwarf and stout with few stakes, good foliage and a reasonable amount of characteristic flowers. Cyclamens are most desirable when well done, and make good profit to the grower and the retailer. Primulas of the best varieties, well-grown, singly or in pans, make a good seller as a cheaper plant. Azaleas forced in at Xmas in variety are excellent plants and fetch good prices. In bright red flowers, so much sought after at Xmas, nothing is better than well-grown, well-foliaged poinsettias, and I believe epiphyllums would also be good for this purpose. In berried plants very few are grown here, and I would suggest a trial.

Rubbers in all sizes seem to be well adapted as an ideal foliage plant for most purposes and well-grown plants sell quickly. My experience has led me to ask why would not medium-sized crotons make good plants for the warm rooms of our customers in the winter months? In palms the demand is for well-grown home stock. Imported stock in kentias of late years has not been so good and is very soft, it being several months before it is properly fit for sale. Ferns are very popular, being much sought after, especially in Nephrolepis varieties, as cordata compacta, Bostoniensis, exaltata and davallioides furcans; and in pteris varieties, as tremula, magnifica and serrulata. With many Cyperus alternifolius is a good seller as a cheaper plant. Ferneries make a large demand for successive batches of 2½ and 3-inch ferns, and the market does not yet supply these in quantity needed at all times.

Lengthening our list of plants, we have cinerarias, hyacinths and bulbs in general, lilies, hydrangeas, pot roses, pelargoniums, fuchsias, marguerites, genistas, dendrobiums, forced shrubs and flowering plum crabs. Most of these we grow in general, but especially for Easter, our specialties then being lilies, good azaleas, pans of tulips, pot roses and spireas, white flowers being in the lead, with such exceptions as hyacinths and other Dutch bulbs, which make excellent sellers in pots and pans.



In bedding plants we find well tested newer varieties and novelties are the best sellers, if well grown and hardened off. Our midsummer plants are cut down to a few, perhaps the cream of them all for color and effect, but at present they do not appeal very strongly to the pockets of our customers, though they help to set off a retail store. They are fancy leaved caladiums, gloxinias, tuberous-rooted begonias, auratum lilies and fancy coleus.

SIMPLE FLORAL ARRANGEMENTS.

A Flat Cluster of Calla Flowers.

Although calla flowers, like the flowers of the tuberose, are not used in such numbers as they once were, for certain purposes they are useful and appropriate, as for instance in church decoration, where the odor of the more graceful Easter lily may be objected to; and there are still many to whom the calla is one of the choice flowers, especially for use at funerals. For this purpose they should be arranged in a loose flat cluster, somewhat as shown in the illustration, care being taken to overcome the natural tendency of the perverse flowers to assume the form of a closely packed cylindrical bunch.

These were provided with a backing of their own foliage, but as calla leaves wilt quickly, and their petioles are soft

Simple Floral Arrangements. No. 3.

and yielding, if the flowers are to be shipped, or placed where they are to be seen and used by someone having less taste and more clumsy fingers than the florist, it will be well to use a more rigid backing, or at least have the leaves well supported by other material. The ribbon used was No. 12, and yellowish green, but white or cream-white would be suitable, and for a cluster of this size No. 16 would be better.

A photograph made as this was, at close range and looking along the length of the object, is naturally somewhat foreshortened, and the portion nearest the camera is unduly enlarged. This cluster was nearly thirty inches in length and longer in proportion to its width than it seems. The fine foliage around the stems is Asparagus Sprengerii, which is very suitable for such uses. W. T. BELL.

Franklin, Pa.

VIOLET NOTES.

The continued cloudiness of the season is something unusual and has made it, and continues to make it, one of the hardest winters we have seen to keep, not alone violet houses, but all houses in first class growing shape. The season has been dark since the first of November, with so few exceptions in bright days, that practically we have had none. As a consequence, unless more than the usual amount of care has been bestowed in keeping the plants well cleaned up, they will not now be in the condition that they should be. They now begin, despite all this, to feel the first whisper of spring by making a growth that they will not at holiday time, and if you wish to make your crop a continued success till late in the season, special care will have to be exercised in regard to the four essentials of violet culture, viz., ventilating, heating, watering and cleanliness.

Don't make the mistake (because you are busy) of thinking that the weather is mild, and if you neglect the fire the house will be all right today without ventilating, etc. If you do, success will not attend your efforts, for one of three things will be sure to happen, either the day will continue cloudy and the temperature will be all right, but the air all wrong, being stale and just right to bring on a diseased condition (as it would on yourself if you had to remain in it), or the fire will be warmer than you expected, so that the temperature will be too high; or the sun will come out for a short time, and cause the same results, and so it goes day after day. The price of good violets is "eternal vigilance," and not relaxing your care for even a day.

They cannot get too much ventilation judiciously applied, as fresh, brisk air is absolutely necessary to thrifty, stocky, healthy plants, and if the houses are close, with a heavy atmosphere, the plants will inevitably get weak and sickly, and ready to go into a decline with the first disease that comes along. We were in a house not long since where we were not surprised at finding the plants doing nothing. It was about noon, outside temperature about 32 degrees, about one inch of ventilation on in every twenty feet, steam on all but one run of inch pipe on each side of the house, and in addition to all this, the sun came out for an hour or so. How they could be expected to do anything is more than I can understand, and then, too, the houses were quite exposed. I doubt if there was piping enough to keep out the frost on a very severe night, and violets will not flourish well in such extremes of temperature.

The owner of this house is a first-class grower, but was away at the time, and I take it his foreman is not a violet grower. No violets have been picked from that house yet. If it were mine, I would sell what will be picked for a year's subscription to The Review, and I would have the best of the bargain.

Watering is equally important with ventilating, but will have to be taken up next time. R. E. S.

VIOLET HOUSES.

I am building some violet houses, 10 feet wide, with wall one foot high, to plant in the summer and then put on sash in the fall. Will you advise me how to pipe same to the best advantage for the plants? J. H. L.

J. H. L. has asked a question that would be much easier to answer if he had stated his outside temperatures, height of houses, and whether the system of heating was hot water, open or under pressure, or steam. If persons asking these questions will bear these points in mind, we could answer much more accurately. It should also be stated whether the houses are open between, that is, under gutters, making it all one house practically, also if they run north and south or east and west; many things are to be taken into consideration.

For this vicinity (twenty-five miles southeast of Albany, N. Y.), supposing the houses to run east and west, and hot water under pressure to be the heating system, we would run a 3-inch main down the house under the ridge, if the house was high enough; if not high enough for this, then two 2-inch mains a little below and at each side of the ridge, then branching each way at the end of the house, with 2-inch pipe running back, with two lines of 2-inch pipe on each side of the house, one line close to the eaves or gutter, the other about a foot above this. Have a valve in each run of pipe, so as to be able to cut off each separately, according to the weather. If the houses are in a very exposed position, it would be well to have an extra run on the north side for use in severe spells. One of the great secrets of success in heating is to have

pipes properly graded, as a very small sag will sometimes greatly impair the rapid (and consequently economical) heating of a house.

R. E. SHUPHELT.

Chatham, N. Y.

VIOLET NOTES.

Mr. W. Scott, in his article on violets in No. 7, claims, that rooted runners only will give satisfactory results, and that they must be planted in solid beds only, in order to achieve success. Our method of growing is somewhat contrary to his, and yet our success this winter would be hard to excel, and with the majority of good growers, hard even to equal.

We grow in both solid beds and benches, both systems having the glass off during the summer, and our plants are the picture of vigor, health and abundance of bloom. Our method of propagation is different from his. In April, when the plants are through blooming, we divide the old plants, making as many as 40 to 50 plants from one. We manage to have a little root on each one; any without roots are put in the propagating bed, the crown thrown away and the rooted divisions potted into 2½-inch pots and placed on the same bench, from which the old plants were removed. Of course great care should be exercised in shading, watering and ventilation, until the roots begin to start, after which they are all right.

By this method, we have met with as good success, I imagine, as with his rooted cuttings, only, although rooted runners, we admit, are preferable; yet it does not follow, that in order to achieve success we must have rooted runners. Again, we have met with equal success with solid beds as with benches, and, indeed we think better; in fact, we prefer them, and excepting the solid beds we now have, we shall in the future plant in benches only. One great factor in benches is that you can dry them out better in damp, wet weather; also regulate the watering to better advantage, which, to grow violets successfully, means no little measure towards success.

GEO. F. CRABB.

MISCELLANEOUS SEASONABLE HINTS.

Primula Obconica.

It is too early yet, middle of March will do, but as soon as you can procure fresh seeds of Primula obconica sow it. It takes longer than the sinensis type to make a good flowering plant. They don't poison every one and are so profuse in blooming that they are one of our important midwinter, inexpensive plants.

There is a demand at Easter for plants to suit all sizes of purses and last year we found that pans of pansies, of good stem and full of flowers, sold well. There is also this advantage that the plants, when out of flower, which doubtless they would be in a few weeks, kept in a warm room would recover and give lots of flowers if planted out the end of April. We have plenty of customers who would not consider this trifling advantage, but there is a large number who would; the same class of sweet ladies who ask you "What shall I do with my geraniums in the fall?" Try and answer such questions with a little humor, a little sarcasm, plenty of good nature, the whole seasoned with respect, and you most likely have cured your patron of putting such idle inquiries unless she is a rural dame, "who loves posies and you ought to see her Begonias to home, what Congressman Boodle brought from Washington and give a slip to her aunt." Don't waste any time or breath on that breed. If you have pansies in a cold frame, dig up some the first occasion that the frost is out of the ground; it is not too early. If in separate colors, so much the better, for a pan of yellow or blue pansies would be bound to sell; but who ever saw a mixed bed of pansies where the colors did not harmonize! A very light house where the night temperature is about 45 degrees will do well for these little plants. You want them to grow, but not grow tall and spindling. I have a bench at present of a thousand or two. The house has been down to 40 degrees many cold nights, and being very light the plants have grown very sturdy, but only now commencing to open their lovely, expressive features. I shall lift a lot of these into 6, 7 and 8-inch pans and keep them as cool as possible, for being all ready to bloom and much larger plants than those from a cold frame, they will come along plenty early enough with the natural advance of the season.

Bougainvillea Sanderiana.

A lot of cuttings of Bougainvillea Sanderiana put in the sand in October, although by no means hard wood, have rooted but indifferently, not more than 50 per cent. Those put into heat 6 weeks ago and now showing their flower buds are also making a young tender growth that will strike as freely as a verbena. You can get a few cuttings off each old plant without in the least robbing to any serious extent.

Begonia Manicata Aurea.

A plant that I had occasion to mention and which may appear in another column of The Review, is Begonia manicata aurea. If anyone has a large stock I am not aware of it. It is not valuable for its fine spike of pink flowers as is the type, but for its beautifully mottled foliage. If it were a tender fastidious plant its mottled green and golden leaves would have little value in the eyes of the commercial florist, but it is not; it is par excellence, one of the very best plants to withstand the dry air of a steam heated room. It grows slowly like most good things and propagation by cuttings is slow, but it can be produced freely by pieces of the leaf as you do the Rex type. A batch put in about October 15 is now showing up with their little leaves. You don't want this for spring sales. Plants rooted in fall or midwinter would not be large enough, but you will have fine plants for next winter's sale. For an amateur conservatory, of which I am glad to say there seems to be quite a revival, it is an ideal plant. I beg to say by "amateur conservatory," I don't mean the detached conservatory and other houses presided over by a professional gardener, but the little 8x16 structure that now is attached on the sunny side to so many of our luxurious residences.

Palms.

There is at the present time an opportunity to do up some jobs round the greenhouse that may not appear absolutely necessary, but yet will well pay for the time spent. One of these is to have a thorough overhauling of your palms, big and little. Be careful of overpotting, if you need any at all. Palms, all of them, will thrive in a remarkably small pot, apparently out of proportion to their size, if well cared for with water and a proper temperature. This is not a bad time to shift, if it must be done. As the days are getting longer there will be more light, more heat and more inclination to grow top and bottom. But it was not shifting I alluded to, it was sponging. In the best regulated houses mealy bug and white and brown scale make their appearance. Go over them all with a sponge and a tub of water in which you have added one-sixtieth part of Rose Leaf Extract of tobacco. In going over them, small plants especially, it does not take long to knock out a Kentia Belmoreana in a 4 or 5-inch pot. See that the crock and perhaps piece of green moss is in shape to let water pass freely through. Pull out a big worm or two; rub off an inch of the worn-out soil on the surface and replace with fresh loam. In nine cases out of ten this is all the palm will need

and better for its health than a shift to larger sized pot. At this, as well as all tedious jobs, don't let one man or lad do it. Man is a gregarious animal and loves company; if he don't he is diseased. Let two be at it. They will work, talk and be merry, and can, without detriment to their work, either in speed or quality, discuss Teller's silver bill, "Helpful Reminders," or any other instructive or important subject.

Ficus Elastica.

There is quite a dearth of rubbers just now. Ficus elastica must be used somewhere in large quantities. Without doubt, it is a fine plant and we shall in future endeavor to raise our own. I am an earnest believer in that most advanced state of civilization known as "division of labor." The average florist had better leave to the specialist the raising of young palms, ferns and other things, as he does to the Dutchman his hyacinths and the Bermudian his lilies, but the rubbers are so easily increased, if you have a few old plants, that you might as well increase your stock. Four or five eyes below the end of the shoot make a cut, slanting upward, an inch or so long, and half way through the shoot; insert a little sphagnum moss to keep the incision open, and wrap a little of the same material round the shoot above, below and to the thickness of half an inch round the cut. If the temperature of the house is kept up to 60 degrees or above and the moss kept moist by an occasional syringing, roots will soon appear when you can sever the shoot just below the cut, and you will soon have an established young plant, which you should not overpot when first taken from the parent tree.

Propagating.

You should not allow a single foot of your propagating bench to now lie idle. The spring will soon be here, and don't be found deficient on any stock for which you always have a good demand. This is about as late as fuchsias should be propagated, and make good plants for spring sales. There is santolina, Begonia vernon (if not raised from seed), lobelias, abutilon, vincas, coleus, achyranthes, senecio, lophospermum, anthericum, all of these should be propagated as fast as you can afford to give them room.

Ivy Geraniums.

Not least in importance are the beautiful ivy geraniums. They are as much a pelargonium as any of the so-called geraniums, but are very different in habit. They cannot be recommended as a bedding plant, for when given root room go out of flower and into a vigorous growth, but they sell in our markets and thousands are used in our cemeteries as an edging to a vase or basket. Hundreds of vases are filled in our cemetery (Forest Lawn), where Emile de Gerardin occupies the center and a semi-double ivy leaf is the entire edging drooper or "vine." It is demanded and we must obey. Plants that we propagated in October are now in 3-inch pots and will make fine (15cent) plants by the end of May. Their tops will even make fine cuttings and root like a weed, and make useful 3-inch plants by selling time. Pot them in the sand, not pot them as you would a zonale geranium.

Care in Fumigating.

Just let me remind you for the seventh time that you must not fumigate in a house where the young growth of astilbe is now expanding. Wetting it thoroughly will help when smoking. Covering with papers or cloth is better, and no smoke is best of all.

Azaleas Wilting.

I also notice in florists' windows (my own among the rest) beautiful plants of Vervaeneana and other azaleas allowed to wilt. It is simply want of a good soaking. The clerks are prevented by an abnormal development of length and stiffness of shirt collar from lowering their vision to the level of the pots, and the poor plants have to suffer. These azaleas make no roots, at any rate till spring, in the new soil, and a heavy watering is necessary to sufficiently wet the old bulb, so don't neglect. When you lose a good azalea you have knocked off the profit of at least the sale of two others. W. SCOTT.

CHRYSANTHEMUMS

CHRYSANTHEMUM NOTES.

Cuttings.

Cuttings may be inserted right along as they are ready now, and should not be left on the stock plants long enough to get run up and spindly. It should be remembered that when rooted, they can be boxed up, and when growing again they can be topped, and the stock thus rapidly increased to the desired quantity. Much has been said and written on the question as to whether cuttings should be trimmed or not, some maintaining that they should not, while others claim that they should. It is hardly worth while arguing about it, as the mum will root anyhow; but one thing stands to reason, that when the bottom leaves are taken off and the others just tipped by one stroke of the knife, it adds greatly to the appearance of the cuttings in the bench, and allows the air to circulate between the rows; thus reducing to a minimum the danger of damping or fungus striking in. The bottom leaves always die if left on, so I don't see why they should not as well be removed first as last.

The cuttings should not be allowed to wilt down in the sun, if it is possible to keep them up. Our propagating house faces north and the sun never strikes it at all, but where growers are not so favored, the cuttings can be shaded with newspapers, which should be raised several inches on labels or short sticks, to allow a current of air to pass beneath the papers and the bench. When we put in cuttings we water them thoroughly, and oftentimes they get no more till they are ready to be taken up. We do not believe in syringing them in the bench, because if the house is kept comparatively cool, as it should be—50 degrees nights and 55 degrees days—they do not need it. With this treatment, and with proper cuttings, we guarantee 100 per cent every time.

Watering and syringing are in too many places entrusted to the boy, when in reality no part of the routine of greenhouse work is so important. Some varieties, if they get too much syringing in the cutting bench, will lose their points by damping, Mayflower being a particularly bad one in this respect, and as it is also with us mighty slow in throwing cuttings, one cannot afford to lose many.

One thing that should be particularly noted is to have the cuttings free from black fly before putting them in the bed. A dip in tobacco water will dispose of them quick enough, and it pays to begin like The Review did, "On a clean foundation." The old plants should be well dusted with tobacco dust, to keep them clean, and mildew, to which this vile weather has introduced us, can be easily cleaned off with sulphur.

When cuttings are rooted, if the idea is to grow them into specimen plants, they should be potted up singly into 2½-inch pots from which, as they fill the pot with roots, they can be moved into 5-inch pots.

For ordinary work, the young plants can be put into flats. This is the simplest and quickest way, and answers well enough. The soil for the first shift should have a little leaf soil or old mushroom bed manure mixed through it, to lighten it somewhat, and encourage root action, the object being to get nice, thrifty young plants, perfectly healthy, without any pretensions to grossness. C. TOTTY.

JUDGING NEW CHRYSANTHEMUMS

I see it has been suggested that raisers of seedling chrysanthemums be required to send flowers to all of the different cities where there are committees of the Chrysanthemum Society of America. While I admit that the average of the judgment of the various committees might be desirable, the ex-

pense of exhibiting before them all would be so great as to prohibit a small grower from presenting a seedling for the consideration of the society. All the best new varieties do not come from the large growers, to whom the extra expense might not be a serious objection. As I understand it, the object of the society is to encourage the production and dissemination of meritorious new varieties, as well as to deter growers from disseminating those that lack merit. If the rule suggested were adopted, the society would assuredly take a step backward. Don't bar out the little fellows. They may do better work occasionally than the big ones. JOHN BEIMFORD.

DISEASED LILIUM HARRISII.

To Prevent Their Importation.

Editor Florists' Review: — I see, through the press, that a bill has been introduced in the Senate regulating the importation of trees, plants and shrubs and other nursery stock, to prevent the importation and spread of injurious insects and fungous diseases. The bill, as I understand it, provides that all nursery stock imported shall be inspected and if found free from injurious insects or diseases receive a certificate to allow the owner to transport and sell it.

Could not this be extended to bulbs also? The way we have been taken in by the Bermuda lily growers of late is nothing less than fraud and has some similarity to the Chicago gold brick industry. I am positive that if a law was in force preventing the importation of bulbs infested with dangerous insects, 75 per cent of the lily bulbs we receive now from Bermuda would have to be sent back, and the growers would wake up to the necessity of discriminating between a good and a bad bulb. They have now a practical monopoly of the Lilium Harrisii trade, and this may account for the carelessness, greed and insolence they have shown.

I am convinced that the disease(?) of the Lilium Harrisii is caused by the bulb mite, Rhizoglyphus echinops, or Rhizoglyphus Robini, as some German publication calls it. This is a very dangerous insect. It is as fond of the hyacinth, tulip, iris, or other flowering bulbs as it is of the lily, and carefulness by grubbing out and burning every bulb that shows the least sign of this insect has kept it down in Holland. But sometimes we strike bad cases from there. I received a shipment of 10,000 Spanish Iris this fall which were badly infested with Rhizoglyphus, some bulbs literally filled with these insects so that I had to burn the whole lot.

Every forcer of bulbs will find among his hyacinths, tulips, etc., bulbs where the center is rotted out. If he will open these and examine them with a good glass he will find Rhizoglyphus present. As to Bermuda lilies, he will have no trouble in finding from 25 to 250 on each bulb. I understand that the Japanese have imported some Lilium Harrisii from Bermuda. If this is the case it may account for the presence of this bulb mite in Japanese Lilium longiflorum. About 5 per cent of my Lilium longiflorum from Japan are so infested, and if the same carelessness is shown over there as in Bermuda, this percentage will increase from year to year.

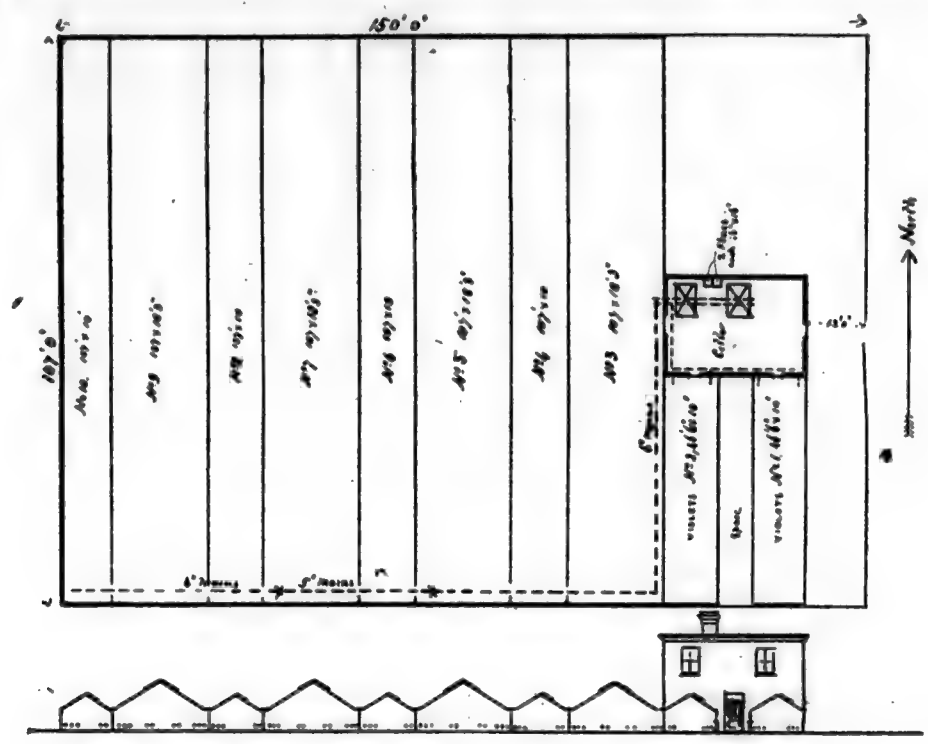
Now, Mr. Editor, I wish you would agitate a little, through your paper, amongst the florists of the country, in favor of such a law as mentioned above. It is impossible for each individual florist to inspect his own importations, as he would be obliged to pay duty first before he could do this, besides putting himself to trouble and annoyance. A government inspector could do his work at the port of entry. It would also stimulate the growing of these bulbs in the United States. EMIL BUETTNER.

BUILDING AND HEATING.

Replying to the inquiry of Madelia, the property he describes is an ideal location for a range of greenhouses. Noticing that his present and immediate future business demands the production of a general and miscellaneous stock of plants and cut flowers, I would suggest the erection of an even-span structure, about 18 feet wide, running north and south along the western edge of the central ravine, the house to be divided into sections according to his requirements, by means of glass partitions, the house being placed sufficiently north of the ravine to allow of a roadway between the house and the ravine. The boiler house would be placed on the slope of the ravine, about 25 feet from its upper edge, thus leaving space for the building of a three-quarter span house along the top of the ravine, facing the south, should he at any future time require such a house for rose-growing, which he undoubtedly will. This future rose house would then be low enough and sufficiently distant from the southern ends of the even-span houses to avoid any shadows being thrown upon them.

The sides of such a house would be about 4 feet 6 inches high, of which two feet would be of glass, made stationary; the ridge would be about eleven feet high, with a continuous line of ventilating sashes along each side of it. For posts I would suggest locust, red heart cedar or cypress, giving preference in the order mentioned; these posts should be sawn on all sides to any convenient size, 3x4 inches being desirable, and should be set not less than 3 feet in the ground, and in setting the posts be careful to set them square to the grade line, not plumb, and see that all other work follows the same square lines, or you will have trouble in the glazing. The roof bars should be two and three-quarter or three inches deep by one and one-half inches wide, machined with a condensation groove, all bars running from ridge to eaves, and for the header upon which the ventilator closes use a strip about two by one and one-half inches, in which square grooves are cut, corresponding to the top of and to the spacing of the roof bars, these grooves being, thus, about eleven-sixteenths of an inch wide by one-half inch deep and with 16 eleven-sixteenth centers, if 16-inch glass is used; this strip to be nailed on to the top of the bars so that each bar fits into its respective groove, thus maintaining the proper spacing of the bars and furnishing a true line upon which the ventilators may close. The ridge could be of 2x6 or 2x8, and the cap of 3x1½-inch cypress. For the support of the roof place 2-inch pipe columns every eight feet under the ridge, and about 18 inches up from the center of each slope of the roof attach a continuous line of 1¼-inch pipe, by means of tin straps, and then by means of 1-inch pipe struts or posts, connect these horizontal pipes, or purlins, to the central 2-inch columns, about 5 feet 6 inches up from the floor. This makes a very economical, rigid and durable bracing.

For glass, I would suggest using that 16 inches wide by 20, 22 or 24 inches wide, according to the stock held in your market, the quality to be that known as second, and of double thickness. The bench legs and bearers should be of cypress, 2x4, and the bottoms may be of cheaper material, say, of hemlock, but if you have the capital to invest, use the cypress; it will pay. The side benches would be about three feet wide by two feet high, the center bench about seven feet wide by 2 feet 3 inches high, and the two walks about 2 feet 2 inches wide.



For heating, I would suggest the installation of a boiler having sufficient capacity for double the first house, say, one with about thirteen square feet of grate surface and heating surface in proportion, and for the piping of the house use 1-inch pipes, the 70-degree section requiring 22 lines, the 60-degree portion 16 lines and the 50-degree part 13 lines, the pipes in each section being arranged for a separate circulation. The work room, offices, etc., could be conveniently placed at the north end of the house, and would there afford some protection.

HENRY W. GIBBONS.

New York.

BUILDING AND HEATING.

In reply to E. G.'s inquiry, as to the general lay-out for a range of greenhouses to cover a plot of ground 107x150 feet, its length running east and west, on which stands a two-story building, 18x25 feet, this building being located centrally at the eastern end of the plot, about 12 feet west of the eastern boundary, the grade of the land falling slightly towards the southeast corner, and the houses to be arranged for the production of carnations, general bedding stock and violets, I would suggest a range of even-span houses, running north and south, arranged about as follows: Commencing on the

Suggested Range of Glass for E. G.

eastern line of, and running south from the two-story building, would be an even-span violet house, No. 1, 10 feet by 46 feet 6 inches, with one line of ventilators on the eastern slope of the roof, and one on each of the vertical sides, below the eaves. I would leave a space about 5 feet wide, which would allow of a second violet house as above, having a line of ventilators on the roof, and one line on the east vertical side only, the eaves on the west side being on a line with the west side of the two-story building, would have a gutter, and from here out towards the west would be a solid block of even-span houses built on the ridge and furrow plan, the first, which would be house No 3, being 18 feet 3 inches wide by 107 feet long, as would also be houses No. 5, 7 and 9, houses No. 4, 6, 8 and 10 being 10 feet wide by 107 feet long, the wider houses having a continuous line of ventilators on each side of the roof, and the narrower houses only one line, which would be on the east side of the roof.

It will be necessary to make connection between each house by means of doors, these may be at either end or at the middle as may be most convenient, the gutters having a fall from the doorways to the ends of the houses. Houses No. 1 and 2, having extra light and ventilation, would be best adapted for the violets, the others being used for carnations or bedding stock as convenience or requirements may dictate. If it is not desirable to cover the entire plot, the intermediate narrow houses may be omitted, in which case I would advise that the vertical sides of the wide houses be made with glass.

For the heating of the entire range, you will require double-flue chimney, each of the flues being 16x16 inches, and extending about eight feet above the roof of the building. Two boilers will be necessary, each having about eight square feet of grate surface, and for the piping of the houses, I would use 2-inch wrought iron pipes, arranged about as follows: In house No. 1, three lines of pipe under each side bench; house No. 2 will need three lines under the west and two under the east bench; house No. 3 should have three lines under each side bench, and four lines under the center; this would also be the arrangement for houses No. 5, 7 and 9; in No. 4 two lines under the east and three lines under the west bench would be required, as would also be the case with houses No. 6 and 8; house No. 10 should have three lines under the west and two lines under the east bench. The mains, which would run from the boilers into No. 3 house, and then along the east side of this house to the south end, and thence across the end of the other houses, would be of 6-inch pipe from the boilers to the west of house No. 5, then reducing to 5-inch to the west of No. 7, and then 4-inch, a separate 3-inch main leading from the boilers to No. 1 and 2. I would valve the pipes in each house, and place the expansion tank in the second story of the present building.

HENRY W. GIBBONS.

New York.

SWEET PEAS.

As this reaches growers only, we will refrain from giving any attempt at extended cultural directions, as the field has been so ably covered from time to time in the various journals that by this time probably every one has formed an opinion as to the methods they intend to follow. There are a few points, however, that we cannot refrain from touching upon.

The soil should be worked as deeply as possible, and before planting be well rolled or trampled.

Drainage should be seen to carefully—better a spot on the dry side than one where at times the water is hard to dispose of.

Supports must be provided—either wire or brush. If brush can be obtained it is preferable, and elm brush is the best, but it must be free from leaves, as they harbor so many insect pests. It is foolishness beyond all reason to attempt to have healthy vines where you wait till leaves are out before cutting the brush and fail to remove them.

As to the merits of deep or shallow planting, we would say that we favor both, and will explain: First, for early planting where severe frosts are to be expected, plant deep. Second, late planting should be planted shallow—1½ to 2 inches is plenty—and the seed should be previously soaked in lukewarm milk or water for five or six hours.

If you can't or don't plant early—real early—then plant late and plant shallow. Wait till danger of frost is past (counting from time you expect the peas to be up), and watch them carefully. Do not allow them to get dried out early in life. Water them when young, and later on in the summer they will take care of themselves.

Whether planted in trenches or not, if sowed broadcast, the row must be thinned out by hand when large enough; overcrowding is one of the greatest faults with which we have to contend. We strongly advise the separate dropping of the seed by hand as being the cheapest in the end (an ideal marker is a notched stick 1x4, about 8 feet long, with side braces to handle, something like an overgrown rake with the teeth straight out).

If possible, mulch the ground between the rows heavily. This keeps down weeds, and if stable litter is used the rains or waterings will carry the soluble parts to the plants, greatly to their benefit.

The gray blister beetle, so destructive to asters, is equally fond of young sweet pea vines. A mixture of one tablespoonful of London purple, two of fresh slacked lime to an ordinary pail of water, sprinkled on with a whisk broom, will drive away those it doesn't kill.

During hottest weather an occasional evening or entire night, if necessary, is well spent spraying. The dust must be washed off and the red spider kept down. Never sprinkle when the sun is out—better leave it undone.

If you want flowers from the beginning of the season, without a break till frost cuts vines down, cut every flower formed—good, bad and indifferent. Whether you need them, can sell them or not, they must be taken off. Often a rain will spoil thousands of blossoms; let the pickers go through and gather them. During the height of the season, when the glut is on, it don't pay to pick them—pick them just the same. Send only the best to market—your time will come later; you

will have flowers to sell when others have memories only.

As to varieties: Avoid a great number of varieties where the colorings are the same or similar. Limit yourself (we speak now as to main crop) to two white, one each lavender, pink (Ex. Ey. Blanche Ferry or type), salmon or blush, yellow, red, blue, maroon and variegated. Plant enough of each so that when you cut you have some.

Have a trial row. Have all the new ones each year. If you cannot afford to do this all by yourself, club with your neighbor and divide the seed. Don't be afraid to let him in—beat him out by growing yours better than he does his. Make it a rule to test twenty varieties each year in this row.

Keep a page of your notebook for your observations; you will then know next year what varieties you want, better than you do this.

Don't try to grow your own seed. There are people making a business of this that are doing it better than you can ever hope to.

If you are in doubt as to what varieties to plant, leave it to your seedsman.—Retlaw, in Hunt's Trade Review.

PROVIDENCE, R. I.

At the Rhode Island greenhouses I found Mr. Miller throwing out one house of roses to make room for young stock. He had heavy crops during the holidays and can afford to discard one house, having several others cropping. His carnations are yielding well, particularly Alaska and Scott. Outcast is proving itself worthy of a place; 'tis much more satisfactory here than Portia. Theo. Egger, who was many years with H. A. Dreer, has charge of the carnation houses.

Farquhar Macrae is picking some grand Mrs. Geo. M. Bradt and Minnie Cook. Jno. Macrae is sending in some of the finest Scotts ever seen here. He is also strong on the double bouvardia Alf. Neuner. 'Tis a fine flower as he does it, grown cool, full of substance.

E. J. Johnston has a house of a select strain of Machet mignonette which is selling well at a good figure. Tom Johnston (who, by the way, is a bureau of information in himself, and a pretty good sized one at that, as those who have the honor of his acquaintance will testify), informs me that bunches are becoming more popular each season. Tom is an expert in this art, which may explain the cause. He showed me some handsome roses and carnations from S. J. Reuter, of Westerly, and Marie Louise violets from W. Hazard.

Jno. Macrae, until recently, had the greatest success with violets before he rebuilt the houses, since which time he can do nothing with them. It is the loss of much revenue to him, though compensated to some extent by the fine carnations he grows.

T. O'Connor missed it on azaleas, but hit it on cyclamens, of which he had the best lot in town; sold like hot cakes, and a splendid lot of cut stock. Albertini and G. M. Bradt brought $1 per dozen. Jahn's Scarlet is immense here, a brilliant shade, handsome flower, very free. No doubt this carnation will be grown more largely when better known. Violets are clean, which fact is attributed to the application of Ivory soap suds applied through a Kinney pump, which effectually got rid of green fly and red spider and did not affect the fragrance of the flower. In one house I noticed a fine lot of stock Princess Alice planted for Easter, and the first batch of narcissus Golden Spur. Roses, particularly Bridesmaid, are very fine. Of lilies for Easter I will say nothing. Shall be pleased to run across a batch free from disease.

Wm. Flanagan finds his stock does much better since he fixed up his plant. The handsome double windows give the place quite an imposing look.

Fairbrother & Wood intend adding to their plant, not being able to grow sufficient stock to supply their downtown store, which is in charge of the irrepressible Johnny Wood; he is a hustler. There is some talk of appointing him M. C. at the social to be held on the 28th inst., when the newly appointed officers of the club will be installed, and to which event the fair sex will be invited. The new staff is J. Canning, president; W. E. Chappell, vice-president; Alex. Rennie, secretary; Farquhar Macrae, treasurer. As these gentlemen are well known for their "get there" qualities, undoubtedly the club will acquire renewed vigor.

I understand Messrs. Geo. Johnson and W. Butcher will furnish the decorations under the direction of Wm. Appleton. W. H. Mason, the retiring secretary, still takes a lively interest in the welfare of the club, which has done so much toward promoting unity amongst the members. W. M.

BALTIMORE.

Resume of the Market.

Judging from the number of wedding decorations, etc., which took place in the Monumental city this week, one would suppose the florists stood right in with that capricious little individual called "Cupid" and allowed him a liberal commission for his prompt action in facilitating these welcome events.

Business is now greatly improved and is once more moving along at the average pace. As stated above, weddings have been numerous, while a number of teas, the usual Monday german and a general improvement all around, have given an increased velocity to the wheel.

The commission houses have had a hungry look, as flowers have been barely equal to the demand. Roses are especially scarce, particularly Maids and La France, which, owing to the bad weather, have suffered very much. Violets are plentiful and have a steady sale, while with carnations the supply, though heavy, is just about equal to the demand. The balance of the list are of about the same proportions as last quotation, with little or no change in price. Very few novelties are now seen. Jacques have now put in appearance, with the indications of being a heavy crop.

Gardeners' Club.

There was a fairly good attendance at the meeting of the Gardeners' Club, Monday, January 25, President Pentland presiding. After the general routine of business the subject of an annual supper was discussed, and the matter then placed in the hands of the executive committee for development.

Question Box.

"Is there any advantage in budded roses over those grown on their own roots, supposedly out-of-door planting?"

Regarding this question there seemed to be a diversity of opinion, yet the majority thought the method unsatisfactory on account of the strength being sapped from the plant by wild suckers. Mr. Pentland then gave a method which would eliminate this evil. He said, in part, that care should be taken to bud in the early spring before the sap begins to flow, and that the bud be placed very low on the manetti stock, which in a measure would prevent the plant from making shoots below the bud.

"Has any one used Jadoo fibre and with what results?" As this article is yet a stranger in our state, the question was not answered. Mr. B. N. Lehman, secretary of the American Jadoo Company, Philadelphia, happened to be among the guests of the evening, and was prevailed upon to give a talk upon the subject, which not only proved interesting but instructive.

Mr. William B. Sands spoke of the advisability, to keep up interest in club affairs, to inaugurate a "good of the club" feature in the order of business. Among other suggestions was to have a co-operative plan by which members in good standing could club together and buy their yearly supply of coal, etc., in bulk, at greatly reduced rates. The above suggestion is food for thought, and the writer would like to see such a scheme take tangible form. He would also like to see the said cooperation extended toward making a more uniform price, both wholesale and retail.

Mr. I. H. Moss, of Govanstown, exhibited two very pretty seedling carnations, one pink, on the order of Scott, but extra fine and large, the other a peculiarly mottled pink, which had a perfect form and stem. This will no doubt have a place. C. F. F.

CLEVELAND.

Weather and Market Conditions.

Weather and business continue to be satisfactory. Although the former has been throughout the month of January rather gloomy, yet it has been very mild, much of the time being hardly below the freezing point, while at no time have we had more than twenty degrees of frost and these spells were of extremely short duration and only occurred twice. We have also had two thunderstorms of a very mild description and one very violent windstorm, wherein Old Boreas blew his best—seventy-two miles an hour, according to the local weather bureau. So far as has been heard, little damage was done to any greenhouse property beyond the blowing out of a few lights of glass or the smashing of an occasional ventilator.

Business, as has been remarked, as regularly as the issue of The Florists' Review, has been good and seems to promise fairly for some time to come. There has been practically no change of any moment in prices of stock in any line. Bulbous stock is daily getting more plentiful and is now of very good quality. There seems so far to be a market for everything that is offered in this and other lines. Carnations are made a little easier in supply by reason largely of the improvement in quantity and grade of bulb stuff, people now having them as an alternative to the carnation as an effective and durable flower for general use. The actual supply of them has not increased to any noticeable extent as yet. Violets are good and selling very well. Roses also are coming better in quality than of late, although the cut has not increased much at this writing.

The Harrisii Lily.

Harrisii lilies, which have been in fair supply since the holidays, are now slightly scarce, with quite a little demand. Whether the shortage is entirely due to the holiday season having been a little too much in the grower's eye to allow him to look after his supply that should follow immediately after that time, or is due to an unusual amount of disease in the bulbs, is an open question. In looking over reports in the trade journals, one cannot fail to be struck by the unanimity of the complaint that is going up from all quarters in regard to lily stock. Cleveland seems to be as badly off in this matter as other localities. Out of many lots that the writer has seen in his peregrinations about the city, only one instance can be recalled in which this complaint has not been made. In this one case an improvement over last year was reported. The five to seven size seems to be worse than the larger sizes, which would seem to indicate a bad outlook for next year in the next larger size, should no remedy be found in the meantime by Bermuda growers. One lot of 1,000 of five to seven that came under the writer's eye was put in a temperature of 55 degrees in the fall. About 10 per cent were thrown out when first brought in. As they grew, at various times, about 15 per cent more were unceremoniously discarded. The earliest were never graded for harder forcing, but were simply cut as they opened. A few bloomed at Christmas, and they have been straggling along ever since. Some will not be through for another month. In the meantime another 10 per cent has been thrown out and one-fourth of the balance is in a worthless condition today, with more to hear from later. This stock has never been subjected to unfavorable conditions, yet it will not be likely to show more than from 30 to 35 per cent of perfect stock out of the entire 1,000. Where is the money in forcing Harrisii lilies under such results?

Various Items.

There have been no very large social events lately, but small work and funerals have furnished a good deal of business. At the funeral of Mrs. Bingham during the past week a great many very fine flowers were used. In fact, the bulk of them were orchids, violets, American Beauties, valley and smilax, high grade stock. There was little wire work and the emblematic monstrosity was entirely absent.

Miss Eadie left for Florida a short time ago. She may be gone two months.

Mr. Boas, representing Edwards & Docker, was in town lately.

NEMO.

MORRISTOWN, N. J.

The first annual dinner of the Morris County Gardeners' and Florists' Society, held at Washington Hotel, was an unqualified success in point of numbers and general enjoyment, and Wednesday evening, Jan. 26, will remain long in the memory of all as a feast of good things, good songs and good fellowship. Mr. Wm. Duckham, and officers of the society, you are to be congratulated.

Mr. Patrick O'Mara was the toastmaster of the evening and it was an ideal selection. He was as ready with stories as our "Chauncy," and as witty as Mark Twain, and if you were called upon to make a speech and could not, Mr. P. O'M. would soon come to your assistance. He was the "E pluribus unum," and contributed greatly to the success of the dinner.

Being right in the heart of the rose-growing district of the United States, if not the world, it was only to be expected that the decorations would be "roseate" and fully sustain the reputation of that section. Contributions were made by the following: Messrs. Reed and Noe, roses; Mr. A. Herrington, some splendid cattleyas; Mr. J. Jones, Convent Station, some excellent mignonette and violets.

The following toasts were responded to over the "nuts and wine:"

"Our Society," by Mr. Duckham, president of the society, who was very eloquent in the society's behalf and felt deeply the honor of responding in the presence of such a success.

"Gardening as a Fine Art," by Mr. A. Herrington, who waxed quite poetic and reminiscent, and quoted the following well known lines of Shakespere:

"This is an art
Which does mend nature—change it rather;
But the art itself is nature."

"Morristown and Morris County," by A. L. Adams, editor Morristown Express.

"Sister Societies," by Geo. W. Smith, of Orange, N. J.

"Seeds, the Kernels of Prosperity," by Mr. Harry A. Bunyard.

"The Commercial Florist," by Mr. F. L. Atkins, Short Hills, N. J.

"Horticultural Exhibitions the Greatest Educator," Mr. Chas. H. Atkins, Madison, N. J.

"Horticultural Press," Mr. J. Withers, of the Florists' Exchange.

Sandwiched in between the "talkin" was "singin" by the following gentlemen: Chas. Hopkins, Thos. Hesket, J. Darby, Mr. Davies, Geo. W. Smith.

About 40 members were present and the following visitors: Patrick O'Mara, New York; Peter Duff, Geo. W. Smith, Orange; John E. Lager, Henry Hurrell, Summit; Thomas Jones, F. L. Atkins, Short Hills. Letter of regret was read from Byron T. Halsted, New Brunswick.

CINCINNATI.

Stock-Prices.

There is no perceptible change in the state of the market here. Cloudy weather still prevails, consequently roses are not up to the standard, with the supply insufficient to meet the demand. Although the weather has been unfavorable for transient trade, the retail stores have done a fair business in the line of funeral work. Paper white narcissus are somewhat scarce and find a ready sale at $4 per 100; Romans and valley going slow at $3. Carnations sell well at $1.50 to $2 for ordinary varieties, and $3 to $4 for fancies. Brides and Maids are held at $6 to $8, Meteors $8 to $10, Perles $5. Callas sell for $10; Harrisii, $12.50; violets, $1; tulips, $3 to $4. Smilax is fine, but goes slow at $12.50.

Special Meeting of Club.

A special meeting of the Florist Club will be held on Saturday, Feb. 5, for the purpose of making arrangements to attend the Chicago convention. Quite a number have signified their intention of going and the indications are that we will be well represented. Those who cannot attend this meeting and would like to accompany the Cincinnati brethren can secure any desired information from the secretary, Henry Schwarz, Price Hill.

Personal Notes.

B. P. Critchell is on the sick list. He was taken ill last Friday, and for a time was in a serious condition, but is now convalescent.

W. G. Matthews, of Dayton, O., was a caller last week. He has recently taken charge of a new store in his city and reports a good business.

E. G. Gillett came down to business last Thursday morning wearing a two-by-four smile. Upon inquiry it was learned that a little Gillett had arrived at his home.

Mr. Julius Baer will shortly wed a charming young lady of the west end. Congratulations are in order.

Mr. J. M. Gasser, of Cleveland, O., is with us this week. He is on his way south for his health, where he will spend a couple of months. B.

Among the Growers.

At Walter Grey's place on College Hill we find most of the space devoted to roses. He reports having cut a very heavy crop during the holidays. They are somewhat off-crop at present, though in excellent health. Most of the roses here are grown in solid beds, some of them having been in same bed for eight years. I noticed a batch of bouvardia, that once popular flower; Mr. Grey is working up a stock of it.

At Corbett & Wilson's pot plants are largely grown for market. Their roses and carnations are good. They have a space devoted to the new violet Princess of Wales. It is excellent and will surely be in great demand another season.

Fred Walz & Son have not fully recovered from the flood of last spring. We were interested in their carnations, Queen of the West, a good pink, and Ruby, a red. Mr. Walz considers them excellent commercial varieties. Quite a number of seedling cannas on this place give promise of being decided acquisitions. Here, too, we find a mum which flowers at Easter.

At B. P. Critchell's Sons' place in Carthage, we noticed a fine stock of young palms. They have a bench of Eucharis Amazonica that was growing and blooming when we first saw the place, not less than twelve years ago, and we do not know how much longer it has been there. We cannot understand why more florists who do a retail business do not grow this useful flower, nothing is easier of cultivation.

I found Mr. Henry Schwarz at home and busy getting some imported roses into pots. Henry does a retail business, growing plants for bedding and market, and will have some excellent stock when spring trade opens. He also has a large cemetery trade.

Anyone visiting Mr. J. A. Peterson's place is immediately struck by the excellent arrangement and condition of the houses, which are models, and the stock grown in them is second to none. Cut flowers are largely grown, but much space is devoted to decorative plants, and ferns for filling ferneries. Roses, though off-crop, are in excellent health. Carnations, as grown by Mr. Peterson, are hard to beat. Our old friend Daybreak appears in the finest form; long, stiff stems surmounted by an immense bloom of exquisite color. Bridesmaid is seen in good form and is considered one of the best. A red, which Mr. P. disseminated last season, is excellent, both as to stem and color, and bears the catchy name of The Outcast. Here again we meet that excellent violet, Princess of Wales. It is in a house with other violets which are so diseased as to be absolutely worthless and are being thrown out, while the Princess is perfectly healthy and the great number of buds and blooms is simply amazing. Its fragrance is more lasting than that of any other violet in cultivation. At Christmas it sold for double the price of the best Marie Louise and Californias.

Of course we visited Mr. Witterstaetter, to be introduced to Evelina in her home, and we find her reigning supreme, and truly it is an ideal flower with its good calyx and stiff stem. Another seedling seen here that will doubtless prove a winner is Opal. It is a light pink, similar in color to Daybreak, though a brighter, livelier shade. Mr. Witterstaetter has a number of houses of seedlings which are exceedingly interesting. An excellent scarlet seedling, brighter than Jubilee, with good calyx and stem, is very promising. Here also we find a large stock of ferns, and here again Mr. W. is fortunate, for he has a seedling pteris that is evidently a cross between tremula and serrulata. These were the only varieties on the place at the time the seedling was discovered. In general appearance it resembles tremula except at the end of each branch of the frond has an extension like serrulata. The plant, too, fills up the entire top and does not leave space between pot and frond as in tremula.

A call at A. Sunderbruch's Sons reveals the fact that they are good growers of a large variety of stock, smilax, asparagus, decorative plants, roses and carnations. In carnations we saw particularly fine Queen of the West and Ruby. Daybreak is also in good form.

N. H. G.

ALBANY, N. Y.

Balls, assemblies, weddings, etc., are keeping the craft hustling around and putting forth their best energies and most artistic efforts.

Some Pretty Decorative Effects.

Goldring Brothers last week had several large events at which Sam outdid himself. Some of the effects are worth detailing. One was Roman hyacinths and Scott carnations, with colored galax leaves, in silver baskets; another was mignonette, white roses and foliage of crotons; another, large vases of Lilium Harrisii, with Dracaena terminalis; and yet another, silver baskets filled with Bride roses and colored galax leaves. But the decorations at the Adelphi club, which is the bon-ton, and celebrates its twenty-fifth anniversary on the 26th inst., will tax his artistic efforts. The whole is to be an effect in green and red, which are the colors of the club. Evergreen curtains tied with red ribbons will hide the retiring rooms, where the sets of furniture will harmonize. The tables will be laid with mirrors running down the centers. Upon these will be arranged tiny electric lights in the colors of the tri-color, nymphaeas (and possibly nymphs) will apparently glide upon the surface, so complete will be the illusion.

H. G. Eyres has his hands full. At a splendid wedding at Troy on the 17th he astonished the Trojans with the effect of his decorative skill. Eight hundred yards of laurel, with vast quantities of southern material, were consumed. Great bunches of American Beauties, from Thomas Totten, of Saratoga, and Jubilee carnations, made a beautiful effect. A novel plan was adopted in chartering an electric express car, duly heated, for it is no joke, with the mercury dancing around the zero mark, to convey even southern palms, as, like their charming admirers, they are so susceptible to a chill. The job gave such satisfaction it was repeated almost in duplicate the following day at a grand ball.

Mr. Eyres is receiving some lovely orchids from his place at Saugerties. Cattleya Trianae alba, so chaste and rare, some exquisite sprays of Odontoglossum crispum, were made up with maidenhair fern for the coiffure of a bride; how sweet! Harry is also receiving some fine violets from the same place.

Mr. Goldring's Violets.

Speaking of these coy, deliciously fragrant flowers, Fred Goldring is a past master in the art of growing these. He feels so elated over his continued success that he is giving his experience in the columns of a contemporary—what one should do and should not do. But with a business wink he remarked to the writer that the secret will be lost as soon as the old houses take a tumble, which they do not look like doing for a while yet. Part of the secret is keeping the soil saturated and not allowing a drop of water on the foliage. I noticed the paths even were fairly reeking with moisture. The houses are low, open at gutters, unfit to grow anything else. The temperature is arranged so that cool or warm waves are felt, and would look like the lines upon a weather chart could they be described. Cleanliness, of course, is a great factor.

Growers' Notes.

I must not finish without noting the success of the white seedling carnation Katharine Goldring. 'Tis a beauty, pro-

lific and regular, strong and chaste, with Lizzie McGowan as a companion and Outcast, the robust crimson. Mr. Goldring speaks highly of Kaiserin Augusta as an all season's rose. He prefers it to the Bride.

John Dingwall was on deck with a choice lot of azaleas, which sold freely at Christmas. Had he anticipated such a rush he would have doubled the number, having a fine stock holding back for Easter. Simon Mardner is a grand forcer, the very best here. Bulbous stock is being brought in. La Reine tulips are in demand for design work. Spring stock is in good trim.

L. Menand was busy storing ice, with which he supplies the demands of his big refrigerator during the season. His stock with houses are fully up to the usual excellent standard. Mr. Memand (3d) takes a lively interest in the business. Three generations of one family, same name and similar tastes, are remarkable, even in our elevating profession. W. M.

BOSTON.

The Market.

Trade is generally good. Roses seem to be off crop and rather scarce. Bulb stuff is coming in freely and of good quality. Violets and valley took a big drop during the week, and were somewhat of a drug. Beauties range in price from $8 to $50; tea roses, $2 to $10; carnations, $1 to $2; Romans, 75c to $1.50; paper whites, $1 to $2; Von Sions, $1 to $3; tulips, $1 to $3; valley, 75c to $2; violets, 50c to $1.

Mass. Hort. Society.

At the weekly exhibition last Saturday, John Barr, gardener for Mrs. B. P. Cheney, was awarded a silver medal for 12 plants of Primula obconica grandiflora, a remarkably fine hybrid of P. obconica. Carl Blomberg, gardener for Oakes Ames, exhibited two beautiful cattleyas, for which he was awarded a certificate of merit. They were Cattleya Trianae var. Amesiana, a very rare variety, sepals and petals white, lip very delicate pink, citron-yellow throat; and Cattleya Trianae var. unicolor, very rare, a well formed flower, lavender pink, orange-colored throat, lip very finely fringed. James Comley, superintendent of the Hayes estate, showed a very fine collection of Camellias, two vases of Coelogyne cristata, a vase of Eriostema myrtifolia (very seldom seen nowadays), Lasandra macrantha (seldom grown, although a showy flower), and a tecoma from Japan, of which he does not know the name. It is a very showy flower, orange-scarlet in color. For his exhibit he was awarded a gratuity prize. Jackson Dawson, of the Arnold Arboretum, showed a dish of fine dendrobium blooms, among which were some handsome blooms of D. Ainsworthii. Norris F. Comley, of Lexington, was awarded a gratuity for turnip radishes; Arthur F. Coolidge, of Cambridge, for lettuce, radish and parsley; C. H. Hovey, South Pasadena, Cal., for Lorillard tomatoes.

A silver medal was awarded to J. E. Rothwell, Longwood, Mass., for Odontoglossum Vuylstekeana, a very rare variety, the specimen shown being said to be the only one in the United States.

A lecture on nuts and nut culture was delivered before the society by Mr. Frank M. Bartram, of Parry, N. J. He stated that in 1897 the United States imported nuts to the value of over $2,000,000, the greater part of which could be produced here. He spoke of the culture of the various nut-bearing trees and pointed out the importance of stimulating an interest in nut culture.

Various Items.

Information is wanted of a gardener named James J. Curran. Address Thos. J. Grey & Co., 32 South Market street, Boston.

James K. Paul has retired as manager for A. P. Stokes, Lenox, and has been succeeded by Wm. Elias, the farmer.

Carl Jurgens, of Newport, paid us a visit, and reports business fairly good.

Mr. C. H. Maynard, brother of Prof. Maynard, of the Massachusetts State Experimental Station, is representing the American Jadoo Company, and is at present located in this city, looking after the trade in this vicinity.

C. H. J.

CHICAGO.

Club Meeting.

At the last meeting of the Florists' Club three new members were elected. Chairman Hauswirth reported progress on behalf of the committee on carnation convention, as previously noted in these columns. The committee has selected Mr. E. Wienhoeber as treasurer, and contributors to the entertainment fund may mail checks to him at 417 Elm street.

The paper by Mr. Joseph Reeve on pot plants for market appears elsewhere in this issue. It was listened to with close attention, and brought out a very instructive discussion. Mr. G. Stollery told of the pot plants noted during his recent eastern trip, mentioning especially Dracaena Sanderiana, Asparagus Sprengerii, Crimson Rambler Rose, Bougainvillea glabra Sanderiana and heaths.

A vase of the new white carnation Evelina from Mr. R. Witterstaetter, Sedamsville, O., was much admired. It certainly is a beautiful flower, and seems to leave nothing to be desired.

The next meeting of the club (February 10) will be "retailers' night," and the retailers should be out in force. The full program will be announced next week.

Market Conditions.

There is a slight improvement in the supply, but the demand is still in excess of it and prices hold up well. The outlook for a further increase in the supply is good, and it is hoped that the demand may soon be fully met on most items.

Death of Mrs. Krick.

Josephine Krick, wife of George Krick, and well known to the florists of this city as "Mother Krick," died last Sunday, aged 67 years. Mrs. Krick was a landmark in the trade in this city. She had acquired considerable property and was supposed to be worth about $300,000.

Various Items.

Mr. G. H. Pieser, of Kennicott Bros. Co., will start next week on an extended southern trip, including New Orleans, in the interest of the "Novelty tulip."

Mr. Lloyd Vaughan, of Vaughan, McKellar & Winterson, left recentiy on an extended western trip in the interests of his house.

The wife of Leopold Ine, of Irving Park, died last week. Mr. Ine has the sincere sympathy of a host of friends in the trade.

Mr. Smith, of Smith & Fetters, Cleveland, was a recent visitor. Mr. J. M. Clark, Des Moines, Ia., is in town.

PHILADELPHIA.

Of Interest to Growers.

Philadelphia growers may be interested in comparing some of the methods employed in producing roses for the New York cut flower market, as seen at Madison, N. J., with those of the best places in the suburbs of our own city. The houses at Madison are nearly all three-quarter span to the south and from 150 to 200 feet in length, a few being longer. They have no very high, even-span houses, with ground beds, such as those of Myers & Samtman and Edwin Lonsdale, and in most cases have no front glass; the long slope of the roof being of decidedly sharp pitch and meeting the front wall very close to the bench, thus giving the roses planted on the front table scant head room. A few of the newer houses had front glass, but no front ventilation. The high position of Madison may make this ventilation unnecessary, whereas here in the hot months it is of benefit, judiciously used.

The roses in Madison are uniformly planted, with Beauties and teas in the same house; the former on the center benches, the latter on the front and back benches, and occasionally also on the lowest center bench, where the angle of the roof is so sharp as to bring this bench too near the glass; here each variety is given a house to itself. While the roses were certainly in splendid condition over there, and the growers claimed having two or more varieties together made no difference, I do not think our growers will be tempted to follow this plan, as there are times when such a system would be a disadvantage. There is this to be said in favor of the plan, that if our market

continues to place a big premium year by year on extra long stemmed Beauties, our houses for that rose will all have to be very high, or else we must let our Brides and Maids play second fiddle to the Beauties, as they do in Madison.

The system of staking differs radically. Here we tie each plant to a single wire stake, allowing air by tying each shoot separately. There, the Beauties are trained on strings, a string to each shoot; the strings being fastened to three wires running lengthwise, one above the other, the highest about four feet above the bench, while the teas had two wires only.

Mr. Tilden was, however, an exception to this plan. His Maids and Brides were given two stakes each, the idea being to tie each shoot so as to give plenty of air and light, thus diminishing the tendency to make blind wood. The condition of his stock made this plan seem well worth a trial, there being very little or no blind wood in sight, although the propagating had not then commenced. The system of stringing Beauties seems excellent for thorough syringing, but makes cultivation somewhat difficult.

Madison has not yet adopted Mr. Lonsdale's evaporating pans for destroying aphis. In fact, it would be impracticable in many cases, as hot water is largely used. Mr. Noe fills his walks with stems, which, though thorough, is open to objection, on the ground of cleanliness. Mr. Tilden places tightly tied bunches of stems on his benches between every few rows of plants, changing these bunches as they lose their strength. This method is very neat in appearance, and is said to be a sure preventive of aphis when properly done.

I went through about fifty rose houses while in Madison and was much surprised to find nearly all planted with three varieties, Beauties, Maids and Brides. A few Perles, Niphetos and Madame C. Testout were also seen, but very few.

Business Satisfactory.

Business last week was excellent, and prices firm. Roses are scarce and in brisk demand. Beauties bring from $3 to $8 per dozen; Brides and Maids, $8 to $10 per 100, a few fine ones $12, and small blooms $5 to $6; carnations, $1.50 to $2, with fancies $2.50; California violets, 40 to 75 cents; daffodils, double, $5 and $6, and coming in more freely; tulips, $4.

A visit to the stores in the early part of the week showed signs of spring hardly in keeping with the extremely cold weather since. Freesia was quite plentiful and very well grown. Daffodils and tulips were displayed here and there, while in one window was a bunch of myosotis and another of the yellow daisy; Etoile d'Or, I think, is its name.

A Pretty Floral Feature.

The vast fortune left by the late Anthony J. Drexel played an important part in the floral world last week. On Tuesday one of Mr. Drexel's sons gave a dinner and german at Horticultural Hall to over one hundred guests; on Thursday his daughter was married, and on Friday another son gave a large ball, also in Horticultural Hall. A pretty feature of the dinner was that each gentleman received, in the cloak room, a bouttoniere which matched in color and design the centerpiece of the table, to which he was to escort his partner. As there were fifteen of these tables, quite a variety of flowers were used, and served a double purpose in avoiding confusion as well as adorning the scene.

Various Items.

Roman hyacinths are very scarce at present.

Edward Reid reports shipping business excellent.

John Burton has sent out an attractive sheet describing his new white carnation, "Alba Superba," which is to be disseminated this spring.

John Westcott is to tell what flowering plants are best for Christmas at Tuesday's meeting of the Florists' Club. Much credit is due the club managers for their efforts to make the meetings instructive.

Mr. B. N. Lehman, secretary of the American Jadoo Company, spent the past two weeks in Washington and Baltimore, and found trade quite active, securing orders for Jadoo fibre and Jadoo liquid from the principal florists in those two cities. J. W. Y.

BUFFALO.

Market Resume.

Business has been fairly good, and flowers in sufficient quantity to fill all orders, except Beauties, which there has been difficulty in obtaining. Carnations are almost king. There are plenty of violets, both double and single, and those who don't grow the double pretend the singles are most in demand. "The wish is father to the thought." Florist windows are as gay now as at any time during the whole year, and more particularly do they seem so when the ground is covered with snow and the end of your nose is two degrees below zero. There is a great variety of plants now, besides cut flowers; azaleas, lilac, hyacinths, primroses, cinerarias, lilies, cattleyas, and coelogyne, besides the gay pans of tulips and other bulbous stuff. Good valley of home growth is more plentiful. We were persuaded to invest in so-called French Von Sion. Even now, when undue forcing is no longer necessary, it has proved itself a humbug and fraud. Tulips bring 75 cents to $1 per dozen, and that, with "ad valorem" added, is much better than they have been for the past few years. If this continues, we shall be persuaded that Mr. Dingley was wise in at least some respects.

New Bids Called for.

After it was all settled and the contract for the big houses at South Park awarded, the whole matter was reopened, and now new bids are wanted. We regret this, for we should like to see those stately houses go up without delay.

I did not intend to omit mentioning such an important fact as the appearance in our midst of Mr. Commissioner Harry Balsley. He takes up considerable room wherever he is. Clay was discussed, both white and red, and so were parks, politics and potatoes.

Mr. S. Skidelsky was very recently here, and, would you believe, a florist who has only for the first time in three months worn an ordinary shoe, gave him a game of St. Louis, I mean bowls. If Mr. S. S. had received 100 as a starter, he would have been just defeated by one pin, but Mr. Skidelsky is a man of brains rather than gifted with dexterity of the hand. He is going home to take lessons from Mr. J. Westcott.

Two large paper boxes arrived in town last week, one in the shape of the Corbett-like Mr. Boas of Edwards & Docker, the other the Edw. Booth features of Mr. Max Beatus, whose name is a misnomer, for we use the product of the Dayton firm, and he does not try to beat us. W. S.

ST. LOUIS.

Scarcity in Roses.

Business is picking up a trifle, but not so good as it should be at this time of year. The market was agreeably stiff the past week, in fact, there is a marked scarcity in roses. Very few are coming in and the demand seems brisker than at any time since the first of the year. Prices ran up on Brides, Meteors and Maids, and are now from $6 to $10, while Perles and Woottons are $4 and $5. The scarcity is owing to a great many of the shippers to this market being off-crop.

Carnations seem plentiful, with demand good. Some commission men claim that more carnations have been sold during the month of January than ever before. Prices range all the way from $2.50 to $4. Daybreaks and Scotts are in greatest supply. Whites are in good demand.

Violets are still a glut. Some of our home growers are complaining that the southern stock, which is sold much cheaper, is taking away a great deal of their profit, and say that the commission men should try and dispose of the home grown stock first. Prices on violets the past week were: Californias, home grown, 50 cents; southern, 25 cents; small single, home grown, 20 cents; southern, 10 cents; good double, 40 and 50 cents.

In bulb stock matters are about the same as last week. Dutch hyacinths are as yet scarce, and sell at $4. Same can be said of Von Sion. Tulips are very short stemmed and sell at $2 per 100. Romans, paper whites, valley, Harrisii, callas and freesia are about the same as last week.

C. Young & Sons decorated the big music hall in the exposition building very tastefully last Friday, the occa-
